Captain Muneck left this Isle the next day, being the 19th of July, with an intention to purfue his Voyage, but by reason of the vast Ice shoals, was forced to return to his old Station, but could not get fight of any of the Salvages again, tho' they did all they could to entice them to the Sea-shoar, by hanging little Knives, Looking glasses, and other Toys on small Ropes; whether it was out of fear for the Danes, or that they were forbidden to keep any further Correspondence with them by the chief Judge or Governour, is uncertain.

Captain Muneck meeting with no Men, went often a Hunting, and having taken abundance of Reently in this life, he gave it the name of Reinfundt, i.e. the Gulph of Renes, and the Read where they lay at Anchor, Munecken Later his own name:

This Isle lies at 61 deg. 20 min. Elevation; where after having fet up the Arms of the King of Denmark his Master, he departed a second time, the 22d of July; but was foon after furprifed by fuch violent Tempelts, and vast Ice shoals, that with much ado he made shift to save himself the 28th of July betwixt two liles, where he cast all his Anchors, and for his better fecurity, was forced to fasten his Vessels with long Ropes, on the shoar.

It was no fooner Low-Water, but the Muneck Danes found themselves all upon dry Land, comes to and the Water beginning to rife again, car-betwist ried along with it fuch a prodigious quanti- two Ifles. ty of Ice shoals, that had they not been day and night upon their guard, they would have been in greater danger here than in the open Sea.

Betwixt these two Isles, where was a huge Ice shoal, about 22 Fathoms high; which being loofened from the Shoar, and broken in two Pieces, did fink to the bottom of the Sea with fo violent a Motion, that the Waves did arife like Mountains, as if it had been in a violent Tempest, and put our Ship in great danger of being swallowed up by them.

They did not see any Inhabitants here, but discovered several foot-steps, and other marks which fufficiently convinced them, that they were either at that time, or had been formerly inhabited by Men. They found here divers Minerals, and among the rest, great store of Tale, of which they carried off feveral Tuns into Ships. They faw several other liles thereabouts, which in all probability, were Inhabited as well as these, but the shoar being so Rocky and full of Ice, that there was scarce ever any thing feen like it; the Danes durst not venture too near them. These Isles are situated at too near them. 62 deg. 20 min. about 50 Leagues within the Christian's Streights. Captain Muneck gave that part where he lay at Anchor, the name of Harefound, i. c. The Bay or Road of Hares, from the vast number of Hares they saw in this lile, and let up Christian the Fourth, there, which the Danes generally express by

this Character (4.

He left these Isles the 9th of August, steering his Course to the W. S. W. with a N. W. wind, and the 10th came on the Southern Shore of Christian's Streights, being the American Coast it self. Pursuing his Course, he discovered a large Isle to the W. unto which he gave the name of Saspeuland, i. e. the Snow Isle.

The 20th of August he steer'd his Course the from the W. to the N. and then (as the Journal breadth of fays) I took the Right Course at the Elevati-Hudion or of 62 deg. 20 min. But it being a very streights.

thick Fogg they could different no Land; the as the fame Juanual fays, The Screights of Christian is thereabours, not above 16 heagues broads. From whence the reasonable to consolude, that it is broader in other Places.

Out of the Streight he Sailed into Hudludion's fow's Sea, the name whereof he changed
r Christi-likewise, as he had done that of the Streights,
as Sea.
giving it two names instead of one; for
that part which washes the shoar of America, he call'd the New Sea, and the other
part towards the side of Greenland (if it
may be supposed to belong to that Country)
Christian's Sea.

He steer'd his Course as much as possibly he could to the W. N. W. till sinding themselves at 63 deg. 20 min. Elevation; they were so entangled amongst the Ice, that they were forced to seek for shelter on the Greenland Coast, and to pass the Winter there; whence it is that they gave the name of Munckens Vinter Haven, i. e. Munck's Winter Haven to that Road; and to the Tract of Land along the Coast, the name

of New Denmark.

The Author of this Journal has pass'd by in filence several Places they saw in their Passage thither, because having inserted their names in a peculiar Map, he directs his Readers thither for farther instructions. He speaks only of two Isles in the Christians Sta, call'd by him the two Sifter Ifles, and of one more much larger than the former, towards the New Sea, unto which he has given the name of Dikes Oculand. He advises those that intend to pass the Christians Streights, to keep in the middle of the Streights as much as possible they can, by reason of the rapidity of the contrary Currents, occasion'd by the flux and reflux of the Seas on both Coasts, which carrying along with them valt Ice shoals, put the Vesfels in frequent danger of being loft. He adds, That the Tides in the Christians Sea, keep their certain times, from five to five hours, and that these Tides are regulated according to the Course of the Moon.

Muneck's Haven.

Captain Muneck came to an Anchor the 7th of September at Munecken's Vinter Haven, where after having somewhat refresh'd his Wen, he ordered his Ships to be drawn into a little Creek near the Harbotti, in order to have them resitted, and to preserve them against the sorce of the Ice: The next thing they had to do, was to entit some Hutts, to defend themselves against the extremity of the cold of the approaching Winter Season, which would not permit them to return homewards at that time.

Muneck's Haven is situate at the entrance of a River, which was not frozen in Ostober, the

the Sca was already full of Ice near the shoar.

Captain Muneck says, that the 7th of October, he went up the River in a Sloop, to view the Situation of the adjacent Country, but could not go further than a League sty near in and half, being stop'd by the Rocks that are cross the River: Finding the Passage by the River thus closed up, he took along with him some Soldiers and Seamen, and March'd along with them about 2 or 4 Leagues deep into the Country, in hopes of meeting with fome of the Inhabitants, but found nothing like it that way. However, in his return thro' another part of the Country, he found a pretty broad and high Stone, and upon it the figure of a Devil, with his Horns and Claws very distinctly Painted. Near it was a Place inclosed with small Stones about 8 Foot square: on one fide of one this square place he saw a little Hill com-sheir A posed of small Stones, intermix'd with the tars. Mois of Trees. On the opposite side of the same square, stood another square Stone, not unlike an Altar, refting upon two pther Stones, and upon the Altar, he faw three pieces of Charcoal laid crossways upon one another.

Captain Muneck faw several such like Altars in his return, with Charcoal upon them, just like the former; and tho' he could not as much as get fight of one fingle Person of the Natives, yet was it observable, that Their is near every one of these Altars they saw, crisical. they observed the foot-steps of Men; whence they conjectured, That the Natives of the Country used to affemble near these Altars, to perform their Sacrifices, which in all likelihood they Celebrated either with Fire, or to the Fire. They further took notice, that near those Places, where they discovered these foot-steps of Men, they found abundance of Bones guaw'd; which as they supposed, were the remnants of the Sacrificed Beafts, eaten by the Salvages at the Sacrifice, after their fashion, or rather torn or gnaw'd to pieces with their hands and teeth, as our Dogs do with a bone.

as our Dogs do with a bone.

In the Woods, thro' which they pass'd, they found abundance of Trees, sawd or cent in pieces by Iron Instruments; as also abundance of Dogs muzzled with small twigs of Trees. But what confirm'd them most of all in their Opinion, viz. That this was not defined of Instants, was, that they had districted to the trees or Fland the same where Teats or Fland the same which is and Wolf skins, and Dogs skits, which the same which t

i Lans.

hat

that these Inhabitants lead a Vagabond life, like the Schwen or Encamp in Troops like the Laplanders.

The Dans having fix'd their Hetts; which were to ferve them all the Winger, began to provide Wood to keep themfelves warm, and Venison for their food. the Captain Munock was the first who shot a bis white Bear with his own Gun, which they "1, est with a good Appetite, and fay, did relish and digest very well. They also kill d abundance of Hares, Partridges, and other Birds; which tho' not express'd by their Peculiar Names, he fays are very frequent in Denmark. He adds, that they catch'd also four black Foxes, and some Sables, a name the Northern Nations generally give to the Sable Martins.

What most surprised the Danes was, That they discover'd in the sky, divers Phenomena's they never observed in Denmark. Thus, (as the Journal affures us) there appear'd the 27th of November, three diffinct Suns on the Firmament, tho' it was a very thick and gross Air. The 24th of January next following, two Suns appeared very diffinctly, and the 10th of December, or the 20th of the Old Stile, they observed an Eclipse of the Moon about 8 a Clock at Night; and the time Night they faw for two hours together, the Moon surrounded by a very bright Circle, with a Cross in it, dividing the whole Body of the Moon into 4 parts: This Meteor feem'd to be the forerunner of the enfuing Misories, and almost total Destruction of the Danes, as you will see out of the following Account.

The extremity of the cold began by this time to increase to fuch a degree, that there lay Ice shoals near the shoar of 300 xtremi and 360 foot thick; and their Beer and of cold. Wines, nay, even the most Spirituous Spanish Wines and strong Brandy's, froze from top to bottom in the Vessels that contained them, which breaking a funder, and the Liquors being congealed into entire pieces of Ice, they were forced to cut out Pieces of them with their Hatchets, which being melted before the Fire, they afterwards used to drink; may fuch was the excels of the cold, that if they happened to forget a finall quantity of Water in any of their Tin or Leather Veffiels, they found them certainly crack'd the next Morning, in that very place where

the Water had begun to freeze.

Thus the moroiless cold, which even did uot spare the Merals, cacreased its rigour birDanes, miserable Danes, that they fell all fick one after another, their solders on the Beaton: For, being seized with a blotter location, they

were emaciated to the last degrees, till they drope one after another; there being about the middle of March, not enough left to keep the Guard; fo that Captain Muneck himself was forced to stand Sentinel at his

The worst was, that this Distemper instead of abating did augment with the approach of the Spring, when their Teeth began to loofen in theirGums, and their Mouths were fo full of Ulcers within, that they could eat no Bread, except what was steep'd in Water. Towards May, the miserable remnants of the Danes were attack'd by the Bloody Flux and fuch excellive Pains in the Nervous parts, as If they had been pricked without intermittion, with the Points of Knives. Their Bodies did decay visibly day by day, turn'd livid and black at latt, no otherwise than if they had been beaten with sticks, and some of them lost their Arms and Legs by the violence of the cold-This is properly nothing elle than the highest degree of Scurvy, a Distemper very common and sufficiently known in the Northern parts of the World. Such as died were forced to be kept above Ground, the reft wanting strength to bury them.

By this time the want of Bread encreasing, they were constrained to digg under the Snow, where by good chance they found a certain fort of Berries, which they did feed upon for fome time; but the worst was that they would not keep in the least, wherefore they were obliged to boil and eat them immediately. The Journal mentions the rath of April as a very remarkable day, be four to cause it then rained the first time, after the four Months, there having not faln a drop of the first time, all the state of the first time, after the first time, after the first time, and the first time, after the first time, and the first time time is all the state time. rain in all that time.

The Spring rejoyced them with the fight Birds of of many forts of Birds, none of which had Greenappear'd all the Winter long, but their weak-land. nels would not permit them to catch or shoot any of them. About the middle of May they faw abundance of wild Geefe, Swans, Ducks, an infinite number of imali Birds, Partridges, Ravens, Faulcons and fome Eagles. Not long after, Captain Muneck happened to fall ill among the reft. and on the 4th of June was to miferably afflicted with tormenting pains in his Limbs that for 4 days together he could not fire out of his Hurt. Not imagining otherthe than that his last hour was near at and; he made his last Will, in which he prayed the next that came to that shoar, Captain be bury his Body, and to be careful of his huncek Journal, in order to deliver it to the King makes his formation of the find left Will. of Denmark, But about 4 days after, finding his strength somewhat resovered, he made thift to peep out of his Hurt to fee

whether any of his Crew were living or not; and out of 64 that came along with him, found only two alive. These poor wretches ravish'd with joy to see their Captain, revived as it were from the Dead, run to him with open Arms, and carried him streightways to a fire, wherewith rubbing his joints, they brought him pretty well to They then encouraged one ano-Recovers. ther, resolving to live if possible they could, but how, was the difficulty; they were forced to look for food under the Snow, where now and then they found fome herbs and roots, which had that happy effect upon them, that they began to recover more and more every day. It being then the 10th of June, the Ice began to melt, which gave them opportunity to catch some Trouts, Salmons and other fishes: Thus what they catch'd by Fishing and Hunting, furnish'd them with fufficient Food; by which means having now recovered their full strength; they resolved notwithstanding all the difficulties and dangers they were to furmount, to endeavour to get back to Denmark; what hastened their resolution, was, that about that time the Summer Scason and rainy weather brought ashoar such vast quantities of Gnats, that they were not able to abide

According to this resolution, they left their greatest Ship behind them, and Embark'd aboard the finall Frigat, the 16th of July; and set sail from the same Port, where I told you they had laid up their Ships, and was by the Captain Lamed Jens Muneckes Bay, i.e. John Munecks Bay or Port, Reimbarks after his own name: Coming into the Chriwith two finn Sea, they met with abundance of floating Ice shoals, where they lost their Sloop, and with much ado got their Veffel clear, , for having loft their Rudder, they were forced to fasten their Ship to a vast Ice Rock, till it could be refitted. The Ice beginning to melt, they found their Sloop again, about 10 days after; but this laited not long, for the Sea freezing and thawing again by turns, they got, not without a great deal of trouble, thro' the Christian Streight, and thence by Cape Farenel into the Ocean; where they were surprised the 3d of September, by so violent a Tempest, that they were in great danger of being loft; the two Seamen being so tired out by the long continuance of the Tempest, that being forced to con mit themselves to the Mercy of the Will and Waves, their Mast was brought by she Board, and with much ado, they got the Sails out of the Sea into the Ship.

The fury of the Tempest being some-Arrive in Norway, what allay'd for fome days, gave them leifire and opportunity to get the 2.1st of Seg-

tember, into a part of Norway, where they came to an Anchor with one Anchor, the only one they had left.

But when they thought themselves freed from all danger, they were affaulted by another Tempelt, which put them in more danger than ever they had feen before; however they had the good fortune once more to escape this danger; having found means to run their Ship among the Rocks, they made shift to get ashoar, till the fury of the Tempest being past, they resisted their Vesfel, and in some days after, got safe into Denmark, where Captain Muneck gave att Account of the Success of his Voyage, to the King, who received him no otherwise, than if he had been return'd from the Dead.

One might reasonably suppose, that this Voyage would put a Period to Captain Muneck's Misfortunes; but his ill Fate not tired yet of pursuing so brave a Man, the od. ness of the Accident that befel him hereafter ought not be pass'd by in silence.

After some stay in Denmark, (during which time he mused upon his last Miscarriage for want of knowledge of the Country) he began to be perswaded within himfelf, that there was still a possibility of find- Munco ing out a Passage to the East that way, for a and therefore resolved to attempt the same a cond v second time. But this being a thing of such age in a Nature as to require the affiftance of other Green People, he engaged divers Gentlemen of land. Quality, and rich Citizens of Denmark in the same design, who entring into a So-cicty, they equip'd two Vessels, which they committed to the care of Captain Muneck.

Having taken effectual care to provide his Ships with all necessaries, and to remedy all the inconveniences he had been made sensible of in his former Voyage; when being just ready to depart, the King of Denmark demanded the Captain (as he was taking his leave of him) the day fix'd for his departure; and thus entring upon the Difcourse of his late Voyage into Greenland, the King began to upbraid his Conduct, as if his Ships had been loft by the Captain's ill management. His Reply happening formewhat rougher than the King expected, he push'd him with his Cane against the breast, pier which the Captain taking to heart, went grief. home to bed, and what with grief, and want of food (which he refused to take) died in 10 days after.

But it is time to return to the subject, that did lead us into this long digrefion; from what has son this is thems to be evident, that there is a long and broad Canal, if not us extend the diagram which, as we know has some last of that Coaft, it remains

Seamen

mains doubtful, whether Greenland is upon the same Continent with America or not; tho' it seems most probable it is not, as I told you before. And Captain Muneck was questionless of the same Opinion, without which he would never have taken so much pains to engage a whole Society of Gentlemen, to attempt the finding out of this Passage to the East.

This Leads me to a Discovery of the Mistake of the Author, who has Published his Differtations concerning the Origin of the Americans, which he deduces from the Greenlanders; the first Inhabitants of which he would make us believe were Norwegians; and confequently that the first Inhabitants of America, were originally of Normay. He pretends to justify his Opinion by a certain imaginary affinity betwixt some American words, that terminate in Lan and the termination of Land, so frequent in the German, Lombard, and Norwegian Languages, and the refemblance of the manner of living; there is, as he tells you, betwixt the Americans and Norwegians, who are, if you will believe him, the Allemanni of Tacitus: But I don't question to convince you of his mistake, by the following reasons: (1.) because the Norwegians were not the first Inhabitants be Nor- of Greenland, as is apparent from what has

regions been said upon the head before; and Mr. rere not Womins, that Learned and Famous Antibe fifth quary of the North, is so far from traceif Green ing the Orlginal of the first Inhabitants
and, of America out of Greenland, that on the
contrary, he believes the Skreglingres, or Original Natives of Greenland, about Westernburgh, to have been descended from the A-

mericans. (2.) He is grievously mistaken in his guess, there being little or no likelihood that Greenland is join'd to the Continent of America, neither is that Passage so well known, nor so easie as he would have us imagine. (3.) He is no less in an Error, in what he says concerning the Affinity of the Languages and manner of living, betwixt the Norwegians and Americans; the contrary being made sufficiently evident by the preceeding Relation: But supposing the Norwegian Language to have been introduced in America; he must find out another Passage for these Northern People into America, than by the way of Greenland.

I will not trouble you with the other Miftakes this Author has been guilty of in feveral Passages of his Dissertations, knowing that you are constantly employed in Matters of much more moment, wherewith you have obliged the Learned World; and as I must look upon it as an eternal obligation, that you would throw away part of your precious time, in reading so unpolish'd a Work; that has so little resemblance to the nicety of your own excellent Pieces, I don't question, but that you are as well pleased to have done with reading of this Letter, as I am satisfied to have sinish'd it, and to declare to you, that I shall always be

#### THE

### PREPARATIONS

TO THE

## OYAGE.

Aving been for many years Importuned, by my Honourable and Worshipful Friends, to undertake the Discovery of that part of the World, which is commonly called, The North West Passage into the South Sea, and so to proceed to Jupan, and to Round the World to the Westward; being prest forward withall, by fignifying to me the Earnest Desire the King's Most Excellent Majesty had, to be satisfied therein: I acquainted my much honoured Friends. the Merchants of Bristol therewith; who, as ever they have been Benefactors and Advancers of them that pursue the Ways of Honour; together with the Enlargement and Benefit of His Majesty's Kingdoms; did freely offer to be at the Charge of furnishing forth Shipping for this purpose. And now being thus Enabled, I Address my self to the Honourable Sir Thomas Roe Kt. (as to a Learned, and furthess employed Traveller by Sea and Land, this Day in England) who Joysully prefented theirs and mine own voluntary willingness, to do His Majesty's Service in this kind; who most graciously accepted of the Offer; and Encouraged me by many Favours in my weak Undertakings. Wherefore with all speed, I contrived in my Mind, the best Model I could, whereby I might effect my Design. The Adventurers Monies were instantly ready, and put into a Treasurer's Hand, that there might be no want of preliat Pay, for any thing I thought necessary for the Voyage.

I was ever of the Opinion, That this particular Action might be better effected by one Ship, than by two Conforted; because in those Icy Seas, so much subject to Fogs, they might be easily separated; I forbear to speak of Storms and other Accidents; as that a Rendezvous in Discoveries, cannot surely, or without much hindrance be appointed; and that speedy Perseverance is the life of such a Business: Wherefore I re-

folved to have but one Ship, the Ship-Boat, and a Shallop.

A great Ship (as by former Experience I had found) was unfit to

be forc'd thorow the Ice, wherefore I made choice of a well-conditioned, strong Ship, of the Butthen of 70 Tun; and in G O D, and that only Ship, to put the hope of my suture Fortunes.

The Ship resolved upon, and that in less time than Eighteen Months our Voyage could not be effected: I next considered how our Ship of Seventy Tuns in Bulk and Weight thight now be proportioned, in Victuals, namely, and other Necessaries; this was all done, as contractedly as we could: And the number of Men it would serve, at ordinary Allowance for the forementioned time, was found to be Twenty Two, a small

small number to perform such a Business, yet double sufficient to Sail

the Ship with provident Carefulness.

The Baker, Brewer, Butcher, and others, undertake their Offices upon their Credits; knowing it to be a general Business, and their utter undoing if they failed in Performance, but truly they proved themselves Masters in their Arts, and have my praise for their honest Care; in them consisting a great part of the Performance of the Voyage.

The Carpenters go in hand with the Ship, to make her as strong

and serviceable, as possible in their Understandings they could.

Every thing being duly proportioned, and my small number of Men known, I began to think of the Quality and Ability they should be of.

Voluntary Loyterers I at first disclaimed, and published I would have all Unmarried, Approved, Able, and Healthy Seamen; in a few days an abundant number presented themselves, surnished with general sufficiency in Marine Occasions. I first made Choice of a Boatswain, and fome to Work with him, for fitting the Rigging of the Ship; and as things went forward, Ship'd the Subordinate Crew: And all things being perfectly ready, I Ship'd the Master's Mates; and last of all, the Master of my Ship, and my Lieutenant. The whole Company were Strangers to me, and to each other, (as by way of Familiarity) but yet privately recommended by worthy Merchants, for their Ability and Faithfulness. I was fought to by divers, that had been in Places of the chiefest Command in this Action formerly; and others also that had used the Northerly Icy-Seas; but I utterly refused them all, and would by no means have any with me that had been in the like Voyage, or Adventures, for fome private Reasons unnecessary here to be related; keeping thus the Power in my own Hands, I had all the Men to acknowledge immediate Dependance upon my felf alone; both for Direction and Disposing of all, as well of the Navigation, as all other things whatfoever.

In the mean time, the better to strengthen my former Studies in this Business, I feck after Journals, Plots, Discourses, or whatever else might

help my Understanding.

I set Skillful Workmen to make me Quadrants, Staves, Semicircles, &c. as much, namely, as concern the Fabrick of them; not trusting to their Mechanick Hands, to divide them; but had them divided by an Ingenious Practitioner in the Mathematicks. I likewise had Compass-Needles, made after the most reasonablest and truest ways that could be thought on: And by the First of April, every thing was ready to be put together into our hopeful Ship.

In the mean space, I made Journey up to London, to know His Majesty's further Pleasure, and to make known to him my Readiness; who, calling for the beforementioned honourable Knight, I speedily after received His Majesty's Royal Letters, with Directions for proceeding in my Voyage, and my Discharge; whereupon I had forth the Ship into the

Road, expecting a fair Wind to begin the Voyage.

·Vol. II. 6 G A

# VOYAGE

For the Discovery of a

## North-West Passage

INTO THE

### SOUTH SEA.

THE 2d of May 1631. I took my leave of the Worshipful Merchant-Adventurers in this Action, in the City of Briftel; and being accompanied with a Reverend Divine, one Mr. Thomas Palmer, and divers of the Merchants, with others of my Kindred and Native Countrymen, I repaired on Board. Here Mr. Palmer made a Sermon; exhorting us to continue Brotherly-Love amongst us, and to be bald to profess the True Christian Religion where ever we should happen, in this our Peregrination. After they had received such Entertainment as my Estate could afford them, they departed for This Afternoon, I made a Review of all Things, as well of Clothes, and other Necessaries, as of Victuals; and where there was found any want, we were presently furnished.

The 3d of May, (after Prayer for a prosperous Success to our Endeavours) about three a Clock in the Afternoon, we came to Sail, and shood down the Channel of Severne, with little Wind, but slowly got forward to the Westward of Lundie; and then the Wind opposed it self so strongly against us, that we were driven to bear up and come to an Anchor in Lundie-Road the 5th in the Evening, where we remained until the 8th in the Morning. Now hoping the Wind would savour us, we came to Sail, but we were forc'd to put into Milford, where we came to an Anchor about Mid-

night. Here we remained till the 17th in the Morning; when with the first favouring Wind, we proceeded and Doubled about Cape Cleere of Ireland.

The 22d we were in the Latitude 51. 26. and the Blaskes did bear of us North-East, about 12 Leagues off; which Blaskes is in Latitude 52. 4. Here I ordered the Course that should be kept; which was generally West North-West, as the Wind would give leave, which in this Course and Distance is very variable and unconstant.

The 4th of June, we made the Land of Greenland, standing in with it to have Knowledge of the Trending of it; it proved very thick foul Weather.

The 5th, by two a Clock in the Morning, we found our felves encompassed about with Ice; and endeavouring to clear our selves of it, (by reason we could not see far about us) we were the more engaged, and struck many searful Blows against it: at length we made seasons agreed piece, (it blowing a very storm) and with Poles wrought day and night to keep off the Ice; in which labour we broke all our Poles.

The 6th, about two a Clock in the Morning, we were befet with many extraordinary great pieces of Ice that came upon us, as it were with witliful violence; and doubtless had crushed us to pieces, if we had not let fall some Sail which the Ship presently felt. In escaping that danger, we ran against another

great piece, that we doubted whether our Ship had not been fav'd to pieces; but Pumping, we found she made no Water. The former pieces of Ice had crushed our Shallop all to pieces; wherefore I caused our long Boat speedily to be had up from betwixt the Decks, and put over-board; by belp whereof we again recovered our broken Shallop, and had her up on the Decks, intending to new build her. All this day, we did beat, and were beaten fearfully, amongst the ice, it blowing a very Storm. the Evening, we were enclosed amongst great pieces, as high as our Poop; and fome of the sharp blue corners of them did reach quite under us. All these great pieces (by reason it was the outfide of the Ice ) did heave and fet, and so beat us, that it was wonderful how the Ship could indure one blow of it; but it was God's only Preservation of us, to whom be all honour and glory. In this Extremity, I made the Men to let fall, and make what Sail they could, and the Ship forced her felf thorow it. tho' so tossed and beaten, as I thing never Ship was. When we were clear, we Sayed the Pumps, and found her stanch; upon which we went instantly to Prayer, and to praise God for his merciful delivery of us.

The 7th and 8th days, we endeavoured to Double about Cape Farewell, being still

pestered with much Ice.

The 9th, we were in Latitude 59. 00. and we made account the Cape Farewell bare of us Due-East, and some 10 Leagues off. The Blaskes in Ireland, is in Lat. 52. 4. and Cape Farewell in Lat. 59. 00. The Course is West North-West, and the Distance about 410 Leagues. I know very well these Latitudes, Courses, and Distance, do not exactly agree with Mathematical Conclusions; but thus we found it by Practice. The variation of the Compass in Lat. 52. 30. and 30 Leagues to the Westward of Ireland, is about 3. 00. to the Eastward; in Lat. 57. 00. about 310 Leagues West North-Welt, from the Blaskes, the Compass doth vary 9.00. to the Westward: In Lat. 59. 15. some 40 Leagues to the Eastward of Cape Farewell, the Variation is about 14. 45. In this Course I have been observant, whether there were any Current that did fet to the N. E. as some have written there did, and that as well in Calm weather, as otherwise; but I could not perceive any. Winds here are variable; and the Sea of an unfearchable depth. We have not of an unfearchable depth.

feen from Ireland hitherto any Whales or other Fish; the Weather, for the most part, was Foggy and Misty, that wets as bad as Rain.

The 10th, all the Morning, was very foul Weather, and a high-grown Sea, although we had Ice not far off about us, and some pieces as high as our Top-Mast-head. Our long Boat, which we were fain to Towe at Stern, (by reason we were Building our Shallop on our Decks) broke away, and put us to some trouble to recover her again. This we did, and made means to have her into the Ship, though very much bruised; and that I had two Men fore hurt, and like to be lost in the heaving of her in. By 8 of the Clock this Evening, we were shot up as high as Cape Desolation; for finding here the Land to trend away North and by East, we certainly knew it to be the Cape. It stands in Lat. 60. 00. and the Land from Cape Farewell to it, trends N. W. the distance about 40 Leagues. The Distance from Cape Defolation, to the South end of the Island of Resolution, is about 140 Leagues; the Course West, half a Point North. The Lat. of the South end of the Island, being 61.20. some 12 Leagues to the Westward of Cape Desolation, the Variation is 16.00. In this Course, we were much tormented, pestered and beaten with the Ice, many pieces being higher than our Top-Mast-head. In our way, we saw many Grampusses amongst the Ice, and it seemeth the Sea is full of them: The Weather for the most part, a stinking Fog, and the Sea very black; which I conceive to be occasioned by reason of the Fog.

The 17th at night, we heard the Rut of the Shore, as we thought; but it proved to be the Rut against a Bank of ice that lay on the Shore. It made a hollow and hideous noise, like an overfall of Water, which made us to reason amongst our selves concerning it; for we were not able to see about us, it being dark Night and Foggy. We flood off from it, till break of day, then in again; and about four a Clock in the Morning we saw the Land above the Fog; which we knew to be the Island of Resolution. This last Night was so cold, that, all our Rigging and Sails were fro-. zel. We endeavoured to compassabout the Southern Point of the Island; for that we were so much pestered with the Ice, and blinded with a very thick Fog. Here runs a quick Tide into the Straight, but the Ebb is as strong as the Flood:

The

The Fog was of such a piercing nature, that it spoiled all our Compasses, and made them flag, and so heavy withall, that they would not traverse. Wheretore I would advise any, that shall Sail this way hereafter, to provide Compasses of Museovia Glass, or some other matter that will endure the moisture of the \'eather. As the Fog cleared up. we could see the entrance of the Straight to be all full of Ice close thronged together. Endeavouring to go forward, we were fast enclosed amongst it; and so drove to and again with it, finding no ground at 230 Fathom, four Leagues from the Shore.

The 20th in the Morning, we had got about the Southern Point of the Island; and the Whad came up at West, and drove both us and the Ice upon the shore. When we were driven within two Leagues of the Shore, we came amongst the most strangest Whirlings of the Sea that possibly can be conceived: There were divers great pieces of Ice aground in 40 Fathom Water, and the Ebb coming out of the broken Grounds of the Island, amongst these Isles of Ice, made fuch a distraction, that we were carried round, sometimes close by the Rocks, fometimes close by those high pieces, that we were afraid they would fall upon us. We were so beaten likewise with the encountring of the Ice, that we were in a most desperate Estate. We made fall two great pieces of Ice to our fides, with our Kedger and Grapnels, that drew nine or ten Fathom, that fo they might be a-ground before us, if so be we were driven on the Shore. But that delign failed us; and now from the top seeing in amongst the Rocks, I fent the . Boat ( for now we had finished her ) to fe if the could find fome place of Security; but she was no sooner parted, but the was inclosed, and driven to hale up on the Ice, or else she had been crushed to pieces. They ran her over the Ice from piece to piece; and in the mean space, with the whirling and incountring of the lce, the two pieces brake away from our fides, and carried away our Kedger and Grapnels: Then we made figns to the Boat, to make all the haste the could to us, which the perceiving, did; the Men being with much difficulty inforced to hale her over many pieces fof ice. In the mean space, we made some fail, and got to that piece of Ice, that had our Grapnel on it, which we again recovered. By this time, was our Boat come; and we put a fresh Crew into her,

and fent her to fetch our Kedger, which she endeavoured with much danger of Boat and Men. By this time, the Ship was driven so near the Shore, that we could fee the Rocks under us and about us; and we should be carried with the Whirlings of the Waters, close by the Points of Rocks, and then round about back again; and all this, notwithstanding the fail we had abroad; that we expected continually when the would be beaten to pieces. In this extremity, I' made them to open more Sail, and to force her in amongst the Rocks and broken Grounds, and where there was many great pieces of Ice a-ground. We went over Rocks, that had but 12 or 13 foot Water on them; and so let fall an Anchor. This Anchor had never been able to wind up the Ship, but that (by good fortune) the Ship ran against a great piece of Ice that was a-ground. This Rush, brake the main Knee of her Beak-head, and a corner of it tore away four of our Main-Shrouds, and an Anchor that we had at the Bowe, fastened into it, and so stopt her way, that she did wind up to her Anchor. faw the sharp Rocks under us, and about us; and had but 15 foot Water; being also in the sides way, where all the Ice would drive upon us: Our Boat we could not fee, which made us doubt fhe had been crushed to pieces. In her, was the third part of our Company; but by and by we faw her come about a point amongst the Rocks. She had recovered our Kedger; which made us fomething joyful: With all speed we laid out Hawfers to the Rocks, and every one did work to the best of his strength, to Warp her out of this dangerous place, to the Rocks side; where we had three fathom Water, and were under the shelter of a great piece of Ice that was aground, which should keep off the Ice, that otherwise would have driven upon Here we lay very well all the Ebb; but when the Flood came, we were affaulted with pieces of Ice, that every half hour put us into despairable distress. We did work continually, and extreamly, to keep off the Ice. At full Sea, our great piece of Ice (which was our Buckler) was a float; and do what we could, got away from us, and left us in a most eminent danger, by reason of the Ice that drove in upon us. But the Ebb being once made, this great piece of Ice came again a-ground very favourable to us, and sheltered us all the rest of the, Ebb. All Night we wrought hard, to

shift our Cables and Hawsers; and to make them fast aloft on the Rocks, that the Ice might the better pass under them. All Day and all Night it Snow'd hard, and blew a very Storm at West, which drove in all the Ice out of the Sea upon us. In working against the violence of the Ice, the Flooke of our Kedger was broken, two Arms of our Grapnels, and two Hawsers, our Shallop being again vely much bruised; whereupon to work

we go on all hands to repair it.

This Tide, the Harbour was choaked full of Ice, so that it did seem firm and unmoveable; but when the Ebb was made, it did move. Some great pieces came a ground, which did alter the Course of the other Ice, and put us on Here, notwithstanding all our uttermost Endeavours, she settled upon a fharp Rock, about a yard above the Main-Mail; and as the Water Ebbed away, she hung after the Head, and heel'd to the Offing. We made Cables and Hawfers aloft to her Mafts, and fo to the Rocks, straining them tough with our Tackles; but she as the Water Ebbed away, funk ftill; that at length she was fo turned over, that we could not stand in her. Having now done all to the best of our Understandings, (but to little purpose) we went all upon a piece of Ice, and fell to Prayer, befeeching God to be merciful unto us. It wanted yet an hour to low Water, and the Tide did want a foot and a half to Ebb, to what it had Ebbed the last Tide. were careful Observers of the low Waters, and had marks by Stones and other Things which we had fet up, so that we could not be deceived. The Ship was so turn'd over, that the Postless of the Forecastle was in the Water; and we did look every minute when she would over-fet. Indeed at one time, the Cables gave way, and she sunk down half a foot at that flip; but unexpectedly it began to flow, and fenfibly we perceived the Water to rife apace, and the Ship withall. Then was our Sorrow turned to Joy, and we all fell on our Knees, praising God for his Mercy, in so miraculous a Deliverance.

As foon as fine was freed from this Rock, we wrought hard to get her further off. All the Flood, we were pretty quiet from the Ice; but when the Ebb was made, the Ice came all driving again upon us, which put us to a great extremity. We got as many pieces betwixt us and the Rocks as we could, to fence us from the Rocks. There came a great

Vol. II.

piece upon our quarter, which was above 300 of my Paces about, but it came a-ground. Thus did divers great pieces belides, which was the occasion, that this Tide the Harbour was quite choakt up; so that a Man might go any way over it, from side to side. When it was three quarters Ebb, these great pieces that came a-ground, began to break with a most terrible thundering noise; which put us in a great fear, that those about us would break us all to pieces. But God

preserved us.

The 22th in the Morning, the Water veer'd to a lower Ebb than the last Tide had done by two foot, whereby we faw God's mercies apparent in our late extremity. That Flood we had some respite from our Labours; but after full The great Sca, our hopes Ebb too. piece that was by us, fo stopt the Channel, that the Ice came all driving upon us; fo that now undoubtedly we thought we should have lost our Ship. To work thereupon we go, with Axes, Bars of Iron, and any thing proper for fuch a purpose; to break the corners of the Ice, and to make way for it to drive away from us. It pleased God to give good Success to our Labours; and we made way for some, and tended off the rest; and got fo much of the fofter fort of the Ice betwixt us and the Rocks, that we were in pretty fecurity. But at low Water, those pieces that were a-ground, breaking, kept a most thundering noise This day I went ashore, and about us. built a great Beacon with Stones upon the highest place of the Island, and put a Crofs upon it, and named this Harbour, The Harbour of God's Providence. In the Evening, the Harbour was fuller of the Ice than ever it had been fince we came hither; and the greater pieces grounded, and ftopt the rest, that none went out the Ebb, but the Ship lay as if she had lain in a bcd of Ice.

The 23d in the Morning, with the Flood, the Ice drove up amongst the broken grounds; and with the Ebb, drove all out (it being then very Calm) except one extraordinary great piece; which coming a-ground not far from us, settled it self in such a manner, that we much fear'd him. But there came no mose great Ice after him; otherwise we must have expected as great danger, as at any time heretofore. I took the Boat, and went ashore upon the Eastern-side, to see if I could find any place freer from danger than this unfortunate place, where amongst the Rocks I discried a

бΗ

likely

likely place. From the top of the Hill where I was, I could fee the Ship. It was now almost low Water; at which instant the forementioned piece of Ice brake with a terrible noise into four pieces, which made me doubtful it had not spoiled the Ship, it being full half Mast high. I made what hafte I could to the Boat, and so to the Ship, to be satisfied; where I found all well, God be thanked, for that the Ice had broken from the I instantly fent away the Boat, to Sound the way to a Cove that I had found; which was a very dangerous passage for the Boat. At her return, we Unmoor'd the Ship, and with what speed possible warpt away from amongst this terrible ice. We were not a Mile from them, but they brake all to pieces; and would furely have made us bear them company, but that God was more merciful unto us. We got about the Rocks. and fo into this little Cove which I had fo newly discovered. Here we made fast to the Rocks, and thought our selves in indifferent safety; which being done, I went ashore again, to wander up and down, to see what I could discover. found it all broken rocky Grounds, and not so much as a Tree, Herb, or Grass upon it: Some Ponds of Water there were in it, which were not yet thawed, and therefore not ready for the Fowl: We found not in the Snow any footing of Deer, or Bears, but Foxes we faw one or two.

We found where the Salvages had heen, but it was long fince. They had made five Hearths, and we found a few Firebrands about them; and some Heads and Bones of Foxes, with some Whale-Bones: I could not conceive to what purpose they should come thither; for we could find none or very little Wood on the shoares side, and no Fish at all; though we did daily endeavour to take But it may be the Season was not vet come. I named this Cove by the Master's Name of my Ship, Price's Cove. The Latitude of it is 61. 24. the Varia-The Firebrands and Chips which I spake of, had been cut with some Hatchet or Instrument of Iron. From the top of the Hills, we could see the Islands that are on the South shore, and commonly called Sir Thomas Button's Isles: They did bear South and By-East, half a Point Easterly; some 14 or 15 Leagues distant upon the Change day, it flows here seven a Clock and a half, and the Tide highest at most three Fathoms. I he Flood comes from the Eastwards, and thither it returns. I have been observant from the top of the Hills, whence I might descry the great pieces of Ice two or three Leagues from the Shore, drive to and again with the Flood and Ebb indifferently. Hence I collected, that affuredly there is no Current fets in here, but that it is a meer Tide. Near the Shore, the Eddies whirl into twenty Manners, when the Ebb is made; which is, because it comes out of the broken ground amongst the Ice that is a-ground near the Shore: Besides which reason, there be divers Rocks lying under Water, on which you shall have now 30, then 12, and anon but 8, and then 20 Fathom; and these uncertainties occasions such distractions. I would therefore advise none to come too near those dangerous Shores, for fear he lose his Ship, and so by consequence all: The last Night we took better rest than we had done in ten Nights before.

And this Morning, being the 24th, there sprung up a fair gale, of Wind at East; and after Prayer we unfastened our Ship, and came to Sail, steering betwixt great pieces of Ice, that were aground in 40 Fathom, and twice as high as our Top-Mast-head.

We went forth of this Cove, upon the Flood, and had none of those Whirlings of the Waters, as we had at our going into it. We endeavoured to gain the North Shore, and kept our felves within a League of the Shore of the Island of Resolution, where we had some clear Water to fail thorow. In the Offing, it was all thick throng'd together, as might be possible. By twelve a Clock we were fast inclosed, and notwithstanding it blew very hard at East, yet we could make no way through it; but the hard corners of the Ice did grate us with that violence, as I verily thought it would have grated the Planks from the Ships fides. Thus we continued in torment till the 26th day, driving to and again in the Ice, not being able to fee an Acre of Sea from Top-Mast-head.

The 26th, was Calm Sun-shine Westher, and we took the Latitude and Va-, the Va-The Latitude is riation. riation we Sounded, and had ground at 140 Fathom, small white Sand. I caused the Men to lay out some Fishing Lines, but to no purpose; for I could not perceive that the Bait had been so much as The Nights are very cold, fo, touched. that our rigging freezes; and the fresh Ponds of Water stand upon the Ice above haif an Inchighick.

The

The 27th, there fprung up a little Gale at South-East, and the Ice did fomething open. Hereupon we let fall our Forefail, and forced the Ship thorow the throng of Ice. In the Evening, the Wind came contrary, at W. N. W. and blew hard; which caused us to fasten to a great piece, to which we remained Moor'd till the 29th.

The 28th, I resolved, that here is no Current, and that by many Experiments which I have made: namely, by taking Marks on the Land, and noting our drift to and again with the Ebb and Flood for many days together, as well in Calm Weather as otherwise. By all these Experiments, I found exactly, that the Tide was no stronger there than that be-

twixt England and France.

The 20th in the Morning, there fprung up a fine Gale at E. and the Ice did open fomething, so that we did force the Ship thorow it with her Foresail. By 12.4 Clock, we were gotten into some open Water, with a fine Gale of Wind at East, and so clear Weather that we could fee the Island of Resolution. The North-end did bear of us E. N. E. some

12 Leagues off.

From the 29th, till the 5th of July, we failed continually thorow the Ice; with variable Winds and Fogs, and fometimes Calm. At Noon we had a good Observation, and were in Latitude 63. 15. and then we saw Salishary Island, bearing W. by N. some seven Leagues off, with much Ice betwixt it and us; to Weather which, we were driven to stand to the Northward. Soon after we faw Prince Charles's Cape and Mill Island; and to the N. N. W. (and indeed, round about us) the Sea most infinitely pestered This did grieve me very much; for whereas I had determined to profecute the Discovery to the North-Westward, I saw it was not possible this. We were moreover driven back again with contrary Winds, still chosed and pestered with ice, and with all the Perils and Dangers incident to fuch Adventures, fo that we thought a thoufand times that the Ship had been beaten to pieces.

By the 15th of July we were got betwixt Digge's Island and Narringham's Mand, not being able to get more Northward. There for an hour or two we

had some open Water.

But before I proceed further, it were not amis in some manner o describe the Straight, which be ins at the Hland of Regulation, and ends act of eggs a Mand.

If you go down into the Bay, the Straight is about 120 Leagues long; and trends W. N. W. and E. S. E. generally. In the entrance, it is about 15 Leagues broad; and then on the Southward fide is a great Bay. About the middest it is likewise about 15 Leagues broad, and then the Land opens fomething wider; so that betwirt Dieges's Island, and Cape Charles, it is about 20 Leagues broad: Betwixt which two, stands Salisbury Island and Nortingham Island. If it be clear Weather, you may fee both the South and the North shores; ordinarily, the depth in the middle of the Straight is 120 Fathous, white Sand : A certain Tide runs in it, and no Current: The North Shore is the straightest, and the clearest from Ice too. Along the North Shore, you have many low. finall Islands which cannot be feen far off from the Land; and in many places, the Land makes as if it had small Sounds into it. The Main-land on both fides is indifferent high Land. And so much for Discourse may suffice, referring you to

the Plot for the particulars.

The 16th, Being now resolved of the Impossibility to do any thing to the North Westward, for the Reasons aforefaid, I gave order to the Master of my Ship to Steer away, W. S. W. to have a fight of Mansfield's Island, which the next day by three a Clock in the Afternoon, we had; having had so much dangerous foul Weather amongst the Ice, that we strooke more fearful blows against it than we had ever yet done. This was the first day that we went to half Allowance of Bread Flesh days, and I ordered things as sparingly as I could. Two of our Men complain likewise of Sickness; but soon afterward recovered. In the Evening we came to an Anchor; and I fent the Boat ashore to try the They brought me word, that Tides. whilst the Boat was ashore, it slowed about some three foot; and as we found by the Ship, and by the Ice, the Water at that time came from the W. S. W. and that at the highest Tides (so far as they could perceive) it had not highed above two Fathom: They found that the Savages had been upon it, by certain Fires which they found, and heaps of Stones, Tracks of other Beafts, but Foxes they could not find. The Wind was so contrary, and the Weather so Foggy, that we were fain to spend fome Powder to recover our Boat again.

Next Morning, being the 17th, the Wind came fomething favourable, and we Weighed. The Shore being fomething clear of ice, (though very thick all to the Offing) we stood alongst it S. and S. by W. fome to Leagues. In the Afternoon, the Wind came contrary, and we came again to an Anchor, within a Mile of the Shore; for to Sea-board, was all thick Ice, and unpassable. I went afhore my felf, to be resolved of the Tide, and found whilft I was ashore, that it did Flow two Foot; and at that time the Flood came from the S. W. by W. 1 deubted it was an half Tide, which afterwards I found to be true. I found where the Savages had been upon the Iffand; but could fee little or no drift-Wood on the Shore, no Beafts on the Island, nor Fishes in the Sea. It Flows on the Change Day about a 11 a Clock. We saw some Fowl on it; of which we killed one, and returned on Board. This Island is very low Land, little higher than a dry Sand-Bank. It hath Ponds upon it of fresh Water, but no Grass; and is utterly Barren of all Goodness.

The 18th in the Morning, the Wind came fomething favourable, and we Weighed and came to Sail; for thelce was all come about us. We endeavoured to proceed to the Westward, intending to fall with the Western-Land about the Latitude 63. 00. By 12 a Clock (having been much peftered) we were come to a firm range of Ice; but it pleased God that the Wind larged, and we Stowed away S. S. W. at Noon in Latitude 62. 00. By four in the Evening (having escaped dangerous Blows) we were come (as we thought) into an open Sea, and joyfully steered away W. and W. by N. although that Joy was soon quailed. By 10 at Night we heard the Rut of the Ice; and it grew a thick Fog, and very dark with it: nevertheless we proceeded, and the nearer we came to it, the more hideous noise it made.

The 19th, by three in the Morning, we were come to it, and as it did clear a little, we could fee the Ice; which were as thick rands of Ice, as any we had yet feen. These being unpassable, and moreover the Wind at N. W. we Stowed alongst it, hopeing to Weather it to the Southward; but at last, we became so blinded with Fog, and so incompassed with Ice, that we could go no further.

The 20th in the Morning (notwithflanding the Fog) we endeavoured to get to the Westward; our Ship beating and knocking all this while most fearfully.

In this Wilfulness we continued till the 21 st. when being fast amongst the Ice. I observed we were in Latitude 60. 33. and then looking what Damage our Ship might have received, we could perceive that below the Plate of Iron, which was, before her Cut-Water, she was all bruifed and broken; the two Knees she bad before, to strengthen her, spoiled and torn; and many other Defects, which we could not by any means come to Notwithstanding all this, and mend. the extraordinary thick Fog, (that we could not see a Pistol shot about us) we proceeded with the hazard of all.

Till the 27th; which was the first time we had clear Weather to look about us: The Wind withal came up at South, and the Ice did open something; so that we made some way thorow it to the Westward. In the Evening, we were fast again, and could go no further; the Wind veering from the South to the East, and blowing a fresh Gale. This occasioned our Griefs the more, that with a good Wind we could not go forward; putting therefore a Hawfer upon a piece of great Ice, to keep the Ship close to it, we patiently expected for better For-Since we came from Mansfield's island, our depth was commonly 110 and 100 Fathom Oozie ground. Now the Water begins to Showld; for this present 27th, driving fast to and again in the Ice, we have but 80 Fathom ground as before.

The 28th and 29th, we were so fast inclosed in the Ice, that notwithstanding we put abroad all the Sail that was at our Yards, and that it blew a very hard gale of Wind, the Ship stirred no more than if she had been in a Dry-Dock. Hereupon we went all boldly out upon the ice, to sport and recreate our selves, letting her stand still, under all her Sails. It was flat, extraordinary large Ice, the worst to deal withall that we had yet I measured some pieces, which found to be 1000 of my Paces long. This was the first day that our Men began to Murmur, thinking it impossible to get either forwards or backwards. Some were of the Opinion, that it was all fuch Ice betwixt us and the Shore. Others, that the Bay was all covered over; and that it was a doubt whether we could get any way, or to any Land, to Winter in. The Hights were long; and every Night it did so freeze, that we

could not Sail amongst the Ice by Night, nor in thick foggy Weather. I comforted and encouraged them the best I could; and to put away these Cogitations, we drank a Health to His Majesty on the Ice; not one Man in the Ship, and the still under all her Sails. I most ingoniously confess, that all their Murmuring was not without reason: Wherefore doubting that we should be frozen up in the Bea, I ordered that Fire should be made but once a day; and that with a certain number of Shides, that the Steward should deliver to the Cook by tail, the better to prolong our Fuel whatfoever should happen.

The 30th, we made fome way thorow the Ice; we heaving the Ship with our Shoulders, and with Mawls and Groes of Iron, breaking the corners of the Ice, to make way. As we got forwards, the Water shoulded apace; so that I believe it to be some Island. At Noon we Observed thorow the Fog, with the Quadrant, upon a piece of Ice, and were in Latitude 58. 54. our Depth 30 Fathom. Weight out Hooks, to try to catch some Fish, but to no purpose, for there is not

any in this Bay.

The 31st, we laboured as aforesaid, and got something forward. At Noon we were in Latitude 58. 40. our Depth 23 Fathom. It was very thick hazie Weather, or else I think we should have seen the Land.

The first of August, the Wind came up at West, which drove us to the Eastward, where our Depth increased to 35 Fathom. At Noon, (by Observation with the Quadrant, on the Ice) we were in Latitude 58. 45. At six a Clock the Evening, we might perceive the Ice to heave and set a little; which was occasioned by a swelling Sea that came out of the South-West. This did comfort us very much; hoping shortly we should get out of the Ice.

The 2d, it did blow hard at S. W. and yet we could not feel the forementioned swelling Sea; which did again quench the hopes we had formerly con-

ceived.

The 3d, we did see a little open Water to the Northwestward; and did seel a swelling Sea from the West; which doth assure us, that there is an open Sea to the Westward.

The 5th, we faw the cat clear; but could by no means work of selves to it with our Sails; wherefor about fix in the Evening, we limit the fathom Water; li with Poles Vol. II.

and Oars to fend off the Ice, and let it pass to Leewards. We continued this continued this Labour all Night.

The 6th, in the Morning, the Windcame up at N. W. and we Weighed with much Joy, as hoping now to get into an open Sea to the Southward. This by Noon we had done, and were in Latitude 58. 28. very free of Ice. The Wind did large upon us, so that we stood away N. W. to get up as high to the Northward as we could; and so to come Coasting to the Southward. We went to Prayer, and to give God thinks for our delivery out of the Ice.

The 9th, (being in Latitude 59. 40.) we came again to the Ice, which lie very thick to the North: Since we came out of the Ice, our Depth increased to 110 Fathom, and now decreaseth again: So that I think we approached towards the

Shore.

The 10th proved very thick foggy Weather; the Wind contrary, and the Water shoalding apace, we came to an

Anchor in 22 Fathom.

The rith, in the Morning, we Weighed, and made in for the Shore, and about Noon faw the Land, our Depth being 16 Fathom, in Latitude 59. 40. The Land to the N. of us did trend N. by E. and so made a point to the Southward, and trended away W. by S. which we followed; making it for that place, which was formerly called Hubberr's Hope. And so it proved indeed, but it is now hopeless.

Two or three Words now, concerning the Bay that we have past over. It is from Digge's Island, to the Westernland (in Latitude aforesaid) about 160 Leagues, the Course W. S. W. the Va-

riation.

The Tides do set in the middle of the Bay, East and West, as we have often tryed by our Lead a-ground: But nearer the Shores, as they are forced by the Land, I am of the opinion that in the Ocean, or in large Bays, the Tides do naturally fet E. and W. and that this doth give little hope of a Passage. greatest Depth we had in the Bay was 110 Fathom, and fo shoalding as you ap: proach to Land, we Coasted round about this forementioned little Bay, which is fome 18 Leagues deep in 8 and fix Fathoms, and in the bottom of it, we were in two Fathom and a half Water, and faw the firm Land almost round about Then we proceeded to the Southward fix and feven Fathom Water, within fight of the breach of the Shore, keeping the Lead continually going, and in the Night we would come to an Anchor. This Night here being little Wind, we came to an Anchor with our Kedger; but in VVeighing of him, we lost him, having no more aboard us.

The 12th, we were in Lat. 58. 46. some two Leagues from the Shore. The

Variation is about 17 Deg.

The 13th in the Afternoon, (it being fomething Hazie) we faw fome Breaches a-head us: our Depth was 9 and 10 Fathom; and Luffing to clear our selves of them, we fuddenly struck upon the Rocks; the Ship then being under our two Topsails, Foresail, and Spritsail, with a fresh gale of Wind. In this fearful Accident, we struck all our Sails amain; and it did please God to send two or three good swelling Seas, which did heave us over the Rocks, into three Fathom and presently into three Fathom and a half, where we Chopt to an An-chor; and assayed the Pumps; but we found she made no Water, although she had three fuch terrible Blows, that we thought her Mast would have shivered to pieces, and that she had been assuredly We hoisted the Boat over-Bulged. board, and double Mann'd her, to go feek and found a way out of this perilous place. She was no fooner gone, but there rose a Fog; so that we were fain to spend some Powder that she might hear whereabouts we were. The Wind dull'd fomething, otherwise it had doubtful whether she could ever have recovered to us again. After she had been absent about two hours, she brought us word, that it was all Rocks and Breaches round about us; and that withal, she had found a way, where there was not less than two Fathom and a half, and that afterwards the Water did deepen. We did prefently Weigh, and follow the Boat, and past over two Ledges of Rocks, on which there was scarce 14 foot Water: then it did deepen to three, four, and so to 14 Fathom; then it shoulded again to nine. It being now Night, we came to an Anchor; where we rid indifferent well all the Night. In the Morning, the Wind came contrary, so that we could not go that way we intended to clear our felves, and therefore we went to Work, to fit our Holds, to Splice our Cables; and made ready two Shot, and so placed them in the Hold, that they might upon all Occasions run clear; the ends of them being fastued to the Main-Mast. We likewise lookt to our Anchors, and fitted our spare ones. We got out our long

Boat from betwixt the Decks; which was very much broken and bruised. The Carpenter went to work to fit her, (for I intended to Tow the Shallop at Stern) and so to have the Boats ready at an instant, either to lay out Anchors, or to be serviceable to what God should be pleased to try our Faith and Patience withall; for in him was our only truft, and our hope upon his favour in our honest Endeavours. At Noon, in Latitude 57. 45. we could see the Land from the N. W. to the S. E. by E. with Rocks and Breaches; and the Rocks that we came over, dry above Water, whereby I knew it flows here two Fathoms at least. At Noon, I fent the Boat off to Sound to the Esseward; because the Water finoalded when we came to an Anchor. She brought us word, the shoaldest Water she had been in was seven Fathom. We intending thereupon to Weigh, the Wind came Easterly, so that we could not budge; but lay here the 14th all Night with a stiff gale of Wind.

The 15th in the Evening, our Cable galded off; by reason of which perilous and sudden Accident, in which we had not time to put a Buoy to it, we lost our Anchor, and were driven into four Fathom Water, before we could set our Sails. This when we had done, we stowed S. S. E. the Wind being at East, but the Water shoalded to three Fathom. Then we stowed N. N. E. and it did deepen by Degrees to 10 Fathom; and because it grew dark, we came to an Anchor, and rid a good stress all Night.

The 16th in the Morning, the Wind came up at N a fresh Gale; and we Weighed and came to Sail. By nine a Clock it grew to be a very Storm; and we turned to and again in 10 Fathom Water. In the Evening, the Wind dull'd; and we stood S. W. to have a sight of Port Nelson; which Course we stood all Night, by the Stars, being in Lat. 57.25. the Variation about 17 Degrees.

The 17th in the Morning, we ftood South; and our Depth decreased by Degrees to eight Fathoms. At Noon we had good Observation, being in Latitude 57. It is and we make Account, that we are time fer or seven Leagues of the Southern-side of Port Nelson. Here the colour of the later changed; and was of a puddled and sandy-red colour. We shad the fix Fathoms, and could from Top-Mass-head for the later change to be sufficient of the pounts of the seven we fixed of the later change to be sufficient to the sufficient of the seven we fixed the seven we fixed the seven we will be sufficient to the seven we fixed the seven we seven when the seven we will be sufficient to the seven we seven when the seven we seven we seven we seven when the seven we seven we seven we seven when the seven we seven we seven we seven we seven we seven when the seven we seven we seven when the seven we seven we seven we seven when the seven we seven we seven when the seven we seven when the seven we seven we seven when the seven we seven when the seven we seven we seven when the seven we seven which we seven when the seven we seven when the seven we seven we seven when the seven we seven we seven when the seven we seven when the seven we seven we seven when the seven we seven we seven when the seven we seven we seven when the seven when the seven we seven when the seven we seven we seven when the seven we seven we seven when the seven we seven when the seven we seven when the seven when the seven we se

where

where the Water was again of the colour of the Sea.

The 18th, as the Wind and Weather favoured us, and the Storm was broken up, we flood in again South, and came again into thick puddlish Water, into eight, seven, and fix Fathom, and then off again, for that it grew thick foggy Weather, keeping our Lead continually

'going, Night and Day.

The 19th, being fine clear Sun-shine Weather, we stood in again into the thick puddlish Water, into eight Fathom, where we came to an Anchor to try the Tides; for that from Top-Masthead we could not now see the Land. We were at Noon (by good Observation) in Latitude 57. 20. and the Tide did set N. W. by W. and S. E. by E. It did run two Knots and a half in two Glasses: I resolved that this was nothing but Shoalds to the Land. In the Afternoon it began to Snuffle and Blow, fo that we had much ado to get up our Anchor. This being done, we stood E. S. E. but the Water shoalded apace. Then we stood E. and it deepened a little. Evening the Wind came up at W. and then we stood E. S. E. into 10 and eight, and afterwards S. E. as our Depth did guide us by our Lead and the colour of the Water, into seven and six Fathoms.

The 20th, at fix in the Morning, we faw the Land, it being a very low flat Land. We stood into five Fathoms, to make it the better, and so stood alongst it. At Noon we were in Latitude 57.00. We named it, The New Principality of South Wales, and drank a Health in the best Liquor we had to Prince Charles his Highneis, whom God preserve. We stood alongst it, and came to a Point where it trends to the Southward; near to which Point, there are two small Islands. In the Evening it was Calm, and we came to an Anchor. The Tide fet as aforesaid. There we rid all that Night, and the next day, by reason the Wind was con-There went a chopping short Sea; and the Ship did labour at it exceedingly leaping in Spreetfail-yard, Forecastle, and all; for as yet we had not trimmed her well, to ride. About nine at Night, it was very dark, and it did We did perceive by the blow hard. Lead, the Ship did drive; wherefore bringing the Cable to Capitang to heave in our Cable, (for we did think we had loft our Anchor) the Anther hitcht again, and upon the chop ing of a Sea, threw the Men from the Laptang. A small Rope in the than gotten foul

about the Cable, and about the Masters eg too; but with the help of God he did clear himself, though not without fore bruifing. The two Mates were Hurt; the one in the Head, the other in the Arm. One of our lustiest Men was strucken on the Breast with a Bar, that he lay sprawling for life; another had his Head betwixt the Cable, and hardly escaped. The rest were flung where they were fore bruised; But our Gunner (an honest and a diligent Man) had his Leg taken betwixt the Cable and the Capitang, which wrung off his Foot, and tare all the flesh off his Leg, and crushed the Bone to pieces, and forely withall bruised all his whole Body; in which miserable manner he remained crying till we had recovered our felves, our memory and strengths to clear him. Whilst we were putting him and the rest down to the Chirurgeon; the Ship drove into shoalde Water, which put us all in fear; we being so sorely weakened by this blow, which had hurt eight of our Men. It pleased God, that the Anchor held again; and she rid it out all Night. By Midnight, the Chirurgeon had taken off the Gunner's Leg at the Gartering place, and drest the others that were hurt and bruised; after which we comforted each other as well as we could.

The 22th, we Weighed, and ftood a little off into deeper Water, expecting a better Wind; which in the Afternoon favoured us. We ftood in again for the Shore, and alongft it we proceeded. It is very floald about four Leagues off, and full of Breaches.

. The 23th, at Noon, we were in Latitude 56. 28. In the Evening, the Wind came contrary, and we were fain to turn to and again. All this Month, the Wind hath been very variable, and continued not long upon one Point; yet it happened so, that we can get but little forward.

The 20th, there sprung up a fine gale at West, but very thick Weather; nevertheles we stood into seven and fix Fathom, the Water very thick and puddless. At Noon it cleared; and we could see that we were imbayed in a little Bay, the Land being almost round about us.

We stood out of it, and so alongst it, in light, till the 27th in the Morning; when we came to higher Land than any we had yet seen since we came from Nortingham Island. We stood into it, and came to an Anchor in sive Fathom. I sent off the Boat, well-mann'd and arm'd, with order in Writing what they were

to do, and a charge to return again before Sun-fet. The Evening came, and no News of our Boat; we shot and made false fires, but had no answer; which did much perplex us, doubting that there had been some disaster befaln her, through carelessness, and in her we should lose all. We aboard, at prefent, were not able to Weigh our Anchor, nor Sail the Ship. At last we saw a fire upon the Shore, which made us the more doubtful, because they did not anfwer our shot, nor false Fires with the We thought withall, that it had been the Salvages, who did now triumph in their Conquest. At length, they came, all fafe and well; and excused themselves, in that upon their coming ashore, it did Ebb so suddenly, that a Bank of Sand was so presently dry without them, as they could not come away. till that was covered again; and with the they pacified me: They reported, That there was great store of drift-Wood, on the Shore; and a good quantity growing on the Land. That they faw the Tracks of Deer and Bears, good Store of Fowl, ( of which they had killed some) but no sign of People. That they past over two little Rivers, and came to a third; which they could not pass: That it did flow very near three Fathoms fometimes, as appeared by the Shore. That it was low Water at four a Clock; that the Flood came from the N. W. and that it flowed half Tide, which both they and we had perceived by the Ship. At low Water, we had but three Fathom, where we did The Wind began to blow hard at E. whereupon we weighed and flood to the Northward till Midnight; then in again: And in the Morning we faw the. Land, and then it began to blow hard, and as we stood off, it encreased to a very Storm; fo that at length we could not maintain a pair of Courses, but tried under our Main-Course, all Day and all Night; sometime turning her Head to the Landward, sometime to the Offing.

The 20th; in the Morning, we made account we had droven back again fome 16 or 18 Leagues; and in the Morning (as it cleared) we faw a Ship to Leeward of us fome three or four Leagues; so we made Sailtand bore up with ther; She was then at an Anchor in 13 Fathom. It was His Majesty's Ship; and Cupitain Fax commanded in her.

I salund him according to the manner of the Sea, and received the like of him

So I stood in to see the Land, and thought to Tack about, and keep Weather of him, and to send my Boat on Board of him; but the Wind shifted, so that for that time I could not. In the Evening, I came to Weather of him, and sent my Boat on Board of him, who presently weighed, and stood off with me till Midnight, and then we stood in again.

In the Morning, Captain Fox and his Friends, came on Board me; where I entertained them in the best manner I could, and with such fresh Meat as I had gotten from the Shore: I told him, how I had named the Land, The South Principality of Wales. I shewed him how far I had been to the Eastward; where I had landed; and in brief, I made known to him all the dangers of this Coast, as far He told me, how he as I had been. himself had been in Port Nellon, and had made but a curfory discovery hitherto; and that he had now been aland, nor had not many times feen the Land. In the Evening, after I had given his Men fome Necessaries, with Tobacco and other Things which they wanted, he departed an Board his Ship; and the next Morning stood away S. S. W. since which time I never faw him. The Wind fomething favouring me, I stood in for the Shore, and so proceeded alongst it in fight.

This Month of August ended with Snow and Hail; the Weather being as cold, as at any time I have felt in

England. The first of September, we coasted along the Shore in ten Fathonis, and when it cleared, in fight of Land. At length the Water shoalded to fix and five Fathom, and as it cleared, we saw it all Breaches to Leeward, to we hull'd off. N. N. E. but still raised Land. Night, we had much ado to get fafely At Mid. out of this dangerous Bay. night, the Wind came up at S. and fo we took in our Sails, and let the Ship drive to the Northward into deeper This Day, was the first time Water. the Chirurgeon told me, that there were the Men tainted with Sickness As Noon, we were in Lati

By Midnight it broke up, and the 3d in the Morning we stood in again; and . by a eleven we saw it. Here we found the Land to trend S. S. E. and S. fo that we knew we were at a Cape Land; and named it Cape Henrietta Maria, by her Majesties Name, who had before named our Ship. At Noon, we were in Latitude 55. 05. and that is the height of the

From Port Nelson to this Cape, the Land trends (generally) E. S. E. but makes with Points and Bays; which in the particulars doth alter it a Point, two or three. The Distance is about 130 Leagues; the Variation at this Cape taken by Amplitude, is about 16 Degrees. A most shoald and perilous Coast, in which there is not one Harbour to be

found.

The 3d Day in the Afternoon, we had a tearing Storm at N. which continued till midnight in extream violence.

The 4th in the Morning (the Storm being broke up) we stood in again S. W. The Weather was very thick, and we Sounded continually; but by Noon it cleared, and we faw the Land. Here it did trend S. by E. and the Tides did fet alongst it, with a quick Motion. In the Evening there came a great rowling Sea out of the N. N. E. and by eight a Clock it blew very hard at S. E. and by reason of the incounter of the Wind and this great Sea, the Sea was all in a Breach; and to make up a perfect Tempest, it did so Lighten, Snow, Rain and Blow, all the Night long, that I was never in the like: We shipt many Seas, but one most dangerous, which rackt us fore and aft, that I verily thought it had funk the Ship, it strook her with such a The Ship did labour most terribly in this diffraction of Wind and Waves; and we had much ado to keep all things fast in the Hold, and betwixt Decks.

The 5th in the Morning, the Wind shifted S. W. but changed not his Condition; but continued in his old anger and fury. In the Afternoon, it shifted again to the N. W. and there showed his uttermost Malice; and in that tearing violence, that nor I, nor any that were then with me, ever faw the Sea in such a Breach. Our Ship was so tormented, and did fo labour, with taking it in on both fides, and at both ends, that we were in a most miserable Di-stress in this so unknow face. At eight a Clock in the Every the Storm brake up, and we d for quietnes in Vol. II.

the Night following, not one having flept one wink in 30 hours before. If this Storm had continued Easterly, as it was at first, without God's Goodness we had

all perished.

The 6th, the Wind was at S. W. fa that we could do no good to the Westward. We spent the time therefore in trimming of our Ship: We brought all our Coals (which for the most part was great Coal) aft; as we also did some other Things, and all to lighten her afore. Others did pick our Bread, whereof there was much wet; for do what we could, we shipt abundance of Water betwixt Decks, which ran into the Hold, and into our Bread-Room; for the Sea, indeed, so continually over-rackt us, that we were like Jonas in the Whales-Belly. We over-looked our Tacks and Shoots, with other Riggings of Stress; because that henceforward we were to look for no other but Winter Weather. This Evening our Boatswain (a painful Man, and one that had laboured extreamly these two or three days) was very Sick, Swouning away three or four times; infomuch that we thought verily he would presently have died.

The 7th in the Morning, the Wind came up at S. E. and we stood away S. W. under all the Sail we could make. this Course, we saw an Island, and came close aboard it, and had 20 Fathom Water, which was some comfort to us; for hitherto we could not come within four or five Leagues of the Shore, at that depth. This Island stands in Latitude 54. 10. In the Afternoon we stood away S. W. and in the Evening had the Shoalding of the Western Shore, in ten, eight, and seven Fathom, but it was so thick, that we could not see the Land. It is about 14 Leagues betwixt this Island

and the Main.

The 8th was thick, foggy, and Calm; which so continued till the 9th about six in the Morning; The Wind then coming up at S. S. W. (though very foggy) we stood to the Eastward, keeping our Lead going continually. In the Evening the Water shoalded to ten and nine Fathom, wherefore we flood off and on all

Night.
The 10th we made it; finding it at Island of about eight or nine Leagues . long. It stands in Latitude 53. 5. and about 15 Leagues from the Western-The part of it that we Coasted, trends W. N. W. I named it my Lord Weston's Island: We stood still away to the Eastward, it being broken foggy

6 K Weather.

Weather. In the Afternoon, we difcryed Land to the Eastward of us ; which made like three Hills or Hummocks: Towards them we Sail, keeping our Lead still going, and very circumspect. At length we also saw Land to the Southward of us; whereupon we Loof up, and now make for that; by Course as we had set it in the thick dark Fog. We came in amongst such low broken Grounds, Breaches, and Rocks, that we knew not which way to turn us; but God be thanked it was but little Wind, and so we came to an Anchor: Soon after it cleared, at which time we could fee nothing but Sands, Rocks, and Breaches, round about us; that way only excepted which we came in. I fent presently the Boat to Sound amongst the Shoalds and Rocks, that if we should be put to extremity, we might have some knowledge which way to go. This Night proved Calm and fair Weather, and we rid quietly.

The 11th in the Morning, I went in the Boat ashore my self; and whilst I was a Land, I fent the Boat about amongst the broken Grounds, to Sound. I found this Island utterly barren of all Goodness; yea, of that which I thought eafily to have found; which was Scurvy-Grass, Sorrel, or some Herb or other, to have refreshed our sick People. could not perceive that the Tide did flow here (ordinarily) above two foot. There was much drift Wood on the Shore; and some of it drove up very high, on the North-side of the Island; whereby I judged that the Storms were very great at North in the Winter. Thus I returned aboard; and fent many of our fick Men to another part of the Island, to see if they themselves could fortunately find any relief for their Griefs. At Noon, by good Observation, we were in Latitude 52. 45. In the Evening, our Men returned comfortless; and then we Weighed and stood to the Westward, coming to an Anchor under another Island, in 20 Fathoms.

The 12th in the Morning, it began to blow hard at S. E. which was partly of the Shore; and the Ship began to drive; it being foft oozie ground. We heaved in our Anchor thereupon, and came to Sail under two Courses. Whilst the most were busic in heaving out of Top-sails; some, that should have had special Care of the Ship ran her ashore upon the Rocks; out of meer carelesses, in looking out and about or heaving of the Lead after they had seen the Land all Night.

long, and might even then have feen it, if they had not been blinded with felf conceit, and been enviously opposite in Opinions. The first blow, struck me out of a deep Sleep, and I running out of my Cabin, thought no other at first, but I had been wakened (when I saw our danger) to provide my felf for another World.

After I had controul'd a little Passion in my felf, and had checkt some bad Counsel that was given me, to revenge my felf upon those that had committed this Error: I ordered what should be done to get off these Rocks and Stones. First, we hal'd all our Sail aback-slays; but that did no good, but make her beat the harder: whereupon we ftruck all our Sails amain; and furdel'd them up close, tearing down our Stern, to bring the Cable thorow the Cabin to the Capstang, and so laid out an Anchor to heave her I made all the Water in hold to be stav'd, and set some to the Pumps to Pump it out, and did intend to do the like with our Beer; Others I put to throw out all our Coals, which was foon We quoiled out our and readily done. Cables into our long Boat; all this while, the Ship beating fo fearfully that we saw some of the Sheathing swim by Then stood we, as many as we could, to the Capstang; and heaved with fuch a good will, that the Cable brake, and we lost our Anchor. Out, with all speed, therefore, we put another: We could not now perceive whether she did Leak or no; and that by reason we were imployed in pumping out the Water, which we had Bulged in Hold; though we much doubted, that she had received her Death's wound; wherefore we put into the Boat the Carpenter's Tools, a Barrel of Bread, a Barrel of Powder, fix Muskets, with some Match; and a Tinder-Box, Fish, Hooks and Lines, Pitch and Okum; and to be brief, whatever could be thought on in fuch an extremity. All this we fent ashore, to prolong a miserable life for a few days. We were five hours thus beating, in which time she struck 100 blows; infomuch, that we thought every stroke had been the last that it was possible she could have endured. Water, we could not perceive in all this time to flow any thing at all: at length, it pleased God, she beat over all the we knew not whe-Whereupon, to hads, till we then we faw then we law

how much Water she did make in a Glass. We found her to be very leaky; but we went to Prayer and gave God thanks it was no worfe; and fo fitted all things again, and got further off and came to an Anchor. In the Evening, it began to blow very hard at W. S. W. which if it had done whilst we were on the Rocks. we had loft our Ship without any Redemotion. With much ado, we Weigh'd our Anchor, and let her drive to the Entward amongst the broken Grounds and Rocks, the Boat going before, Sound-At length, we came amongst Breaches, and the Boat made figns to us that there was no going further. Amongst the Rocks therefore we again came to an Anchor, where we did tide all Night, and where our Men which were tired out with extream Labour, were indifferent well refreshed. Here I first noted, that when the Wind was at S. it flowed very little or no Water at all, so that we could not bring our Ship aground to look to her; for we did

Pump almost continually.

The 13th at Noon we Weighed, and stood to the Westward; but in that Course, it was all broken Grounds, Shoalds and funken Rocks; so that we wondered with our selves, how we came in amongst them in a thick Fog. we shap'd our Course to the Northward, and after some Consultation with my Asfociates, I refolved to get about this Land, and so to go down into the bottom of Hudson's Bay, and see if I could discover a way into the River of Canada; and if I failed of that, then to Winter on the Main Land; where there is more comfort to be expected, then among Rocks or Islands. We stood alongst the Shore, in fight of many Breaches. When it was Night, we stood under our Foresail, the Lead still going. At last, the Water shoalded upon us, to ten Fathom, and it began to blow hard. We Tackt about, and it did deepen to 12 and 14 Fathom, but by and by, it shoulded again to eight Fathom. Then we Tackt about again, and suddenly it shoulded to fix and five Fathom, so we struck our Sail amain, and chopt to an Anchor, resolving to ride it out for Life and Death. We rid all Night a great stress; so that our bits did rife, and we thought they would have been torn to pieces.

At break of day the 14th, we were joyful Men; and when we could look about, we described an 1 and some two Leagues off, at W. by 1 and this was the mould that let a bout and Here did.

run a distracted, but yet a very quick Tide; of which we taking the opportunity, got up our Anchor, and stood N. W. to clear our felves of this Shoald. In the Afternoon, the Wind came up at N. E. and we flood alongst the Eastern shore in sight of a multitude of Breaches. In the Evening it began to blow a Storm not Sail-worthy, and the Sea went very high, and was all in a Breach. Shallop, which we did now Tow at Stern, being Moor'd with two Hawsers, was funk; and did spin by her Moorings, with her Keel up, 20 times in an hour. This made our Ship to Hull very broad, fo that the Sea did continually over-rake us; yet we endured it, and thought to recover her. All Night, the Storm continued with violence, and with fome Rain in the morning, it then being very thick Weather. The Water shoalded apace, with such an over-grown Sea withal that a Sail was not to be endured; and what was as ill, there was no trusting to an Anchor. Now therefore began we to prepare our felves, how to make a good end of a miserable tormented life. About Noon, as it cleared up, we saw two Islands under our Lee, whereupon we bare up to them; and feeing an opening betwixt them, we endeavoured to get into it before Night; for that there was no hope of us, if we continued out at Sea that Night. Therefore come Life, come Death, we must run this hazard. We found it to be a good Sound; where we rid all Night fafely, and recovered our Strengths again, which were much impared with continual Labour. But before we could get into this good Place, our Shallop broke away, (being Moor'd with two Hawsers) and we lost her to our great Grief. Thus now had we but the Ship-Boat, and she was all torn and bruised This Island was the same that we had formerly Coasted the Western fide of, and had named my Lord Weston's Island. Here we remained till the 19th, in which time it did nothing but Snow and blow extreamly, infomuch that we durft not put our Boat over-board.

The 19th, the Wind shifted N. N. E. and we Weigh'd and shood to the Southward; but by Noon the Wind came up at S. and so we came to an Anchor under another island, on which I went assisted, and named it, The Earl of Bristol's Island. The Carpenter wrought hard in repairing our Boat: Whilst I wandered up and down on this Desart Island, I

could

could not perceive, that ever there had been any Salvages on it; and in brief, we could find neither Fish, Fowl, nor Herb upon it, so that I returned comfortless on Board again. The Tides do high about some six Foot, now that the Wind is Northerly. The Flood comes from the North, and it doth flow half The full Sea this Day was at one a Clock. Here, seeing the Winds continne so Northerly, that we could not get about to go into Hudson's Bay; we confidered again what was best to do, to look out for a Wintering place. Some advised me to go for Port Nelson, because we were certain that there was a Cove, where we might bring in our Ship. liked not that Counsel; for that it is a most perilous place, and that it might be fo long ere we could get thither, that we might be debar'd by the Ice. Moreover, seeing it was so cold here, as that every Night our Rigging did freeze; and that fometimes in the Morning, we did shovel away the Snow half a foot thick off our Decks, and in that Latitude too: I thought it far worse in the other I resolved thereupon, to stand again to the Southward, there to look for some little Creek or Cove for our

The 21th, the Wind came up at N. and weWeighed, although it was a very thick Fog, and stood away S. W. to clear our felves of the Shoalds that were on the point of this Island. This Island is in When we were clear, we Lat. 53. 10. steer'd away S. At Noon the Fog turned into Rain, but very thick Weather, and it did thunder all the Afternoon, which made us doubt a Storm; for all which, we adventured to proceed. the Evening, the Wind encreased, and blew hard; wherefore we took in all our Sails, and let her drive to the Southward, heaving the Lead every Glass. Depth, when we took in our Sails, was 30 Fathom, and it did encrease to 45. which was a great comfort to us in the dark: At Midnight, our Depth began fuddenly to decrease; and as fast as the Lead could be heaved, it shoulded to 20 Fathom, wherefore we chopt to an Anchor and trimmed our Ship aft, to mount on the Sea, and fitted all things to ride it. out. There was no need to bid our Men watch, not one of them putting his Eyes together all the Night long. Werld it out well all the Night, although the Sea went very lofty, and that it did blow very hard.

The 22d in the Morning, when we could look about us, we faw an island under our Lee some Leagues off, all being Shoalds and Breaches betwixt us and it. At Noon ( with the help of the Windward Tide) we attempted to heave up our Anchor, although the Sea still went Joining all our Strengths very lofty. therefore, with our best skills, God be thanked, we had it up; but before we could fet our Sails we were driven into Indeavouring thereupon nine Fathom. to Double a Point, to get under the Lee of this Island, the Water shoulded to feven, fix, and five Fathom, but when we were about, it did deepen again, and we came to an Anchor in a very good place; and it was very good for us that we did, for the Wind increased to a very Storm. Here we rid well all the Night, took good rest, and recovered our spent The last Night and Strengths again. this Morning it did Snow and Hail, and was very cold: Nevertheless, I took the Boat and went ashore to look for some Creek or Cove to have in our Ship, for the was very leaky, and the Company become fickly and weak, with much Pumping and extream Labour. Island, when we came to the Shore, it was nothing but ledges of Rocks, and Banks of Sand, and there went a very Nevertheless, I great Surf on them. made them row thorow it, and ashore I got with two more, and made them row off without the Breaches; and there to come to an Anchor and to stay for me: I made what speed I could to the top of a Hill, to discover about, but could not see what we looked for: Thus because it began to blow hard, I made haste towards the Boat again. I found that it had Ebbed fo low, that the Boat could not by any means come near the Shore for me, so that we were fain to wade thorow the Surf and Breaches to her; in which, some took such a Cold, that they did complain of it to their Dying-Day. But now it began to blow hard, fo that we could not get but little to Windward toward our Ship, for the Wind was shifted since we went ashore, and return to the shore, we could not, by reason of the Surf. Well, we Row for life; they in the Ship, let out a Buoy by a long Warp, and by God's Affiftance we got to it, and so haled up to the Ship, where we were well welcom'd, and we A CONTRACTOR OF THE PARTY OF TH is was a Preful how we was Winter

Wes-

Weather already. I named this Island, Sir Thomas Roe's Island: It is full of fmall Wood; but in other Benefits not very rich, and stands in Latitude 52. 10. At Noon we Weighed, seeing an Island that bare S. S. E. of us, some four Leagues off, which was the highest Land we had yet feen in this Bay; but as we came near it, it fuddenly shoulded to six, five, and four Fathom, wherefore we ftruck our Sails amain, and chopt to an Anchor; but it was very foul ground, and when the Ship was winded up, we had but three Fathom at her Stern. As it cleared, we could fee the Breaches all alongst under our Lee, holding it safe therefore to stay long here, we settled every thing in order, for the Ship to fall the right way. We had up our Anchor, got into deep Water, and stood over again for Sir Thomas Roe's Island; which by Night we brought in the Wind of us, some two Leagues off, which did well shelter us. The Tides run very quick here amongst these Shoalds; and their times of running Ebb, or Flood, be very uncertain: Their Currants are likewise so distracted, that in the Night there is no Sailing by the Compass; wherefore we were fain to feck every Night some new place of Security to come to an Anchor.

The 24th in the Morning, it did lower, and threaten a Storm, which made us with the Windward Tide, Weigh to get nearer under the Island. It was very thick foggy Weather; and as we stood to the North Eastward, we came to very uncertain depths; at one cast 20 Fathom, the next seven, then 10, five, eight, and three, and coming to the other Tack, we were worse than we were before, the Currants making a fool of our best Judgments in the thick Fog when we could fee no Land-Marks. It pleased God that we got clear of them, and endeavoured to get under the Lee of the Island. This being not able to do, we were fain to come to an Anchor in 35 Fathom, some two Leagues off the Shore: All this Afternoon (and indeed all Night too) it did Snow and Hail, and was very Cold.

The 25th we Weighed, and thought to get to the Eastward; but as we Tackt to and again, the Wind shifted so in our Teeths, that it put us within a quarter of a Mile of the very Shore; where we chopt to an Anchor, and rid it out for Life and Death. Such Miseries as these we endured amonost the Shoalds and Vol. II.

broken Grounds, or rather more desperate than I have related, (very unpleafant perchance to be read) with Snow, Hail, and stormy Weather, and colder than ever I felt it in England in my life. Our Shoote-Anchor was down twice or thrice a day, which extream Pains made a great part of the Company sickly.

All this lasted with us, until the 30th of this Month of September, which we thought would have put an end to our Miseries; for now we were driven amongst Rocks, Shoalds, Over-falls, and Breaches round about us, that which way to turn we knew not; but there rid amongst them in extremity of distress. All these Perils, made a most hideous and terrible noise in the Night Season; and I hope it will not be accounted ridiculous, if I relate with what Meditations I was affected, now and then, amongst my ordinary Prayers; which I here afford the Reader, as I there conceived them in these few ragged and torn Rhimeś.

H, my poor foul, wby dost thou grieve to see, So many Deaths muster to murther me? Look to thy self, regard not me; for I Must do, (for what sem) perform, or die. So thou mayst free thy self from being it A dung-hill dungeon; a meer sink of sin, And bappily be freed, if thou believe, I ruly in God through Christ, and ever live. Be therefore glad yet: ere thou go from hence, For our joint Sins, let's do some Penitence, Unseignedly together. When we part, I'll wish the Angels foy, with all my beart. We have with considence relied upon A rulty Wire, touchs with a listle Stone, Incompast round with Paper, and alass to bouse it harmless, nothing but a Glass, And thought to shun a thousand dangers, by The blind diress on of this senseless fift. When the sierce Winds shatter'd black nights assunder, Whose pitchy Clouds, spiriting forth Fire and Thunder, Hath shook the Earth, and made the Ocean roar; And run to hide it, in the broken shore:

Now thou must Steer by saith; a better guide, 'Twill bring thee safe to Heaven against the Tide of Satans Malice. Now let quite gales

Of Satans Malice. Now let quite gales

The first of Ottober was indifferent sair Weather, and with a Windward Tide, out went our Boat, to Sound a Channel to help us out of this perilous Place. The Boat, within two hours returned; and told us, how she had been a way where there was no less than 12 Fathom. We presently thereupon Weighed, but sound it otherwise, and came amongst many strange Races, and Over-salls, upon which there went a very great and breaking Sea: As we proceeded, the Water shoalded to six Fathom.

Well! There was no remedy, we must go forward, happy be lucky, seeing there neither was any riding, and as little hope to turn any way with a Sail, but that there appeared present death in it. It pleased God so to direct us, that we got thorow it, having no less than five several, and all very uncertain depths. The Water, fometimes deepened to 20 Fathoms, then upon a fudden, it shoalded to feven, fix, and five Fathoms; fo we struck all our Sails amain, and chopt to an Anchor, where we rid till Midnight, for life and death, it blowing a merciless gale of Wind, and the Scagoing very lofty, and all in a breach: The Ground was foul Ground too, infomuch that we doubted our Cable every Minute.

The 2d in the Morning was little Wind; wherefore taking the opportunity of the Tide, the Boat went forth to Sound; which returning again in two hours, rold us how they had Sounded about that should, and had found a place of some safety to ride in, and had been in no less Water than five Fathom. Weighed, and found our Cable galled in two places; which had foon failed us, if the foul Weather had continued. flood the same way that the Boat did direct us; but it proved so Calm, that we came to an Anchor in 18 Fathom. I took the Boat, and went ashore on an Island that was to the Southward of us, which I named, The Earl of Danby's Island: From the highest place in it, I could see it all broken Grounds and Shoalds to the Southward; and rather worse than any thing better than that which we had been in. I found that the Salvages had been upon it, and that it was full of I made hafte to the Boat to found the Bay for fear of Shoalds and funken Rocks, but found it indifferent Toward the Evening it began to blow hard; wherefore we made towards the Ship. She put forth a Buoy and a Warp; and we rowing for life to recover her, were put to the Leeward of her; but by getting hold of the Warp, we hal'd up to her. The Boat we left half full of Water, our felves being as wet as drown'd Rats; and it made us the more rejoyce, that we had escap'd this great danger. All this Night, we had a very hard rode-steede, it blowing . a most violent gale of Wind, with Snow and Hail.

The 3d about Noon, the Wind dull'd, very lump; and we had up our Anchor, standing in to Thaw of

further into the Bay into four Fathom and a half Water. Here we came again to an Anchor, with our fecond Anchor; for many of our Men are now fick, and the rest so weakened, that we can hard-ly weigh our Shoote Anchor: I took the Boat, and went prefently ashore to fee what Comfort I could find: This was the first time that I put foot on this Ifland, which was the fame that we did, after Winter upon. I found the Tracks of Deer, and faw fome Fowl; but that that did rejoyce me most, was, that I did fee an opening into the Land, as if it had been a River. To it we make with all speed, but found it to be Barr'd, and not two Foot Water at full Sea on the Bar; and yet within, a most excellent fine Harbour, having four Fathom Water. In the Evening, I return'd aboard, bringing little Comfort for our Sick Men more than Hopes.

The 4th, it did Snow and Blow very hard, yet I got ashore, and appointed the Boat to go to another place, ( which made like a River) and to Sound it. the mean time, I went with four more, some four or five Miles up into the Country, but could find no relief all that way for our Sick, but a few Berries only. After we had well wearied our selves in the troublesome Woods, we return'd to the Place I had appointed the Boat to tarry for me; where at my coming I still found her, she having not been where I had ordered her, for it had blown such a fierce gale of Wind, that she could not row to Windward. Thus we return'd aboard with no good News. continued foul Weather, with Snow and Hail, and extream Cold, till the 6th, when with a favouring Wind, we stood in nearer to the Shore, and here Moor'd the Ship.

The 7th, it Snow'd all day, so that we were fain to clear it of the Decks with Shovels, and it blew a very Storm withal. It continued Snowing and very cold Weather, and it did so freeze, that all the Bows of the Ship, with her Beakhead, was all Ice; about the Cable also, was Ice as big as a Man's middle. Bows of the Boat were likewise frozen half a Foot thick, so that we were fain to hew and beat it off. The Sun did shine very clear; and we tore the Topfails out of the Tops, which were hard frozen in them, into a lump; so that there they hun; a Sunning all day, in a of them. After the very lump;

Boat was fitted, we Rowed towards the Shore, but could not come near the place where we were used to Land, for that it was all thickned Water with the Snow, that had fallen upon the Sands, that are dry at low Water. This made it so difficult to Row, that we could not fet through it with four Oars, yet something higher to the Westward, we got ashore. Seeing now the Winter to come thus extreamly on upon us, and that we had very little Wood aboard, I made them fill the Boat, and went aboard and fent the Carpenter and others to cut Wood, others to carry it to the Waterfide, whilst the Boat brought it aboard, for I doubted that we were likely to be debar'd the Shore, and that we should not go to and again with the Boat. It was miferable and Cold already aboard the Ship; every thing did freeze in the Hold, and by the Fire fide: Seeing therefore that we could no longer make use of our Sails, (which be the Wings of a Ship) it raised many Doubts in our Minds that here we must stay and Winter. we had brought fo much Wood aboard as we could conveniently Stow, and cnough as I thought would have lasted two or three Months, the fick Men defired that some little House or Hovel might be built a-shore, whereby they might be the better sheltered, and recover their Healths. I took the Carpenter, (and others whom I thought fit for fuch a purpose) and choosing out a Place, they went immediately to work upon it. In the mean space, I my self, accompanied with some others, wandered up and down in the Woods, to fee if we could discover any signs of Salvages, that so we might the better provide for our Safeties against them. We found no anpearance that there was any on this Island nor near unto it: The Snow by this time was half-Leg high; and Stalking through it, we returned comfortless to our Companions, who had all this time wrought well upon our House. They aboard the Ship, took down our Top-fails in the mean while, and made a great Fire upon the Hearth in the Hatch-way; fo that having well thaw'd them, they folded them up, and put them betwixt Decks, that if we had any Weather, they might bring them again to Yard: Thus in the Evening we returned aboard.

The 12th, we took our Main-sail from the Yard, which is hard frozen to it, and carried it as eto cover our House with all, being st fain to Thaw

it by a great fire: By Night they had covered it, and had almost hedged it about; and the fix Builders did desire to lie in it ashore that Night, which I condescended unto, having sirst fitted them with Muskets and other Furniture, and a charge to keep good watch all Night. Moreover, they had ashore two Greyhounds, (a Dog and a Bitch) which I had brought out of England, to kill us some Deer, if happily we could find any.

By the 13th at Night, our House was ready; and our ix Builders defired they might Travel up into the Country to see what they could discover.

The 14th, betimes in the Morning, being fitted with Munition, and their Order to keep together, (but especially to seek out some Greek or Cove for our Ship) they departed. We aboard, took down our two Top-Masts and their Rigging, making account if we did temove, to make use of our Foresail and Mizen.

The 15th in the Evening, our Hunters returned very weary, and brought with them a smull, lean Deer, in four quarters, which rejoyced us all, hoping we should have had more of them to refresh our Sick Men withall. They reported, that they had wandered above 20 miles, and had brought this Deer above 12 miles, and that they had feen The last Night, nine or ten more. they had a very cold Lodging in the Woods; and so it appeared, for they lookt all almost starved, nor could they recover themselves in three or four days They faw no fign of Salvages, nor of any ravening wild Beafts, nor yet any hope of Harbour.

The 17th, my Lieutenant, and five more, defired they might try their Fortunes in Travelling about the Island. But they had far worse luck than the others, although they endured out all Night, and had wandered very far in the Snow, (which was now very deep) and returned comfortless and miserably difabled with the Coldness. But what was worse than all this, they had lost one of their Company, John Barton, namely, our Gunner's Mate; who being very weary, meerly to fave the going about, had attempted to go over a Pond that was a quarter of a Mile over; where when he was in the very middest, the. Ice brake and closed upon him, and we Considering these never faw him more. Disasters, I resolved to Fish no more with

with a golden Hook; for fear, I weakned my felf more with one Hunting than twenty fuch dear Deers could do me good. Being now affured, that there was no Salvages upon the Island, nor yet about us on the other Islands; no, nor on the Main neither, as far as we could discover, (which we further proved by making of Fires) and that the cold Seafon was now in that extremity, that they could not come to us, if there were any; we comforted and refreshed our selves, by fleeping the more fecurely. changed our Island Garison every week, and for other refreshing we were like to have none till the Spring.

From this 10th, to the 29th, it did (by interims) Snow and blow so hard, that the Boat could hardly adventure afhore, and but feldom Land, unless the Men did wade in the thick congealed Water, carrying one another. We did fenfibly perceive withall, how we did daily fink into more Miseries. The Land was all deep covered with Snow, the Cold did multiply, and the thick Snow-Water did increase; and what would become of us, our most merciful God

and Preferver knew only.

The 29th, I observed an Eclipse of the Moon, with what care possibly I could, both in the trial of the Exactness of our Instruments, as also in the Observation: I refer you to the Observation in the latter end of this Relation, where it is at large described. This Month of Octoher ended with Snow and bitter cold Weather.

The first of November I cast up my Accounts with the Steward concerning our Victual, the third part of our time being this day out. I found him an honest Man; for he gave me an Account every Week what was spent, and what was still in the hold remaining under his Hand: I would take no Excuse of Leakage or other waste, unless he did daily show it me. Every Month, I made a new Survey; and every fix Months, put what we had spared, by it self; which now was at least a Months Provision of Bread, and a Fortnights of Pease and Fish, &c.

The 3d, the Boat endeavoured to get ashore, but could not set thorow the

thick congealed Water.

The 4th, they found a Place to get ashore, and so once in two or three days, till the oth, bringing Beer to our Men ashore in a Barrel, which would freeze firmly in the House in one Night. Other Provision they had store. The Ice Beer being Thaw'd in a Kettle, was not good; and they did break the Ice of the Ponds of Water, to come by Water to drink. This Pond-Water had a most loathsome fmell with it; fo that doubting left it might be infectious, I caused a Well to be funk near the House. There we had very good Water, which did tafte (aswe flattered our selves with it) even like Milk.

The 10th, (having store of Boasts for such a purpose ) I put the Carpenter to work, to make us a little Boat which we might carry (if occasion were) over the Ice and make nie of her, where there was Water. At Noon I took the Latitude of this Island by two Quadrants, which I found to be 52, 00. I urged the Men to make traps to catch Foxes, for we did daily fee many. Some of them were pied, black and white; whereby I gathered that there was fome black Foxes, whose Skins, I told them, were of a great value; and I promised, that who loever could taken one of them, should have the Skin for his Reward: Hereupon, they made divers Traps, and waded in the Snow (which was very

deep) to place them in the Woods.

The 12th, our House took fire, but we foon quenched it. We were fain to keep an extraordinary fire Night and Day; and this Accident made me order a watch to look to it continually; feeing, that if our House and Clothing should be burnt, that all we were but in a woeful Condition. I lay ashore till the 17th, all which time our Miseries did increase. It did Snow and Freeze most extremely. At which time, we looking from the Shore towards the Ship, she did look like a piece of Ice in the fashion of a Ship, or a Ship resembling a piece of Ice. The Snow was all frozen about her, and all her fore-part firm Ice, and so was she on both sides also. Our Cables froze in the Hawse, wonderful to behold. I got me aboard, where the long Nights I spent, with tormenting Cogitations; and in the Day time, I could not see any hope of Saving the Ship. This I was affured of, that it was most impossible to endure these Extremities long. Every Day the Men must beat the Ice off the Cables; while fome within board, with the Carpenters long Calking Iron, did dig the Ice out of the Hawfes; in which work, the Water would freeze on their Clothes and Hands, and would so Benumb them, that they d hardly get into the Ship, without being heav'd in with a Rope.

The 19th, our Gunner, (who as you may remember, had his Leg cut off) did languish irrecoverably, and now grew very weak; desiring, that for the little time he had to live, he might drink Sack altogether, which I ordered he should do.

The 22th in the Morning he died. An honest and a strong-hearted Man. He ad a close-boarded Cabin in the Gunroom, which was very close indeed; and as many Clothes on him as was convenient, (for we wanted no Clothes) and a Pan with Coals, and a Fire continually in his Cabin: For all which warmth, his Plaister would ficeze at his Wound, and his Bettle of Sack at his Head. We committed him at a good distance from the Ship unto the Sea.

The 23th, the Ice did increase extraordinarily, and the Snow lay on the Water in flakes, as it did fall; much Ice withal drove by us, yet nothing hard all this while. In the Evening, after the watch was fet, a great piece came athwart our Hawse, and four more followed after him, the least of them a quarter of a Mile broad; which in the dark did very much aftonish us, thinking it would have carried us out of the Harbour, upon the shoalds Easter-point, which was full of Rocks. It was newly congealed, a matter of two Inches thick, and we broke thorow it, the Cable and Anchor induring an incredible stress, fometimes stopping the whole Ice. that off three Muskets, fignifying to our Men ashore, that we were in Distress; who answered us again, but could not help us. By ten a Clock it was all past; nevertheless, we watched carefully, and the Weather was warmer than we had felt it any time this Month. Morning, at break of Day, I fent for our Men aboard, who made up the House, and arrived by ten, being driven by the way, to wade thorow the congealed Water, so that they recovered to the Boat with difficulty. There drove by the Ship many pieces of Ice, though not fo large as the former, yet much thicker: One piece came foul of the Cable, and made the Ship drive.

As foon as we were clear of it, we joyned our Strengths together, and had up our Eastermost Anchor; and now I resolved to bring the Ship a-ground, for no Cables nor Anchors could hold her: But I will here show y a the Reasons Vol. II.

why I brought her no fooner a-ground. First, It was all Stony-ground, some Stones lying dry, three or four foot above Water; fo that it was to be suspected, that it was the like all about us. Secondly, It did ordinarily flow but two Foot and a half here; and if she should bed deep in the Sands, we could not ever come to dig her out again; for that she would not be dry, by four or five Foot. Thirdly, It was a loofe Sind, which might rife with the Surf, or fo mount about her; that all our weak powers could not heave it away in the next Spring-time. Fourthly, Wedoubted the Tides would not high fo much in the Summer as they did now. Fifthly, We could not bring her out of the Tides way, which doth run fomething quick here; and the Ice, belides, might drive and mount up upon her, and foover let her, or tear her, and carry away her Planks, Iron-works and all; fo that we should have nothing left to finish our Pinnace with. Sixthly, If it did blow a Storm at N. W. or thereabouts, the Water would flow ten Foot and upwards; and that Wind being off the Shore, it would blow away all the Ice, and there would come in an extraordinary preat Surf about the shoald Eastern-Point, which was occasioned by a deep Over-Morcover, she would Leat extreamly; and if she were put up by the Sea, or that Surf, it was very doubtful that we should never have her off again. For these Reasons we endured all the extremity, still hoping upon some good and fortunate Accident. But now all our provident Deligns we faw to become Foolishness; and that a great deal of miserable Labour had been spent in vain With the Flood we Weighed by us. our Westermost Anchor, perceiving God's Assistance manifestly, because it happened to be fine warmWeather,otherwe had not been able to work. Wind was now South, which blew in upon the Shore, and made the lowest Tides. We brought the Ship into 12 Foot Water, and laid out one Anchor in the Offing, and another in shoald Water, to draw her a land at command. Our Hope also was, that some Stones that were to the Westward of us, would fend off some of the Ice. We then being about a Mile from the Shore, about ten a Clock in the dark Night, the Ice came driving upon us, and our Anchors came home. She drove fome two Cables length; and the Wind blowing 6 M

J

on the Shore, by two a Clock she came i-ground, and stopt much Ice; yet she ay well all Night, and we took some est.

The 25th, the Wind shifted Easterly, ind put abundance of Ice on us. When the Flood was made, we incouraged one mother, and to Work we go, drawing home our Anchors by main force, under great pieces of Ice, our endeavour being to put the Ship to the Shore. But to our great Discomforts, when the half Tide was made, (which was two hours before High-Water) the Ship drove amongst the Ice to the Eastward, (do what we could) and fo would have on the shoald Rocks. As I have formerly faid, these two days, and this day, was very warm Weather, and it did Rain, which it had not yet but once done, since we came hither; otherwise, it had been impossible we could have Withall, the Wind shifted wrought. also to the South, and at the very instant, blew a hard puff; which so continued for half an hour. I caused our two Top-fails to be had up from betwixtDecks, and we hoisted them up with Ropes in all haste, and we forced the Ship ashore, when she had not half a Cables length to drive on the Rocky Shoalds. In the Evening we broke way thorow the Ice, and put an Anchor to Shoreward in five Foot Water, to keep her to the Shore if possible it might be. Here Sir Hugh Willoughby came into my Mind, who without doubt was driven out of his Harbour in this manner, and fo starved at Sea. But God was more merciful to us. About nine a Clock at Night, the Wind came up at North-West, and blew a very Storm. This Wind was off the Shore, which blew away all the Ice from about us, long before we were affoat. There came in a great rowling Sea withall about the Point, accompanied with a great Surf on the Shore. And now were we left to the Mercy of the Sea on the Ground. By ten, she began to rowl in her Dock; and foon after, began to Beat against the Ground. We stood at the Capstang as many as could, others at the Pumps; for we thought that every fifth or fixth blow would have staved her to pieces. We heaved to the uttermost of our strengths to keep her as near the Ground as we could. By reason of this Wisid, it flowed very much Water, and we drew her up so high, that it was doubtfull if ever we should get her off again. She continued thus Beating, till two a Clock the next Morning, and then she again settled. Whereupon we went sleep to restore Nature; seeing the next Tide we expected to be again to mented.

The 26th, in the Morning-Tide, Ship did not float, whereby we had fo After Prayers, I called & quietness. Consultation of the Master, my Lieutenant, the Mates, Carpenter, and Boat, fwain; to whom I proposed, that now we were put to our last Shifts, and therefore they should tell me what they thought of it: Namely, whether it were not best, to carry all our Provision ashore; and that when the Wind should come Northerly, it were not fafest to draw her further off, and fink her. After many Reasonings they allowed of my purpose, and so I communicated it to the Company, who all willingly agreed to it. And so we fell to getting up of our Provisions; first our Bread, of which we landed this Day two Dry-Fats with a Hogshead of Beef; having much ado to fet the Boat thorow the thick congealed Water. In the Evening, the Wind came up at N. E. and E. and fill'd the Bay choakfull of Ice.

The 27th, the Bay continued full of Ice, which I hoped would so continue and freeze, that we should not be put to sink our Ship. This Day we could Land

nothing.

The 28th, at break of day, three of our Men went ashore over the Ice, unknown to me; and the Wind coming up at W. drove the Ice from betwixt us and the Shore, and most part out of the Bay also: And yet not so, that the Boat could go ashore for any thing. I made the Carpenter fit a place against all sudden Extremities, for that with the first N. W. or Northerly Wind, I meant to effect our last project. In the run of her, on the Starboard-side, he cut away the Sealing and the Plank to the Sheathing some four or five Inches square, some four Foot high from the Keel of her, that so it might be Boared out at an We brought our Bread which was remaining in the Bread-room, up into the great Cabin, and likewise all our Powder, setting much of our light dry things betwirt Decks.

The 20th, at five a Clock in the Morning, the Wind came up at W. N. W. and began to blow very hard. It was ordinary for the Wind to shift from the W. by the N. round about. So

first

first I ordered the Cooper to go down in Hold, and look to all our Cask; those that were full, to mawle in the Bungs of them; those that were empty, to get up, or if they could not be gotten . up, to Stave them. Then to quoil all our Cables upon our lower Tire; and to lay on our spare Anchors, and any thing that was weighty, to keep it down from rifing. By seven a Clock, it blew a Storm at N. W. our bitter Emmy. The Ship was already Bedded some two Foot in the Sand, and whilst that was a flowing, she must Beat. This I before had in my Confideration; for I thought she was so far driven up, that we should never get her off. Yet we had been fo ferrited by her last beating, that I resolved to sink her right down, rather than run that hazard. By nine a Clock, she began to rowl in her Dock, with a most extraordinary great Sea that was come; which I found to be occasioned by the forementioned Over-And this was the fatal Hour that put us to our Wits end. Wherefore I went down in Hold with the Carpenter, and took his Auger and bored a hole in the Ship, and let in the Water. Thus with all speed, we began to cut out o-ther places, to bore thorow, but every place was full of Nails. By ten, notwithstanding, the lower Tire was coveed with Water; for all which, the began fo to beat in her Dock, more and more, that we could not work, nor stand to do any thing in her: Nor would she sink fo fast as we would have her, but continued beating double blows; first abaft, and then before, that it was wonderful, how she could endure a quarter of an hour with it. By twelve a Clock, her lower Tire rose; and that did so counter-beat on the infide, that it beat the bulk-heads of the Bread-Room, Powder-Room, and Fore-piece, all to pieces; and when it came betwixt Decks, the Chests fled wildly about, and the Water did flash and fly wonderfully; so that now we expected every Minute when the Ship would open and break to pieces. At one a Clock she beat off her Rudder, and that was gone we knew not which way. Thus she continued beating till three a Clock; and then the Sea came up on the Upper-Deck, and foon after, she began to settle. In her, we were fain to Sink the most part of our Bedding and Clothes; and the Chirurgeons Cheft with the rest. Our 1 2 that were a-· shore, stood looking a us, almost

dead with Cold, and Sorrows to see our Misery and their own. We look'd upon them again; and both upon each other with woeful Hearts. Dark Night drew on, and I bade the Boat to be haled up, and commanded my loving Companions to go all into her; who, (in some refusing Compliments) expressed their faithful Affections to me, as loth to part from me. I told them, that my meaning was to go ashore with them. And thus, lastly, I forsook the Ship.

We were 17 poor Souls now in the Boat; and we now imagined, That we were least out of the Frying-Pan into the Fire: The Ebb was made, and the Water extraordinary thick congealed with Snow; fo that we thought affuredly, it would carry us away into the Sea. We thereupon double-Man'd four Oars, appointing four more to fit ready with Oars; and so with the help of God we got to the Shore, halling up the Boat after us. One thing was most strange in this thick Water: Namely, That there went a great swelling Sea. Being arrived upon the Land, we greeted our Fellows the best we could; at which time they could not know us, nor we them by our Habits nor Voices, so frozen all over we were, Faces, Hair, and And here I mean to take Apparel. breath a-while, after all this long and unpleasant Relation of our miserable Endeavours; craving leave first of all to speak a word or two in general.

The Winds, fince we came hither, have been very variable and unconstant; and till within this fortnight, the Southerly Wind was the coldest. The reason I conceive to be, for that it did blow from the Main-Land, which was all covered with Snow; and for that the North Winds came out of the great Bay which hitherto was open. Add to that; we were now under a South Bank which did shelter us, so that we were not so sensible of it.

A N. W. a N. W. by N. and a N. N. W. Wind (if it blew a Storm) would raife the Tides extraordinarily: And in brief, from the W. N. W. to the N. N. E. would raife the Tides in proportion, as they did blow from the middle Point: The Wind being on the opposite Points (if it blew) it would flow very little at all. The harder it blew, the less Water it would flow. If it were little Wind, or Calm, it would flow indifferently. The Tides do high

ordinarily (without being forced) about three Foot; but being forced with the forementioned Winds, upwards of ten Foot. I could perceive no difference betwixt Neap and Spring-Tides: It flows half Tide; that is, the Flood comes from the Northward; and thither returns again, two hours before it be high Water; and it is commonly so seen in most Bays or Inlets.

## OUR WINTERING.

Fter we had haled up the Boat, we went alongst the Breach-side in the dark, towards our House, where we made a good Fire, and with it, and Bread and Water, we Thawed and comforted our felves, beginning after that to reason one with another, concerning our Ship. I requir'd that every one should speak his Mind freely. The Carpenter (especially) was of the Opinion, that she was fonder'd, and would never be ferviceable again. He alledged, that she had so beaten, that it was not possible, but that all her Joints were loofe, and Seams open; and that by reason it slowed so little Water, and no Creek nor Cove being near, wherein to bring her a-ground, he could not Devise how he might come to mend it. Moreover, her Rudder was loft, and he had no Ironwork to hang on another. ledged, that we had heaved her up fo high upon the Sands, that they thought we should never have her off again, and that they were affured she was already Dockt three Foot. Others, that she lay in the Tides way, and that the Ice might tear her to pieces off the Ground; befides which, two of our Anchors we could not now get from under the Ice; which when the Ice brake (which would be of a great thickness by the Spring) would break our Anchors to pieces, and then we should have no Anchors to bring us home withall, supposed we got off the Ship, and that she proved Sound also. I comforted them the best I could with such-like Words, My Masters and faith-tal Companions, be not dismaid for any of these Disasters, but let us put our whole trust in God; It is he that giveth and he that taketh away; he throws down with one hand, and raiseth up with another: His will be done. If it

be our Fortunes to end our days here, we are as near Heaven as in England; and we are much bound to God Almighty for giving us so large a time of Repentance, who as it were daily calls upon us, to prepare our selves for a better life in Heaven. I make no doubt, but he will be merciful to us both here on Earth, and in his bleffed Kingdom; he doth not in the mean time deny, but that we may use all honest means to fave and prolong our natural Lives withall; and in my Judgment, we are not yet fo far past hope of returning into our Native Countries, but that I fee a fair way by which we may effect it. Admit the Ship be foundered, (which God forbid, I hope the best) yet have those of our own Nation, and others, when they have been put to these Extremities, even out of the Wreck of their lost Ship, built then a Pinnace, and recovered to their Friends again. If it be objected, That they have happened into better Climates, both for temperateness of the Air, and for pacifick and open Seas; and provided withall, of abundance of fresh Victuals; yet there is nothing too hard for couragious Minds, which hitherto you have shown, and I doubt not will still do, to the uttermost.

They all protested to work to the uttermost of their Strength, and that they would result nothing that I should order them to do, to the uttermost hazard of their lives. I thank'd them all; And to the Carpenter for his cheerful undertaking, I promised to give him so much Plate presently, as should be worth Ten Pound Sterling; and if so be I went to England in the Pinnace, I would give her him freely, and Fifty Pounds in Money over and above; and would moreover, gratise a them, that I should see.

painful

Thus we then painful and industrious. resolved, to build us a new Pinnace with the Timber we should get upon the Ifland; that in the Spring, if we found not the Ship Serviceable, we might tear her up, and Plank her with the Ships Planks. And so for this Night we settled our selves close about the Fire, and took

ime rest till day-light.
The 30th betimes in the Morning, I caused the Chirungeon to cut the Hair of my Head short, and to shave away all the Hair of my Face, for that it was become intolcrable, and that it would be frozen fo great with Icefickles: The like did all the rest.

The first of November we fitted our The first thing we felves to work. were to do, was to get our Clothes and Provisions ashore, and therefore I divided the Company. The Master and a convenient Company with him, were to go aboard, and to get things out of the Hold. The Cock-swain with his Gang, were to go in the Boat, to bring and carry things ashore. My self, with the nest, to carry it half a Mile thorow the Snow, unto the place where we intended to build a Store-House: As for the heavier Things, we purposed to lay them upon the Beach. In the Afternoon the Wind was at South South West, and the Water veer'd to so low an Ebb, that we thought we might get fomething out of our Hold: We Launched our Boat therefore, and with Oars, fet thorow the thick congealed Water: It did freeze extream hard, and I did stand on the Shore with a troubled Mind, . thinking verily that with the Ebb the Boat would be carried into the Sea, and that then we were all lost Men. But by God's Assistance, they got safely to the Ship, and made a Fire there, to fignific their arrival aboard. fell prefently to work, and got fomething out of the Hold, upon the Decks; but Night coming on, they durst not adventure to come ashore, but lay on the Bed in the great Cabbin, being almost starved.

The first of December was so Cold, that I went the same way over the Ice to the Ship, where the Boat had gone yesterday. This day we carried upon our Backs in Bundles, 500 of our Fish, and much of our Bedding and Clothes, . Which we were fain to dig out of the

The 2d was mild Veather; and some of the Men going over the Ice, Vol II.

fell in, and very hardly recovered; fo that this day we could Land nothing, neither by Boat nor Back : I put them therefore to make us a Store-House ashore. In the Evening, the Wind came up at West; and the Ice did break and drive out of the Bay: It was very deep and large Ice, that we much doubted it

would have spoiled the Ship.

The 3d day, there were divers great pieces of Ice that came athwart the Ship; and she stopt them, yet not so, that we could go over them. We found a way for the Boat; but when she was loaden; she drew four foot Water, and could not come within a flight-shot of the The Men therefore must wade thorow the thick congealed Water, and carry all things out of the Ship upon their Backs. Every time they waded in the Ice, it so gathered about them, that they did feem like a walking piece of Ice, most lamentable to behold. In this extream cold Evening, they cut away as much Ice from about the Boat as they could, and pickt it with Hand-spikes out of her, and endeavouring to hoise her into the Ship: There being small hope that she could go to and again any more. But use what means they could, she was so heavy, that they could not hoise her in, but were fain there to leave her in the Tackles by the Ship's side.

The 4th, being Sunday, we rested: and performed the Sabbath-Duties of a

Christian.

The 5th and 6th were extream Cold; and we made Bags of our Store-shirts, and in them carried our loofe Bread over the Ice ashore upon our Backs. We also digged our Clothes and new-Sails with Hand spikes of Iron, out of the Ice, and carried them ashort, which we dried by a great Fire.

The 7th day was so extreamly Cold, that our Noses, Cheeks, and Hands, did

freeze as white as Paper.

The 8th and 9th it was extream Cold, and it did Snow much, yet we continued our Labour, in carrying and rowling things ashore. In the Evening the Water raised the Ice very high, and is ' did break two Thoughts of our Boat, and break in the fide of her; but for that time we could not help it.

The 10th, our Carpenter found Timber to make a Keel, and a Stern, for our Pinnace; the rest wrought about our Provisions until the 13th day; and that we fpent in digging our Boat out of the ice, σN

## Our Wintering at Winter's Forest.

Ice, which we were fain to do to the very Keel; and dig the Ice out of her, and then we got her up on the Ice; in which doing, many had their Noses, Cheeks, and Fingers, frozen as white as Paper. The Cold now encreased most extreamly. By the 19th, we could get no more things out of our Hold; but were fain to leave five Barrels of Beef and Pork, all our Beer, and divers other things, which were all firm frozen in her.

The 21st was so Cold, that we could

not go out of the House.

The 23th we went to have our Boat ashore, running her over our Oars, but by ten a Clock there came fuch a thick Fog, that it was as dark as Night. I made them give over, and make what hafte we could to the Shore; which we had much ado to find, for the time, At the last, we losing one another. met all at the House, the miserablest frozen that can be conceived. divers, the Cold had raised Blisters as big as Wall-Nuts. This we imagined to come, by reason that they came too hastily to the Fire. Our Well was now frozen up; so that dig as deep as we could, we can come by no Water. Melted Snow-Water is very unwholesome, either to Drink or to Dress our Victuals. It made us fo short-breathed, that we were scarce able to speak. All our Sack, Vinegar, Oil, and every thing else that was liquid, was now trozen as hard as a piece of Wood, and we must cut it with a Hatchet. House was all frozen on the inside, and it froze hard within a yard of the fires When I landed first upon this Island, I found a Spring under a Hills fide; which I then observing, had caufed some Trees to be cut for Marks to know the Place again by. It was about three quarters of a Mile from our House. I fent three of our Men which had been formerly with me, thither upon the 24th. These wadeing thorow the Snow, at last found the place, and shoveling away the Snow, they made way to the very head of it. They found it fpring very strongly, and brought me a Can of it, for which I was right joyful. This Spring continued all the year, and did not freeze, but that we could break the Ice and come to it. We labour'd very hard these three or four days, to get Wood to the House, which we found to be very troublesome, through the deep Snow.

We then settled our Bedding and Provisions, providing to keep Christman. Day Holy, which we Solemnized in the joyfullest manner we could; So likewise did we St. John's Day; upon which we named the Wood we did Winter in, in Memory of that Honourable Knight, Sir John Winter, Winter's Forest. And now instead of a Christmas Tail, I will here describe the House that we did live in, with those adjoyning.

When I first resolved to build a House, I chose the warmest and convenientest Place, and the nearest the Ship withall. It was amongst a Tuff of thick Trees, under a South-Bank, a bout a flight-shot from the Sea's side True it is, That at that time we could not dig into the Ground, to make us a Hole or Cave in the Earth, ( which had been the best way ) because we found Water within two Foot digging; and therefore that project fail'd. It was a white light Sand; so that we could by no means make up a Mud-Wall. As for Stones, there were none near us; which, moreover, were all now covered with the Snow. We had no Boards for fuch a purpose, and therefore we must do the best we could, with such Materials as we had about us.

The House was square, about 20 foot every way, as much namely, as our Main-Course could well cover: First we drove strong stakes into the Earth, round about, which we watteled with Boughs, as thick as might be, beating them down very close. This our first work was fix Foot high on both sides; but at the ends, almost up to the very top, there we left two holes for the light to come in at; and the same way the Smoak did vent out also. Moreover, I caused at both ends, three rows of thick Bush-Trees, to be stuck up, as close together as might be possible. Then at a distance from the House, we cut down Trees, proportioning them into lengths of fix Foot, with which we made a Pile on both sides, six Foot thick, and fix Foot high; but at both ends, ten Foot high, and fix Foot thick: We left a little low Door to creep into; and a Portal before that, made with Piles of Wood, that the Wind might not blow into it. We next of all fastned a rough Tree aloft over all; upon. which we laid our Rafters, and our Main-Course over those again; which lying thwart ways over all, did reach

€ુ% છ

down to the very ground on either fide. And this was the Fabrick of the Jout-side of it. On the inside, we made fast our Bonnet-sails, round about. Then we drove in Stakes and made us Bed-stead frames, about three sides of the House; which Bed-steads were double one under another, the lowermost being a foot from the Ground: Thefe. we first fill'd with Boughs, then we laid some spare Sails on that, and then our Bedding and Cloths. We made a Hearth or Causie in the middle of the House, and on it, made our fire; some Boards we laid round about our Hearth to stand upon, that the cold damp should not strike up into us. With our Wast-clothes we made us Canopies and Curtains, others did the like with our small Sails.

Our fecond House was not past 20 foot distant from this, and made for the watteling much after the same manner, but it was less, and covered with our Fore-Course: It had no Piles on the South-side, but in lieu of that, we piled up all our Chests, on the inside; and indeed the restex of the Heat of the Fire against them, did make it warmer then the Mansion-House. In this House, we drest our Victuals, and the subordinate Crue did refresh themselves all day in it.

A third House, (which was our Store-House) we likewise made, some 20 paces off from this, for fear of firing. This House was only a rough Tree fastened aloft, with Rasters laid from it to the Ground, and covered with our new Suit of Sails. On the inside, we had laid small Trees, and covered them over with Boughs, and so Stor'd up our Bread and Fish in it, about two foot from the Ground, the better to preserve them. Other things lay more carelesty.

Long before Christmas, our Mansion-House was covered thick over with Snow. almost to the very Roof of it. And so likewise was our second House; but our Store-House all over, by reason we made no Fire in it. Thus we seemed to live in a heap, and Wilderness of Snow; forth a-toors we could not go, but upon the Snow; in which we made us Paths middle-deep in some Places, and in one special place, the length of ten Steps. To do this, we must Shovel away the Snow first; and then by treadding, make it fomething hard under foot: . The Snow in this Path, was a full yard thick under us. And this was our best Gallery for the Sickmen, and for mine own ordinary Walking, And both

Houses and Walks, we did daily accommodate more and more, and make fitter for our Uses.

The 27th we got our Boat ashore; and setcht up some of our Provisions from the Beach-side into the Store-House; and so by degrees did we with the rest of our Provisions; with extremity of Cold and Labour, making way with Shovels thorow the deep Snow, even from the Sea-side unto our Store-House. And thus concluded we the old year 1621.

January, 1632.

The first of January (and for the most part of all the Month) was extream Cold.

The 6th, I observed the Latitude with what exactness I could, (it being very clear Sun-shine Weather) which I found to be 51. 52. This Difference is, by reason that here is a great Refraction.

The 21st, I observed the Sun to rise like an Oval, alongst the Horizon: I call'd three or four to see it, the better to confirm my Judgment; and we all agreed, that it was twice as long as it was broad. We plainly perceived withall, that by degrees, as it gate up higher, it also recovered its roundness.

The 26th, I Observed, when the Eastern-edge of the Moon did touch the Planet Mars, the Lion's Heart was then in the East-quarter 21. 45. above the Horizon; but all this was not done with that Exactness that I have done other Observations.

The 30th and 31st, there appeared in the beginning of the Night, more Stars in the Firmament than ever I had before seen by two thirds. I could see the Cloud in Cancer full of small Stars, and all the Via Latter nothing but small Stars; and amongst the Pleiades, a great many small Stars. About ten a Clock, the Moon did rife; and then a quarter of them was not to be feen. The Wind for the most part of this Month, hath been Northerly, and very cold; the warmest of which time we imployed our felves in fetching Wood, working upon our Pinnace, and other things that happened. In the beginning of this month, the Sea was all firmly frozen over, so that we could see no Water any way. I hope it will not feem tedious to the Readers, if I here deliver mine own Opinion, how this abundance of ical comes to be ingendered.

The

The Land that encircles this great Bay, (which lies in a broken irregular Form, making many little Shoald Bays, and Guts, being moreover, full of Iilands and dry Sands) is for the most part low and flat, and hath flat Shoalds adjoyning to it, half a Mile or a Mile, that are dry at low Water. Now you must know, that it flows half Tide (as I have often experienced) that is, from whence the Flood commeth, the Water thither returneth, two hours before it be high Water, or full Sea. It seldom Rains after the middle of September, but Snows; and that Snow will not melt on the Land nor Sands: At low Water, when it Snows, ( which it doth very often) the Sands are all covered over with it; which the half Tide carries officiously (twice in 24 hours) into the great Bay, which is the common Rendezvous of it. Every low Water are the Sands left clear, to gather more to the increase of it. Thus doth it daily gather together in this manner, till the latter end of Ostober, and by that time hath it brought the Sea to that Coldness, that as it Snows, the Snow will lie upon the Water in Flakes without changing his colour; but with the Wind is wrought together; and as the Winter goes forward, it begins to freeze on the Surface of it, two or three Inches or more in one Night; which being carried with the half Tyde, meets with some obstacle, (as it soon doth) and then it crumples, and so runs upon it self, that in a few hours it will be five or fix foot thick. The half Tide fill flowing, carries it so fast away, that hy December it is grown to an infinite multiplication of Ice. And thus by this storing of it up, the Cold gets the Predomination in the Sea, (which also furnisheth the Springs and Water in the low flat Lands ) that it cools it like This may appear by our Experience, though in all this, I freely fubmit my felf unto the better Learned. Our Men found it more mortifying Cold to wade thorow the Water in the beginning of June, when the Sea was all full of Ice, than in December, when it was increasing. Our Well, moreover, out of which we had Water in December. . we had none in July.

The Ground at ten foot deep, was The quantity of the Ice, may very easily be made appear, by Mathemacal Demonstration; and yet I am not of the Opinion, that the Bay doth freeze all over. For the 21st, the Wind blowing a Storm at North, we could perceive the Ice to rife something in the Bay.

February, 1632.

The Cold was as extream this month as at any time we had felt it this year; and many of our Men complained of Infirmities. Some, of Sore-Mouths, all the Teeth in their Heads being lose, their Gums swoln, with black rotten! Flesh, which must every day be cut a-The Pain was so Sore on them, that they could not Eat their ordinary Others complained of Pain in their Heads and their Breasts; some of Weakness in their Backs; others of Aches in their Thighs and Knees; and others, of Swellings in their Legs. Thus were two thirds of the Company under the Chirurgeon's Hand. yet nevertheless, they must work daily, and go abroad to fetch Wood and Timber; notwithstanding the most of them had no Shooes to put on. Their Shooes, upon their coming to the Fire, out of the Snow, were burnt and scorcht upon their Feet; and our Store-Shooes were all funk in the Ship. In this Necessity they would make this Shift; to bind Clouts about their Feet, and endeavoured by that poor help, the best they could to perform their Duties. Our Carpenter likewise is by this time faln Sick to our great Discomforts. I practised some Observations by the Rising and Setting of the Sun, Calculating the Time of his Rising and Setting, by very true running Glasses. As for our Clock and Watch, notwithstanding we still kept them by the Fires side, in a Chest wrapt in Clothes, yet were they so frozen, that they could not go. My Observations by these Glasses, I compared with the Stars coming to the Meridian. By this means we found the Sun to rise 20 Minutes before it should; and in the Evening to remain above the Horizon 20 Minutes (or thereabouts) longer then it should do. And all this by reason of the Refraction.

Since now I have spoken so much of the Cold, I hope it will not be too coldly taken, if I in a few Words make it some way to appear unto our Readers.

We made three differences of the Cold, all according to the Places. In our House; in the Woods; and in the open Air, upon the Ice, in our going to the Ship

For

For the last, it would be sometimes fo extream, that it was not indurable; no Cloathes were proof against it; no motion could resist it. It would, moreover, fo freeze the Hair on our Eye-lids, that we could not fee; and I verily believe, that it would have stifled a Man in a very few hours: We did daily find by Experience, that the Cold in the Woods would freeze our Faces, or any part of our Flesh that was bare; but it was yet not so mortifying as the other. Our House on the out-side was covered two third parts with Snow; and on the infide frozen, and hang'd with Ice-The Cloathes on our Beds would be covered with Hoar-Frost, which in this little habitacle, was not far from the Fire. But let us come a little nearer to it. The Cook's Tubs, wherein he did Water his Meat, standing about a yard from the Fire, and which he did all day ply with melted Snow-Water; yet in the Night-Season, whilst he flept but one watch, would they be firm frozen to the very bottom. And therefore was he fain to Water his Meat in a Brass-Kettle close adjoyning to the Fire; and I have many times both feen and felt by putting my Hand into it, that fide which was next the Fire, was very warm, and the other fide an Inch frozen: I leave the rest to our Cook, who will almost speak Miracles of the Cold. The Surgeon, who had hung his Bottles of Syrups, and other Liquid things, as conveniently as he could to preserve them, had them all frozen: Our Vinegar, Oil, and Sack, which we had in small Cask in the House, was all firm frozen. It may further in general be conceived, that in the beginning of June, the Sca was not broken up; and the ground was yet frozen, and thus much we found by Experience, in the burying of our Men; in fetting up the King's Standard to-wards the latter end of June; and by our Well, at our coming away in the beginning of July; at which time upon the Land, for some other Reasons, it was very hot Weather.

#### March, 1532.

The first of this Month being St. David's Day, we kept Holiday, and solemnized it in the manner of the Antient Britains, praying for his Highness Happiness Charles Prince of Wales.

The 15th, one of our Men thought Vol. II.

he had feen a Deer; whereupon he with two or three more defired that they might go to fee if they could take it; I gave them leave; but in the Evening they returned so disabled with Cold, which did rife up in Blisters under the Soles of their Feet and upon their Legs, to the bigness of Walnuts, that they could not recover their former Estate (which was not very well) in a fortnight after.

The 26th, three more defired that they also might go out to try their Fortunes; but they returned worse disabled, and even almost stifled with the Cold.

This Evening, the Moon rose in a very long Oval alongst the Horizon.

By the last of this Month, the Carpenter had set up 17 Ground Timbers, and 34 Staddles, and (poor Man) he proceedeth the best he can, though he be fain to be led unto his Labour.

In brief, all this Month hath been very Cold. The Wind about the N. W. The Snow as deep as it hath been all this Winter: But to Answer an Obje-Aion that may be made; You were in a Wood ( may fome Men fay unto us ) and therefore you might make Fire enough to keep you from the Cold. It is true, we were in a Wood, and under a South Bank too, or otherwise we had all starved. But I must tell you withal, how difficult it was to have Wood in a Wood: And first, I will make a Muster of the Tools we had. The Carpenter in his Cheft had two Axes indeed; but one of them was spoil'd in cutting down Wood to pile about our House before Christmas: When we came first a-Land, we had but two whole Hatchets, which in a few days broke two Inches below the Sockets. I called for three of the Coopers Hatchets: The Carpenters Axe and the Coopers best Hatchet I caused to be lockt up: The other two Hatchets to be new Helv'd, and the Blades of the two broken Hatchets, to be put into a cleft piece of Wood, and then to be bound about with Rope-Yarn as fast as might be, which must be repaired every day. And these where all the Cutting-Tools we had > Moreover, the 6th of February the Car-penter had out his best Axe about something, and one of the Company in his absence, by his undiscreet handling of it, brake that too, two laches below the Socket; we must henceforth order these pieces of Tools the best we could; where

wherefore I gave order, that the Carpenter should have one of the Cooper's Hatchets: They that lookt for Timber in the Woods, the other: And they that cut down Wood to burn, were to have the two pieces. And this was before Christmas.

The three that were appointed to look crooked Timber, must Stalk and Wade, (sometimes on all four) thorow the Snow; and where they saw a Tree likely to fit the Mould, they must first heave away the Snow, and then see if it would fit the Mould; If not, they must seek further: If it did fit the Mould, then they must make a Fire to it, to Thaw it; otherwise it could not be cut. Then cut it down, and fit it to the length of the Mould; and then with other help, get it home, a Mile thorow the Snow.

Now for our Firing. We could not burn green Wood, it would so Smoke, that it was not indurable; yea, the Men had rather Starve without in the Cold, than sit by it. As for the dry Wood, that also was bad enough in that kind; for it was full of Turpentine, and would fend forth such a thick Smoke, that would make abundance of Sote; which made us all look, as if we had been free of the Company of Chimney-Sweepers. Our Cloathes were quite burnt in pieces about us; and for the most part, we were all without Shooes: But to our Fuellers again. They must first (as the former) go up and down in the Snow, till they faw a standing dry Tree; for that the Snow covered any that were Then they must hack it down with their pieces of Hatchets, and then others must carry it home thorow the The Boys with Cutlasses, must cut Boughs for the Carpenter; for every piece of Timber that he did work, must first be Thaw'd in the Fire; and he must have a Fire by him, or he could not work. And this was our continual labour throughout the forementioned Cold; besides our tending of the Sick, and other necessary Imployments.

#### April, 1632.

The first of this Month, being Easter-Day, we solemnized as religiously as God did give us grace. Both this day, and the two sollowing Holy-days were extream Cold: And now sitting all about the Fire, we reasoned and considered together upon our Estate: We had see Men (whereof the Carpenter was one) not able to do any thing. The Boatfwain, and many more, were very in-firm; and of all the reft, we had but five that could Eat of their ordinary Allowance. The Time and Season of the year came forwards apace, and the Cold did very little mitigate. Our Pinnace was in an indifferent forwardness; but the Carpenter grew worse and worse The Ship (as we then thought) kay all full of folid Ice; which was weight enough to open the Seams of any new and found Vessel; especially of one that had lain fo long upon the Ground as she had done. In brief, after my Disputations, and laying open of our miserable and hopeless Estates, I resolved upon this Course: That notwithstanding it was more Labour, and though we dechined, weaker still and weaker; yet that with the first warm Weather, we would begin to clear the Ship, that so we might have the time before us, to think of some other Course. This being ordered, we lookt to those Tools we had, to dig the Ice out of her; we had but two Iron-Bars ashore, the rest were sunk in the Ship, and one of them was broken too. Well! we fell to fitting of those Bars, and of four broken Shovels that we had; with which we intended (as after we did) to dig the Ice out of her; and to lay that Ice on a heap, upon the Larboard-Bow, and to fink down that Ice to the ground so fast, that it should be a Barricado to us, when the Ice brake up, which we feared would tear us all to pieces.

The oth was the deepest Snow we had all this year; which fill'd up all our Paths and ways, by which we were used to go unto the Wood: This Snow was something moister and greater than any we had all this year; for formerly it was as dry as Dust, and as small as Sand, and would drive like Dust with the Wind.

The Weather continued with this Extremity, until the 15th; at which time our Spring was harder frozen, then it had been all the year before. I had often observed the Difference betwixt clear Weather and mifty Refractious Weather, in this manner. From a little Hill which was near adjoyning to our House; in the clearest Weather, when the Sun-shone with all the purity of Air that I could conceive, we could not see, a little sland, which bare off us S.S. E. Tome four I saggest off: but if the Weather when

## Our Wintering at Winter's Forew.

er were misty, (as aforesaid) then e should often see it, from the lowest ace. This little Island I had feen the It year, when I was on Danby Island.

The 13th, I took the Heighth of it istrumentally, standing near the Sea's de; which I found to be 34 Minutes, he Sun being 28 degrees high. hows, how great a Refraction here is. Yet may this be noted by the way; That I have feen the Land elevated by reason of the Refractious Air; and nevertheless, the Sun hath risen perfect zound.

The 16th was the most comfortable Sun-shine day that came this year; and I put some to clear of the Snow from the upper Decks of the Ship; and to clear and dry the great Cabbin, by making Fire in it. Others I put to dig down thorow the Ice, to come by our Anchor, that was in shoald Water; which the 17th in the Afternoon we got

up and carried aboard.

The 18th, I put them to dig down thorow the Ice, near the Place where we thought our Rudder might be. They digged down, and came to Water; but no hope of finding of it: We had many Doubts, that it might be Sanded, or that the Ice might have carried it away already the last year; or if we could not recover it by digging before the Ice brake up, and drove, there was

little hope of it.

The igth, we continued our Mineing Work aboard the Ship, and returned in the Evening to Supper ashore. day, the Master, and two others, desired that they might lie aboard, which I condescended to; for indeed they had lain very discommodiously all the Winter, and with fick Bed-Fellows; as I my felf had done, every one in that kind taking their Fortunes. By lying aboard, they avoided the hearing of the miserable groanings; and lamenting of the fick Men all Night long, enduring (poor Souls) intolerable Torments.

By the 21st, we had laboured so hard, that we came to see a Cask, and could likewise perceive that there was some Water in the Hold. This we knew could not be Thawed Water; because it did still freeze Night and Day very hard aboard the Ship, and on the Land

alfo.

By the 23th in the Evening, we came to pierce the forementioned Cask, and found it was full of very good Beer, which did much rejoyce us all, especi-

ally the Sickmen, notwithstanding the it did taste a little of Bulge-Water. By this we at that time thought that the holes we had cut to fink the Ship, were frozen, and that this Water had stood

in the Ship all the Winter.

The 24th, we went betimes in the Morning to work; but found that the Water was risen above the Ice where we had left work, about two Foot; for that the Wind had blown very hard at North the Night before. In the Morning, the Wind came about South, and blew hard, and although we had little reason for it, we yet expected a lower veer of the Water. I thereupon put them to work on the outlide of the Ship, that we might come to the lower hole, which we had cut in the Stern-Shootes. With much labour by Night, we digged down thorow the Ice to it, and found it unfrozen, (as it had been all the Winter) and to our great Comforts, we found that on the infide, the Water was Ebb'd even with the hole; and that on the outlide, it was Ebb'd a Foot lower. Hereupon I made a shot-board to be nail'd on it; and to be made as tight as might be, to try if the Water came in any other way. As to the other two holes, we had digged on the infide, we found them frozen. Now I did this betimes, that if we found the Ship foundered, we might resolve of some Course to fave, or prolong our Lives, by getting to the Main before the Ice were broken up; for, as for our Boat, it was too little, and bulged, besides that, our Carpenter was by this time past hope; and therefore little hope had we of our Pinnace. But which was worst of all, we had not four Men able to Travel through the Snow over the Ice, and in this miserable estate were we at this prefent.

The 25th, we satisfied our Longing; for the Wind now coming about Northerly, the Water rose by the Ships side (where we had digged down) a foot and more above the Hold, and yet did not rife within board. This did so incourage us, that we fell very lustily to digging, and to heave out the Ice out of the Ship. I put the Cook, and fome-others, to Thaw the Pumps; who by consinual pouring of hot Water into them, by the 27th in the Morning they had cleared one of them; which we assaying, found that it did deliver Water very fufficiently. Thus we fell to Pumping; and having cleared two foot Water, w

then left to have a fecond trial. Continuing our Work thus, in digging the Ice, by the 28th we had cleared our other Pump, which we also found to deliver Water very well: We found likewise, that the Water did not rise any thing in Hold.

The 29th, it Rained all day long, a fure fign to us, that Winter was broken

nn.

The 30th, we were betimes aboard at work; which day, and the 31ft, were very Cold, with Snow and Hail; which did pinch our fick Men more than any time this year. This Evening being May Even, we returned late from our Work to our House, and made a good Fire, and chose Ladies, and did ceremoniously wear their Names in our Caps, endeavouring to revive our selves by any means. And because you hear us in this Merry Humour, I will make known to you what good Cheer we kept at Christmas and Easter; and how we had Dieted our selves all the Winter.

At our coming forth of England, we were stored with all fort of Sea Provisions; as Beef, Pork, Fish, &c. but now that we had little hope of refreshing, our Cook did order it in this manner.

The Beef which was to serve on Sunday Night to Supper, he did Boil on Saturday Night, in a Kettle full of Water, with a Quart of Oat-Meal, about an Hour: Then taking the Beef out, he Boiled the rest till it came to half the quantity; and this we called Porridge; which with Bread we did Eat, as hot as we could; and after this we had our ordinary of Fish. Sunday Dinner, we had Pork and Peafe; and at Night the former Boiled Beef made more Porridge. this manner, our Tuesday's Beef was Boiled on the Monday Nights; and the Thursday's upon the Wednesday. And thus all the Weck (except Friday night) we had fome warm thing in our Bellies every Supper. And (furely) this did us a great deal of good. But soon after Christmas, many of us fell sick, and had fore Mouths, and could neither eat Beef, Pork, Fish, nor Porridge. Their Diet was only this: They would Pound Bread, or Oatmeal in a Mortar, to Meal; then fry it in a Frying-Pan, with a little Oil, and so Eat it. Some would Boil Pease to a soft paste, and feed as well as they could upon that. For the most part of the Winter, Water was our Drivk. In the whole Winter, we took not above a dozen Foxes; many of which would be dead in the Traps, two or three days, oftentimes; and then when the Blood was fettled, they would be unwholesome. But if we took one and hive, that had not been long in the Trap, him we Boiled, and made Broth for the weakest sick Men of him; the Flesh of it being soft Boiled they did Eat also.

Some White Partridges we kill'd; but not worth the mentioning towards

any refreshing.

We had three forts of fick Men. Those that could not move nor turn themselves in their Beds, who must be tended like an Infant. Others that were as it were Cripled with Scurvy Aches. And others lastly, that were something better: Most of all had Sore Mouths. You may now ask me, How these insirm Men could work? I will tell you. Our Surgeon (who was diligent, and a sweet-conditioned Man as ever I saw) would be up betimes in the Mornings; and whilst he did pick their Teeth, and cut away the dead Flesh from their Gums, they would Bathe their own The man-Thighs, Knees, and Legs. ner whereof was this: There was no Trees, Buds, nor Herb, but we made trial of it; And this being first boiled in a Kettle, and then put in a small Tub, and Bason, they put it under them, and covered themselves with Cloathes upon it: This would so mollisie the grieved Parts, that although, when they did rise out of their Beds, they would be fo Crippled, that they could scarce stand; yet after this done half an hour, they would be able to go, (and must go ) to Wood, thorow the Snow, to the Ship, and about their other Business. By Night, they would be as bad again; and then they must be Bathed, Anointed, and their Mouthes again drest, before they went to Bed. And with this Diet, and in this manner, did we go thorow our Miseries.

I ever doubted, that we should be weakest in the Spring; and therefore had I reserved a Tun of Alegant Wine unto this time. Of this, by putting seven Parts of Water, to one of Wine, we made some weak Beverage; which (by reason that the Wine by being frozen, had lost his Virtue) was little better than Water. The Sicker fort had a Pint of Alegant a day, by it self; and of such poor Agna Vita too, as we had, they had a little Dram allowed them next their Hearts every Morning; and

thus we made the best use of what we had, according to the Seasons. .

#### May. 1632.

The 1st of this Month, we went aboard betimes to heave out the Ice.

The 2d, it did Snow and Blow, and was so Cold, that we were fain to keep This unexpected Cold House all day. at this time of the year did fo vex our fick Men, that they grew worse and worse; we cannot now take them out of their Beds, but they would fwound, and we had much ado to fetch life in them.

The 3d, those that were able, went aboard betimes to heave out the lce. The Snow was now melted in many Places upon the Land, and stood in Plashes; and now there came some Cranes and Geese to it.

The 4th, while the rest wrought aboard, I and the Surgeon went with a couple of pieces, to see if we could kill any of these Fowl for our sick Men, but never did I see such wild-Fowl; they would not indure to see any thing move. Wherefore we returned within two hours, not being able to indure any longer stalking thorow the Snow, and the wet Plashes. I verily thought that my Feet and Legs would have fallen off, they did fo torment me with Aching.

The 6th, John Warden, the Master of my Ship's chief Mate, died; whom we builed in the Evening (in the most Christian-like manner we could) upon the top of a bare Hill of Sand, which

we called Brandon-H.ll.

The Weather continued very Cold; freezing so hard in a night that it would bear a Man.

By the 9th, we were come to, and got up our five Barrels of Beef and Pork, and had found four Buts of Beer, and one of Cydar, which God had preserved for us: It had lain under Water all the Winter; yet we could not perceive that it was any thing the worse. God make us ever thankful for the Comfort it gave us.

The ioth, it did Snow and Blow so Cold, that we could not stir out of the House; yet nevertheless, by Day, the Snow vanisheth away apace on the Land.

The 11th, we were aboard betimes,

to heave out Ice.

. The 12th at Night, we had cleared out all the Ice out of the Hold, and found likewise our Store-Shooes which lad lain Vol. II.

foakt in the Water all the Winter; but we dried them by the Fire, and fitted our felves with them. We struck again our Cables into the Hold: there Stow'd we a Butt of Wine also, which had been all the Winter on the upper-Deck, and continued as yet, all firm frozen. fitted the Ship also, making her ready to fink her again, when the Ice brake up. We could hitherto find no defect in her; and therefore well hoped that she was stanch. The Carpenter, nevertheless, did earnestly argue to the contrary; alledging, that now she lay on the ground, in her Dock; and that the Ice had fill'd her Defects; and that the Ice was the thing that kept out the Water; but when she should come to labour in the Sea, then doubtless, she would open. And indeed we could now fee quite through her Seams, betwixt Wind and Water. But that which did trouble us as ill as all this, was the loss of her Rudder; and that she now lay in the very strength of the Tide, which, whenever the Ice drove, might tear her to pieces. But we still hoped the best.

The 13th, being the Sabbath-Day, we folemnized, giving God thanks for those Hopes and Comforts we daily had; The Weather by day-time was pretty and warm, but it did freeze by Night; yet now we could see some bare Patches of Land.

The 14th, we began a new fort of The Boatswain and a convenient number fought ashore the rest of our Rigging, which was much spoiled by pecking of it out of the Ice, and this they now fell to fitting, and to serving I fet the Cooper to fit our Cask, although (poor Man) he was very infirm; my intent being to pass some Cables under the Ship, and so to Buoy her up with these Cask, if otherwise we could not get her off. Some others, I ordered to go fee, if they could kill fome Wild-Fowl for our fick Men, who grew worse and worse. And this is to be remembred, that we had no shot, but what we did make of the Aprons of our Guns, and some old Pewter that I had; for the Carpenter's Sheet-Lead we durst not use.

The 15th, I Manured a little patch of Ground, that was bare of Snow, and Sowed it with Peason, hoping to have some of the Herbs of them shortly to Eat; for as yet we can find no green

thing to Comfort us.

The 18th, our Carpenter, William Cole Died, a Man generally bemoaned of us all; as much for his innate Goodness, as for the present necessity we had of a He had endured a Man of his Quality. long Sickness, with much Patience, and made a godly end. In the Evening, we Buried him by Mr. Warden, accompanied with as many as could go; for three more of our principal Men, lay then expecting a good hour. And now were we in the most miserable Estate that we were in all the Voyage. Before his extream weakness, he had brought the Pinnace to that pass, that she was ready to be Boulted and Trennel'd; and to be joyn'd together to receive the Plank; fo that we were not fo discouraged by his Death, but that we did hope of our selves to finish her, if the Ship proved unserviceable.

This our Pinnace was 27 Foot by the Keel, 10 Foot by the Beam, and five Foot in Hold; she had 17 ground Timbers, 34 principal Staddles, and eight short Staddles. He had contrived her with a round Stern, to save Labour; and indeed, she was a well proportioned Vessel. Her Burthen was 12 or 14 Tun.

In the Evening, the Master of our Ship, after Burial returning aboard Ship, and looking about her, discovered some part of our Gunner, under the Gun-Room Ports. This Man, we had committed to the Sea at a good distance from the Ship, and in deep Water, near six Months before.

The 19th in the Morning, I sent Men to dig him out, he was fast in the Ice, his Head downward, and his Heel upward, for he had but one Leg, and the Plaister was yet at his Wound: In the Afternoon, they had digg'd him clear out; after all which time, he was as free from noisomeness as when we first committed him to the Sea. This alteration had the Ice and Water, and time only wrought on him, that his Flesh would ilip up and down upon his Bones, like a Glove on a Man's Hand. In the Evening This day, we Buried him by the others. one George Ugganes (who could handle a Tool best of us all) had indifferent well repaired our Boat, and so we ended this mournful Week. The Snow was by this time prettily well wasted in the Woods; and we having a high Tree, on the higheft place of the Island, which we called our Watch-Tree; from the top of it we might see into the Sea, but found no apbearance of breaking up yet.

The 20th, being Whit-Sunday, we fadly folemnized, and had fome tafte of the Wild-Fowl, but not worth the Wri-

ting.

The 21st, was the warmest Sun-shine day that came this year. I fent two a Fowling; and my felf taking the Master, the Surgeon, and one more, with our Pieces and our Dogs, we went into the Woods to see what Comfort we could find. We wandred from the House eight Miles, and fearcht with all diligence; but returned Comfortless, not an Herb nor Leaf Eatable, that we could find. Our Fowlers had as bad Success. In the Woods, we found the Snow partly wasted away, so that it was passable. The Ponds were almost Unthaw'd; but the Sea from any place we could fee all firm frozen.

The Snow doth not melt away here with the Sun or Rain, and so make any Land-Floods, as in England; but it is Exhaled up by the Sun, and suckt sull of holes, like Honey-Combs; so that the Sand whereon it lies, will not be at all wetted. The like Observation we also had; that let it Rain ever so much, you shall see no Land-Floods after it.

The 22th, we went aboard the Ship, and found that she had made so much Water, that it was now risen above the Ballast, which made us doubt again of her Soundness. We fell to Pumping, and pumpt her quite dry. And now by day sometimes, we have such hot Glooms, that we cannot endure in the Sun, and yet in the Night it would freeze very hard. This unnaturalness of the Season, did torment our Men, that they now grew worse and worse daily.

The 23th, our Boatswain (a painful Man) having been long Sick, which he had heartily resisted, was taken with such a painful Ach in one of his Thighs, that we verily thought he would have presently died. He kept his Bed all day in great extremity; and it was a Maxim amongst us, that if any one kept his Bed two days, he could rise no more. This made every Man to strive to keep up for life.

The 24th was very warm Sun-shine; and the Ice did consume by the Shore's side, and crackt all over the Bay, with a fearful noise. About three in the Afternoon, we could perceive the Ice with the Ebb to drive by the Ship: Whereupon I sent two with all speed unto the Master, to beat out the hole, and to sink the Ship; as likewise to look for the

Rudder betwixt the Ice. This he prefently performed; and a happy Fellow, one David Hammon, pecking betwixt the Ice, struck upon it, and it came up with his Lance; who crying that he had found it, the rest came and got it up on the Ice, and so into the Ship. In the mean space, with the little drift that the Ice had, it began to rise and mount into high heaps against the shoald Shores, and Rocks; and likewise against the heap of Ice, which we had put for a Barricado to our Ship, but with little harm to us. Yet we were fain to cut away 20 Fathom of Cable which was harm to us. After an hour, the frozen in the Ice. Ice settled again, as not having any vent outwards. Oh! This was a joyful day to us all; and we gave God thanks for the hopes we had of it.

The 25th was a fine warm day, and with the Ebb, the Ice did drive against

the Ship, and shake her shrewdly.

The 16th, I took the Chirurgeon with me, and went again to wander the Woods; and went to that Bay, where last year we had lost our Man John Barton. But we could find no fign of him, nor of other Relief.

By the 28th it was pritty and clear betwixt the Ship and the Shore, and I hoped the Ice would no more dangerously oppress us; wherefore I caused the lower hole to be firmly stopt, the Water then remaining three foot above the Ballast.

The 29th, being Prince Charles his Birth-Day, we kept Holy-day, and display'd his Majesty's Colours, both a-land and aboard; and named our Habitation, Charles Town, by Contraction Charlen; and the Island, Charlton Island.

The 30th, we Launched our Boat, and had intercourse sometimes betwixt the Ship and the Shore by Boat, which

was News to us.

The last of this Month, we found on the Beach some Vetches to appear out of the Ground, which I made the Men to pick up, and to Boil for our sick Men.

This day, we made an end of fitting all our Rigging and Sails; and it being a very hot day, we did dry and new make our Fish in the Sun, and aired all our other Provisions. There was not a Man of us at present, able to Eat of our balt Provisions, but my self and the Master of my Ship. It may be here remembred, that all this Winter we had not beed troubled with any Rhumes, nor

flegmatical Diseases. All this month the Wind hath been variable, but for the most part Northerly.

June, 1632.

The four first days it did Snow, Hail, and blow very hard; and was so Cold, that the Ponds of Water did freeze over; and the Water in our Cans did freeze in the very House; our Clothes also that had been washed and hung out

to dry, did not thaw all day.

The 5th, it continued blowing very hard in the broad-fide of the Ship, which did make her swag and wallow in her Dock for all she was sunken, which did much shake her. The Ice withall did drive against her, and gave her many fearful blows. I resolved to endeavour to hang the Rudder; and when God fent us Water, (notwithstanding the abundance of Ice that was yet about us ) to have her further off: In the Afternoon, we under-run our small Cable to our Anchor, which lay a-Stern in deep Water, and so with some difficulty gate up our Anchor: This Cable had lain flack under-foot, and under the Ice, all the Winter, and we could never have a clear Slatch from Ice, to have it up before now; we found it not a jot the worse. I put some to make Colrakes, that they might go into the Water, and rake a hole in the Sands to let down our Rudder.

The 6th, we went about to hang it. And our young lustiest Men took turns to go into the Water, and to rake a-way the Sand; but they were not able to indure the Cold of it half a quarter of an hour it was so mortifying; yea, use what Comforts we could, it would make them Swound and Die away. We brought it to the Stern-post, but were then fain to give it over, being able to work at it no longer. Then we Plugg'd up the upper holes, within board, and sell to Pumping the Water again out of her.

The 7th, we wrought fomething about our Rudder, but were again forced to give over, and to put out our Cables over-board, with Messengers up to them; the Anchors lying to that pass, that we might keep her right in her Dock, when we should have brought

her light.

By the 8th at Night, we had pumpt all the Water out of her; and she at a high Water would fleet in her Dock, tho 2d though she were still Dock'd in the Sands, almost four Foot. This made us to consider what was to be done. I resolved to heave out all the Ballast, for that the bottom of her being so so so the so, that it would bear her. If we could not get her off that way, I then thought to cut her down to the lower Deck, and take out her Masts; and so with our Cask to Buoy her off.

The 9th, betimes in the Morning, we fell to work; we hoist out our Beer and Cydar, and made a Raft of it, fastning it to our Shore-Anchor: The Beer and Cydar funk presently to the Ground, which was nothing strange to us; for that any Wood or Pipe-Staves that had lain under the Ice all the Winter, would also sink down, so soon as ever it was heaved over-board: This day we heaved out ten Tun of Bal-And here I am to remember God's goodness towards us, in sending those forementioned green Vetches. Fer now our feeble fick Men, that could not for their lives stir these two or three Months, can indure the Air and Walk about the House; our other tick Men gather strength also, and it is wonderful to fee how foon they were recovered. We used them in this manner: Twice a day, we went to gather the Herb or Leaf of these Vetches, as they first appeared out of the Ground; then did we wash and Boil them, and fo with Oil and Vinegar that had been frozen, we did Eat them: It was an excellent Sustenance and refreshing; the most part of us Eat nothing else: We would likewise bruise them, and take the Juice of them, and mix that with our Drink: We would Eat them raw also with our Bread.

The 11th was very warm Weather, and we did hang our Rudder. The Tides did now very much deceive us; for a Northerly Wind would very little raife the Water. This made us doubt of getting off our Ship.

The 13th, I resolved of the Latitude of this Place; so that having examined the Instruments, and practised about it this fortnight, I now found it to be in 52 Deg. and 3 Min.

The 14th, we had heaved out all the Ballast, and carried all our Yards, and every thing else of weight ashore, so that we now had the Ship as light as possible it could be.

The 15th, we did little but exercise our selves; seeing that by this time, our Men that were most seeble, are now grown strong, and can run about. The Flesh of their Gums became settled again, and their Teeth sastened; so that they can Eat Beef with their Vetches.

This day I went to our Watch-Tree; but the Sea (for any thing I could perceive to the contrary) was still firm frozen; and the Bay we were in, all full of Ice, having no way to vent it.

The 16th, was wondrous hot, with fome Thunder and Lightning, fo that our Men did go into the Ponds ashore, to Swim and Cool themselves; yet was the Water very Cold still. Here had lately appeared divers forts of Flies; as Butter Flies, Butchers-Flies, Horse-Flies; and fuch an infinite abundance of bloud thirsty Muskitoes, that we were more tormented with them then ever we were with the Cold Weather. These (I think) lie dead, in the old rotten Wood all the Winter, and in Summer they revive again. Here be Summer they revive again. likewise infinite company of Ants, and Frogs in the Ponds upon the Land; but we durst not Eat of them, they lookt so speckled like Toads. By this time were there neither Bears, Foxes, nor Fowl to be seen: They are all gone.

The 17th, the Wind came Northerly, and we expecting a high Tide, in the Morning betimes, put out our fmall Cable a-stern out at the Gun-Room-Port; but the Morning Tide we had not Water by a Foot. In the Evening I had laid Marks, by Stones, &c. and me thoughts the Water did Making Signs therefore flow apace. for the Boat to come ashore, I took all that were able to do any thing with me aboard; and at high Water, (although she wanted something to rise clear out of her Dock ) yet we heav'd with fuch a good Will, that we heaved her thorow the Sand into a foot and a half deeper Water. Further then fo, we durst not yet bring her, for that the Ice was all thick about us. After we had Moor'd her, we went all to Prayers; and gave God thanks that had given us our Ship again.

The 18th, we were up betimes; the Cooper, and some with him, to fill fresh Water: my self with some others, to gather Stones at low Water; which we pileing up in a heap, at high Wa-

ter the Cock-swain and his Gang, setcht them aboard; where the Master with the rest stowed them. The Ship at low Water had a great Lust to the Offing; by which means we could the better come and stop the two upper holes firmly; after which, we sitted other convenient Flaces, to make others to sink her, if occasion were.

The 19th, we were all up betimes to work, as afore specified: These two days, our Ship did not Fleet, and it was a happy Hour, when we got her off, for that we never had such a high Tide all the time we were here. In the Evening, I went up to our Watch-Tree; and this was the first time I could fee any open Water, any way, except that little by the Shorefide, where we were. This put us in fome Comfort, that the Sea would shortly break up, which we knew must be to the Northward, seeing that way we were certain, there was above two hundred Leagues of Sca.

The 20th, we laboured as aforefaid. The Wind at North North West. The Tide rose so high, that our ship sleeted, and we drew her further off, into a foot and a half deep Water. Thus we did it by little and little; for that the Ice was still wonder-

ful thick about us.

The 22th, there drove much Ice about us, and within us, and brought home our Stern Anchor. At high Water (notwithstanding all the Ice) we heav'd our Ship further off; that so she

might lie a float at low Water.

The next low Water, we Sounded all about the Ship, and found it very foul ground; we discovered Stones three Foot high above the ground, and two of them within a Ships breadth of the Ship; whereby did more manifestly appear God's Mercies to us; for if when we forced her ashore, she had strucken one blow against those Stones, it had Bulged her. Many such Dangers were there in this Bay, which we now first perceived, by the Ice's grounding and rising against them. In the Evening, we Tow'd off the Ship, unto the place where she rid the last year, and there Moor'd her, sheering the Ship, Night and Day, Flood and Ebb, amongst the disperst lee that came athwart of us.

The 23th, we laboured in fetching our Provisions aboard; which to do, we were fain to wade to carry it to the Boat Vol. 11.

a full flight shot; and all by reason the Wind was Southerly. This Morning, I took an Observation of the Moon's coming to the South, by a Meridian-Line of one hundred and twenty yards long, which I had rectified many Weeks before-hand.

The 24th, I took another Observation of the *Moon*'s coming to the Meridian; for which I refer you to the Observations in the latter end of this

Journal.

Whereas I had formerly cut down a very high Tree, and made a Cross of it, to it I now fastened (uppermost) the King's and Queen's Majesties Pictures, drawn to the Life, and doubly wrapt in Lead, and so close, that no Weather could hurt them. Betwixt both these I affixed his Majesties Royal Titles; viz. Charles the First, King of England, Scotland, France, and Ireland; As also of New-tound-land, and of these Territories : And to the Westward, as far as Nova Albion; And to the Northward, to the Latitude of 80 Degrees, &c.

On the out-side of the Lead, I fastened a Shilling and a Six-Pence of his Majesty's Coin; under that, we fastened the King's Arms fairly cut in Lead; and under that, the Arms of the City of Brissol. And this being Midsummer-Day, we raised it on the top of the bare Hill, where we had Buried our dead Fellows; formally by this Ceremony taking possession of these Territo-

ries to his Majesties Use.

The Wind continuing Southerly and blowing hard, put all the Ice upon us; fo that the Ship now rid amongst it, in fuch apparent Danger, that I thought verily we should have lost her. We laboured, Flood and Ebb, both with Poles and Oars, to heave away and part the Ice from her. But it was God that did protect and preserve us; for it was past any Man's Understanding, how the Ship could indure it, or we by our Labour fave her. In the Night, the Wind shifted to the Westward, and blew the Ice from us, whereby we had some rest.

The 25th in the Morning, the Boatfwain, with a convenient Crue with, him, began to rig the Ship, the rest fetching our Provisions aboard. About 10 a Clock, when it was something dark, I took a Launce in my hand, and one with me with a Musket and some Fire, and went to our Wasch-Tree, to

6 Q

make

make a Fire on the eminentest Place of the Island, to see if it would be answered: Such Fires I had formerly made, to have knowledge if there were any Salvages on the Main or the Iflands about us. Had there been any, my purpose was to have gone to them, to get some Intelligence of some Chriflians, or some Ocean Sea thereabouts. When I was come to the Tree, I laid down my Lance, and so did my Confort his Musket; and whilst my self climed up to the top of the Tree, I ordered him to put Fire unto some low Tree thereabouts. He (unadvised-ly) put Fire to some Trees that were to Windward; fo that they (and all the rest too, by reason it had been very hot Weather) being feare and dry. took Fire like Flax or Hemp; and the Wind blowing the Fire towards me, I made haste down the Tree. But before I was half way down, the Fire took in the bottom of it, and blazed fo fiercely upwards, that I was fain to leap off the Tree, and down a steep Hill, and in brief, with much ado, cicap'd Burning. The Moss on the ground was as dry as Flax; and it would run most strangely, and like a Train along The Musket and the Lance the Earth. were both burnt. My Confort at last came to me, and was joyful to fee me; for he thought verily I had been burn-And thus we went homeward together, leaving the Fire increasing, and itill burning most furiously. We could fee no answer of it. I slept but little all Night after: and at break of day, I made all our Powder and Beef to be carried aboard. This day, I went to the Hills, to look to the Fire; where I 'faw how it did still burn most furiously, both to the Westward and Northward; leaving one upon the Hills to watch it, I came home immediately, and made them take down our new Suit of Sails, and carry them to the Sea-side, ready to be cast in, if occasion were, and to make haste to take down our Houses. About Noon, the Wind shifted Northerly; and our Centinel came running home, bringing us Word, that the Fire did follow him hard at his Heels, like Train of Powder. It was no need to bld us take down and carry all away to the Sea-side. The Fire came towards us with a most terrible rattling noise; bearing a full Mile in breadth: And by that time we had uncovered our Houses and laid hand on, to carry away our

last things, the Fire was come to our Town and seized on it, and (in a trice) burn it down to the Ground. lost nothing of any value in it; for we had brought it all away into a Place of Security. Our Dogs, in this Combustion, would fit down on their Tails, and howl, and then run into the Sea, on the Shoalds, and there stay. The Wind shifted Easterly; and the Fire ranged to the Westward, sceking what it might devour. This Night, we lay all together aboard the Ship, and gave God thanks, that he had Shipt us in her again.

The 27th, 28th, and 29th, we wrought hard in fetching our Things aboard, as likewise our Water, which we must Towe off with the Ebb, and bring it to the Ship with the Flood. Moreover, we must go about the Easter-Point for Drift-Wood; for our Tools were all so spent, that we could cut none: Wherefore, about some three days agone, I had caused our Pinnace to be Sawed to pieces, and with that we Stowed our Cask, intending to burn it at low Waters, and such other times, as we could not work in carrying things aboard. I employed the Men in fetching Stones; and we did build three Tombs over our three Dead Fellows, filling them up with Sand in a decent and handsome fashion. The least Tomb had two Tuns of Stones about it.

The 30th, we most earnestly continued our Labour, and brought our Sails to Yard; and by 11 a Clock at Night had made a priddy Ship; meaning to have finished our Business with the Week and the Month, that so we might the better solemnize the Sabbath ashore to morrow, and so take leave of our Wintering Island.

The Wind hath been variable a great while; and the Bays are now so clear of Ice, that we cannot see a piece of it, for it was all gone to the Northward. Hoping therefore that it give content to some Readers, I will relate the manner of the breaking of it up. It is first to be noted, that it doth not freeze (naturally) above six Foot, the rest is by accident. Such is that Ice that you may see here, six Fathom thick. This we had manifest proof of, by our digging the Ice out of the Ship, and by digging to our Anchors before the Ice broke up.

In May, when the Heat increaseth, it Thaws first on the Shoald by the Shore side; which when it hath done round about, then the Courses of the Tides (as well by the Ebb and Flood, as by their rising and falling ) do so shake the Main Ice, that it cracks and breaks Thus, when it hath gotten room for motion; then runs one piece of it upon another; and so bruises and grinds it felf against the Shoalds and Rocks, that it becomes abbreviated, infomuch that a Ship may have well passage tho-Besides this; much of it is thrust upon the Shoalds, where it is much confumed by the heat of the Sun. The Season here in this Climate, is most unnatural; for in the day time, it will be extream Hot, yea, not indurable in the Sun, which is, by reason that it is a fandy Country. In the Night again, it will freeze an Inch thick in the Ponds, and in the Tub about and in our House: And all this, towards the latter end of June.

The Muskices, upon our coming a-way, were most intolerable. We tore an old Auncient in pieces, and made us Bags of it to put our Heads in; but it was no Fortification against them. They would find ways and means to sting us, that our Faces were swoln hard out in Pimples, which would foltch and Smart, that we must needs rub and tear them. And these Flies, indeed, were more tormenting to us, than all he Cold we had heretofore indured.

#### July, 1632.

The first of this Month being Sunday, we were up betimes. And I caused our Ship to be adorned the best we could; our Auncient on the Poop, and the King's Colours in the Main-Top. I had provided a short Brief of all the Passages of our Voyage to this day: I likewise wrote in what state we were at present, and how I did intend to profecute the Discovery, both to the Westward, and to the Southward, about this Island. This Brief Discourse I had concluded with a Request to any noble Minded Traveller, that should take it down, or come to the notice of it; that if we should perish in the Action, then to make our Engeavours, known to our Sovereign Lord the King. And thus with our Arms, Drum and Colours, Cook and Kettle, we went ashore, and first we

marcht up to our eminent Cross, adjoyning to which we had Buried our Dead Fellows. There we read Morning Prayer, and then walked up and down till Dinner time. After Dinner we walkt to the highest Hills, to see which way the Fire had wasted. We descried that it had consumed to the Westward, sixteen Miles at least, and the whole breadth of the Island: Near about our Cross and Dead, it could not come, by reason it was a bare fandy Hill. After Evening Prayer, I happened to Walk alongst the Beachside; where I found an Herb resembbling Scurvy-Grass. I made some to be gathered, which we Boiled with our Meat to Supper: It was most excellent good, and far better than our Vetches. After Supper we went all to feek and gather more of it; which we did, to the quantity of two Bushels, which did afterwards much refresh us: And now the Sun was fet, and the Boat come ashore for us; whereupon we assembled our felves together, and went up to take the last view of our Dead, and to look unto their Tombs, and other Things. Here leaning upon mine Arm, on one of their Tombs, I uttered these Lines, which though perchance they may procure Laughter in the Wifer fort, (which I shall be glad of) they yet moved my young and tender-hearted Companions at that time with some Compassion. And these they were.

Were unkind, unless that I did shed, Besore I part, some Tears upon our Dead: And when my Eyes be dry, I will not cease In heart to pray their Bones may rest in peace: Their better parts, (good Souls) I know mere given, With an intent they should return to Heaven. Their Lives they spent, to the last drop of Blood, Seeking God's glory, and their Countries good; And as a valiant Soldier, rather Dies, Than yields his Courage to his Enemies: And stops their way, with his hew'd Flesh; when Death Hath quite deprived him of his Strength and Breath: So have they spent themselves; and here they lie, A famous Mark of our Discovery. We that survive, perchance may end our In some Employment meriting no praise:

5 ZU

And in a Dunghill Rot; when no Man Names The Memory of us, but to our shames. They have out-liv'd this fear, and their brave ends. Will over be an honour to their Friends. Why drop you so, mine Eyes? Nay rather DOUT My sad departure in a solemn shower. The Winters Cold, that lately froze our Blood, Now were it so extream, might do this As make these Tears, bright Pearls: which 1 mould lay, Tomb'd sasely with you, till Doomes fatal day. That in this Solitary place, where none Will ever come to breathe a Sigh or Groan, Some Remnant right be extant, of the true And faithful Love, I ever tender'd you. Oh, rest in peace, dear Friends, and let it be No Pride to Say the sometime part of me. What Pain and Anguish doth afflict the The Heart and Stomach, when the Limbs are dead. So griev'd, I kiss your Graves: And Vow to Die, A Foster-father to your Memory.

FAREWELL.

So fastning my Brief to the Cross, which was securely wrapt up in Lead, we presently took Boat and departed, and never put foot more on that Island. This Island and all the rest, (as likewife the Main) is a light white Sand, covered over with a white Moss, and full of Shrubs and low Bushes; excepting some bare Hills, and other Patches. In these bare Places, the Sand will drive with the Wind like Dust. very full of Trees, as Spruse and Juniper; but the biggest Tree I saw, was but a foot and a half over. our first coming hither, we saw some Deer, and kill'd one; but never any since. Foxes, all the Winter we saw many, and kill'd some Dozen of them; but they went all away in May. Bears, we saw but few, but kill'd none; we saw some other little Beafts. ka May, there came fome Fowl, as Ducks and Geefe; of which we kill'd very few. White Partridges we faw; but in small quantities; nor had we any Shot, to shoot at them. Fish we could never fee any in the Sea; nor no Bones of Fish on the Shore-side, excepting a few Cockle-shels, and yet nothing in them neither. Other things remarkable I have before mentioned.

### OUR

# DISCOVERY

## AND

# Coming Home.

July, 1632.

Unday being the 2d of July, we were up betimes, about Stowing and Fitting our Ship, and Weighing of our Anchors, which when the last was a-Trip, we went to Prayer, beseching God to continue his Mercies to us, and rendring him Thanks for having thus restored us. Our Ship we found no Defect in; we had abundance of fuch Provisions as we brought out of England; and we were in indifferent Health, and did gather Strength daily. This being done, we Weighed, and came cheerfully to Sail. The Wind at North West, bad to get away. Where-fore we stood over to Danby Island, to take in more Wood; and there to be ready to take the opportunity of a fair Wind. I went ashore my felf with the Boat; for that some of the Company had told me, that they had seen Stakes the last year droven into the Ground. When we came ashore, whilst some gather'd Wood, I went to the Place; where I found two Stakes droven into the Ground about a foot and a half, and Firebrands, where a Fire had been made by them. I pull'd up the Stakes, which were about the bigness of my Arm; and they had been cut sharp at the ends, with a Hatchet, or some other good Iron tool, and driven in as it were with the head of it. They were distant about a Stones throw from the Water-side. I could not conceive, to what purpose they should be there set, unless it were for some Mark for Boats. c This did augment my Desire to speak with the Salvages; for without doubt Vol. II.

they could have given notice of some Christians, with whom they had some Commerce. About four in the Evening, I returned aboard with a Boats lading of Wood; and the Wind something favouring, we Weighed; with our Lead seeking out a Channel amongst these perilous Shoalds. In the Evening, the Wind oppoling it felf, we came to Anchor betwixt Charleton Island, and that Island we named the last year, (in Memory of that Honourable Gentleman, Mr. Thomas Carie, one of the Bed-Chamber to the King) Carie's Island; where we rid all

The 3d, at break of day, we Weighed with a bare Wind, and Sounding up and down for a Channel, we were many times in five and four Fathom Water. The Wind largeing upon us, we stood away West: By Noon, we saw all Ice to the Northward of us. Endeavouring therefore, to Compais about the Westerpoint of Charleton Island, and so to seek to the Southward, we found it all Shoalds, Rocks, and Breaches. By four in the Afternoon, we saw the Western-land, but all full of sce; whereupon, as the Wind favoured us, we stood alongst in in fight to the Northward.

The 4th was Calm, but so very thick Fog with all, that we could not fee a Pistol-shot about us. Wherefore we came to an Anchor, and there rid all this day and the next night.

The 5th, at three in the Morning, we Weigh'd; but Ice being all about us, we knew not which way to turn us: Now to avoid telling the same thing 20 times, we were continually, till the 22th, fo pestered and tormented with Ice, that it would seem incredible to relate it; fome-

6 Q

fometimes we were so blinded with Fog, that we could not see about us; and being now become willful in our Endeavours, we should so strike against the Ice, that the fore-part of the Ship would crack again; and make our Cook and others to run up all amazed, and think the ship had been bearen all to sieces. Indeed, we did hourly trike such unavoidable blows, that we did leave the Hatches open, and 20 times in a day, the Men would run down into the Hold, to see if she were Bulged.

Sometimes, when we had made her fast in the Night, to a great piece of Ice, we should have such violent Storms, that our fastning would break; and then the Storm would beat us from piece to piece most fearfully; otherwhile, we should be tast inclosed among great Ice, as high as our Poop. This was made (as I have formerly faid) by one piece running upon another; which made it draw eight or ten fathom Water. Befides which, the lowermost would rife from underneath, and ftrike us under the Bulge, with pieces of five, fix, yea, of eight Tun, that many times we have pump'd clear Water for an hour together before we could make the Pump fuck. Amongst these several and hourly Dangers, I over-heard the Men murmur, and fay, that they were happy that I had buried; and that if they had a thousand Pounds, they would give it, fo they lay fairly by them; for we (fay they) are destined to Starve upon a piece I was fain to indure all this with Patience; and to comfort them up again, when I had them in a better Humour.

The 22th, having been vext with a Storm all last Night, and this Morning with a thick Fog, we drove in 13 Fathom Water. About Noon, it clear'd, and we faw Land; and at the instant, had a good Observation, whereby we knew it to be Cape Henrietta Maria. I made the Master stand in with it; and in the mean time, we fitted a Cross, and fastened the King's Arms, and the Arms of the City of Bristol to it; we came to an Anchor within a Mile of the Shore, in fix Fathom Water: fo we hoisted out the Boat, and took our Arms and our Dogs, and went ashore. Upon the most eminent place, we erected the Crofs; and then seeking about, we soon saw some Deer, and by and by more and more. We flole to them with the best skill we had, and then put our Dogs on them; but the Deer ran clear away from them

at their pleasure. We tired the Dogs, and wearied our felves, but to no purpose; neither could we come to shoote at them. I saw in all, about a dozen (old and young) very goodly Beafts. We took half a dozen young Geese, on the Pools, by wading in to them; and fo returned to our Boat vext, that now we had found a place where there was refreshing, and we could get none of it. Whereas, therefore, we had kept our Dogs with a great deal of Inconvenience aboard the Ship all the Winter; and had pardoned them many Misdemeanors, (for they would steal our Meat out of the Reeping Tubs) in hope they might hereafter do us some Service; and seeing they now did not; and that there was no hope they could hereafter: I caused them to be left ashore. were a Dog and a Bitch: Buck Dogs, of a very good Race. The Dog had a Collar about his Neck, which it may be hereafter, may come to light. I did fee no fign at all, of any Salvages; nor could we find any Herbs, on other Refreshing here.

In the Evening, (being returned aboard) and the Wind blowing fair at South; I caused the Master to Weigh, and come to Sail, and to lose no time; for we did hope for an open Sea to the N. W. This Cape hath a very Shoaldpoint, that lies off it; which we endea-

voured to compais about.

Sailing therefore amongst shattered Ice, we came to very Shoald-Water, ( four and five Fathoni deep ) and could not avoid it. At length, standing N. the Water deepened; but we came amongst great pieces of Ice; which by reason of some open Water, there went a pretty Sea. These hard pieces of Ice made a most fearful noise. It proved a fair Moon-shine Night; otherwise it had gone ill with us. We turned amongst this ke, staying the Ship sometimes within her length, of great pieces, as bad as Rocks; but by reason we were often forced to bear up, we did fag upon the Main-rand of let, and that we thought would be worse for us; we let fall an Anchor, and stood all on the Decks to watch the Ice's meering of the Ship, (to and again) to avoid it. Thus having Poles and Oars to fend it, we could not keep our selves so clear, but many pieces came foul of us. brake two of our great Poles with it; which were made to be handled by four Men, besides some other Damages. At break of day, we Weighed; and lought

fought all ways to clear our felves of Ice, but it was impossible. I conceive it impertinent to relate every particular days passages, which was much alike to Our Endeavours were sometimes with our Sails; giving and receiving 500 fearful Blows in a day. Sometimes, we would stop at an Anchor, when we could get a little open Water, and fo fuffer the Ice to drive to Leeward; other whiles, we should be enclosed amongst it; and then it would so break, and rife, and leap up under us, that we expected to be beaten every hour to pieces.

Moreover-we should have such Storms in the dark Nights, that would break the Moorings we had made fast to some piece of Ice for security in the Night Season; and then we should beat most dangerously from piece to piece till Daylight, that we could fee to make her fast again. I forbear to speak of thick Fogs which we had daily, which did freeze our Rigging day and night: Besides all which, we should come into most uncertain depths; sometimes 20 Fathom, next cast 10, next 15, then 9, Rocky foul The great deep Ice withall, Ground. driving on these uncertain depths, did so distract the Tides, and deceive us so much in our Accounts, that by the 30th, we were driven back so far, to the Eastward, and to the Southward of the Cape, that at five a Clock in the Evening it bare N. W. of us some three Leagues off, contrary to our Expectations. With all these Mischiefs, our Ship is now become very leaky, that we must Pump every Here I called a Consultahalf Watch. tion; and after consideration of all our Experience, we were all of the same Opinion, that it was impossible to get to the Northward, or to the Eastward, by reason of the Ice. Wherefore I resolved upon this Course: When the Wind blew South, it would blow the Ice off the South-shore, then we would feek to get to the Westward, betwixt it and the shore. I must confess, that this was a desperate Resolution; for all the Coaft we knew to be shoald and foul Ground, all Rocks and Stones; so that if the Wind should shift to the Northward, there would be (without God's mercies) little hope of us. But here we must not stay; the Nights grew long, the Cold for increased, that betwixt the pieces of Ice, the Sea would be frozen. I caused the Ship to be fitted, and Places convenient again prepared to fink her the fecond time, if to be we were put to Extremi-

ties. We presently put our project in Execution (the Wind being at South) and got about the fhoalds of the Cape, standing then into the shoreward, to get betwixt it and the Ice; we came into four Fathom Water (very foul rocky ground) thinking to come to an Anchor all Night, and let the Ice drive to Leeward. But still there was so much lee betwixt us and the shore, that we were fain to bear up amongst it into deeper Water, and to let the Ship drive amongst The Wind increasing, we endured a most dangerous dark Night of it. the Morning, we fell to work, to get the Ship again out of the Ice into some clear Water, which we saw W. by S. of us. Some of our Company went out upon the Ice, to heave her with their Shoulders, whilst others stood aboard with Poles. The rest stood to spill and fill the Sail. By nine in the Morning, we had gotten into some clear Water, and stood West and by South, and into four Fathom Water, foul Ground. But being not able to weather some rands of sce which did drive, we were fain to stand off again, and (when the Evening grew dark) to come to an Anchor.

About Midnight, there came a great piece of Ice (which we could not avoid) athwart of our Cable, and made the Ship drive and drag her Anchor. This drove her into shoald Water, it being very rocky and foul Ground. We brought the Cable to Capstang, and heav'd with such a Courage, that we heav'd home our Anchor from under it. Thus we did endeavour (the best we could) to keep our selves in eight and ten Fathom Water. It then pleased God, that the Wind blew alongst the shore, otherwise it had gone far worse with us.

#### August, 1632.

The first of this month at break of day, when we could see a little about us, we sell to struggle and strive again with the Ice, and to get in nearer to the shore. There, by reason the Wind was opposite to come to an Anchor, we let the Ice drive to Leeward, hoping that there was a clear Sea to the Westward. The Ice drove very thick upon us, and one piece came soul of us, which did touch our Sprit-Sail Yard, and made the Ship drive; but we soon cleared our selves on it. Then we Weighed, and stood in nearer to the shore; but the Water shoulded, and there were so many great rands of Ice betwixt us and the shore;

that there was no coming to an Anchor. So we turned betwirt the Ice; many pieces of it being a-ground in should Water; and few pieces distant one from the other a Cables length. This day we saw two Sea Morses on the Ice.

The 2d in the Morning, we were glad of the break of day, having most dangerously turn'd amongst the Ice all Night, and endured many a heavy blow. stood in again to the shore-ward, to see if we could get some clear Water; for to the Northward it was all impassable Ice. We stood into five and four Fathom, but still all incompast with Ice. So we stood off again into deeper Water, and in the Evening we were inclosed amongst extraordinary great pieces: It was a very thick Fog withall; so that we made fast the Ship to a great flat piece, and went to Sleep and refresh our selves after our extream Pains-taking.

The 3d, 4th, and 5th, we were inclosed amongst very great Ice; and it blew such a Storm of Wind, that we sometimes endeavouring to get forward to the Westward, did strike such heavy blows, that made all the forepart of the Ship crack again. Then we would give over working and let her alone amongst it; but then the Ice would break and rise under us, that would endanger us as bad as the former. Our Ship doth make above a Tun of Water every Watch, which we must Pump out, beside our our other Labour. God think on us, and be merciful to us amongst all these Dangers.

The 5th at Noon, we were in Latitude 55. 30. the Cape bearing off us S. E. by E. fome 12 Leagues off; and this is all we have gotten, fince the 22th of July. All Night it blew a violent gale of Wind, at W. N. W. and about Midnight, our Hawser (which we had made fast to a piece of Ice) broke, and we lost 14 Fathom of it. We beat all Night most fearfully, being tost from piece to piece, because that in the dark we durst not venture our Men to go forth on the Ice for fear of losing them.

All the 6th, the Storm indured, and drove us again with the Ice, almost to the Cape.

The 7th, was the most comfortable day we had since we came out of our Wintering place; the Wind came up fair at East, and we got (although with our former Inconveniencies and Dangers) nearer to the shore, and into some open Water, making good way to the Westward. Moreover, our Leak now stopt

of its own accord, so that now we Pumpt but little. We sailed all Night, keeping good Watch on the Forecastle, bearing up for one, and looffing for another.

Thus did we the 8th also, but then the Wind shifting to the N. W. it drove the Ice on the shore, and we came to an Anchor in eight Fathom Water. Main-Ice, we had some two Mile to Windward of us, but the set of the Tide kept it off from us. At Noon, we were in Latitude 5.5. 34. In the Evening, a rang of Ice drove upon us, which made us Weigh, and stand in nearer the shore, into fix Fathom, and there to come to an Anchor. The Wind increasing about Midnight, the Ship did drive, and was quickly in five Fathom Water; wherefore we let fall our Shoot-Anchor, and both held her. But that that troubled us, was, that we expected every Minute, when the Main-Ice would come upon us, and then there would be no hope but to be put ashore.

The 9th, in the Morning, we Weighed our second Anchor, the Ice being within less than a Mile of us. About eight in the Morning, a Point of it came foul of us, which we prevented, by Weighing, and came to an Anchor in three Fathom and a half Water. Wind continued N. N. W. which was in on the shore. This Morning, I caufed all our empty Cask to be fill'd with Water, and the Ship to be left unpumpt; and the Places lookt to, that we had prepared to link her: for we were at prefent in as apparent danger, as any time this Voyage; and (to our great griefs) it was all foul rocky ground. The Danger of this was, if we made fast to a piece of Ice that drew deep Water, then, as foon as it came to ground on these Rocks, it would break all to pieces, and betray us to our Destruction. About Noon, there came foul of us, the point of a range of Ice, which we resolved to endure the extremity of, with an Anchor, thinking to ride and break through it, we now perceiving some open Water beyond it; thrusting therefore, and fending with our Poles, at last a great piece came thwart our Hawser, and there went a pretty Sea amongst it. The Ship did now fall upon it so violently, that I expected every blow, she would beat out At length, she did drive her Bows. with it, so that I thought the Cable had been broken. We brought it to Capstang to heave it in; but found that our Shoote-Anchor was broken in the middle

of the shank. We presently set our Sails thereupon, endeavouring that way to edge in amongst the Ice off of this perisons shore. It pleased God to savour our Labour so, that by eight in the Evening we got off into seven Fathom; and a dark Night coming on, we made fast to the biggest piece we could find. It blew fairly all Night; but about Midnight, the Wind came up at North, which was more on the Shore than before.

By break of day, on the 10th, we were driven into four Fathom, very foul ground; so that the Lead did fall off the Rocks three or four Foot, we fet our Sails, and used our uttermost Endeavours to edge off. Some of us went upon the Ice to hale her; others stood with Poles to thrust, by Night. At Night we had gotten off, into eight Fathom; and made fall to the biggeff piece we could find. If any Man should ask, Why we now kept so near to the shore, in this continual danger? I answer, Because that in the Offing, the Ice was so extraordinary thick, that we could make no way, any way through it. Moreover, when we were in that great thick Ice, and that the Wind came up fair at S. or S. E. or E. we could not get out of it. Wherefore we chose to run this adventure, and so prevent and overcome all Dangers with God's Assistance and our extream La-

The 11th in the Morning was a thick Fog, yet there fprung up a gale of Wind at East, and we made in for the shore.

From the 11th till the 14th, the Wind continued fair; and we made all the Sail we could (night and day) as the lee would fuffer us. We had the shore in fight by day, on one side, and the lee within two Miles, on the other; and we sail'd amongst disperst pieces, luffing for one, and bearing up for another.

The 14th at Noon, we were in Latitude 57. 55. In the Evening we were imbayed in Ice, and stood S. W. to clear our selves of it, but could not. But seeing from Top-mast Head, clear Water over it, we put into it; but there rose a very thick Fog, and Night came on withall, that we were sain to sasten to a piece of Ice, expecting Day and better Weather.

The 15th in the Morning, (although the Fog was very thick) we endeavoured to get out of the Ice, and food away. West; but within two houts, the Water shoulded from 40 Fathem to 25, whereby we knew that we had the shoulding of the Western-shore. Then we Vol. II.

fhapt our Course to the Northward, the Fog continuing so thick, that we could not see a Pistol-shot about us. We had not stood this way two hours, but we heard the rut of the Ice a-head of us, which made the most hideous noise of any we had heard this Voyage. hal'd our Tacks aboard, and stood to the Westward in this day darkness, hearing of it sometimes, and sometimes feeing of it, which was very large, deep, and high Ice, above the Water. We weathered it all, except forme few pieces, and got into open Water. About Sunfet, there came a fudden guft at N. N. W. and before we could handle our Sails, it was with us, and put us to some trouble. It dallied with us by Gusts till nine a Clock, and then it fell into a most violent Storm. We considered where we might have the clearest drift; and so took in all, and let her drive, her Head to the shoreward. Before Midnight, the Water shoalded on us to 15 Fathom. Then we turned her Head to the Eastward, and fet our Main-Course low set, but as much as she could indure. The Water deepned but little, and we knew that we were on those rocky Shoalds which we struck on the last year. God be merciful to us. Here was the first great breaking Sea that we had this year.

The 16th in the Morning, we were driven to a great rand of Ice; to avoid which, we fet our Fore-Course too, and stood to the shoreward in 13 Fathomi Water, and then about again: We stood in, a Mile into the Ice; but there went fuch a great fwelling Sea in it, that it was indurable, so we stood out again. About three a Clock in the Afternoon, the Storm broke up, and blew fair at N. W. which proved good for us, for we had not drift for four hours : besides, it was but two Leagues betwixt the Shoalds and the Ice. We set all our Sails, and endeavoured to weather the Ice; but in the Evening we were still pester'd with By Midnight, we knew not which way to turn, nor what to do; fo we took in all our Sails, and let her drive amongst it. The Ice beat us on every fide, for there went amongst it a very great full Sea.

The 17th in the Morning, when we could see about us, we were in the midst of the Ice; but with the last storm it was all broken into mammocks, as big as a Boat of three; or four Tuns, which did give us many a heavy blow in the dark night. If this Storm had taken us amongst

amongstit, it had beaten us all to pieces, without Gods miraculous Preservation. We made Sail, and endeavoured to clear our selves of it to the Northward, which by 8 in the Morning we had done.

We then went to Prayer, and gave God thanks that had delivered us out of it. For we were hourly, for the space of fix Weeks, as it were in the Jaws of Death; yea, never any (that I have heard of) have been so long, in such long Nights, upon a foul should shore, tormented with Ice, as we have now been. At Noon we were in Latit. §8. 20.

Now as touching the Dissolution or Ruining of the Ice, we found that this Storm had torn and shattered this rand of Ice, which was on the outlide; although it must have a long time to work into the main body of it. I have in July, and in the beginning of August, taken some of the Ice into the Ship, and cut it fquare two foot, and put it into the Boat, where the Sun did shine on it with a very strong reflex about it. And notwithstanding the warmth of the Ship, ( for we kept a good fire ) and all our Breathings and Motions, it would not melt in 8 or 10 days.

It was our Practice, when we should be two days together fast to a piece of Ice, to set Marks on it, to see how it did consume; but it yielded us small hope of dissolving. We could not in that time perceive any Diminution by the sinking of it or otherwise. Nevertheles, I think that it is ruined with Storms, or consumed with Heat some years; or else the Bay would be fill'd choke-full: but I confess, that these Secrets of Nature are past my Apprehension.

Being out of it, (but no otherways than that we yet faw it from off the Decks, all to the Eastward) I ordered the Master to steer away North and by East, keeping the shoalding of the Westernshore.

The 18th at Noon, we were in Latitude 59. 30.

The 19th, we continued our Course betwixt the N. N. E. and the N. by E. and at Noon were in Latitude 61. 7. some 12 Leagues off the Shore. I ordered the Master to shape his Course North East, to look to that place betwixt Carie's Swan's Nest, and Neulera.

The 20th, we were in Latitude 61.45. This day we saw some few Seols about

the Ship.

The 21th, the Water shoalded, so that we made account we did approach

the Land; but about Noon, the Wind came up at N. E. our direct opposite. We Looft as near it as we could, and as it Larg'd, we came to stand E. and E. and by N.

The 22th, we fell with the Land to the Westward of Carie's Swan's Nest: where we had 40 Fathom, three Leagues off. We stood in, within a League of the shore, into 13 Fathom; and seeing the Land to the Southward of us, we compast about it, it being Carie's Swan's Nest, which is in Latitude 52.00.

All the 23th, we failed N. E. and for

the most part in fight of Land.

The 24th at Noon, (by Judgment) we were in Latitude 63.30. having failed a N. E. Course. All this day was a very thick Fog, which about one a Clock clear'd a little, fo that I expected to fee the Land. Some of our Men being better sighted, spied it out about some two Leagues off from us. I knew it could be no other then Nottingham Island; though it were something contrary to the expectation of our best Mariners. We stood into it to make it. It was the North end of it; and it bare off us Due-East; I was soon assured of it; and I ordered the Master to shape his Course North West and by North. Both he and others were unwilling; but without much ado, submitted themfelves, (how loth foever) for that it was so very foul thick weather. The Reafons of my resolution were these: The time of the year was far spent, and the Discommodities of Winter came upon us; and therefore would I make the shortest way, betwixt the Lands already discovered. If I found an open Sea, I had my delire, and did then intend to proceed to the uttermost of our power; if we met with the Land, I should then finish the Discovery, it being not passing 15 Leagues from Land to Land, and not passing 10 Leagues from Nottingham Ifland to the Main of the North-shore. We made what Sail we could, it blowing a very stiff gale of Wind until eight in the Evening; then it began to blow fiercely, and we took in our Top-fails, and stood under our two Courses and Bonnets. At nine, it blew a violent Storm at S. S. E. so that we took in our Foresail, and let her drive N. W. All the Night it continued an extraordinary Storm; fo that we heaved the Lead every half watch; But the Ship did drive fo faft, that she would be past the Lead before there was 20 Fathom of Line out, all the Night being exceeding Cold withall. The

The 25th, the Storm continued in his uttermost Malice, and did so perplex us, that there were but few that did Sleep or Eat a bit these 24 hours. a Clock in the Afternoon, the Storm began to flacken, yet blew there a fierce gale of Wind betwixt the S. and S. W. We stood W. N. W. and made a N. W. way, when suddenly the Sea became very fmooth. We reasoned thereupon amongst our selves, what might be the Cause of it. We all thought it to be the Leeward Tide; nothing doubting what afterwards we encountered. The Ship had very quick way in this smooth Water.

The 26th, by two a Clock in the Morning, we were fuddenly come in amongst the Ice; and it pleased God, that the Moon at the instant gave us so much light, that we could see a little about us. We would have staid the Ship, but it was so thick to Windward, and so near us, that we durst not. We then bore up in this unexpected accident; and (I verily believe) did not scape striking, the length of a foot, against the Ice as hard as Rocks, two or three times; the Ship now having way, after 12 Leagues Then we stood close by a a watch. Wind to the Eastward, expecting day, that we might see about us. We could from Top-mast Head see the Ice to the N. N. W. the N. W. and fo round about by the S. to the E. and some there was to Leeward of us. It was all flat found Ice, in Main rands; and the Sea as smooth as a Well amongst it. ftruck us all into a dump; whereupon, I called a Consultation of my Associates; namely, Arthur Price Master, William Clemens Lieutenant, John Whittered Master's Mate, Nathaniel Bilson Chirurgeon, and John Palmer Boatswain; requiring them to Advise and Counsel me, how to prosecute our Business to effect. all went together, and reasoned amongst themselves; and then brought me their Opinions in Writing under their Hands; vie. Our Advice is, That you repair homeward, from this present 26th, and that for these Reasons

First, For that the Nights are long, and so extream Cold withall, that we can hardly handle our Sails and Riggings. Secondly, The times are now subject to stormy and gusty weather; as witnesser to storm ever since the 24th, and doth yet continue no Weather to discover in Thirdly, We doubt whether Hudsen's Straights be so clear of Ice, that it may

be passable in convenient time, (Winter coming now on apace) before we be frozen up, seeing the Ice lies here all over the Sea in rands and ranges. Fourthly, We must have a set of fair weather, to pass the Straight, which we may stay a long time for, if we negled the first opportunity. Fifthly, For that our Ship is very Leaky, so that in foul Weather we are fain to Pump every Glass, which is great Labour. Moreover, we know her to be so sorely bruised with Rocks, and Blows of the Ice, that she is no more to be adventur'd amongst it, but in saving of our Lives homewards. Belides all this, our Men grow very weak and fickly, with extream Labour. Sixthly\_ The Season of the year is so far spent, that we can expect no other Weather than we have had, both lately and at present; that is to say, Snow and Fog, freezing our Rigging, and making every thing fo flippery, that a Man can scarce stand; and all this, with the Wind Southerly; which if it should come to the Northward, then we are to expect far worse. Seventhly and Lastly, That the Ice lies all in thick rands and ranges, in the very way we should go, as you and all Men here may see. And therefore we conclude, as aforesaid, That there is no possibility of proceeding further: Wherefore we here Counsel you to return homeward, hoping that God will give us a favourable Passage, and return us home safe into our Native Countries, if we take time, and not tempt him too far by our willfulness.

Indeed most of these Reasons were in view, and I could not tell what to say to oppose them; nor any reason could I give, how we might proceed further; wherefore (with a forrowful heart, God knows) I consented, that the Helm should be born up, and a Course shapt for England; well hoping, that his Majesty would graciously Censure of my Endeavours, and Pardon my return. And although we have not discovered populous Kingdoms, and taken special notice of their Magnificence, Power, and Policies, brought Samples home of their Riches and Commodities; pried into the Mysteries of their Trades and Traffick; nor made any great fight against the Enemies of God and our Nation; yet I wish our willingness in these Desart Parts may be acceptable to our Readers. When we bore up Helm, we were in Latitude 65. 30. at least, N. W. and by N. from Netringham Island. Some were of an Opinion, that we were further to the

Northward ?

Northward; but by reason it was by Judgment, I chose to set down the lesser distance.

The 27th, the Wind came up at N. W. with which Wind we could not have gone on our Delign: That Wind made no great swelling Sea. By Noon, we were athwart of Cape Charles; fo that we went in betwixt that Cape, and Mill Islands. The last Night it did Snow ve-1y much, and was very Cold; fo that all our Rigging and Sails were frozen, and all the Land covered over with Snow. And here, (fithence I have formerly spoken that it Snows very much) it will not be amiss to consider of the Reasons of it. When I was upon Charleton Island, (our Wintering place) and in June, when the Snow was clearliest gone off the Ground, I have in the Nights, (and some of them following the hottest days) observed, whether there fell any Dew or no; but I could never perceive any, and (under Correction of the Learned) from Moss and Sand, little (me thoughts) was to be expected. Now, of what was Exhal'd from the Snowy Ice, and Cold Sea; could there probably be returned but the like again. Generally, we continued on our Course, blinded with Foggy and dirty Weather; and that, intermixt with Snow and Frost, amongst disperst pieces of Ice, many of them higher than our Top-mast head.

With great variety of Winds, we were also driven within three Leagues of both Shores; so that the last of this month, we were in the narrow of the Straight; which is about 15 Leagues over; the South shore was much pestred

with Ice.

#### September, 1632.

The 1st, and 2d, we continued our Endeavour to get on our way.

The 3d in the Evening, as the Weather cleared up, we did see the South-

end of the Island of Resolution.

These three Days and Nights had been extream Gold, with Fog and Frost; infomuch, that our Men in the Evening could hardly take in our Top-Sails and Spreet-Sail. We have sailed thorow much Mountainous Ice, far higher than our Top-mast head. But this day we sailed by the highest that I ever yet saw, which was incredible indeed to be related. Now as the Wind comes Easterly, we feel another Sea, out of the Ocean, and the Ship labours with another Motion, than she hath done with

any that ever we observed to come out of the Westward.

From the 3d to the 8th, we had variety of Winds, and were gotten clear out of the Straights; but were now come into such a tumbling Sea, (the Weather durty and gusty, and by interims Calm again) that the Ship did so Labour and Rowl, that we thought verily she would have rowled her Masts by the board. This made her so Leaky, that we were fain to Pump every Glass; yea, her Seams did so open alost, that we lay alt wet in her.

This was the last day that we saw any Ice. The Wind now favouring us, we made all the haste we could homeward. By the way, (having endeavoured, observed, and experimented some things in my unfortunate Voyage) I perfected up my said Observations; which being after commanded to publish, I here most submissively offer unto the judicious Readers; and raine our private Opinion withall, concerning the seiseableness of the Action intended, which was to find a Passage into the South Sea.

What hath been long ago Fabled by fome Portugueses, that should have come this way out of the South Sea, the meer shadows of whose mistaken Relations have come to us, I leave to be confuted by their own Vanity. These hopes have stirred up from time to time, the more active Spirits of this our Kingdom, to research that meerly imaginary Passage. For mine own part, I give no Credit to them at all; and as little to the vicious, and abusive Wits of later Forengueses and Spaniards, who never speak of any difficulties; as shoald Water, Ice, nor sight of Land; but as if they had been brought home in a Dream or Engine. deed, their Discourses are found absurd; and the Plots, (by which some of them have practifed to deceive the World) meer Falsities; making Sea where there is known to be Main-Land; and Land, where is nothing but Sea.

Most certain it is, That by the only industry of our own Nation, those Northern Parts of America have been discovered, so the Latitude of 80 Degrees and upwards. And it high been so curiously done. (the Labours of several Men being invested together) that the Main-Land, bath been both seen and searcht; sue they have brought this supposed Passage they have brought this supposed Passage they have begrees of Latitude. A Cald Color, pestered with Ice, and other Discounteries, and where

the Spaniards Dispositions, and their weak Speeke-Ships, can hardly long endure it. And withall, it is thus known, that the entrance of Hudson's Streights is but is Leagues broad, in the middle not fo much; and betwixt Salisbury Island, and the Main, that it is but eight Leagues. Then proceeding to the Northwards, towards the forementioned Latitude, it is but is Leagues from Main to Main. This in length, is but about 140 Leagues, as may more plainly appear by the Map. Most infinitely pestered withall it is with the Ice, until August, and some years not passable then; yea, I believe, the Straight is never clear of Ice tho-

Now most probable it is, that there is no Passage, and that for these Reasons

tollowing.

First, That there is a constant Tide Flood and Ebb, fetting into Iludion's Streights, the Flood still coming from the Eastward; which, as it proceeds, (correspondent to the distance) it alters his time of full Sea. This also entering into Bays, and broken Ground, it becomes distracted, and Reverses with half Tides.

Secondly, Here is no small Fish, as Cod, &c. and very few great ones, which are rarely to be feen: Nor are there any Bones of Whales, Sea-Horses, or other great Fish, to be found on the

Shore; nor any Drift-Wood.

Thirdly, That we found the Ice in the Latitude of 65. 30. to be lying all over the Sea in rands; and I am most certain, that the Shoalds and Shoald-Bays are the Mother of it. Had there now been any Ocean beyond it, it would have been broke all to pieces; for fo we found it coming thorow the Straight into the Sea to the Eastward.

Fourthly, The Ice feeks his way to the Eastward, and so drives out at Hudson's Streight, which I have often observed being a Land, upon the Island of Refolution, and driving amongst the Ice in

the Streight.

Now admit there were a Passage, yet is it known, that it is partly narrow, for 140 Leagues, and to be infinitely peftered with Ice withall, as every one have found, who have gone that way. Comparing therefore someObservations taken at Bantam, Gulolo, and at Firando in Ja-Fan, and the Distance betwix Japan and othe Western part of Califurnia; with the Vol. II.

Observations taken at Charleton Island, (referring all to the Meridian of London) and then the Distance betwixt the Meridians of Cape Charles, and the Westernpart of Califurnia, will be found to be about 500 Leagues, in the Lat. of 66.00. where yet the Meridians incline very

much together.

To this may be added. That near about Cape Charles, the Variation is 20 Degrees to the West; which is a probable Argument, that there is much Land to the Westward; and that this Straight must be very long, and that you have no time to pass it but in August and Sepremb. when the Nights are so long, and the Weather fo cold, that it will not be indurable.

Add to this, That neither can any great Ships, which are fit for carrying of Merchandize, indure the Ice, and other Discommodities, without extraor-

dinary danger.

Moreover, a thousand Leagues is sooner failed to the Southward, and about the Cape de Bona Speranza, (where the Winds are constant) and that with safety, than a hundred in these Seas, where you must daily run the hazard of losing Ship and Lives. Put hereunto, that Comfort for the Sick, or refreshing, for your Men, here is none to be had in these Quarters.

Towards the latter end of August, and in September, the Weather grows Tempestuous, and the Winds incline to be Westerly, that there will be but small hope of performing your Voyage

this way.

But let us (by way of Imagination only) inlarge this Streight, in this Latitude, and free it of Ice; yet, what Advantage, in speedy performance, will be gotten by this Passige, if the Winds be withall considered? To Japan, China; and the Northern Parts of Asia, it may be the nearer cut; but in Navigation, the farthest way about, is well known, in fewer days to be performed, yea with lesser pains, and more safety of Ship and Goods.

Again: To the East-Indies, and other Parts, where we have the greatest Commerce and Employment of Shipping, the What benefit of other way is as near. Trade might have been obtained in those Northern Parts of Asia, I will not prefume to speak of; holding that there is a great difference betwixt those Parts and the Northern Parts of America; whereas I am fure that there is none

6 T

in any place where I have been all this Vovage.

,,

The 22th of October, we arrived in the Road of Briftol, having been hindered and croft with much contrary tempestuous Winds and Weather. The Ship being brought into Harbour, and hal'd dry a-ground to look to her, it was there found, that all her Cut-water and Stern were torn and beaten away, together with 14 Foot of her Keel; much of her Sheathing cut away, her Bows broken and bruifed, and many Timbers crackt within board; and under the Star-board Bulge, a sharp Rock had cut thorow the Sheathing, the Plank, and an Inch and a half into a Timber that it met withall. Manv other Defects there were besides, so that it was miraculous how this Vessel could bring us home again. Being all here arrived, we went all to Church, and gave God thanks for his Preservation of us amidst so many Dangers. I very well know that what I have here hastily written, will never discourage any noble Spirit, that is minded to bring this so long tried Action to absolute effect: And it is likely withall, that there be some, who have a better

Understanding, and a furer way of profecuting of it, than my felf have. whose Designs I wish a happy Success. And if they do but make a review of what hath been done, and give more certain Celestial Observations, Hydrographical Descriptions, or Exacter Practice in Navigation, it will be a most commendable Labour. For although I have spent some years of my ripest Age, in procuring vain Intelligence from Foreign Nations, and have travelled unto divers Honourable and Learned Personages of this Kingdom, for their Instructions; have Bought up whatever I could in Print, or Manuscript, and what Plot or Paper foever conducing to this Business, that possibly I could procure; and have ferved voluntarily besides, and spent some time in rendring a relation, (fince my coming home ) and Expended withall of my own Monies, in my aforesaid Endeavours, and in furnishing of extraordinary Necessaries, above 200 l. in ready Money; yet I repent not my self, but take a great deal of Comfort and Joy, in that I am able to give an account (in fome reasonable way) of those Parts of the World, which heretofore I was not so well satisfied in.

### COPY of the LETTER

Which I left at

## CHARLETON

Fastened to the Cross, July 1. 1632.

E it known to any that shall haply arrive here, on this Island of Charleton, that whereas our Soveraign Lord, Chailes I. King of England, Scotland, France, and Ireland, Defender of the Faith, &c. having a Desire to be Certified, whether there were any Passage, or not, by the North-West or Northwestward, thorow these Territories, into the South Sea: Some of the betterminded Merchants, of the worshipful Company of Merchant-Adventurers of the City of Bristol, to Satisfie His Majesty therein, did voluntarily offer to set forth a convenient Ship for that purpose, well Mann'd, Victualled, and furnished with all other Necessaries. free Offer of theirs was not only commended, but graciously accepted of by His Majesty. Whereupon, they fitted and furnished forth a Ship, called the Henrietta Maria, of the Burthen of 70 Tuns, Victualled for 18 Months. A number thought convenient to manage such a Business, was 22 Men, whereof 19 were choice able Men, two Younkers, and my unworthy felf their Commander. All which, the Bristol Merchants did most judiciously and bountifully accommodate, and had in a readiness, the first of May, 1631.

The 3d of May, we began our Voyage out of the Road of Briftol, commonly called King's Road, passing about the Cape Cleere of Ireland, upon many Courfes, but reduced to a West North-West, we sailed along; and upon the 4th of June, we made the Land of Greenland to the Northward of Cape Farewell, where for the space of two days, we were dangerously ingaged amongst the Ice. Being clear of it, we doubled Cal Farewell to the Southward, and so c ntinued our

Course to the Westward, continually Sailing and thrusting the Ship thorow much Ice.

The 19th of June we made the Island of Resolution, and endeavouring to compass about it to the Southward, we were taken with a strong Westerly Wind; which drove the Ice, and it us, upon the Shore. In that Distress, (seeing it was broken Grounds and Main-Inlets into it) I fent the Shallop to Seek and Sound a Place, for our Refuge; but when she was departed, she was in as great Danger as we, and could not return to us by reason of the Ice. We being now driven very near the Rocks, were fain to set our Sails, and force the Ship into an opening, adventuring her amongst unknown Dangers to avoid apparent, before we could Moor her in a place (as we thought) fafe from Danger.

The 22th of June, (this Inlet being full of Ice) that Ice upon the Ebb, fo Jamb'd one piece into another, that it altered the ordinary Course of it, and it came upon the Ship, and put her against the Rocks, notwithstanding our utmost refistance. As the Water Ebb'd away, the Ship hung by the Keel upon a Rock, and heel'd to the Offing. As foon as we perceived this; we made fast some Hawfers to her Masts, and to the Rocks, to hold her upright; but all in vain; she funk still, as the Water Ebb'd away; fo that the was fo turned over that we could. not stand in her. Hereupon, we got all upon a piece of Ice, looking upon her, and praying God to be mercitul to us. The Rock that she hung upon, was a little abaft the Main-Mast, which made her hang after the head, and she sunk over A much, that the Portlass of the Forecastle was in the Water. At length, it pleased

God

God, the Flood came, before it had Ebb'd fo low as the Tide before and after, by a Foot; and the Ship rose, and was Safe and Sound: And thus were we miraculoufly delivered. With the first Wind, we proceeded to the Westward; continually being peftred with fo much Ice. that it was about the middle of July before we could attain to Sir Dudley Digg's Island. And here I was put to my Confideration; for whereas by my Directions, I was to fearch especially two places; one from Digg's Island to the Northward, and failing there, to go to the Checks and Hubbari's Hope, and so to search it to the Southward; I now finding the Sea much pestered with Ice in the Latitude of 64 0 and as far as we could fee to the Northward; and that the time was fo tar spent, as that before I could do any thing that way, it would be Angust, and then as much trouble to return again to Digg's Island; and that by that time, the year would be fo far spent, the Nights fo long and cold, that I fear'd I should be forced with shame to return into Figlind again that year. Wherefore I took my way to the Westward, by Mansfield's Island; on which I landed twice, still hindr'd and incumbr'd withIce. Thence I proceeded Westward, hoping for an open Sea in the Bay. We were there more troubled with Ice, than in any place before; so that it was the 11th of August, before we had fight of the Western land, which we made in Latitude 59. 30. something to the Southward of the Checks. We were not able to attain thither, by reason of the contrary Winds and Ice; but were Observant of the Currant of the Tides; which after, by experience, we found to come from the Northward. We Coasted alongst the Shore, in fight of Land, and in 10 Fathom Water to the Southward; and entred that Inlet, which heretofore was called Hubbari's Hope; which was the very place, where the Passage should be, as it was thought by the Understandingest and Learnedest Intelligencer of this Business in England. We failed to the very bottom of it, into three Fathom Water; and found it to be a Bay of some 18 or 19 Leagues deep. From thence we proceeded to the Southward, in fight of Land for the most part; and although I was as careful to keep the Lead always going (it blowing a fresh gale of Wind and a pretty big Sea) our depth, eight, pine, and ten Fathom; yet before the Lead was up, the Ship struck upon a flat / Rock; (the then being under Forefail,

Foretopfail, Maintopfail, and Spritfail) and gave three fore Knocks, and got over it. Being past this Danger, we proceeded, and pass'd by Port Nelson. Finding the Land trend to the Eastward, we began our Discovery of it more carefully; because that no Man (that ever I could hear or read of) did ever see this Land before. We stood into six and sive Fathom; for it is very low Land, and trends for the most part E. S. E. and E.

by S.

The 27th of August, I entred upon it, and in the Name of the Merchants-Adventurers of Briffol, took Possession of it to His Majesties Use, naming it, The New South-West Principality of Wales. I brought from the Land, fome small Trees and Herbs, and killed divers forts of Fowl, in fign of Seifure, which I brought aboard. Not long after, (being put back to the Westward with contrary Winds) we spake with Captain Fox, in a Ship of his Majestics, set forth for the same purpose that we were: I invited him aboard, and entertained him with fuch fare as we had taken in this new Discovered Land; and made him a relation of all our Endeavours: The like did he to us, and withall told us, That he had been in Port Nelson; where he had put up a Shallop, and found there many things which Sir Thomas Button had left there. next day, he departed from us, and stood to the Westward, and we never saw him His Ship, he, and all his Comfince. pany, were very well. We continued our Discovery to the Eastward, and came to the Eastern-Point, which is in Latitude 55. 06. which we named Cape Henrietta Maria. There the Land trends to the Southward, and we followed it in fight, but were put off with foul Weather; which being over-blown, we flood in again for the Western-shore, (that we might leave no part unseen) and followed it again to Latitude 54. 40. The fe-cond time we also put off, with like foul Weather, which made us stand to the Eastward. In this way we past by some Islands, and happened amongst broken Grounds and Rocks, in Latitude 53. 30. where we came to an Anchor, and sheltred our selves some few days, shifting Now the Winter began to come on, and the Nights to be long and cold; that amongst these dangerous Places, we were fain to spend the day to look for fecurity for the Night. Here, by Misforture, our Ship came a ground; and that amongst great Stones, as big as a Man's Heal; where she did beat for

the

the space of five hours most fearfully. In this time, we lightned her, and carried some of our things ashore; so that by the great favour of God, we got her off again; whereupon we named this Island, The Island of God's Favour. After that again, amongst those Rocks, we were put to many Extremities. length (having a gentle Southerly Wind) we stood alongst the Eastern-shore to the Northward, now looking for a convenient Place to Winter in. And here again, were we assaulted with a violent Storm, in which we lost our Shallop, and were driven amongst divers Dangers; and feeing an opening betwixt two Islands, we ventured to go in, in very foul Weather. We found it to be a very good Sound, and there we came We landed on one of to an Anchor. them, which we named, The Lord Wefton's Island; and Man'd out our old Ship-Boat upon it. The other Island, we named my Lord of Briftol's ifland. Parting from hence, we stood to the Southward, to look for a Wintering Place, because the time of Discovery was past for this year. Many were our Troubles amongst these Islands, Shoalds, and broken Grounds; which made us strain our Ground Tackle for life many a

The 6th of October, we arrived in this Bay, it feeming a very likely place to find a Harbour in; but fearching the likeliest places, we found it all so should flats and Rocks, and Stony by the shoreside; that we could by no means bring our Ship near the shore, but were forced to ride a League off, in three Fathom and a half Water.

The Wirter came on apace, the Weather proved Tempestuous; and the Cold so multiplied, that our Sails froze in lumps to the Yards, unmanuable. ther could our only Boat go from the Ship, by reason of the Weather. About the middle of Ottober, I caused a House to be made ashore where our sick Men might the better recover; but always with an intent to take it down, if we found other-where, a place for our Ship. I fent likewise Men a-foot, (feeing the Boat could not go) to discover the Island, and to see if they could find some Creek or Cove; but all in vain; we spent the time with hope of fairer Weather, till now the Cables began to freeze in the House, and the Ship to be flozen over with the Sprew of the Sea; to that we were fain to shovel the Snow off our Decks. Moreover, the Water began so Vol. II.

to Congeal by the shore side, that the Boat could hardly get ashore. Yet for all that, if the Wind blew N. W. there went a very great Surf on the Shore, and such a great Sea in the Bay, that there was no bringing of our Ship aground. Besides this, she would have then lain open to the E. and S. E. and S. and indeed the nearest Land, all about that way, was two Leagues off. Hereupon, we continued out the extremity, at an Auchor.

The 29th of November; the Ice came about us on all fides, and put us from our ground Tackle, and would have driven us out of the Bay upon Rocks and Shoalds, (where undoubtedly we had perished ) but that by God's great Goodness, it proved so warm a day, (the Wind at S.) that suddenly we brought up some Sail, and hoist it up with Ropes, and fo forced her ashore; where the beat all that Night very fore-The Ship being now grounded and quiet, we considered what was best to do with her, and resolved to fink her; but the next Tide, before we had any of our Provisions ashore, the Wind came N. W. fo that the Ship beat most fearfully. We got all our dry Provisions up to the upper Deck, and made a hole to fink her; but before she was sunk, she beat so extraordinarily, that we all thought she had been foundered. Being funk down so low, that the Water came on the upper Deck, we took our Boat and went all ashore, in such pitiful cold Weather, that we were all so white frozen, that fome fick Men that were ashore before, did not know us one from another.

The next day we fell to land our Provisions: First our Bread, Fish, and dry Things, the Men driven to Wade in the Water up to the middles, most lamentable to behold. Within two days, what with great flat pieces that stuck about us, and that which froze, it was become firm Ice, betwixt the Ship and the shore; so that then we were fain to carry all things on our Backs a Mile from the Ship to the House. Within few days, the Hold became so frozen, that we could not get all our things out of it, but were fain there to leave it frozen, till the next Then we made us two other Houses: Our first House was our Mansion-House, wherein we did all lie together; our other was to dress our Victuals; and the third, for a Store-House; which we built a pretty distance off, for fear of Fire. And now we confidered of the Estate we were in, we all doubted

that the Ship was foundered; especially our Carpenter. But suppose she were Sound; yet was it a question, whether we could get her off in the Summer, when the Tides are low. Moreover, the might be spoiled, lying in the Tides way, when the Ice brake up; and then we should be destitute of any Vessel to bring us home. The Carpenter undertook to build a Pinnace, of the Burthen of 12 or 14 Tun, that should be ready by the Spring; that if we found the Ship unserviceable, we might tear her up, and Plank her with the Ship's Plank. Upon this we refolved, and by May brought it to that pass, that she was ready to be joyned together to receive the Plank. But God mercifully provided otherwise tor us: We indured a bitter Cold Winter, in which it pleased God to visit us with Sickness; so that in the beginning of May 1632. there was but my felf, and the Master, and Surgeon perfectly found, and he began to find some defect About the beginning of April, we began to dig the Ice out of our Ship, which by the middle of May we had effected.

The 24th of May, the Ice began to break up betwixt the Ship and the Shore; and about the middle of June, we had off our Ship, and found her to be Stanch and Sound, contrary to all our Expecta-Before this time, about the middle of May, our Carpenter died; and with him, the Hope of our Pinnace. Master Wardon died the 6th of May; our Gunner, Richard Edwards, had his Leg broken (which was cut off) at the Capftang in August 1631. and languished till the 22th of November, on which day he These three Men lie buried here Died. under these Tombs of Stones. We loft another Man; one John Barton our Quarter-Master, who miscarried in the little Bay that is Due West from this Cross three Mile; the Ice breaking under him, fo that he funk down, and we never faw him more. The two Pictures which are wrapt in Lead, and fastened uppermost on this Cross, are the lively Pictures of our Soveraign Lord and Lady, Charles 1. and Queen Mary his Wife, King and Queen of England, Scotland, France, and

Ireland, &c. The next under that, is, His Majesty's Royal Arms; the lower-most is the Arms of the City of Bristal.

And now we are in a readiness to depart this day, and I intend to prosecute our Discovery to the Westward, in this Latitude of 52. 03. and to the Southward also, although with little hope. Failing there, I mean to hafte to Dieg's Island, and endeavour to discover to the Northward. Thus having had fome Experience of the Dangers of the Ice. Shoalds, and Rocks of unknown Places: I thought it necessary to leave this testimony of us and our Endeavours, if God should take us into his heavenly Kingdom, and frustrate our return into our Native Country. Wherefore I desire any noble-minded Traveller, that shall take this down, or come to the Knowledge of it, that he will make relation of it to our Soveraign Lord the King's Majesty, and to certifie his Grace, that we cannot as yet find any hope of a Passage this way; and that I do faithfully perfevere in my Service; accounting it but my Duty to spend my life to give his Majesty Contentment; whom I beseech God to Bless with all Happiness. And that they would likewife Advertise our worshipful Adventurers of all our Fortunes; and that if as aforesaid, we perish, it was not by any want or defect in Ship or Victual, or other Necessaries; all which we have in abundance for four Months and above; which if occasion be, we can prolong to Six Months. Thus being at present unable to express a grateful Mind otherwise but in my Prayers to God, I heartily beseech him to pour out his bountiful Blessing upon all their honest Endeavours, and to continue their noble Dispositions in Actions of this kind. And I faithfully promise, that if I shall come where the like Letters and Tokens shall be left, to make a true relation of it, as it shall be desired. So desiring the happiness of all Mankind, in our general Saviour Christ Jesus, I end,

Charleton, July 2. 1632.

Thomas James.

# The NAMES of the several INSTRUMENTS, I Provided and Bought for this Voyage.

Quadrant of old seasoned Pear-Tree Wood, artificially made, and with all care possible divided with Diagonals, even to Minutes. It was of sour Foot (at least) Semidiameter.

An Equilateral Triangle of like Wood; whose Radius was five Foot at least; and

divided out of Petifons's Table of Tangents.

A Quadram of two Foot Semidiameter of like Wood; and with like care pro-

jected.

The Sights, Centers, and every other part of them look'd to, and tried with convenient Compasses; to see if they had been wrong'd or alter'd. And this continually, before they were made use of.

Staves for taking Altitudes and Distances in the Heavens.

A Staff of Seven Foot long; whose Transome was four Foot, divided into equal Parts by way of Diagonals, that all the Figures in a Radius of Ten Thousand, might be taken out, actually.

Another of ax Foot, near as convenient, and in that manner to be used.

Mr. Gunter's Cross-Staff.

Three Jacob's Stavez, projected after a new manner, and truly divided out of the Table of Tangents.

Two of Mr. Davis's Back-Staves, with like care made and divided.

#### Of Horizontal Instruments

Two Semicircles, two Foot Semidiameter, of seasoned Pear-Tree Wood, and divided with Diagonals, to all possible Exactness.

Six Meridian Compasses, ingeniously made; besides some Dozens of others, more

common.

Four Needles in square Boxes, of six Inches Diameter, and other six of three Inches Diameter.

Moreover, four special Needles, (which my good Friends Mr. Allenand Mr. Marre gave me) of fix Inches Diameter; and toucht curiously, with the best Load-Stone in England.

A Load-Stone to refresh any of these, if occasion were; whose Poles were marked for fear of mistaking.

A Watch-Clock of fix Inches Diameter, and another lesser Watch.

A Table every day Calculated, correspondent to the Latitude, according to Mr. Gunter's Directions in his Book, the better to keep our Time and our Compass, to judge of our Course.

A Chest full of the best and choicest Mathematical Books, that could be got for Money in England; as likewise Mr. Hackluire, and Mr. Purchas; and other Books of

Journals and Histories.

Study Instruments, of all sorts.

I caused many small Glasses to be made, whose part of time, I knew to a most insensible thing, and so divided and appropriated the Log-Line to them; making use of Wilbrordus, Snellins his numbers of Feet answering to a Degree, and approved of by Mr. Gumer.

I made a Meridian-Line of 120 yards long, with fix Plumb-Lines hanging in it; fome of them being above 30 Foot high, and the Weights hung in a hole in the Ground, to avoid Wind. And this to take the Sun's or Moon's coming to the Meridian. This Line we verified, by fetting it by the Pole it felf, and by many other ways.

Two pair of curious Globels, made purposely; the Workman being carnestly af-

ı

feeled to this Voyage.

This was the manner that we took the Variation of the Compals, and that as often as conveniently we could, but divers of the Tables, by Negligence of my Boy are loft; but these (I hope) may suffice to give Satisfaction of our Care in Navigation.

July 13. 1631.

Hese 13 Azimuths, with the Alcitu. Dec. were taken upon a great piece of Ice, with 3 Needles together; then the Declination was not Equated, the last 3 set forth by themselves, proves the rest; viz. The Azimuth of W. with his Variation, the

Azimuth at Due W. and the Variation by the Altitude and Azimuth at Due W.

These were taken 20 Leagues to the Eastward of Salisbury Island; and two Quad.

one of four, another of two Foot, Semid. Semicircle of two Foot Semid.

### An Appendix touching Longitude.

Atitude and Longitude are two primary Affections of the Earth, by the help of these two, doth the Geographer strive to represent the Parts of the Earth that they may keep Symmetry and Harmony with the whole. Latitude then is an Arch of the Meridian, comprehended between the Æquator and a Parallel; but Longitude is an Arch of the Æquator, intercepted by the Prime Meridian and the Meridian of a Place, the Difference of Longitudes being the Difference of two Meridians. The Measure of the former is the Meridian, the Æquator of this latter. For the exact fettling of Latitudes we have many and absolute help, so that the Error, if any happen, ought to be imputed to the imperfect handling of the Artist. But the Longitude of a Meridian is that which hath, and still wearieth, the greatest Masters of Geography. Nevertheless hath not the Wise Creator left Man unfurnished of many excellent helps to attain his Desire: For besides Eclipses, especially of the Moon, (whose leasure we must often wait, and perhaps go without, if the Heavens be not propitious to us) we have the concourse of quick pac'd inferiour Planets, with superiour flow ones, or their Appulses with some fixed Star of known place, or else some other Artifice derived from their Motions and Politions. As for the Magnetical Needle to argue a Longitude from its Variation, is altogether without ground. And though well-furnisht Seamen are able by their Dead Reckonings (as they term them) to determine the Difference of Meridians somewhat near, yet by reason of the unknown quantity of a Degree in a given Measure, (which is the rule of the Ship's way) Varieties of adverse Winds, Different Sets of Tides, and other involved incumbrances, they come often wide of the Mark they aim at. The best way yet known to the World, is that which is deduced from the Cœlestial Apparences, which being performed by Judicious Artists, may in short time rectifie our Geographical and Hydrographical Charts hitherto in most Places foully distorted. tent here, to give an instance from two several Observations drawn from the Collestial Bodies, by the Author of this Discourse, in his Discovery for the N. W. at the bottom of the Bay, being his Wintering Place, and called by the Name of Charleton, which for Judgment, Circumspection, and Exactness, may compare with most: The first, from the Eclipse of the Moon; The second, from the Moon's Mediation of Heaven, or her coming to the Plan of his Meridian of Charleton.

The Captain then mindful of the Lunar Eclipse, which was to happen, Ostob.29.

Anno 1631. was waiting on the Moon with his instruments, but by reason of the Interposition of the Clouds, could make no Observation on the beginning of her Obscuration, but at her Emersion or Total Recovery of Light, the Heavens being more Serene, he took the Altitude of the Superior Limb of the Moon 29 d. 11 m.

the Latitude of Charleton being 52 d. 3 m.

At that very time, my felf, with some Friends, found the exact time of the Moon's Emersion at London in Gresham College, (by a Quadrant of six Foot Radius, actually cut to each Minute of the Quadrant) to be Octob. 29. 13 h. 7 m. 28 sec. or Oct. 30.

day, at 1 of the clock, 7 min. and about a half in the morning.

Now because the Tables of the Celestial Motions, lately published by the most Learned and Industrious Lansberg, do much amuse the World, with that lofty title of Perpetuity, it shall not be amis to enquire after the time of the Captain's Observation from them, that so by comparing the one with the other, we may obtain the Difference of Meridians, which is the matter now sought after.

The middle Motions of the Luminaries answerable to the equal time of the Emer-

sion of the Moon, are these which follow.

Being thus furnished with these middle Motions, we are next to enquire for the true Places of the Luminaries and their Concomitants, as their Right Ascentions, the Declination, Latitude, Semidiameter, Parallax, and Refraction of the Moon, that so the true Altitude of the Moon's Center, and consequently the time of the Emersion may be had at Charleton.

| For the Sun's true Place.                                                                                                                                                                                                                                                                                                                                                                                                                                 | Se         | r.Deg. | м          | Sec      |

| And by comparing this Arch with the Difference of the Ascensio                                                                                                                                                                                                                                                                                                                                                                                            | ns c       | f the  | Lum        | inak     |

And by comparing this Arch with the Difference of the Ascensions of the Lumination, the Time of the Moon's total Recovery of her light at Charleton, will be 7 h. 49 m. 28 sec. which Subtr. from the time of the Emersion at London, 13. h. 7 m. 28 s.

The Difference of Meridians, in respect of time, will be s h. 18 m. so that Charl-

ton is removed from London Westwards, 79 deg. 30 m.

This may likewise be confirmed by a second different Observation made at the instant of the Moon's Culmination or Mediation of Heaven, at which time the Altitude of the brightest Star in the Asterism of the Northern Crown, (being of the second Magnitude) was found to be 33 deg. 27 m. Easterly, Anno 1632. June 23.

It may be Problematically delivered after this manner.

Having the Latitude of a Place, with the Altitude of a known fixed Star at the

moment of the Moon's Culmination, to find the Longitude.

This fixed Star is of known Longitude and Latitude, therefore was his Declination 27. 59. and Right Ascension 229. 46. Now by the Resolution of a Sphærical Triangle of three known sides we have the Distance of this Star from the Meridian, and by confequence the Right Ascension of the Moon, whence we conclude her Culmination to be with the 28 d. 10 m. of Aquaries; but the Moon's true Place was much less. Here Note, That the Scrupulosity of Time is unknown, and therefore we cannot argue the Moon's truePlacefrom thence, (though I grant it might be evinced) for that were to beg the Question, and to know that first, which we look after.

In the next Place we are to enquire with what point of the Ecliptick the Moon did Culminate with us here at London, that so from the difference of her Places, of

the like Affection, we may deduce the Difference of Meridians.

Observation on the Moon's Culmination here at London we made none, therefore must we have recourse to the aforesaid Tables of Lansberg, and from thence Calculate the same. Now because the Moon was not far removed from the Sun's oppolite Point, it will not be amiss to enquire first the Moon's Place at Midnight.

Sex.Deg. M. Sec. The Sun's opposite Place at Midnight in Aquarius---The Moon's true Place at midn. reduced to the Eclip.was in Aquariuso 1 Ś 23 The South Latitude of the Moon was-56 Therefore the Difference of Ascensions will be-6 14 The Diurnal Motion of the Moon——— Therefore the Moon's proper Motion answerable to the Diffe--0 14 24 33 50 Which added to the Moon's true Place at Midnight-33 18 Gives us the Moon's true Place reduced to.

The Ecliptick at her Culmination at London --0 24 Now because the Moon's Southern Latitude was 4 deg. 36 min. 38 sec. the Arch therefore of the Ecliptick comprehended between the Moon's true Place and the Culminating Point of the Ecliptick, will Trigonometrically be found to be 54 m. 38 fec. which added to the Moon's true Place before found, gives us the Culminating Point of the Ecliptick, 25 d. 1 m. 46 fec. which is less than that found at Charleton, the Difference being 3 d. 8 m. 24 sec. therefore is the Place of Observation Westerly of London. Having therefore the Moon's Diurnal Motion, and the Difference of the Culminating Points, we conclude the Meridian of Charleton to be distant from this of London 5 h. 14 m. of Time, of 78 d. 30 min. of the Equator.

The Difference between that of the Eclipse, and this latter Observation, is only 4 Min. of Time, or one Deg. a difference easily pardoned, especially if we shall compare the same with some other Places, yea even such as Border nearly on each other. To give an instance on two eminent Places which lie in the Heart of Enrope, Rome and Norenberg: Their Difference of Longitude, Regiomentanus makes 36, th erner 32, Appian 34, Mastlin and Origan 33, Stoster 18, Maginus 26, Schoner 12, Mercator and Hondius as much, Stadius 13, Jansonius 10, Longomontanus 16, Lanslerg 10, Kepler by two Observations on two Lunar Eclipses, but 4 Min. of Time.

This variety among these great Artists, will I hope, pardon us this Difference of 4 itin. and be a means to incourage our English Seamen, and others, to make such or the like Observations in Foreign Parts as the Heavens shall be offered unto them.

#### H. GELLIBRAND.

#### TO THE

## Venerable Artists, and Younger Students in Divinity, in the Famous University of CAMBRIDGE.

**TO U** nobly-witted, and ingenuoully-studied Academians; whose Excellency in all Kinds of Learning, all Foreign Universities do admire, and none attain unto; I here present you a Voyage to Cholcos, though not the Golden-Fleece with it; the Search, I mean, but not the Finding, of that so much Talkt of, so often Sought for, North-West Passage, and nearer way into the South Sea. That, wherein so much Time and Treasure have been Expended, fo many brave Spirits Employed, and yet none Discovered. Perchance, there is no fuch Passage to be found; and that the Spaniards, by the Gullery of their falfo Sea-Charts, and the Fable of an old Greek Pilot, have but diverted our English and Dutch Seamen, from their golden Indies. This Plot of theirs hath taken, for these many years; and it appears to be but a Plot, for that themselves never make use of this Passage. For mine own part, I suppose that the Philosopher's Stone is in the North West Passage. My Argument for it, is, For that there's so much Philosophy in the way to it.

So much, and such variety; such variety, and that so various, (I think) from what is received in the Schools; that it were well worth the Disquisition of an University, (and I wish you the first ho-nour of it) either to find out, how these Observations may be reduced to Aristotle's Philosophy; or whether they need any other Enquiry, and ought to be Examined by some other Rules, than Aristotle hath yet light upon. This is my purpole of inscribing it unto you. Of this one thing am I confident: that you are all so Rational, and Ingenious, as to prefer Truth, before Authority : Amicus Plato, amicus Aristoteles, but magis amica veritas. Your Sciences, then, being Liberal; your Studies, I know, have so far passed into your Manners, that your Minds are so too, and that such as have already profited beyond the Credulity required • in a young Learner, and are themselves promoted to be Masters of the Arts; though they still reverence their old Vol. II.

Greek Tutor, yet they will not suffer that of Pythagoras's School, so to domineer in Arifotle's, as to let an Ipse dixit, go away with it: much less allow it the Authority of a Mayor's Hammer, with one Knock to silence all Arguments.

Upon this Confidence, I with all due Respects, here prefer two Propositions unto your Discussing.

The First this, Whether those Rules of Aristotle's Philosophy be to be allowed so Universal, that they hold all the World over.

The Second this, Whether they ought to be so Magisterial, as to prescribe against all other Examinations.

The First of these, I shall but Problematically propound unto you: but in the Second, I hope a Man of my Cloathing, may be allowed the freedom of being something more earnest.

But that I may not come with prejudice to the making of these Motions, or be thought, upon some Ignorance or Ambition, to speak against the incomparable Aristotle ; I shall delire all my fellow Academians to allow me so much discretion, as to know, That he that shall in your Hearings, oppose your Aristotle, does like the Ship here spoken of, run against a Rock, endanger his own Bulge, and the Staving of his Vessel. No, I so far Honour the old Aristotle, that I well allow him to be Master and Moderator of the Schools: and that there is the same respect due to him in the Schools, which, by Reason and long Custom, is due to one of the King's Ships in the Narrow Seas; That in acknowledgement of a Soveraignty, every other Name ought to strike fail to him. Aristotle (it must be confess'd) hath made all Learning beholding to him: no Man hath learned to Confute him, but by him; and unless he hath Plowed with his Heifer. He had the most incomparable Wit, and was the most Logical and demonstrative Deliverer of himself, of all

the Sons of Nature: One, who best of all deserved to be called, Her Principal Secretary; one, who not only aderns a Library, but makes it: Qui habet Aristotelem, habet Bibliothecam, is truer of him, than of the Great Comparer, This is my Opinion of him; and I with him more studied.

Tis not, therefore, the Name, or the Authority of the great Aristorie, that my Propositions meddle withal: but whether his Observations gathered out of this part of the World alone, could, like a Royal Pass or Commission, carry a

Man all the World over?

It must be confest, That in respect of the Equinostial, and the Latitude that Aristorle lived in, he was but a Northern-Man: and 'twas his own Rule, that Nibul agit extra Spharam activitatis fua. then, it would be put to Voices to consider, Whether he that knew but these Northern Parts, and the Mediterranean Sea, could possibly make fuch Collections, by what was here to be Learned, as should be unfailable in the Southern Hemisphere and the two Indies? Plainly, those that are conversant in the Navigations and Books of Voyages into those Parts; have found fo many Contrarieties to obferve, That it were rather tedious, than difficult, to fill up a Note-Book with them.

The Ancients, we know (as if they had measured the World by the Yeard-Wand) restrained the limits of Temperature, and Habitation, by the five Zones: without Confideration of any Interlopeing or concurring Causes, which Experience hath now found out, to have quite altered their Observation. I add, that a good Leisure and Diligence might observe, how in the contrary part of the World, there be found clean contrary Causes and Effects, unto those in this part of the World. The South Wind there, brings Cold and Winter: and the North, is the Rainy Wind. How will the Thunder and the Wind, be made agree with Aristotle's Definition of a Meteer? In some Places of the Mountains Andes by Peru, it Thunders ever. East-Indies have their Monsons, and their iteady Winds, constant for fix Months together: And who shall assign their Causes? Then the Dostrine of the Tides, rothing so uncertain; which Ebb and Flow in some Places, different; and in others contrary, to the Moon and her Motions. This (as I remember) is Ariffvele's Definition of a Meteer, that it is, An imperfett mixt body, generated out of an infirm and inconfrant Concretion of

the Elements; which therefore cannot be du-Now the Mensen, is both constant in his continuance this year, and in his return next year; most constantly keeping his Seasons half year one way, and half year another way, for all Ages: nothing more constantly or durably; and therefore nothing like Athorie's And so for the Thunder upon Meteor. the Andes: It is First, Perpetual; Secondly, Not caused by a dry Exhalation, (as Aristotle wills) but hanging over such Hills as are covered with Snow, and a perpetual Winter. Witness the Thunder on the Alps alfo; yea, and that in the middle of the Sea, 500 Leagues from the Shore, or any thing that is dry. Yea, it frequently both Snows and Thunders upon the Andes, at one instant; and in dry Places that are hard by, scarce

ever Thundering.

But not to pass the Line for it; You fee in this little Book, how Charleton Island, which is no more Northerly than your Cambridge, is yet for unsufferably Cold, that it is not Habitable: and that there encounter fo many different (at least so seeming) Occurrences of Nature, as were well worth the Disquisition of a Philosopher. I could (in my small Reading) instance in many other Particulars, which I had rather should be found out by some industrious Searchers after Nature, in the Modern Relations of our Discoverers, than in this my short Proposition. 'Tis not to be doubted, but that the careful Reading of our Books of Voyages, would more Elucidate the Hiftory of Nature, and more conduce to the Improvement of Philosophy, than any thing that hath been lately thought upon. These Navigations have in part fulfilled that of the Prophet, Many shall pass to Da and fro, and knowledge shall be encreased. This, I suppose, might be observed from this Study, That the great and infinite Creator hath so disposed and varied every thing, that it is impossible for Man's Reason and Observation to conclude him: and therefore, though vulgar and received Philosophy, may give a Man a general hint, all the World over; yet no Universal and unfailing certainty.

This brings me to my Second Proposition, That seeing God will not have his Works, (no more than his Kingdom) to come by Observation: Whether, to then, eight any humane Distates to be for Magisterial, as to preferibe against all other ? Examination?

No humane Study more conduces to the fetting forth of God's Glory, than the Contemplation of his great Works, in Philosophy: For though a finattering knowledge in Second Caufes, warps the Mind towards Atheism; yet a higher Speculation of them, brings it about again to Religion. No Man, I believe, will think it fit for us to have a Pope in Philosophy; one, that no body shall prefume to censure of: but all be bound to advance his Decretals, above the Holy This is the Scandal that my Scripeures. felf, and divers good Men take, at the undue Authority in some Heats pinn'd upon the Stagerite.

I am forty that the Ifraelites Dotage in, & upon Solomon's Philosophy, should have bini. caused the zealous Hezekiah to call in and to suppress those unvaluable Phyfirks: for fear, I suppose, lest their Credit should have as much derogated from the Authority of the Holy Scriptures ; as the Brazen Serpent (which he destroyed about the same time) had done from Religion. None will believe, that Solomon's Philosophy was contrary to the Scriptures; feeing the Scripture commends Solomon for them. 'Twas not Hezekiah's fear, therefore, (or not only) lest there might have been a Competition between them, but a neglect of one of them: he was jealous lest the Scripture might have any Writing set up by it, though not against

> Can Divines, then, be blamed for Speaking, when they hear Aristotle's Philosophy to be solely magnified, and the Study of the Scripture Philosophy, difrespected? Or that when 'tis confess'd, That fuch a thing is true in Divinity, and yet the Moderating of the Point, determine for Philosophy? Nay, to hear it call'd absurd and ridiculous, to have Scripture urg'd at all, in point of Philosophy? No doubt there is, But what soever is false in Divinity, is also false in Nature, how much show of Truth soever it passes with in Philosophy. Philosophy hath taken its turn in the Schools: and the Holy Texts by the Schoolmen, have even been submitted unto Aristotle's: yea, to the great Corruption of Theology, as the Complaint is, hath this Man been so far advanced That Contra est Philosophus, & Contra tst Apostolus, have familiarly passed up and down for equal Oppositions: so that it hath been a measuring Cast oftentimes, betwirt the Prophet and the Propheterick: and by foul play hath the Measure been made to stand the harder at the Peripatetick, for that the Prophet hath been en-

forced to comply with him by a prefted Interpretation. Thus had St. Paul need give his Caveat unto Theology, as well as unto Theologues, Beware lest any Man spoil you through Philosophy.

All this were to no purpose, unless the Text of God were excellent in this kind; and embellished, here and there, with most admirable Philosophy. What incomparably rare foot-steps of it, have we in the Books of Genesis, Job, and the Pfalms? How noble a Study then were it, and how worthy the leifure of some excellently learned, to bestow some time upon it? Valefius the Physician, hath in his Sacra Philosophia done something in this kind: who yet might have done better, here and there, for the honour of the Scriptures. I am not so sottish to believe, That every particular is to be drawn out of Scripture: 'tis none of my dotage, that. Or, That God in Scripture did intend, every where, the accurateness of Philosophy; or stand to be fo curious in Definitions and Decisions. Nor so foolish would I be thought, as to have all Philosophy taken in pieces, and new moulded by the Scriptures. that nothing should be determined on, till a Text confirmed it. But this, perchance, might profitably be thought upon: That where the Scriptures have any thing in this kind, it should more reverently be esteemed; Collections out of scattered Places (as is done out of Aristotle) made: these compared, and their Resultances observed. This, surely, would amount to more, than is yes thought of: and, a-God's name, let Schollars be so bold with Aristotle, as to examine him upon good Affurance, by what is Truth's Touch-stone : Received Philosophy is a most necessary Hand-maid to the Scriptures; but let her not be fet above her Lady, nor no Competion be maintained betwixt them.

Something else remains to be thought of: That seeing the same God, who gave Aristotle these good Parts; hath, in like manner, raised up many excellent Spirits moe: whether it were not injurious unto what is done, and a discouragement to what might be none; to have the Inventions or Observations of those excellent Wits and great Industries, so abaffit with Ariftotle's Authority; that they can have no Credit in the World, for that his Diffues have pre-occupated all good Opinion? Let it not then by thought unequal, to examine the first Co-gitations of the old Philosophy, by the Second Thoughts of our more Modern Artifes:

For that the same Improvement may by this means accrue unto our Physicks. that hath advanced our Geography, our Mathematicks, and our Mechanicks. And let it not be thought so insolent, to refule Aristotle's Authority singly, where his reason is not so concluding; seeing other Men have taken the Boldness to do that before us, in several Kinds. Some have perfected, and others control'd his Ethicks, by the Scriptures: as Scultetus, Wallens, and some others. Justin Martyr, firnamed, the Philosopher, hath purposely written Contra dogmata Aristotelis: Baffon and Gaffendus, (two brave Men) have newly written point-blank against him: nor have they taken away all liberty from those that are to follow them.

And thus, with renewing my former Protestation for mine own respects to Aristotle, I conclude my two Propositions: which I desire may receive a favourable Construction from all ingenuous, incapricious Scholars. I meant them, out of good-Will to promote Learning; to en-

courage and countenance future Undertakings: and in fuch a cafe, a little too much faying, may be thought not to have exceeded an honest Rhetorician; for I would not be thought too earnest in it: The Hint for all this, I took from this Book; which in mine own and some better Judgments; is (to fay no more) as well done, and enriched with as fure and useful Observations, as any in this kind. I was defired by the able Author, and fome other Friends, to over-look the written Copy of it, and to amend the English here and there; in which I did not despair of doing something: for that, in my younger time, I had a little acquainted my self with the Language of That which put me in the the Sea. head to inscribe it unto your Names, (most excellently learned Academians) was, for that the Place of this Wintering, was within a Minute or two, of the heighth of our Cambridge. Which my Prayer to God is, that your Studies may make famous.

Tours, X. Z.

# ACCOUNT

## VOYAGES:

The FIRST of

Feodor ISKOWITZ BACKHOFF,

The Muscovite Envoy,

INTO

# CHINA:

The SECOND of

Mr. ZACHARY WAGENER,

A Native of DRESDEN in MISNIA,

Thro' a great part of the World,

As also into CHINA.

Translated from the High-Dutch Original Printed at Berlin.

# Advertilement

TO THE

# READER.

A MONG those many Voyages, which lately have been ushered into the World, the following Muscovite Embassie may justly challenge a Place; especially for its usefulness in Geography, which I here present to the Reader, without the least Alteration according to the Copy thereof, sent to me by Johannes Scultetus Councellor of State, of his Electoral Highness of Brandenburgh: And as the Voyages of Mr. Zacharias Wagener, are very samous in Holland, and the following Abstract thereof being Communicated to me by his Brother-in-Law Mr. Christian Bothe, a considerable Merchant in Dresden, I thought it not unseasonable to Subjein the same, for the Benesit of the Courteous Reader.

## TRAVELS

OF

Feodor ISKOWITZ BACKHOFF

FROM

# USC

INTO

#### (1.) The Road from Muscow to Siberia.

OST generally they take their way over Ustingha, seated upon the River Dwina, from whence we continued our Journey to Tobolsko, the Capital City of Sileria, being 3000 Versts, or 600 German Leagues from the City of Muscow. Before you have Travell'd the third part of your way, you come to a great Ridge of Mountains, call'd Camiani Rojas, i. e. the Stone Girdle by the Muscovites; it being their opinion, that they extend round the Terrestrial Globe; I suppose them to be the same the Ancients call'd Montes Siberei. This

Mountain being 50 Leagues over, and interwoven with deep Valleys, which are generally, but especially in Autumn, over-flown with Water, is impassible in the Summer, but these being well frozen in the Winter, afford a swift and convenient Pasfage for fleds, so that in 24 hours you may Travel 18 or 20 Leagues, and consequently perform the whole Journey from Muscom to Tobolsko in 6 or 7 Weeks. The first City you come to in Siberia, is call'd Worchaturia from the River Tura, upon which

#### (2.) Of the Cities, Rivers and Fertility of Siberia.

Siberia has 23 Cities, The Capital of which is Tobolsko, fituate upon a Hill near the River side, is a Place of no great

utmost frontier Place of Siberia, on the Calmuck fide. Siberia is Watered by many Riyers, among which, the River Ohy is the chiefest; it contains many Islands well stor'd with Trees: This River is in some Places, Traffick; the Inhabitants being for the most chiefest; it contains many Islands well stor'd with Trees: This River is in some Places, are very Poor; the chiefest Place of Trading being Jeness, lying a prear way being being Jeness, which consists in stables, Martins and such like Furrs. Deals is the and among the rest Being's or White Fish:

The Cities of Siberia are, Worchaturia, 3a-Backhoff ponfoi, Tumen, Tobolsko, Damiansky, Samara, Sergouz, Berofott, Narin, Tomoko, Kosnebrz, Krasnozar, Ket, Jenessay, Nallen, Dauri, Takow, Magascy; these as well as all the other Cities of Siberia, are not very Populous. There are very good Corn fields here, the

Soil whereof is so good, that it bears very well without Dung. It has no Sea-ports, the Tarrarian Sea being covered with Ice Summer and Winter; however Fisher boats venture as far as the Isle of Malgamfay, over against the Mouth of the River Oby.

#### (3.) Of the Inhabitants of Siberia.

THE Ancient Inhabitants were Tartars, Govern'd by their own Princes or Kings; one of the Family of their left Prince living not long ago with the Czeri permission in Siberia, till his House was Plunder'd and he forced to fly the Country, by the Ruffians that Trade that way in Salt, with the Calmuck Tartars, which they bring thence in great Barges. This Prince having afterwards Married among the Calmuck Tartars, makes formetimes an Inroad into Siberia; and takes a severe revenge of the Muscovites there. The Natives being not very forward to oppose him, as living still in hopes, that one time or other he may be instrumental in delivering them from the Mascovice Yoak. The Calmuck and Mogul Tartars, border upon Siberia, (besides divers other Tartarian Nations) their Comtry extending from thence to the frontiers of China There are also divers other Hords. living on the frontiers of Siberia, as the Tingoskoy, the Waszkoy, Tyrgyskoy and Barrabanskey, which have each their particular Captains or Leaders: The Natives of Siberia are much addicted to Sorcery: There are not many Russians living among them. by reason of the great distance of this Country from Muscow.

#### (4.) How Siberia was brought under the Obedience of the Musicovites.

Bove 100 Years ago under the Reign of the Can Joan Bazilowitz, a certain Cofaen named Formac Timorfof, Leader of a certain gang of Robbers, having taken fomeVeffels loaden with Ammunition belonging to the Czar; he issued his strict Orders to seize the said Jormac, cost it what it would; so that Formac dreading the Czar's Revenge, got with his Gang into the River Cama, and fo to Czotrava, an Isle about 500 or 600Versts above Casan, which at that time belong'd to a vast rich Russian Merchant named Daniel Stroginot, living in a City built by him, and call'd Stroginot after his name. Having represented to this Merchant the casie Conquest of Siberia, he obtain'd some Arms, and Ammunition of him to accomplish his design; accordingly he went up the River Tagir, till he came to the River Toura, where is a confiderable Island, Inhabited by Tartars; these he soon chased thence, and continuing his March to the City of Tumen, he soon made himself Master of it, the same he did afterwards with Tobolsko the Residence of their King: However he March'd forward 50 Leagues to the River Ireish, in pursuit of the Enemy, who retreated before him. Having refresh-

ed his People hereabouts for fix Weeks, he fent 300 of them to purfue the flying Tartars, which they did with so much eagerness, that being furrounded by the Enemy, they were almost all kill'd, few escaping their hands. Formac having no more than 200 Men left, Intrench'd himself in an Isle, but being Attack'd in the Night time by the Tartars, he was kill'd with all his followers, except 40 who made a shift to get into Mulcovy; and having represented unto the Cxar all the Circumstances of the Matter, he sent 600 chosen Men under the Command of one of these Colacks (who had been Jormac's Lieutenant) who retook the City of Tobolsko; where having Fortify'd himself, and being recruited with fresh Troops, he made fuch frequent excursions into the Neighbouring Tartarian Countries; that they at last grew weary of the War, and submitted to the Czar of Muscouy. The same Fortune attended the Czar in his Conquest of the Kingdom and City of Astrachan, which he made himself Master of in one Campaign, but he paid pretty dear for Cafan, having been forced to raise the Siege of that City, the first time, but took it in the second Siege.

#### (5.) The Revenues of the Kingdom of Siberia.

'H E Czar's Revenues in this King- and other Furry, out of which he has the dom, arise from the Tribute of the fifth for his there; certain Officers being ables, Martins, red and white Foxes skins, appointed by the Czar, for that purpose;

Mr. Fletcher who was English Envoy in whose Muscowy in 1588, affirms, that in one Year there were brought into the Czar's Treasury out of Siberia, no less than 466 Zimmer of Sables (40 Sables to each Zimmer) and 180 Siberian Fox skins. The ordinary Revenue of Siberia, amounts now to 200000 Roubles. They have different ways of catching the

Sables; either by Wooden Traps, not unlike our Mice-Traps, or by Snares, which being laid under the Trees where they feed, the Trees are cut down, and they entangled in the Snares. They also go a Sable hunt. ing in Sleds drawn by Dogs, and kill them with their Bows and Arrows.

#### The Journals of Feodor Iskowitz Backhoff from Tobolsko, the Capital City of Siberia, into China, call'd Kattay by the Russians.

N the Year 7162 \*, in the Month of May, I left Tabalah and from Czarijh Majesty's Orders, and Travell'd to begin the City Tax upon the River Irrifo, where World I arrived the 27th of July, having spent a unding Month and three days in this Journey. From the Ruf Tax I went up the River, the 1st of August, and for want of Horses, spent four Weeks unite of my Journey to the White Lake, where tar of being furnished with 40 Camels and 50 Cent Hories from Snablai Thischa, or Prince of the Bouchar Tartars, we left the faid Lake the 16th of October, and continued our Journey in three Weeks time to Kabalgakuna, Inhabited by the Calmuck Tartars, who live in Brick Houses, built after the Russian manner. From Kahalgakuna to the seven Elms is two days Travelling; and from thence to the Rivulct of Jelkufa, which arises from among the Mountains, and falls into the Irrift, another days journey. From the River of Felkusa along the right side of the Ireisto, to the Relidence of that Calmuck Prince (who is a Priest) Residing on the left fide of the said River, is three days Journey: Their Fields which produce Wheat, Barley, and Peafe, are Plowed by some of the Bouchar Tartars. From hence, all along the Right side of the River Irtish to Ablawich (near the Bouchar Corn-fields) is 14 days Journey, thro' high Mountains, full of Birch-trees.

We Arrived at Ablamich the 22d of November, where they live in Plaistered Houses; their Fruits are Wheat, Barly and Peale; and they abound in Fish. Their Prince named Ablai Tonscha did invite me to his House, where after he had demanded the Czars Prefents, (which I gave him) he entertain'd me very handfornly. The 30th of November I continued my Journey, thro' the Bouchar Tartars, who are for the most part Husbandmen, among whom I tarried four Months and 10 Days.

The 3d of April 7163, went from thence to the Brook of Bosks, 12 days Journey from the Bouchar Corn-helds; near this Brook the beforementioned Prince ablai Ton-Scha, was Building for himself two Houses of Stone, by Chinese Workmen. Here I stayed five Weeks and five days.

The 30th of June 7163, having received my Passport from Ablai Tonscha, I continued my Journey from the Brook Botka to Conjaja Toucha, or Koltaschings Children in 14 days, and in 5 days more to the small City of Rontosbina, Inhabited by Calmuck Priests. From this Place to the Lake, thro' which paffes the River Irtifle, is 14 days Journey.

From hence to Mifgansko Tefcha is two days Journey, and from thence thro' the Mountains seven days more. Hereabouts live the Princes of the Mogul Tartars, who speak both the Mogul and Calmuck Languages; there is three days Journey from hence to the Residence of the Prince named Dobruna, whose Territories extend 15 days Journey to the Frontiers of China. However many Petty Princes have their Territories interspersed here, who are also of the Race of the Moguls.

From the uttermost frontiers of China to Cokatana, their first City, is a Journey of three Months: the Mountains along the River Ireilb and the Woite Lake to the Front tiers of China, are Inhabited by the Moguls and Calmuck Tartars; the first live very poorly, and I was often obliged to stay among them to furnish my self with Water After I had stayed nine and Provisions. days at Cokatana in expectation of two Guides, we continued our Journey thence the 12th day of January 7164 to Koski, 2 Journey of 12 days: hereabouts also live divers Petty Princes of Mogul Tartars, who call themselves Tioberzansky, but are under the Chinese Jurisdiction. Kanki is situate among the Rocks; here I saw the famous Chinese Wall, being three Fathoms high, and one and a half thick, fill'd up in the infide with small stones; the Stone Towers stand not in the same line close to the Wall, but at 10 Fathoms diffance, and are 100 Fathoms distance from one another, reaching as long as the Wall to the Sea fide. The 20th of February, having received Orders from the King of China for the continuation of my Journey, we fer out the 21st from

### A V vyage into CHINA.

Caphin 7 days Journey from Cambalu (or Pekin) having 28 Cities lying between them; furrounded with Stone Walls, upon which we faw fome Cannon, but of a finall fize. The Soldiers that keep the Guard at the Gates, were Arm'd with a kind of Carabines, not above half a Yard long, with threefold Muzzels, but without Firelocks: They have generally Stone-bridges built over their Canals or Rivulets, but have not many Rivers of Note; the Governours of the Places are gemerally carried in Palanka's or Litters, upon Mens shoulders, attended by a Guard on both fides.

We came to Cambalu the 3d of March 7164, about an English Mile out of Town, we were met by two Deputies, one whereof was the Chancellor of the Prices, or Secre-1y's Office of the Foreign Affairs, the other of that of the Chinese Affairs. They received us in a Spacious Structure of Stone, Inhabited by some Priests, and built as we were told, for the Reception of the Dalac I ama, or the Tartarian High-Priest, who is Reverenced among them like a God. At the Entrance of this House they defired me to alight from my Horse, and to pay my Respects to their King upon my Knees; Unto which I reply'd, that it was not our Custom to Salute even our Czar upon our Knees, but only with a very low bow and bare-headed; unto which they gave no other Answer, but that the Dutch never refused it, and therefore I ought not. They then presented me with some Thee made with Cows Milk and Butter, in the King's name, it being Lent I refused to drink it; they told me that I being sent from one great Czar to another mighty Prince, I ought at least to accept it, which I did, and so returned back. As we were making our Entry, I faw in the Gate standing three BrassCannon, and so we March'd forward for a Versts, thro' most Markets, before we came to the Court prepared for our Reception, which had two Houses of Stone, hung with Tapestry. Our daily allowance of Provisions was one Sheep and a small Cask of Spanish Brandy, two Fishes, amiddle fized Jass, a certain quantity of Wheaten-flour, Sicher and Rice; and two Cups of Brandy. The'4 of March, certain Persons sent by the Chinese King, came to my Lodgings to demand the Prefents I had brought along with me from the Czer; I told them that it was not Customary at our Czar's Court to deliver the Presents, till we had been admitted to the Audience of the King, and delivered our Credentials; unto Which they relpy'd, One King ought not to prescribe Laws to another, our Customs are different from yours ; our Bogday (King) bas lens we to demand the Presents, but if you come

to fell them, let us know your Price: I reply'd, That I was not sent by the Czar to Merchandise, but to Establish a Friendly Concurrence betwirt the two Kings, and to offer him some Presents: they then told me, That fince I own'd I was fent with Presents to their King, they would take by force what our Exar had fent; and as for my Credentials care should be taken of them. hereafter; and thus actually took the Pre-

fents by force

The 6th of March, word was sent me to bring my Credentials to the Secretary's Office, which I refused to comply with, telling the Messenger that I was sent with these Credentials to the King and not to his Ministers. Aug. 21. They sent again upon the same Errand, but I refuling the same, they told me, That fince I had disobey'd their King's Command, they had Orders to Punish me: I gave them no other Answer, but, If they cut me Limb by Limb, I would not part with them till I had been admitted to the King's Presence. The 31st of August all the Prefents were brought back by certain Officers, who told me that it was done by special Command from their King, because I had refused to deliver my Credentials into the Pricas or Secretaries Office; and one among them told me, No Foreign Minister, tell him, come from what Country he will, is admitted into the Presence of our King, but only of his Great Ministers, call'd Inoanol Boyarde. I can give you no true Account of the bigness of the City of Cambalu, because we had no liberty to take a view of it, but if we may Credit the Moguls and Chineses, they told us it was 60 Versts (12 German Leagues) in Compass. Vast quantities of Silk Stuffs. are made and fold here, but their Pearls and Precious Stones they have from Karatscho, two Months Journey with Camels from Cambalu, and then in the Possession of a Son of the late King. The Kings Palace fronts a Spacious Market Place, whither all forts of People come to Salute the King, at least three times a Month. Every New Moon they put out Flags as a fignal to the People to come to make their Submittion; and the same is done every 22d and 29th day of the Month, when they appear in rich Brocado'd Cloths, upon their bended Knees, and among the rest 26 Elephants trained up for that purpose. The Bogday then Regent, was a Mogul Tartar; but the late Chinese Emperour, after these Tartars had made themselves Masters of the Chinese Empire (about 30 Years before kill'd himfelf, securing only 2 Young son amed Toung Sie, behind 2 of the Chineses Lords carried to Karatscho in a Old Ching. The Chineses are much stronger in the City of Cambalu than the Moguls.

China.

In the Year 7164, the 7th of July, 25 chieff. Hollanders (a) the remainders of the 3 Ships, (who had each of them 100 Men shoard, two whereof were loft) Arrived at Cambalu, but for want of an Interpreter could not converse with them; they gave the two Letters for Majcow. Having obtained my Pasiport in 7164 in September, Helt Cambalu, and returned thro' the same way I came to Muscow, having had but ill Success in my Negotiation, because I would not Reverence their Idols (b).

And here is to be observed that Cambulus the Capital Cay of China, otherwise is call'd Peking, the first being the name given them by the Tartars, whence some Geographers have been missead, who have placed cambulus in their Maps, in the great Tartar Tamerlain a Tartar, by birth having conquered China, is the Reason that frequent mention has been made of Cambulus in his History, which has introduced this Error of placing Cambulus in Tartary; add

to this, That our Ancient Historians of China have call'd it Kastay, the same name that is given to it by the Russians to this day; Rattay being a Tartarian Word, fignifying as much as an Inclosed or Wall'd Place, (such as China is) given by them to China, whilst they were in Potestion of it. And because China was known or first described by the Ancient Historians at the same time, the Tartars were Masters of it, they were eafily led into that Mistake, by taking the Grand Terrany for Chine, and so put it accordingly in their shaps, placing Ca in Tartary, whereas it is the same with king the Capital City of the Chinese Empire. For the same reason it is, that they have described Tartary as a rich Plentiful Country, whereas it is very mean, and above one half of it not fit for Tillage. Kattay is indeed a Tartarian word, but not a name of their own Country, but given by them to

(a) Nieuboff p. 181. We understand by the said Father Adam, that there was there a Museovise Embessy, with an Attendance of 100 Persons (among whom were some Moors) so treat about certain Points relating to Trassick; but were not as yet admitted to Audience, because the Emperor Resided at that time some officers in the City, some times at some distance thence.

(b) Introcessa p. 31.3. Speaking of this Embafiy: In quos (sc. ritus) quoniam Majovia ante biennium legatione fundi consentire nollent, cum dedecore muneribus, qua attulerunt redditis repetit funt. And Nieuboff, p. 187, the 14th of Septemour Envoys understood that the Aussovite Am-

baffadonr was upon his Departure, without being admitted to Audience, because he refused to bend his Knees before the Imperial Seat, as looking upon it as a degrading to his Master's Honour. About Noon, just as our Envoys were at Dinner, one of the said Ambaffador's Dome-flicks came to take leave of us, defiring in behalf of all the rest, that we would be pleased to give them a Certificate to trestify that they had met with us here, which was readily granted. Afterwards we heard, that the said Ambaffador was stoped in the Country, because he was not provided with a sufficient Palipogs.

A SHORT

A SHORT

## ACCOUNT

OF THE

## V O Y A G E S

OF

### Mr. ZACHARY WAGENER,

Perform'd in 35 Years,

THROUGH

Europe, Asia, Africa and America,

Taken out of his own Journal.

Wagener.

NNO 1633, the 3d of June, I left Drefden (my Native City) with confent of Parents, and Embarked in a small Vessel upon the River Elbe in Company of Mr. Frederick Lebzelter, one of the Grooms of the Chamber to his Electoral Highness of Saxony, for Hamburgh, where we Arrived fafely some time after; but not meeting with any op-portunity of Preferment there, I Embark'd for Amsterdam, where I was entertain'd for a whole Year by Mr. William Johnson Blane, one of the most Noted Booksellers of that City; and after that, being refolv'd upon Travelling further, engaged my felf in the Service of the West India Company, in the Quality of a Private Sentinel, and in 1634, the 18th of July, Embark'd aboard a fout two Deck'd Ship bound for Brafil, where we Arrived after a most troublesome Voyage of 16 Weeks, and came to an Anchor before the Receif. Not long after our Arrival, I was advanced to a Muster Mafter's Place in Major Bajart's Company, then in Garrison in the Fort Enestus, and tometime after was made Clerk of the Kitchin of his Excellency Count John Manice of Muscow, General of Brasil.

Anno 1638, the 20th of April, the be-foremention'd Earl Embark'd with 8000 European Soldiers, and 3000 Brafilians a-board 47 Ships, steering their Course from the Receif, to the Bay of all Saints, in Or-der to Besiege the City of St. Salvator; I went along with his Excellency in that Expedition, which proved unfuccessful, for the City being impossible to be begirt on all fides, we return'd after two Months to the Receif. Anno 1630, I went along with the said Earl to Anthony Vaez, by the way of the Cape of St. Austin and Sexinhain, and so further by Land to Porto Calvo: In our Return, we pass'd thro' the middle of the Dutch Brafil, by the way of Bosiovegid, to the City of Paraiba, and as we passed along, took a view of all the Garisons and Fortresses, so that this Progress took up above 3 Months. After I had spent this seven Years in Brafil, viz. three Years in the Service, and four in his Excellency's Family, I defired leave the return home, which being granted, and a Passport given me, I Ent bark'd in 1641, in April, aboard a Vessel call'd the Ziger, bound with two other Vesfels, Freighted with Sugar, Tobacco, and

Brafil Wood, Mr. William Honten Commo-Wagener. dore for Holland. We arrived the 17th of January in the Texel, when a Man of War being then just ready to fail for Enkhuifen, I went aboard her, and lodged that Night in the faid City. The 18th, early in the Morning, I went by Land over Horn to Burmerent, and from thence thro' the Beemstes by Water to Amsteldam. The 20th, early in the Morning, I went in the Trackfour over Harlem to Leyden, and from thence to the Hague and Delft, where I delivered the Letters and Presents wherewith I was In-

But having a longing defire to fee my Native Country, I fet out from Amsteldam, Anno 1641, the 14th day of August, and taking my way over Harlem, thro' Friscland, arrived fafely at Hamburgh the 23d. but the Roads being then much infelted by stragling Parties I went up the River Elbe as far as Magdeburg, where taking Coach for Leipzick, I continued my Journey afterwards from thence to Drefden, the Place of my Nativity, where I arrived the 12th of October, and to our mutual Joy, found my Parents in good Health. I stayed with them about 14. Months, but not being able to comply with their manner of living, so different from what I had been used to of late Years; I took a resolution (with their consent) to return into Holland, and to take a Voyage thence into the East Indies.

trusted by his Excellency the Earl of Nassaw.

Accordingly in 1642, the 10th of February, I took Shipping upon the River Elbe in company of the Young Mr. Dillichius, and the Son of the Count Marshal, Mr. Henry van Tauben, and pailing down the River Elbe, where my fellow Travellers left me, intending to continue their Journey thro' Holland for France; and the River beginning to be full of Ice by this time, our Vessel could not get further than Tanger munden, where we were forced to stay till the 2d of March and then went forward, (tho not without great danger of the Ice) for Hamburgh, where I arrived the 6th, and soon after agreed with a Dutch Master of a Vessel to carry me to Amsteldam. The 11th we fet fail, and passing by Gluckstadt, came to an Anchor near Zell, where going ashoar, I diverted my felf for a short time with one of my Relations, and so went aboard again, and continued our Voyage towards the Durch Coast. Our Master it seems was born in a certain Village on the Friseland Coast, call'd Maccon, and being seiz'd with a curiofity to see his Birth-place, took this opportunity to come to an Anchor near it, which proved to unprosperous, that in a few days after, being surprised by a Storm, with a violent Frost, I was obliged to spend 13 days at the House of a rugged Prescland Country Fellow, whose Language I did not

Vol. II.

understand. All the Comfort I had was to take this opportunity to go to Francker, an University in those Parts: and after my return the Tempest being laid, we set sail again the 26th, and arrived the 28th at Enklouisen, where changing my Vessel for another, I came the 29th early in the Morning to Amsteldam, here I received the unwelcome News that the Ships wherewith I intended to have failed to the East Indies, were already gone some days before, and that the next were not to fail till August; being afraid that my Money would scarce hold out till that time, I was forced to take a Journey into North-holland, to expect the coming of their East India Ships, wherewith I returned afterwards. Anno 1642, the 10th of May, we came to an Anchor with 9 Ships before the Texel, where in 2 Months after, we law 10 Ships richly freighted, Mr. Francis Caron Commodore, and came along with them in August into Helland.

Having in vain codeavoured, by the Interest of Mr. Beiemblestern to get an Asissants
Place in the Chamber of Amsteldam, I was forced to take up with a Cadee's Place, at In what the rate of 10 Guilders per Month; and be-quality ing furnished with recommendatory Let-first went ters to the Regency of Batavia, I fail'd out in the East of the Toyal the 20th of September in a Indies.

of the Texel the 29th of September, in a new Veffel call'd the Swan, in Company of two others; and having refreshed our selves at the Isle of Wight, (belonging to England) and in the Isle of St. Vincent, we came in 1643, the 17th of April, safely to an Anchor in the Road of Baravia, having outstrip'd the two others, that were no such Sailers as ours. After I had stayed here for fome time, the then Governour General Anthony van Diemen removed me from the Military Service to an Affiftant's Place worth 20 Guilders per Month. Anno 1647, the 20th of May, Mr. Cornelius vander Lyn, his Successor, bestow'd upon me one of the Head Clerk's Places worth 28 Guilders per Month, befides fix Reals board Wages: Anno 1648, I being then in the 35th year of my Age, Married at Batavia a certain Widow, born in the City of Welel, named Mary, the relict of Mr. Aux Brebis, who then lived with the Head Factor, Mr. James Schwern. Anno 1649, the 29th of September, the faid Governour General Mr. van Lyn, was pleafed to bestow upon me the Employment of a Factor (belides my Clerk's Place) for 5 Years, with a Monthly Sallary of 56 Guilders per Month, and 12 Reals board Wages.

Anno 1650, I was fent in an open Chaploop from Batavia to the Streights of Sunda, Thys Crab Commander, to fetch certain Infructions, which Mr. Maximilian le Maire (who was lately arrived there with the Ship the Walfich from Holland) had brought along

7 B

with him, but before we reach'd the said agency. Vessel, we met the Ship the Nassaw, coming from the Western Coast of Sumatra, loaden with Pepper, and being willing to freak with them, by the carelessness of our Mafter the Chaloop run so violently against the Poop of the Ship, that it was ready to fink; I did endeavour to lay hold of the Lyon's head of the great Ship, but misling my aim, fell into the Water, where I narrowly escap'd being drowning; for the Ship being under fail, I got under her, and with much ado got upon the other fide (yet not without being forely cut by the Mussel shells that stuck to the bottom) from whence, with much ado, they dragged me up with a Rope, into the Ship. Afterwards it being refolved to fend me along with Mr. William Verstegen, Extraordinary Councellor of the Indies, and Commissary of the Northern Quarter, from Tonquin to Tahwan, my Sallary was raifed to 66 Guilders per Month.

Anno 1651, the 20th of April, we Embark'd aboard the Delft haven Yacht at Batavia, in order to profecute this intended Voyage, which having been accomplish'd with good Success, we stop'd in our Return near the Kingdom of Quinam, and after having settled a firm Peace with that King, and obtained the Releafement of our Priloners, we came to an Anchor again in the Road of Baravia, the last day of December, where in a few days after my Arrival, I was constituted a Member of the Council of Juflice by Mr. Reimerfon, then Governour General in the absence of Mr. Lyn.

Anno 1653, the 14th of July, The time of my former Contract being expired, I engaged my felf again in the Companies Service for three Years longer, at the Rate of

(a) Of this Voyage, Nicubeff, p. 29. Hereupon it was refolved to fend as Commissioners Mr. Schedel and Mr. Wagener, the first in the Brown-fish, the other in a Vessel call'd the Shel-fish. They let fail together from Batavia, and after a Voyage of four Weeks, came to the Western Point of Haisanon. From whence they went up the River Kanton, as far as Wangso, three Leagues distant from Kanton, where having staid for some time, but in vain, in expectation of the Mandarins to Conduct them to Kamon,Mr. Schedel without leave from the Regencyof Kanton and against the Advice of the Interpreters went to see his old Friend Haitau, in whom he much consided; being directed by him to go to see Tautans, he did accordingly, but finding nei-ther him nor his Secretary at Home, was forced to come aboard again immediately, as not

the same Neutoff, p. 32. Mr. Wagener finding all his Courthips to the Mandarius of no effect, he returned with both the Yachts to Betavia, he having not with all his Cunning, been able to fettle a Commerce there for his Country men: What vexed him most, was, that these avaricious wretches had the impudence to demand so vast a Summ of Money, only to procure the Reception of his Letters by the Vice Roy, without the least Promise of

85 Guilders per Month; I was foon after as Commissary or Envoy of the Company tent with two Yachts the Shel-fifth and the Brown-fish to Kanton in China (a) to endeavour the Establishment of free a Commerce for our Company there, with the Tartarian Viceroy; but the Tartarian Commanders aiming at nothing but our Money and little to be relied upon, I left these Covetous Wretches, and made the best of my way with my two Yachts towards Tunquin. where, having left the Brown-fift to reht, I returned, notwithstanding I was very dangeroufly Ill, with the Shel-fift alone, the 29th of December, to Basavia. Having immediately after my recovery, given an Account of my Negotiation, I had soon after a Place affign'd me in the Council of Justice.

Anno 1656, the 12th of July, I was fent in the Quality of Director in the Ship call'd the Calf to Japan, (b) to relieve according to Cultom, Mr. John Brichlinus, his Year being expired; where I arrived the 18th of August, and immediately delivered the Prefents fent by the Company to the Emperor; but had icarce been here three days when on the North fide of the Capital City of Jedo, a fudden fire broke out, which being increased by a violent Wind, laid not only the whole City, (which might for its bigness, be compared to a whole Province) in Ashes in 48 Hours, but also consumed the Royal Palace, and near 160000 Souls; however we had the fortune to escape the fury of the flames thro' God's Mercy, tho' not without a great deal of danger.

Anno 1657, the 27th of Ottober, I return'd out of Japan (c) in the Ship the Flower Valley, in Company of the head Factor, Mr. John Betgens, who had received

entring afterwards into a Conference upon the

proposed Commerce.

(b) Concerning this Commission, Arnold Montan lays, p. 356. Next to this the Embassy performed by Mr. Zachary of Misnia, is no less remarkable; and p. 369. Speaking of this Conflagration: Mr. Wagener returning early in the Morning into the City, found the whole Southern part of it in a flame: About Noon the fire got into the Imperial Palace, with fuch violence, that in an instant the strong Towers and Stone-Warch-houses were seen tumbling into the Ditch, where the fire frop'd on that fide; but continuing on the other hand, the Emperour's Lodgings were confumed before Night, he having scarce time-given him to retire with his chief Councellors to their Summer-Houses, built on the North side at some distance from the Palace: in short, in two days time above 100000 houses were laid in Ashes inhabited before the fire by 1000000 of Souls, to-

gether with a fast number of most Stately Pa-laces, and Provies or Pagan Temples.

(c) The lame Monson, p. 377. In the mean while Mr. Wasner, taking a short Voyage to Ba-stris, soon returned to prepare for his second intended Embassy to Japan. Anno 1659 he had made all the necessary preparations for it.

Orders to go and Refide at Tajoan in the 'agener. Quality of Deputy Governour to Mr. Coyets; we were put to no finall trouble to get into the Road of that Place, where having stay'd fix days, I fet fail again thence, in Company of the Hercules and the Watchman, and came fafely before Batavia the 18th of December, where we found several Dutch Ships (which on the 31st returned for Holland, under the Command of Mr. John Canaus)

Riding at Anchor.

Anno 1658, being ready to go a second time as Director to Japan, to take care of the Companies Interest there, Mr. John Maetzucker, who fucceeded Mr. Reymers as Governour General, was pleased to appoint me 100 Guilders per Month, without any limited time; I Embark'd immediately after, aboard the Ship call'd the Venenburgh at Batavia, and set forward with a Prosperous Gale till August, when being among the Maccausche Islands, upon the Chinese Coast, we were overtaken by so violent a Tempest, that we expected every Monient to be dashed against the Rocks; but thro' God's Mercy this Storm lasted not above 12 hours; after which, the Wind proving pretty favourable, we continued our Voyage, and the 17th of September arrived fafely in the Bay of Nangafacki. Our Commerce in Japan being establish'd upon a good foot, and all other matters settled to our satisfaction, I began to prepare for my return to Batavia, and in 1659, set sail in the Ship call'd the Haversen, from the Bay of Nangafacki; but the Master of our Vessel being not well acquainted in those Seas, we got one Night among the Rocks de Paraelles (a branch of the Sea, formerly part of the Continent, but swallow'd up by the Waves) I was no fooner awake the next Morning, but seeing our selves among these Rocks, and that we had missed the Entrance of the Streight of Banca, I gave my self over for loft, and certainly had been so, if by the indefatigable Labour of the Seamen, and a favourable Gale, we had not made shift to get the 20 of December, into the Harbour call'd Paulosingen, where we were forced to flay four days before we could get out to make the faid Streight, from whence we failed without any finister accident, to Baravia.

Anno 1660, the 22d of August, Mr. Jacob Carack, and I were fent as Commissioners to Macassar in the Postillion Yacht, to treat with the King concerning a Peace, Pursuant to the Instructions given us for

that purpose.

The 12th of November I recurred alone in the same Vessel, in order to give an Account of my Negotiation there, Mr. Carack being obliged to May behind about some business of Moment in our Fortress of Panneholla. In the beginning of the Year 1601, be-

ing without Employment, I thought fit to accept of the Surveyorship over the Buildings, vacant by the Death of Mr. John Listingen, whereby I a third time obtained a Place in the Council of Justice; but finding this Office too burthensome for my Gouty Carcass, which was not able to endure such continual going from Place to Place, I quitted that Employment, and in lieu thereof was order'd to relieve the Commander in Chief on the Cape of good Hope, Mr. John van Richeck, who was to have been succeeded by Mr. Gent van Hoom, but he dying in his Voyage thither, I was pitch'd upon to supply his Place. Accordingly I left Baravia Anno 1662, the 30th of Fanuary, with all my Family, and with 2 Ships in 16 days time, with a Prosperous Gale, came in sight of the Cape, or utmost Point of Africa: As I was entring the Bay, we heard the un-welcome News, that of the seven Ships we faw at Anchor before Baravia, and parted thence about a Month before us, four were lost in a Storm near the Island of St. Maurice.

Anno 1663, in February I received Letters out of Holland from the Governours of the Company, wherein they not only confirm'd me in my Governours Place here. but also appointed me the same Allowance

my Predecessor had enjoy'd.

Anno 1664, being Advertifed by several Letters fent to me over Land from the Bay of St. Helens, by Captain Henry van Wallen, intimating that a Conspiracy had been discovered in the Ship call'd the Arms of Horn, and that he had been obliged to take into Custody the Master of the Ship and another Officer; I Embark'd the next day, with three Horses aboard, the Ship call'd the Watercock, but not being able to go beyond the Cape of Satanhia, I landed there, and with two Servants on Horse back, continued my Journey thither by Land; but were no fooner arrived there, when being inform'd by the Hottentots (Inhabitants o the Cape) that the faid Ship was failed thence the day before, towards the Cape; we were forced to make the best of our way back to the Bay of Satanhia, where we arrived the 3d day, but to our great regret, found that the Captain had again quitted his first Station there, and was gone up two Leagues farther into the Bay; fo that we faw our felves under an absolute necesfity to take up our resting Place all that Night upon the Ground near the Sea shoar that were not a little furprised, when the next Morning we discovered in the Land the foot-steps of a great Lyon that had p.S fed but a few Paces from us, without doing us any harm.

After my return to the Cape, viz. Anno 1666, my Wife, after a Months lickness, departed this Life, after I had lived with

her in Marriage 18 Years and 4 Months, Wagener. but had no Children by her; I ordered a Ifmall Chappel to be built on the Cape, wherein the was interred. Not many Months after, viz. the 26th of September, Mr. Cormeline van Qualbergen, who was fent in the Ship the Dordrecht to succeed me in my Command, arrived at last on the Cape, after a most tedious and troublesome Voyage of 8 Months, in which they had loft 190 Men by the Scurvy and other Distempers. Having pursuant to the Orders sent me by the Council of 17. given the faid Mr. Qualbergen, all the necessary Instructions, and surrendered the Government into his hands, I Embark'd with all my Moveables the 1st of October, in the beforementioned Ship the Derdrecht, together with my Daughter-in-Law, whose name was Mary Bucquoi, the relict of Cornelius Vorburgh, one of the head Factors of the Company, and with a very moderate and prosperous Wind, arrived fafely at Batavia, where being lodged at Mr. John Bolan's House, she and I shared the Inheritance of her Mother, according to the Determination of two Arbitratorschofen for that purpote.

Anno 1667, the 1st of September, I Embark'd at Batavia in the Ship call'd the Erafmus, being fent as an Envoy of the Companys to the Emperour of great Java, or of Materan, with two very fine Perfian horses, besides other Presents to renew the Ancient Friendship, and good Neighbourly Correspondency betwixt them; we came to an Anchor near the River Samaran, where leaving our Ship, we Travell'd in 6 or 7 days to the Capital City Materan, where having discharged my Commission, I return'd from thence by Land, with a numerous Attendance to Samaran, and from thence fet fail towards Japan, where having stayed a few days to dispatch some Business of Moment, we Embark'd, and arrived the last day of November, with the same Yacht, we came in from Batavia, in that Road, where I gave an ample Account of my Transactions, to the Great Council of the Indies.

Having by this time spent 25 Years in the East India Companies Service, I took a full resolution to return to my Native Country, for which reason having desired my discharge from the just now mentioned Council, the Governour General, Mr. Maetzucker, would fain have prevail'd upon me to continue there for fome time longer, offering me his Garden House without the Gate of

Batavia for my Habitation.

But being resolved to return to my Native Country, I was forced to refuse his kind offer, and having obtain'd my Paffport, I Batavia in 1667, the 8th of December,

a Squadron of 6 Ships, whereof John

wander Labn was Admiral, and my felf carrying the Vice-Admiral's Flag, aboard the Ship call'd the Arms, bound for Middleburgh on Account of the Chamber of Zealand. Having happily pass'd the Streights of Sunda, we arrivd Anno 1668, the 22d of February, with fair Wind and Weather, in the Table Bay of the Cape of Good Hope, where, to our great fatisfaction, we received the News of the late concluded Peace betwixt his Britannick Majesty, and the States General at Breda.

Whilst we lay at Anchor here 24 more Ships that were left behind at Batavia to take in their Cargo, arrived likewise in the said Bay the 10th of March; as also not long after, the Ship call'd Thuys de Telfen, being sent from the Chamber of Amsteldam, having aboard 14 Conspirators, (for the most part Northern Country Men) who had laid a Plot to kill the Captain and the other Officers of their Ship whilst they were at Dinner, and afterwards to feize the Veffel; five of the Ringleaders of them were Sentenced to be hanged on a Gibbit near the Fort; feven others to be whip'd, and blirn'd with a Red-hot Iron, and the rest to be kept in Irons for their life time, and to work in fuch Places as should be appointed by the Company, which was put in Execution accordingly. Anno 1668, the 26th of Merch, we set sail from Table Bay with the whole Fleet, confifting of 10 Ships richly laden, viz. the Holland Hayn, the Arms of Middleburgh, the Dordrecht, Liberty, Amerongen, Cattenburgh, the Spreeaw, Outshorn, the Tiger, and the Young Prince, and taking our Courie betwixt the Continent and the Red Island, passed the Green Sea, and so with a Prosperous Gale, continued our Voyage till the Month of July, when we arrived happily in Holland.

N. B. Mr. Zachary Wagener, being in the Month of July, arrived with 10 Ships as Vice-Admiral in Zealand; found himself so much indisposed, that after some stay at Middleburgh, he thought fit to go to Amsteldam to take the Advice of the Physicians of that City; and having accordingly take up his Quarters at the Sign of the City of Prague, in the Warmerstreet, nothing was left unattempted to remove the indispession of his Body; which notwithstanding, all the endeavours of the best Physicians not availing, he died, the Ist of October 1668, and was inter'd the 6th following, in the Old Church of Amsteldam. He was then 54 Tears old and 4 Months, the greatest part of which he had spent in Trabelling, by Sea and Land; having spent 7 Years in Brasil, and served ed the Dutch East India Company no less than 25 Years.

# Author's Preface.

Being the Son of the Admiral Chaiftagher Columbus, a Person worthy of Eternal Mes mory, who discovered the West-Indies; and having my self sail'd with him some sime, if leem'd to me but reasonable, that among other things I have writ, one and the chiefest should be his Life, and wonderful Discoursy of the West-Indies, or New-World; because his great and dominimal Safforings, and who Diftempers he latherned smales, did not allow him time to form his Names and Olforamians into a Method fit for Hillory; yet knowing where were many others who had attempted this Work, I forbore, till reading their Books I found in them. that which is usual among Historians, VIZ. That they magnify some things, lessen others, and sometimes pass that over in silence, which they ought to give a very particular Account of. this reason I resolved to undergo the labour of this Task, thinking it better I should lie under the censure my Skill and Presumption shall be subject to, than to suffer the Truth of what relates to to Mable at Profom ito lie Jurised in oblivious. For it is my Comfort, that if any fault be found in this my undertaking, it will not be that, which mest Historians are liable to, viz. That they know not the truth of what they write; for I propriife to Compose the History of his Life, of such matter only as I find in his own Papers and Letters, and of these Passages of which I my felf was an Eve witness. And whosoever shall imagine, that I add any thing of my own, may be affur'd, I am Jatisfied, I can reap no benefit thereby in the life to come; and that the Reader alone will have the benefit of it, if it be capable of yielding any.

The Author having given this Account of himself, I have not much to add, but to inform the Reader before he enters upon the Work, that in it he will find all the Reasons which induced the Admiral to such an undertaking; he will see how far he proceeded in Person upon the Discovery in four several Voyages he made; how Great and Honourable the Articles were, upon which the control upon the Discovery, and which were afterwards consiron de to him by those two famous thereof a ling Ferdinand and Queen Mabel or Elizabeth; how basely they were all vielated; and has a faw such unparalled a Services, most unhumanly wreated; how far he settled the Affairs of the Island Hispaniola, the first place the Spaniards Planted in; what care he took that the Indians should not be oppressed, but rather by good Usage and Example, prevailed upon to embrace the Catholick Faith; also the Customs and Manners of the Indians; their Opinions and Practice as to Religious Worship; and in a Word, all that can be expected in a Work of this nature, the Foundacion whereof was laid by so great a Man as was the Admiral, and sinished by his own Sau, who had all the Education that could contribute to make him capable of writing so notable a Life.

### LIFE and ACTIONS, &c.

CHAP. I.

Of the Country, Original, and Name of Admiral Christopher Columbus.

Columbus. flory of any Man of Note, to make known his Country and Original, be-Columcause they are best look'd upon, who are bus's Ori- born in Noble Circs and of Illustrious Parems, therefore forme would have had me spent my time in thewing that the Admiral was Honourably descended, tho' his Parents, thro' the peevillands of Fortune, were ful'n Into great Poverty and Want; and that I flooded have proved they were the Offspring of that Junius Coton, of whom Tacisus in his

Theing a very material Point in the Hi-

12th Book fays, That he brought King Milbridges Prifonor to Rome; for which bervice the People assign'd him the Confuier Dignity, the Eagle, or Standard and Confuler Court. And they would have me give a large Account of those two Illustrione Coloni, this Predecessors, who, Sabellian tells us, gain'd a Mighty Victory over the Venerians, as shall be mentioned in the 5th Chapter: But I refused to undertake that Task, believing he was particularly cholen by Almighty God for to great an Affair as

that was he perform'd; and because he was to be fo truly his Apostle, as in effect he proved, it was his Will he should in this past be like the others, who were call'd to make known his Name from the Sea and Rivers, and not from Courts and Palaces, and to imitate himfelf, whose Progenitors being of the Blood Royal of Jerusalem; yet it pleased him that his Parents thould not be much known. Therefore, as God gave him all the Perfonal Qualities for fuch an undertaking, to be would have his Country and Original work hid and obscure. So it is that some, who would cust a Cloud upon his Futne, by he was of Merei, others of Cagaras, and others of Bas giefco, all finall Towns near the City & Genoa, and upon its Coast. Others, who were for exalting of him, lay, he was a Native of Savena, others of Genea, others; more vain, nlake him of Fincenza; in which City there are some Honourable Persons of his Family, His Name: and Tombs with the Arms and Inscriptions of the Family of Columbia; this being then the usual Simame of his Predecessors,

tho' he, complying with the Country whither Columbus he went to live, and begin a new State of life. modell'd the World that it might be like the Ancient, and diftinguish'd the Direct from the Colateral Line, calling himself Colon. This made me apt to believe, that as most of his Affairs were guarded by tome special Providence, so this very parti-cular, concerning his Name and Sirname, was not without some Mystery. We may instance many Names which were given by fecret Impulie, to denote the effects those Persons were to produce, as in his is fore-told and expressed the Wonder he per-formed. For if we look upon the common Simame of his Anceltors, we may fay he was true Columbus or Columba, for as much as he convey'd the Grace of the Holy Ghoft into that New World which he discover'd; shewing those People who knew him not, which was God's beloved Son, as the Holy Ghost did in the figure of a Dove at St. John's Baptism; and because he also carried the Olive branch and Oyl of Baptism over the Waters of the Ocean, like Noah's Dove, to denote the Peace and Union of those People with the Church, after they had been shut up in

the Ark of Darkness and Confusion. And the Sirname of Colon which he reviv'd, was proper to him, which in Greek fignifies a Member, that hil proper Name being Chris stopber, it might be known he was a Member of Christ; by whom Salvation was to be convey'd to those People. Moreover, if we would bring his Name to the Latin pronunciation, that is Christopherik Colonis; we may fay, That as St. Christopher is reported to have bore that Name, because he carried Christ over the deep Waters, with great danger to himfelf; whence came the denomination of Christopher, and as he convey'd over the People whom no other could have been able to carry; so the Admiral, Christopherus Colonus, imploring the allistance of Christ in that dangerous Passage, went over fafe himself and his Company, that those Indian Nations might become Citizens and Inhabitants of the Church Triumphant in Heaven; for it is to be believ'd, that many Souls, which the Devil expected to make a Prey of, had they not pass'd thro' the Water of Baptism, were by him made Inhabitants and Dwellers in the Eternal Glory of Heaven.

#### CHAP. II.

Of the Admiral's Father and Mother, and their Quality, and of the false Account one Iustiniani gives of his Employ before he had the Title of Admiral.

sainty of Columrentage.

OT to go upon the Etymology, Derivation and Meaning of the word Columbus's Pa Admiral; but to return to the Quality and remane. Persons of his Progenitors; I say, That how confiderable foever they were, being reduc'd to Poverty and Want by the Wars and Factions in Lombardy; I do not find after what manner they lived, tho' the Admiral himself in a Letter, says, That his Ancestors and he always Traded by Sea. For my further information in this particular, as I paled thro' Cugureo, I endeavoured to receive some information from two Brothers of the Colombi, who were the Richest in those Parts, and reported to be somewhat a Kin to him; but the Youngest of them being above 100 Years old, they could give me no Account of this Affair. Nor do I think that this is any Dishonour to us who descend from him, because I think it better that all the Honour be deriv'd to us from his Person, than to go about to enquir: whether his Father was a Merchant or a Man of Quality that kept his Hawks and Hounds, whereas it is certain there have been a Thousand frich in all Parts, whose Memo-

ry was utterly lost in a very short time among their Neighbours and Kindred; fo as it is not known whether ever there were any such Men. But I am of Opinion that their Nobility can add less Lustre to me, than the Honour I receive from fuch a Father. And fince his own Honourable Exploits made him not fland in need of the Wealth of his Predecessors, (who notwithstanding their Poverty, were not destitute of Virtue, but only of Fortune) he ought at least by his Name and Worth, to have been railed by Authors above the rank of Mechanicks and Handicrafts. Which yet Fall if any will affirm, grounding his Affertion Justi on what one Augustin Justiniani writes in his Chronicle; I say, That I will not set my self to deny it begging time, or means to prove the contrary by Testimonials; for as much as Justinian's writing it does not make that to be look'd upon as an Article of Faith, which is no longer in the Memory of Man; so neither will it be thought undeniable, should I say I received the contrary from a Thousand Persons. Nor will I show his falsebood by the Histories others

have writ of Christopher Columbus, but by 'olumbus, this fame Author's Testimony, and Writing, m whom is verified the Proverb, That Lyars ought to have good Memories, because otherwife they contradict themselves, as Justiniani did in this Case; saying in his Comparison of the four Languages, upon that Expreffion of the Pfalm, In omnem terram exivit Conus corum, these very words, This Chri-Stopher Columbus having in his tender Years, attain'd some Elements of Learning; when he came to Manly Years, applied himself to the Art of Navigation, and went to Lifbon in Portugal, where he learn'd Cosmography, taught him by a Brother of his who there made Sca Charts; with which Improvement, and Discoursing with those that fail'd to S. George de la Mira in Africk, and his own reading in Cosmography, he entertain'd thoughts of Sailing to those Countries he Discover'd. By which words it appears, That he follow'd no Mechanick Employment, or Handicraft; fince, he fays, he employed his Childhood in Learning; his Youth in Navigation and Cosmography, and his riper Years in Discoveries. Thus Justinian convinces himself of falshood, and proves himself an inconsiderable, rash, and malitious Countryman; for when he speaks of a Renowned Person who did so much Honour to his Country, whose Historiographer Justiniani made himself, tho' the Admiral's Parents had been very mean, it had been more decent, to speak of his Origin, as other Authors in the like Cafe do; faying he was of low Parentage, or come of very poor Friends, than to use injurious words, as he did in his Pfalter; and afterwards in his Chronicle, falfly calling him a Mechanick. And supposing he had not contradicted himself, Reason it self made it appear, that a Man, who had been employed in Art Manual or Handicraft, must be born --- a norfe.4 Ma-

falshood of his Writing will be made out. The first therefore was, That the Admiral went to Lisbon to learn Cosmography of a Brother of his own that was there; which is quite contrary, because he liv'd in that City before, and taught his Brother what he knew. The second falshood is that at his first coming into Castile, their Cotholick Majesty's Ferdinand, and Isabel, or Elizabeth accepted of his Proposal, after it had been feven years bandy'd about and rejected by all Men. The third, That he fet out to Discover with two Ships, which is not true, for he had three Caravals. The fourth, That his first Discovery was Hispaniola, and it was Guarahani, which the Admiral call'd S. Salvador, or S. Saviour. fifth, That the faid Island Hispaniola was Inhabited by Canibals, that eat Men's flesh; and the Truth is, The Inhabitants of it were the best People, and most civiliz'd of any in those Parts. The fixth, That he took by force of Arms, the Canoo, or Indian Boat he saw, whereas it appears that he had no War that first Voyage with any Indian, and continued in Peace and Amity with them till the day of his departure from Hispaniola. The seventh, That he return'd by way of the Canary Islands, which is not the proper way for those Vessels to return. eighth, That from the said Island he difpatch'd a Messenger to their Majesty's aforefaid, whereas it is certain, that he was not first at that Island, as was observ'd, and he himself was the Messenger. The ninth, That the fecond Voyage he return'd with twelve Ships, and it is manifest he had seventeen. The tenth, That he Arrived at Hilpaniola in twenty days, which is a very short time to reach the nearest Islands, and he perform'd it not in two Months, and went to others much farther distant. The eleventh, That he presently made from Hispaniola with two Ships, and it is known there were three he

ry and Navigation. But it is no wonder that Justiniani should dare to deliver an untruth in this particular, which is hidden, fince in Affairs well known concerning his Discovery and Navigation, he has inferted above a dozen fulfhoods in half a Sheet of Paper in his Pfalter, which I shall briefly hint at without staying to give him an Anfiver, to avoid interrupting the Series of the Hiltory, fince by the very Course of it, and what others have writ on that Subject, the Vol. II.

from Hilpansola w CHUM, Hispaniola. So that by his negligence and heedleffness, in being well inform'd and writing the Truth of these Particulars, which are to plain, we may plainly differn what inquiry he made into that which was so obscure, wherein he contradicts himself, as has been made appear. But laying aside this Controversie, wherewith I believe I have by this time tir'd the Reader, we will only add, That confidering the many Mistakes 7 D and

and Falshoods found in the faid Justinian's Columbus. Hillory, and Pfalter, the Senate of Genos has which a Penalty upon any Person that shall read or keep it; and has caus'd it to be carefully fought out in all Places it has been tent to, that it may by Publick Decree be deitroy'd and utterly extinguish'd. I will return to our main design, concluding with this Affertion, That the Admiral was a Man of Learning and great Experience; that he did not employ his time in Handicraft or Mechanick Exercises, but in such as became the Grandour and Renown of his

wonderful Exploits, and will conclude this Chapter with some words taken out of a Letter he writ himself to Prince John of Castile's Nurse, which are these.

I am not the first Admiral of my Family. let them give me what Name they please; for when all is done, David, that most Prudent King, was first a Shepherd, and afterwards chosen King of Jerusalem, and I am Servant to that same Lord, who rais'd him to such Dignity.

### CHAP. III.

# Of the Admiral's Person, and what Sciences he learn'd.

The Admiferib'd.

THE Admiral was well shap'd, and of a more than middling Stature, long Visag'd, his Cheeks somewhat full, yet neither fat nor lean; he had a Hawk Nofe, his Eyes white, his Complexion white, with a lovely red: In his Youth his Hair was fair, but when he came to 30 Years of Age, it all turn'd grey. He was always modest and sparing in his Eating, Drinking and his Dress. Among Strangers he was affable, and Pleafant among his Domesticks, yet with Modesty and an easy Gravity. He was so Brick in Religious Matters, that for Fasting and faying all the Divine Office he might be thought profest in some Religious Order. So great was his Aversion to Swearing and Curling, that I Protest I never heard him fwear any other Oath, but by S. Ferdinand; and when in the greatest Passion with any body, he would vent his Spleen by faying, God take you for doing or Saying So. When he was to write, his way of trying his Pen

was by writing these words, Fesus cum Maria fit nobis in via, and that in fuch a Character, as might very well serve to get his Bread. But passing by other Particulars of his Actions and Manners, which may be mention'd at their proper time in the Course of this History; let us proceed to give an Account to what Science he most addicted himself. In his tender years he apply'd himfelf so much to study at Pavia, as was sufficient to understand Cosmography; to which fort of reading he was much addicted, for which reason he also apply'd himself to Astrology and Geometry, because these Sciences are fo link'd together, that the one cannot subsist without the other, and be-cause Ptolemy in the beginning of his Cosmography, fays, That no Man can be a good Cosmographer unless he be a Painter too; therefore he learn'd to draw, in order to describe Lands, and set down Cosmographical Bodies, Plains or Rounds.

# CHAP. IV.

# How the Admiral employ'd himself before he came into Spain.

Testimonies out of Columbus's own Writings.

THE Admiral having gain'd fome infight in Sciences, began to apply himself to the Sea, and made some Voyages to the East and West; of which and many ether things of these his first days, I have no perfect Knowledge, because he died at fuch time as I being confin'd by filial Duty, had not the boldness to ask him to give an Account of things; or to speak the truth, being but young, I was at that time far **bas** 

But in a Letter writ by him in the Year 1501, to their Catholick Majesties, to whom he durst not have writ any thing but the truth; he has these following words.

Most Serene Princes, 'I went to Sea very young, and have continued it to this day;

- and this Art inclines those that follow it, to be defirous to discover the Secrets of this
- " World; it is now forty Years that I have been Sailing to all those parts, at present fre-
- ' quented; and I have Delt and Con-• yerled

versed with wise People, as well Clergy Columbus. as Laity, Latins, Greeks, Indians and Moore, and many others of other Sects; and our Lord has been favourable to this my Inclination, and I have received of him the Spirin of understanding: He has made me very skilfull in Navigation, knowing enough in Aftrology, and fo in Geometry and Arithmetick. God hath given me a Genius and hands aut to draw this Globe, and on it the Cities, Rivers. Islands and Ports, all in their proper Places. During this time I have feen, and endeavoured to see, all Books of Cofmography, Hiltory and Philosophy, and of other Sciences; fo that our Lord has fenfibly opened my understanding, to the end I may Sail from hence to the Indies, and made me most willing to put this in execution. Fill'd with this defire, I came to your Highnesses. All that heard of my ' undertaking, rejected it with contempt In your Highnesses alone, and fcorn. Faith and Constancy had their Seat '. In another Letter written from Hispaniola, in 3anuary 1495, to their Catholick Majesties, telling them the Errors and Mistakes commonly made in Voyages and Piloting; he fays thus, ' It happened to me that King Rence, whom God has taken to himfelf, fent to me to Tumi to take the Galeasse call'd Fernandina; and being near to the Island of Sr. Peter by Sardinia, I was told there were two Ships and a Barack with the faid Galeasse, which discompos'd my Men, and they refolved to go no further, but to return to Marfeilles for another Ship and more Men; and I perceiving there was no going against their Wills, without some contrivance, yielded to their defires, and changing the point of the Needle, set sail when it was late, and next morning at break of day, we found our selves near Cape Carregna, all aboard thinking we had certainly been failing for Mar-' feilles '. In the same manner in a Memorandum or Observation he made to show, that all the five Zones are Habitable, and proving it by Experience in Navigation, he says, In February 1467, I sail'd my self an Hundred Leagues beyond Thule, Iseland, " whose Northern part is 73 degrees distant

from the Equinoctial, and not 63 degrees as some will have it to be; nor does it lie upon the Line where Ptolemy's West begins, but much more to the Westward; and to this Mand which is as big as England, the English Trade, especially from Bristol. At the time when I was there, the Sea was not Frozen, but the Tides were fo great, that in some Places it swell'd 26 Fathoms, and fell as much '. The Truth is, That the Thule Ptolema speaks of, lies where he fays, and this by the Moderns is call'd Frizeland. And then to prove that the Equinoctial or Land under it is Habitable, he fays, I was in the Fort of St. George de la Mira belonging to the King of Portugal, which lies under the Equinoctial, and I am a Witness that 'tis not Inhabitable, as some would have it'. And in his Book of his first Voyage, he says, 'He saw some Mermaids on the Coast of Meneguera, but that they are not so like Ladies, as they are painted'. And in another Place he fays, ' I observed several times in Sailing from Lisbon to Guinea, that a degree on the Earth, answers to 56 Miles and two Thirds '. And farther he adds, ' That in Scio, an Island of the Archipelago, he faw Mastick drawn from some Trees'. In another Place he fays, 'I was upon the Sea 23 Years, without being off it any time worth the speaking of; and I saw all the East and all the West, and may say towards the North; or England, and have been at Guinea; yet I never faw Harbours for goodness, like those of the West-Indies'. And a little farther he fays, 'That he took to the Sea at 14 Years of Age, and ever after follow'd it '. And in the Book of the fecond Voyage, he says, ' I had got two Ships, and left one of them at Porto Santo, for a certain reason that curr'd to me, where she continued one day, and the next day after I join'd it at Lisbon, because I light of a Storm and contrary Winds at South West, and she ' had but little Wind at North East, which was contrary. So that from these Instances we may gather, how much Experience he had in Sea Affairs, and how many Countries and Places he Travel'd before he undertook his Discovery.

Columbus.

### CHAP. V.

The Admiral's coming into Spain, and how he made himself known in Portugal, which was the cause of his discovering the West-Indies.

Another Columbus.

S concerning the cause of the Admiral's coming into Spain, and his being addicted to Sea Affairs, the occasion of it was a famous Man, of his Name and Family, call'd Columbus, renown'd upon the Sea, on Account of the Fleet he commanded against Infidels, and even in his own Country, infomuch that they made use of his Name to trighten the Children in the Cradle; whose Person and Fleet, it is likely were very confiderable, because he at once took four Venetian Galleys, whose bigness and strength I should not have believ'd, had I not seen them fitted out. This Man was call'd Cotumbus the Young, to dillinguish him from another, who was a great Scaman before him. Of which Columbus the Younger, Marc Antony Sabellicus, the Livy of our Age, fays in the eighth Book of his tenth Decade, That he lived near the time when Maximilian, Son to the Emperor Frederick the 3d. was chosen King of the Romans: Jerome Donato was fent Embaffador from Venice into Portugal, to return thanks in the name of the Republick to King John the 2d, because he had cloathed and relieved all the Crew belonging to the aforefaid great Galleys, which were coming from Flanders, relieving them in such a manner, as they were enabled to return to Venice, they having been overcome by the Famous Corfair Columbus the Younger, near Libon, who had strip'd and turn'd them ashoar. Which Authority of to Grave an Author as Sabellicus, may make us fensible of the aforemention'd Justimani's Malice, fince in his History he made no mention of this Particular, to the end it might not appear, that the Family of Columbus was less Obscure than he would And if he did it thro' ignorance, he is nevertheless to blame; for undertaking to write the History of his Country, and omitting to remarkable a Victory, of which its Enemies themselves make mention. For the Historian, our Adversary, makes so great Account of his Victory, that he fays, Ambassadors were sent on that Account to the King of Portugal. Which same Author in the aforementioned eighth Book, some what further, as one less obliged to inquire into the Admiral's Discovery, makes mention of it, without adding those twelve lyes which Justiniani inserted. But to return to the matter in hand, I say, That whilst the Admiral fail'd with the aforefaid Columbus Tounger, which was a long time; it fell

out that understanding the beforementioned four great Venetian Galleys were coming from Flanders, they went out to feek, and found them beyond Lisbon, about Cape St. Vincent, which is in Portugal, where falling The A to blows, they fought furioufly, and grap der bis pled, beating one another from Veffel to Vessel with the utmost rage, making use, not only of their Weapons, but Artificial Fire-works; so that after they had fought from Morning till Evening, and abundance were kill'd on both fides; the Admiral's Ship took fire, as did a great Venetian Galley, which being fast grappled together with Iron Hooks and Chains, used to this purpose by Sea faring Men, could neither of them be relieved, because of the confusion there was 'among them, and 'the fright of the fire, which in a short time was so increased, that there was no other remedy, but for all that could, to leap into the Water, so to die sooner, rather than bear the torture of the fire. But the Admiral being an excellent fwimmer, and feeing himfelf two Leagues or a little further from Land. laying hold of an Oar, which good Fortune offered him, and fometimes refting upon it, sometimes swimming, it pleased God, who had preserved him for greater ends, to give him strength to get to shoar; but so tired and spent with the Water, that he had much ado to recover himfelf. And because it was not far from Lisbon, where he knew there were many Genoefes his Countrymen, Come he went away thither as fast as he Lisbe could, where being known by them he Mari was so courteously received and entertain'd that he set up House and Marry'd a Wife in that City. And for as much as he behav'd himself honourably, and was a Man of a Comely Presence, and did nothing but what was just; it happened that a Lady whose name was Donna Felipa Moniz, of a good Family and Pensioner in the Monastery of all Saints, whither the Admiral used to go to Mass, was so taken with him, that she became his Wife. His Father-in-Law Peter Moniz Perestrello, being dead, they went to live with the Mother-in-Law, where being together, and she seeing him so much addicted to Cosmography, told him that her Husband Perestrello had been a great Sea faring Man, and that he with two other Captains, having obtained the King of Portugal's leave, went to make dif-

coveries, upon Condition, that dividing olumbus. what they found into three parts, they were to cast Lots who should choose first. Being thus agreed, they fail'd away to the South West, and arriv'd at the Island of Madera and Porto Santo, Places never before discovered. And because the Island of Madera was biggest; they divided it into two Parts, the Island of Porto Santo, being the 3d which fell to the Lot of the faid Perestrello, Columbus's Father-in-Law, who had the Government of it till he died.

> The Admiral being much delighted to hear fuch Voyages and Relations, his Mother-in-Law gave him the Journals and Sea Charts left her by her Husband, which still more inflam'd the Admiral; and he enquired into the other Voyages the Portugueles then made to St. George de la Mira, and along the Coast of Guinea, being much pleased to discourse with those that had failed thither. To say the Truth, I can not certainly tell whether whilst this Wife lived, the Admiral went to Mira or Guinen, as I faid above, the reason seems to require it. However it was, as one thing leads to another, and one confideration to another, fo

whilst he was in Portugal, he began to reflect, that as the Portugueses Travel so far Southward, it were no less proper to sail away Westward, and Land might in reason be found that way. That he might be the more certain and confident in this Particular, he began to look over all the Cosmographers again, whom he had read before, and to observe what Astrological Reasons would corroborate this Project; and therefore he took notice of what any Persons whatsoever spoke to that purpose, and of Sailers particularly, which might any way be a help to him. Of all which things he made fuch good use, that he concluded for certain, that there were many Lands West of the Canary Mands, and Cabo Vade; and that it was possible to fail to, and discover them. But that it may appear from what mean Arguments lie came to deduce, or make out so vail an undertaking, and to satisfy many who are delirous to know particularly, what Motives induc'd him to Difcover these Countries, and expose himself in so dangerous an undertaking, I will here tet down what I have found in his Papers relating to this Affair.

# CHAP. VI.

The Principal Motives that inclin'd the Admiral to believe he might discover the West-Indies.

There reading BEING about to deliver the Motives the Differ that inclin'd the Admiral to undertake the Discovery of the West-Indies, I say they were three, viz. Natural Reason, Authority of Writers, and the Testimony of Sailers. As to the first, which is Natural Reason, I fay, he concluded that all the Sea and Land compos'd a Sphere or Globe; which might be gone about from East to West, Traveling round it, till Men came to stand feet to feet one against another in any opposite Parts whatfoever. Secondly, he gave it for granted, and was fatisfied by the Authority of approved Authors, that a great part of this Globe had been already Travelled over, and that there then only remained to discover the whole, and make it known, that ments from Space which lay between the Eastern bounds of India, known to Ptolemy and Marimus, round about Eastward, till they came thro' our Western Parts to the Islands Azores, and of Cabo Verde the most Western Parts yet Discovered. Thirdly, He confidered, that this Space lying between the Eastern limits known to Marinus, and the aforefaid Island of Cabo Verde, could not be a-Vol. IL

bove a third part of the great Circumference of the Globe, fince the faid Marinus was already gone 15 Hours, or 24 Parts into which the World is divided towards the East; and therefore to return to the said Isles of Cabo Verde, there wanted about eight Parts; for the said Marinus is said to have begun his Discovery towards the West. Fourthly he reckoned, that since Marinus had in his faid Cosmography, given an Account of 15 Hours, or Parts of the Globe towards the East, and yet was not come to the end of the Eastern Land, it followed of course, that the said end must be much beyond that; and consequently, the farther it extended Eastward, the nearer of it came to the Islands Cabo Verde, towards our Western Parts; and that if such space were Sea, it might eafily be fail'd in a few days, and if Land, it would be fooner difcovered by the West, because it would be nearer to the faid Islands. To which rese son may be added, That given by Strabo in the 15th Book of his Cosmography, that no Man with an Army ever went to far as the Eastern Bounds of India, which Crefia: 7 E

indies.

thors.

writes is as big as all the rest of Asia; One-Columbus. ficritus affirms, it is the third part of the Globe; and Nearchus, that it is four Months Journey in a strait Line; besides that, Pliny in the 17th Chapter of his 6th Book, says, That India is the third part of the Earth: Whence he argu'd, that being fo large, it must be nearer Spain by way of West. The 5th Argument that induced him to believe, that the distance that way was small, he took from the Opinion of Alfragranus and his followers, who make the Circumference of the Globe, much less than all other Writers and Cosmographers, allowing but 56 Miles and two Thirds to a Degree. Whence he would infer, that the whole Globe being small, that extent of the third Part must of necessity be small, which Marinus left as unknown; therefore that Part might be fail'd in less time than he aslign'd; for since the Eastern bounds of India were not yet discovered, those bounds must lie near to Why call'd us Westward, and therefore the Lands he should discover, might properly be call'd Indies. By this it plainly appears, how much

one Mr. Roderick, Arch-Deacon of Seville. was in the wrong as well as his Followers. who blame the Admiral; faying, He ought not to have call'd those Parts Indies, because they are not so, whereas the Admiral did not call them Indies, because they had been scen or discover'd by any other Person, but as being the Eastern Part of India beyond Ganges, to which no Cosmographer ever asfign'd bounds, or made it border on any other Country Eastward, but only upon the Ocean; and because these were the Eastern unknown Lands of India, and have no particular name of their own; therefore he gave them the name of the nearest Country, calling them West-Indies, and the more because he knew all Men were sensible of the Riches and Wealth of India; and therefore by that name he thought to tempt their Catholick Majesties, who were doubtful of his undertaking, telling them he went to difcover the Indies by way of the West. And this mov'd him rather to defire to be employed by the King of Castile, than by any other Prince.

### CHAP. VII.

The second Motive inducing the Admiral to discover the West-Indies.

A fecond Motive that encouraged Motive the Admiral to undertake the aforethe Admiral to undertake the aforefrom Au faid Enterprise, and which might reasonably give occasion to call the Countries he should so Discover Indies, was the great Authority of Learned Men, who faid that it was possible to sail from the Western Coast of Africk and Spain, Westward to the Eastern bounds of India, and that it was no great Sea that lay between them, as Aristotle affirms, at the end of his 2d Book of Heaven and the World; where he fays, That they may fail from India to Cadiz in a few days. Which some think Averroes proves, writing upon that Place. Seneca in his first Book of Nature, looking upon the Knowledge of this World, as nothing in respect of what is attain'd in the next life; says, a Ship may sail in a few days with a fair Wind from the Coast of Spain, to that of India, And if as some would have it, this same Senega, writ the Tragedies; we may con-clude it was to the fame Purpole, that in the Chorus of his Medea, he speaks thus;

Venient annis Sacula Seris, quibus Oceanus Vincula rerum laxet, & ingens Patent tellus, Typhisque novos Detegat orbes, nec fit terris Ultima Thule.

That is, There will come an Age in later Years, when the Ocean will loofe the bonds of things, and a great Country be difcovered, and another like Typhys shall discover a new World, and Thule shall no longer be the last Part of the Earth. Which is now most certain has been fulfill'd in the Person of the Admiral. And Strabe in the first Book of his Cosmography, 'says, the Ocean encompasses all the Earth; that in the East, it washes the Coast of India, and in the West, those of Mauritania and Spain, and that if the vastness of the Atlantick did not hinder, but they might foon fail from the one to the other upon the fame Parallel. The fame he repeats in the second Book. Pliny in the fecond Book of his Natural Hiflory, Chep. III. adds, That the Ocean furreunds

furrounds all the Earth, and that the ex-Columbus, tent of it from East to West, is from India The fame Author, Book the 6th. ₩ to Cadiz. Chap. 31, and Solinus, Chap. 68, of the remarkable things in the World, fay, That from the Islands Gorgones, supposed to be those of Cabo Verde, was forty days sail on the Atlantick Ocean, to the Islands Hefperides, which the Admiral concluded were those of the West-Indies, Marcus Polus Venetus, and John Mandeville in their Travels fay, They went much farther Eastward, than Ptolemy and Marinus mention, who perhaps do not speak of the Eastern Sea; yet by the Account they give of the East, it may be argued, That the faid India is not far distant from Africk and Spain. Peter Aliacus in his Treatile, De imagine mundi, Chap. 8. De quantitate terre habitabilis, & Julius Capitolinus, de locis habitabilibus; and in several other Treatises, say, That Spain and India are Neighbours Westward. And in the 19th Chapter of his Cosmography, he has these Words; according to the Philosophers and Pliny, the Ocean that stretches between the Weitern borders of Spain

and Africk, and from the beginning of India Eastward, is of no great Extent, and there is no doubt but it may be fail'd over in a few days, with a fair Wind, and therefore the beginning of India Eastward, can not be far distant from the end of Africk Westward. These and the like Authorities of fuch Writers, inclined the Admiral to believe that the Opinion he had conceived was right, and one Mr. Paul Physician to Mr. Dominick of Folrence, Contemporary with the Admiral, much encouraged him to undertake the faid Voyage. For this Mr. Paul being a Friend to one Ferdinand Martinez, a Canon of Lisbon, and they writing to one another concerning the Voyages made in the time of King Alphonso of Portugal to Guinea, and conterning what might be made Westward; the Admiral who was most curious in these affairs, got Knowledge of it, and foon by the means of Laurence Girardi, a Florentine residing at Lisbon, writ upon this Subject to the said Mr. Paul, sending him a small Sphere, and acquainting him with his design. Mr. Paul sent his Anfwer in Latin, which in English is thus.

# CHAP. VIII.

# A Letter from Paul, a Physician of Florence, to the Admiral, conterning the Discovery of the Indies.

To Christopher Columbus, Paul the Physician wishes Health.

Perceive your Noble and Earnest desire to Sail to those Parts where the Spice is produced; and therefore in Answer to a Letter of yours, I send you another Letter, which some days since I writ to a Friend of mine, and Servant to the King of Portugal, before the Wars of Castile, in Answer to another he writ to me by his Highnesses order, upon this same Account, and I send you another Sea Chart like that I sent him, which will satisfy your demands. The Copy of that Letter is this.

To Ferdinand Martinez Canon of Lisbon, Paul\* the Physician wishes Health.

A letter for the familiarity toucrining with a different formers and surjour have with your most Serene and with Magnificent King, and though I have very often Wellward discoursed concerning the short way there is from hence to the Indies; where the Spice is produced, by Sea, which I look upon to be shorter than that you take by the Coast of Guinea; yet you now tell me, that his Highness would have me make out and demonstrate

it, so as it may be understood and put in Pra-Stice. Therefore, the I could better show it him with a Globe in my hand, and make him sensible of the Figure of the World; yet I have resolved to render it more easie and intelligible, to show this way upon a Chart, such as are used in Navigation; and therefore I send one to bis Majesty, made and drawn with my own hand, wherein is fet down the utmost bounds of the West from Ireland, in the North, to the furthest part of Guinea, with all the Islands that lie in the way: opposite to which Western Coast is described the beginning of the Indies, with the Islands and Places whither you may go, and how far you may bend from the North Pole towards the Equinoctial, and for how long a time; that is, how many Leagues you may sail before you come to those Places most fruitfull in all forts of Spice, Jewels and Precious Stones. Do not wonder if I term that Country where the Spice grows West, that produst being generally ascrib'd to the Bast, because those who shall Sail Westward, will always find those Places in the West; and they that Travel by Land Eastward, will ever find these places in the East. The strait Lines that lie lengthways in the Chart, show the distance there there is from West to East, the other cross Columbus them, show the distance from North to South. I have also mark'd down in the said Chart, feveral Places in India, where Ships might put in upon any Storm or contrary Winds, or any other accident unforeseen. And moreover, to give you full information of all those Places, which you are very defirous to know; you must understand, that none but Traders live or reside in all those Islands, and that there is there as great a Number of Ships and Sea-faring People with Merchandice, as in any other part of the World, particularly in a most noble Part call'd Zacton, where there are every Year an Hundred large Ships of Pepper loaded and unloaded, besides many other Ships that take in other Spice. This Country is mighty Populous, and there are many Provinces and Kingdoms, and innumerable Cities under the Dominion of a Prince call'd the Great Cham, which Name signifies King of Kings, who for the most part Resides in the Province of Cathay. His Predecessors were very desirous to have Commerce, and be in Amity with Christians; and 200 Tears since, sent Embassadors to the Pope, defiring him to send them many Learned Men and Doctors to teach them our Faith; but by reason of some Ostacles the Embassadors met with, they returned back without coming to Besides there came an Embassador to Pope Eugenius IV. who told him the great Friendship there was between those Princes, their People and Christians. I discours'd with him a long while upon the several Matters of the Grandeur of their Royal Structures, and of the Greatness, Length and Breadth of their Rivers, and he told me many wonderful things of the multitude of Towns and Cities founded along the banks of the Rivers, and that there were 200 Cities upon one only River, with 'Marble Bridges over it of a great Length and Breadth, and adorn'd with abundance of Pillars. This Country deserves as well as any other, to be discover'd; and there may not only be great Profit made there, and many things of Value found, but also Gold, Silver, all forts of Precious Stones, and Spices in abundance, which are not brought into our Parts. And it is certain that many wife Men, Philosophers, Astrologers, and other Persons skill'd in all Arts and very Ingenious, Govern that mighty Province, and Command their Armies. Lisbon directly Westward, there are in the Chart 26 Spaces, each of which contains 250 Miles, to the most noble and vast City of Quisay, which is 100 Miles in Compass, that in 35 Leagues; in it there are 10 Marble Bridges: The name signifies a Heavenly City, of which wonderfull things are reported, as to the ingenuity of the People, the Buildings and Revenues. This Space above mentioned, is almost the third part of the Globe. This City is

in the Province of Mango, bordering on that of Cathay, where the King for the most part Resides. From the Island Antilia, which you call the seven Cities, and whereof you have some Knowledge, to the most noble Island of Cipango, are ten Spaces, which make 2500 Miles, or 225 Leagues, which Island abounds in Gold. Pearls, and Precious Stones: and you must understand, they cover their Temples and Palaces with Plates of pure Gold. So that for want of knowing the way, all these things are hidden and conceal'd, and yet may be gone to with safety. Much more might be said, but having told you what is most Material, and you being Wise and Judicious, I am Satisfied there 15 nothing of it, but what you understand, and therefore I will not be more Prolix. much may ferve to fatisfie your Curicfity, it being as much as the shortness of time and my Bufiness would permit me to say. So I remain most ready to Satisfie and Scrue his Highness to the utmost, in all the Commands he shall lay upon me.

Florence, June 25.

After this Letter, he again writ to the Admiral as follows;

To Christopher Columbus, Paul the Pyhsician wishes Health.

Received your Letters with the things you Anoth fent me, which I take as a great Favour, and Lette commend your noble and ardent defire of Sailing the A from East to West, as it is mark'd out in the Chart I fent you, which would demonstrate it self better in the Form of a Globe. I am glad it is well understood, and that the Voyage laid down is not only possible, but true, certain, honourable, very advantageous, and most glorious among all Christians. You cannot be perfect in the knowledge of it, but by Experience and Practice, as I have had in great Measure, and by the solid and true Information of Worthy and Wife Men, who are come from those Parts to this Court of Rome, and from Merchants who have Traded long in those Parts, and are Persons of good Reputation. So that when the faid Voyage is perform'd, it will be to Powerful Kingdoms, and to most noble Cities and Provinces, Rich, and abounding in all things we stand in need of, particularly in all forts of Spice in great quantities, and store of Jewels. This will moreover be Grateful to those Kings and Princes, who are very desirous to Converse and Trade with Christians of these our Countries, whether it be for some of them to become Christians, or else to have Communication with the Wise and Ingenious Men of these Parts, as well in point of Religion, as

in all Sciences, because of the extraordinary Columbus. Account they have of the Kingdoms and Government of those Parts. For which reasons and many more that might be alledg'd, I do not at all admire, that you who have a great Heart, and all the Portuguese Nation, which has ever had notable Men in all undertakings, be eagerly bent upon performing this Voyage.

A third

Motive

from the

This Letter, as was faid before, encourag'd the Admiral much to go upon his Discovery, tho' what the Doctor there writ was falle, as believing that the first Land they should meet with, would be Cathay, and the Empire of the Great Cham, with the rest he there relates; since as Experience has made appear, the distance from our Indies to that, is greater than from hence to our Indies.

## CHAP. IX.

The third Motive and Inducement, which in some measure excited the Admiral to Discover the West-Indies.

THE third and last Motive the Admiral had to undertake the Discovery of the West-Indies, was the hopes of finding, before he came to India, some very beneficisome Land, al Island or Continent, from whence he before un-might the better pursue his main design. hard of This his Hope was grounded upon the Authority of many Wife Men and Philosophers, who look'd upon it as most certain, that the greatest part of this Terraqueous Globe was Land, or that there was more Earth than Sea; which if fo, he argued, that between the Coast of Spain and the bounds of India then known, there must be many Islands, and much Continent, as experience has fince demonstrated, which he the more readily believed, being impos'd upon by many Fables and Stories, which he heard told by feveral Persons and Sailers, who Traded to the Islands and Western Sea, and to Madera; which Testimonies making fomewhat to his purpole, they were fure to gain a Place in his Memory. Therefore I will not forbear relating them, to fatisfy those that take delight in such Curiofities. It is therefore requifite to be understood, That a Pilot of the King of Portugal, whose Name was Martin Vicente, told him, that he being once 450 Leagues Westward of Cape S. Vincent, found and took up in the Sea, a piece of Wood ingeniously wrought, but not with Iron; by which, and the Winds having been West for many days, he gueffed that piece of Wood came from some Island that way. Next one Peter Correa, who had Married the Admiral's Wife's Sifter, told him, That in the Island of Porto Santo he had seen another piece of Wood brought by the fame Winds, well wrought, as that above mentioned; and that there had been Canes found to thick, that every joint would hold above four quarts of Wine. Which he faid he affirmed, the King of Portugal himself different to the control of the contro , Vol. 11.

courfing with him about these Affairs, and that they were shown him, and there being no Place in our Parts, where fuch Canes grow, he look'd upon it as certain, that the Wind had brought them from some Neighbouring Islands, or else from India. For Peolemy in the first Book of his Cosmography, Chap. 17. says, There are such Canes in the Eastern Parts of India: And fome of the Islanders, particularly the Azores told him, That when the West Wind blew long together, the Sea drove fome Pines upon those Islands, particularly upon Gratiofa and Fayal, there being no fuch in all those Parts. And that the Sea cast upon this Island of Flores, another of the Azores, two dead Bodies of Men, very broad faced, and differing in Aspect from the Christians. At Cape Verga and thereabouts, they fay, they once faw some cover'd Almadies or Boats, which it is believed were drove that way by stress of Weather, as they were going over from one Island to another. Nor were these only the Motives he then had, which yet feem'd reasonable; but there were those that told him they had seen some Islands, among whom was Anthony Leme, married in the Island of Madera, who told him, that having made a confiderable run in a Caraval of his own Westward, he had feen three Islands. These he did not give Credit to, because he found by their own words and discourse, that they had not fail'd 100 Leagues to the Weitward, and that they had been deceived by some Rocks, taking them for Islands; or elfe Perhaps they Floating were forme of those floating Illands that are Islands. carried about by the Water, call'd by the Sailers Aguada, whereaf Pliny makes mention, the first Book, Ches. 97, of his Natural History; where he says, That in Northern Parts the Sea discover'd some f of Land, on which there are Trees of a Room, which percels of Land are carried 7 F

# The First Dikovery of

about like Floats, or Hlands upon the Wa-Columbus ter. Seneta undertaking to give a Natural Reafon why there are luch fort of Hands; says in his 3d Book, that it is the Nature of certain flungy and light Rocks, so that the Islands made of them in India, swim upon the Water. So that were it never lo trile, that the faid Ambony Leme had feen forme Island, the Admiral was of opinion, it could be no other than one of them, such as those call'd of St. Brandam are supposed to be, where many wonders are reported to There is also an Account have been feen. of others that lie much Northward, and always burn. Juvenius Forsunatus Relates. That there is an Account of two Islands towards the West, and more Southward than those of Cabo Verde, which swim along upon the Water. These and the like grounds might move feveral People of the Islands of Ferro, and la Gomera, as also of the Azores, to affirm that they saw Islands towards the West every Year, which they look'd upon as most certain, and many Persons of Reputation swore it was true. He says moreover, That in the Year 1484, there came into Persugal, one from the Hland of Madera to beg a Careval of the King to go to differver a Country, which he swore he saw emanner, agreeing with others, who faid they had feen it from the Hlands Azores. On which Grounds in the Charts and Maps formerly made, they placed some Islands thereabouts; and particularly because Aristate in his Book of wonderful Natural things, affirms, it was reported that forme Curthaginian Merchants had sail'd through the Atlantick Sea, to a most fruitful Island, as we shall declare more at large hereafter, which Island some Portugueses inserted in their Maps, calling it Antilla, tho' they did not agree in the Situation with Ariffetle, yet none placed it above 200 Leagues due Welt from the Conurses and Azores, which they conclude to be certainly the Hland of the feven Cities, Peopled by Portaguefer at the time that Shin was Conquer'd by the Moore in the Year 714. At which rime they law feven Bilhops with their People Embark'd, and Sail'd to this Mind, where each of them built's City, and to the end, none of their People might think of returning to spain; they burn the Ships, Trickle Pirtugatefes discourting about this Marid. there were those that affilm's, feveral Po-trad gate term who could not find by to it again! Par

Men went ashoar, and were led by the Islanders to their Church, to see whether they were Christians, and observed the Roman Cleremonies, and perceiving they did, they defired them not to depart till their Lord came, who was then ablent, would make very much of them, and give them many Presents, and to whom they would presently send advice; but the Master and Scamen, were afraid of being detain'd, fuspecting those People had not a mind to be discovered, and might therefore burn their Ship, and for that reason they sail'd back to Portugal, hoping to be rewarded for what they had done by the Infante. He reprov'd them feverely, and bid them return quickly; but the Master for fear, run away from Postugal with the Ship and Men: and it is reported, that whilst the Seamen were at Church in the faid Island, the Boys of the Ship gathered Sand for the Cook-room, the third part whereof they found to be oure Gold. Among others that fet out to discover this Island, was one James de Fiene. whose Pilot Peter Velasquer, of the Town of Palos de Moguer, told the Admiral in the Monastery of Sr. Mary de la Rabida, that they fet out from Fayal, and failed above 150 Leagues South-West, and in their return discovered the Island Flores, being led to it by abundance of Birds they faw fly that way, because those being Land and not Sea-Fowls, they judged they could not rest but upon Land: After which they sailed so far North East, till they came to Cape Clare, in the West of Ireland, where they met with stiff Westerly Winds, and yet a smooth Sea, which they imagin'd was caused by some Land that shelter'd it towards the West. But it being then the Month of August, they would not turn towards the Island, for fear of Wincer. This was above 40 Years before our Indies were discovered. This Account was confirm'd by the Relation a Mariner at Port St. Mary made, telling him that once making a Voyage into Ireland, he saw the said Land which he then thought to be part of Tartary, falling off towards the West, which it's like was the Land we now call Bacallaos, and that they could not make up to it by reason of the bad Weather. This he said agreed with what one Ferer de Velafco of Gelleis affirm'd to film in the City of Minch was, that falling for Ireland, they went away to far to North West that they dicovered Land West of Ireland, which Land the believes to be the fame, that one Femalibelines, attempted to

The three of Philip

ters upon slight grounds. Gonzalo de Ovie-Columbus. do, in his History of the Indies, writes, That the Admiral had a Letter, wherein he found the Indies describ'd, by one that had before discovered them, which was not fo. but thus: Vincent Denr, a Portuguese of Tavira. Returning from Guinca to the Tercera Islands, and having pass'd the Island of Ma-

Sevil, to fit out a Ship with all freed for the faid Pilot. But the faid Francis making a jest of such an undertaking, Luke de Carana set out a Vessel in the Tercera Islan and the Pilot went out three or four times to feek the faid Island, failing from 120 to 130 Leagues, but all in vain, for he found no Land. Yet for all this, neither

rainly concurred to the to the Tercera Island, he told it to one Luke de Cazzana, a Genocse Merchant, who was very Rich, and his Friend, per-fwading him to fit out some Vessel to Conquer that Place; which he was very willing to do, and obtain'd Licence for it of the King of Portugal. He writ therefore to his Brother Francis de Cazzana, who Resided at

it, that he knew two Sons of the Captain that discovered the Tercera Island, their names Michael and Jasper Cortereal, who went feveral times to discover that Land; and at last in the Year 1502, Perish'd in the Attempt, one after another, without ever being heard of, and that this was well known to many.

### CHAP. X.

Proving it to be falfe, that the Spaniards had formerly the Dominion of the Indies, as Gonzalo de Oviedo endeavours to make out in his ' History.

TF all we have faid above, concerning fo many imaginary Islands and Countries, appears to be a meer Fable and Folly, how much more Reason have we to look upon that as a falshood, which Gonzalo Fernandez de Oviedo conceits in his Natural History of the Indies, looking upon his own imagination as a certain Truth, and faying A miliak he has fully made out, that there was anoen Account ther Discoverer of this Navigation of the of a Spa-Ocean, and that the Spaniards had the Dominion of those Lands, alledging to make out his Affertion, what Aristorle writes of the Island Atlantis, and Sebosus of the Hesperides. This he affirms upon the judgment of some Persons, whose Writings we have duly weigh'd and examin'd, and I would have omitted to talk on this Subject, to avoid condemning some, and tiring the Reader, had I not confider d, that some Persons, to leffen the Admiral's Honour and Reputation, make great account of fuch Notions. Besides I thought I did not perform my Duty fully, by setting down with all Sincerity the Motives and Inducements that inclin'd the Admiral to undertake his unparaliel'd Enterprize, if I should fuffer such a Faishood, which I know to be so, to pass uncensur'd. Therefore, the better to discover his Mistake, I will in the first place, set down what Aristotle, as related by one F. Theophitus de Ferrariis, says as to this Point; which F. Theophi-

lus among Aristotle's Problems Collected by him, brings in a Book call'd, De Admirandis in Natura auditis, a Chapter with these following words: Beyond Hercules's Pillars. it is reported there was formerly found an Island in the Atlantick Sea, by certain Carthaginian Merchants, which had never before been inhabited by any but brute Beafts. It was all Wooded and covered with Trees. had a great many Navigable Rivers, and abounded in all things Nature usually duces, tho' removed not many days fail from the Continent. It happened that some Carthaginian Merchants coming to it, and finding it a good Country, as well for the richnels of the Soil, as temperature of the Air, they began to People it. But the Semate of Carebage being offended at it, soon made a Publick Decree, That for the future, no Person upon pain of Death, should go to that Island, and they that went first were put to Death; to the end that other Nations should not hear of it, and some more Powerful People take Possession of it; by which means it might become an Enemy to their Liberty. Now I have faithfully quoted this Authority, I will give the Rea-ions that induced me to fay, That Oviedo has no just cause to affirm that this Island was Hilpariola or Cuba, as he afferts. In the first Place, because Gonzalo de Oviedo not understanding Larin, he of necessity took fuch Interpretation of this Place, as some

thor difproved.

Language into another, fince he alter'd and chang'd the Latin Text in feveral Particulars, which perhaps deceiv'd Oviede, and inclin'd him to believe that this Quotation spoke of some Island in the Indies, because we do not read in the Latin Text, that neither Hi- these People went out of the Streights of ipaniola Gibraltar, as Ouiedo Writes; nor much less, nor Cuba that the Island was large, nor its Trees great, but that it was an Island much wooded. Nor is it found there, that the Rivers were wonderful; nor does it speak of its fatness, or say it was more remote from Africk than Europe, but in plain Terms, fays, it was remote from the Continent: Nor does it say any Towns were built there, for Traders who happened upon it could build but little: Nor is it faid to be famous, but that they were afraid its Fame would spread abroad into other Nations. So that the Expositor who interpreted this Place to him, being so ignorant, it caused Oviedo to imait to be another thing than really it and if he should say, that it is other-

body made him; who, by what we fee did lides, He writes of a thing not then new, Columbus not well know how to Translate out of one but which had happened long before; faving, It is reported, that formerly an Island was found, and therefore it may well be faid according to the Proverb, That in great Travels there are great lyes: Which Proverb is now verify'd, for in that Narration there are Circumstances no way agreeable to Rea-fon, for as much as it says, That this Island abounded in all things, but had never been Inhabited, which is not confonant, nor likely, for as much as fruitfulness in Land proceeds from its beginning, cultivated by the Inhabitants, and where there are no Inhabitants, the Land is to far from producing any thing of it felf, that even those things which Art produces, grow wild and uscless. Nor is it more likely, that the Carthaginians should be displeased, because their People had found fuch an Island, and should put to death the discoverers; for if it was so remote from Carthage as the Indies are, it was a folly to fear that those who should come to Inhabit there would Conquer Carchage, unless, that as Oviedo affirms, the Spaniards posses'd those Islands before. He

> What Arijtotie will, a much were gave him Authority to bestow so many Kingdoms on whom he pleases, and to rob one of his Honour, who has gain'd it fo fairly; and tell him he ought not to have been satisfied with reading that Authority as it lies in the Friar's Pamphlet, but should have feen it in the Original, that is, in Aristotle's Works. Besides, That he was misinform'd in this Case, for the Theophilus in all his other Books following Ariftotle, delivering the substance and summ of wha the fays; yet he did not so in his Book De Admirandis, he himself owning in the beginning, that he does not in that his Book Abridge Aristotle, as he has done in the others; but that he there inferts all the Text word for word, and therefore it cannot be faid there was either more or less in Aristotle, than what he fet down. Add to this, That Anthony Beccaria of Verona, who Translated this Book out of Greek into Latin; of which Translation Theophilus made use, did not render it so faithfully, but that he inserted several Matters differing from the Greek Original, as will appear to any Man that shall ob-

In the fecond place I fay, that tho' Arifloele had writ so, as Theophilus delivers it, yet Aristotle himfelf quotes no Author, but speaking as of a thing, for which there is no good Authority, fays, Ferrur, which implies that what he delivers concerning this Island, he writes as doubtfull and ill grounded. Be-

Emperor taking Tunis or Carthage, with the Money brought from the Indies, which I am fatisfied he would have faid, to gain more Favour by telling fuch News, than he did, but that his Book was Publish'd before. So that any judicious Person may conceive it is a folly to say, that Island was never more heard of, because the Carthaginians quitted the Dominion of it, for fear any other Nation should take it from them, and come afterwards to destroy their Liberty; for they ought to have fear'd this much more from Sicily or Sardinia, that lay but two days fail from their City, than from Hispaniola, between which and them, there lay one third of the World. And if it should be objected that they apprehended the Wealth of that Country, might impower their Enemies to do them harm; I answer, they had more cause to hope, that being themselves Masters of those Riches, they might Oppose and Subdue whom they pleased, and that if they left that Island unpeopled, they left it in the Power of another to discover it; whence the same mischief might follow, which they feared. And therefore they ought rather to Fortify it and secure their Trade to it, 25 we know they did another time upon the like occasion; for having found the Islands which they then call'd Caffigerides, and now we call the Azores, they kept that Voyage very Private, because of the Tin they brought from thence, as Strabe tells us at

the latter end of the 3d Book of his Cofcolumbus mography: Wherefore, Granting it were True what Ariffothe had writ in this Fable, it might be fait he meant it of the Voyage to the Hlands Agres, which either for want of better understanding, and the great Anriquity of the Teltimony, or through affe-Gion which blinds Men, Ovisdo argues, should be understood of the Indies we now possels, and not of the faid blands Azeres, or any of them. If it should be reply'd that this cannot be, because Strabo does not fay they were the Carthaginians who were possest of the Islands Azores, but the Phanicians: I Answer, That the Carebaginians being come from Phanicia with their Queen Dids, therefore she and they were call'd Phanicians at that time, as the Christians born in the Islands are now call'd Spamiards. And should it be again urg'd, that the Place of Aristotle which speaks of this Island, says, it had many Navigable Rivers, which is not to be found in the Mands Azeres, but in Cuba and Hispaniola: I Answer, That if we will take notice of this Particular, they add, That there were abundance of Beafts in them, which there is not in Cuba or Hispaniela and it may well be, that in a thing of fuch Antiquity, there might be some Milbake in Relating that Particular, as often happens in many of these uncertain and so far distant Antiquities: Observe that neither Cuba nor Hi-Spaniola, have any deep Navigable Rivers, as the Place quoated intimates; and that any Ships may enter the Mouths of the biggest Rivers of those Islands, but not conveniently fail up them. Befides that, as has been faid, how great foever Ariftonis's Authority may be, the word might possibly be corrupted, and it might be writ Navigandum, instead of Perandum, which better agreed with what he treated of, commending it for Plenty of drinking Water, as well as fruitfulness in producing things to eat. This might well be verify'd of any one of the Azores, and with more reason, because neither Cuba nor Hispaniola lie 60, as that the Carthaginians could be carried to them either by reason of their nearness, or by any Mischance; for, if those who went purposely with the Admiral to discover, thought the way fo long, that they would have turn'd back, how much longer must it seem to them who defign'd no fuch tedious Voyage, and who, as foon as the time would permir, had turn'd back towards their Country. Nor does any Storm last so long, as to carry a Ship from Cadia to Hispaniele; nor is it like-. ly, that because they were Merchants, they should have any mind to run further from Spain, or Carebage, than the Wind oblig'd

Vol IL

them, especially at a time when Navigation was not come to that perfection as now it is. For which reason very inconfiderable Voyages were then look'd upon as great, as appears by what we read of, Jafon's Voyage to Celeber, and that of Ulifes, thro' the Mediterranean, in which fo many Years were spent; and therefore they were so famous. that the most excellent Poets have given an Aecount of them, because of the little Knowledge they had then of Sea Affairs, whereas it has been so approv'd of late in our Age, that there has been those, who have had the boldness to sail round the World, which has contradicted the Proverb that faid. He that goes to Cape Nam, will either return or met, which Cape is in Africk, not very much distant from the Canaries. Besides. it is a notorious Mistake to think the Hand. whither those Merchants were earried, could be either Cuba or Hispaniola, for it is well known, that with all the Knowledge we have at this present, 'tis almost impossible to come at them without meeting with any other Islands that encompass them all round. But if we would fay that Land or Island, was none of the Azores, as has been faid above, one lye ought to be grafted upon another, by alledging that it was the fame Island of which Seneca in his 4th Book, makes mention, where he tells us, that Thucydides speaks of an Island call'd Atlantiea, which in the time of the Peloponnesian War was all, or mostly drowned. Whereof also Plate makes mention in his Timeus. But because we have discoursed too long concerning these Fables, I will proceed to the next Point, where it is faid, that the Spanjards had entirely the Dominion of the faid Islands, which Opinion is grounded upon what Statius and Sebosiu, say, That certain Islands call'd Hesperides lay, 40 days Hesperides fail West of the Islands Gorgoner; and hence des some it is argu'd, that fince those must of necessities. fity be Indies and are call'd Hesperides; that name came from Helperus, who was King of Spain, who of confequence, and the Spaniards, were Lords of that Country. So that rightly confidering his words, he endeavours from uncertain Premiles to deduce three infallible Confequences, contrary to Seneca's Rule, who in his 6th Book of Nature, Speaking of fuch like things, fays it is hard to affirm any thing as first and certain upon Grounds that are no other than Conjectures, ng here Oviede does; for as much as only Sebefur is faid, to have made mention of those Islands Helperides, declaring towards what part they lie, but not mentioning that they were the Indies, or of whom they took the Name, or by whom Conquerd. And if Oviede out of Berefus, affirms that Helperus

was King of Spain; I grant it to be trut but not that he gave the name to Spain, or Italy. But he like a true Historian, owning that Berefus fails him in this particular, took up with Higinus, yet cautiously without mentioning in what Book or Chapter; and thus he conceals his Authority, for in fhort, no Place is to be found where Higimus speaks of any such matter; but on the contrary in one only Book of his that is extant, Entitul'd, De Poctica Astronomia; he not only has no fuch words, but in three feveral Places where he speaks of these Hesperides, he fays thus: Hercules is painted as Killing the Dragon that guarded the Hesperides. And somewhat further he says, That Hercules being sent by Euristeus for the Golden Apples to the Hefperides, and not knowing the way thither, he went to Prometheus on Mount Caucasus, and intreated him to shew him the way, whence follow'd the Death of the Dragon. Now according to this we shall have other Hesperides in the East, to whom also Oviedo may say, Hesperus King of Spain gave his Name. Higinus lays further, in the Chapter of Planets, that it appears by several Histories, that the Planet Venus is called Hesperus, because it setts soon after the Sun. From all which we may infer, that if we ought to make use of any Testimonies, or Quotations from Persons us'd to relate Poetical Fables, as Higinus does, that very fame which Higims fays, rather

makes [against Oviedo than for him; and we may suppose and affirm, they were call'd Hesperides from a certain Stor. And as the Greeks for the same reason call'd Italy, Hespera, as many write; so we may say, Sebosus call'd these Islands Hesperides, and made use of the same Conjectures, and some Reasons to show whereabouts they lay, which we faid above, mov'd the Admiral to believe for certain, that there were fuch Islands Westward. Thus we may conclude that Oviedo did not only prefume to Counterfeit Authorities for what he faid, but that either through inadvertency, or to pleafe him who told him these things, (for it is certain he did not understand them himself) he maintain'd two contradictions, the difagreement between which were fufficient to discover his Error. For if the Carthaginians who as he says, arriv'd at Cuba or Hispanicla, found that Country Inhabited by none but Brute Beafts; How could it be true that the Spaniards had been possessed of it long before, and that their King Helperus gave it his Name? unless perhaps he will fay, That some Deluge unpeopled it; and that afterwards some other Noah restored it to that condition it was discovered in by the Admiral: but because I am quite tired with this Dispute, and methinks the Reader is cloy'd with it, I will not dilate any more upon this Point, but follow on our Hiftory.

# CHAP. XI.

# How the Admiral was disgusted by the King of Portugal on Account of the Discovery he proposed to him.

Proposals T made to the King of Portutal.

THE Admiral now concluding that his Opinion was excellently well grounded, he resolved to put it in Practice, and to fail the Western Ocean in quest of those Countries. But being sensible that such an undertaking was only fit for a Prince, who could go through with and maintain it; he resolved to propose it to the King of Porrugal, because he liv'd under him. And tho' King John then Reigning, gave ear to the Admiral's Proposals, yet he seem'd backward in imbracing them, because the great trouble and expence he was at upon Account of the Difcovery and Conquest of the Western Coast of Africk call'd Guinea, without my confiderable Success as yet, or being 115 yet able to weather the Cape of Good Hope, which Name some say was given it initead of Agesingue, its proper Denomination, because that was the furthest they hop'd to extend their Discoveries and Conquests, or as others will have it, because this Cape gave them hopes of better Countries and Navigation. Be it as it will, the aforesaid King had but little inclination to lay out more Money upon Discoveries; and if he gave any ear to the Admiral, it was because of the excellent Reasons he gave to prove his Opinion, which so far prevail'd upon him, that there remained only to grant the Admiral those Terms he demanded. For the Admiral being a Man of a Noble and Generous Spirit, would Capitulate to his great Benefit, and Honour, that he might leave behind him fuch a Reputation, and so considerable a Family, as became his great Actions and Merits. For this Reason the King by the Advice of one Doctor Calzadilla, of whom he made great Account, icfolved to fend a Caraval privately, to attempt that which the Admiral had proposed to him; because in case those Countries were

so discovered, he thought himself not oblig'd to bestow any great Reward, which might be demanded on Account of the Discovery. Having thus speedily equip'd a Caraval, and going out, it was to carry supplies to the Mands of Cabo Verde, he fent it that way the Admiral had propos'd to go. But those he fent wanted the Knowledge, Constancy and Spirit of the Admiral: After wandring many days upon the Sea, they turn'd back to the Islands of Cabo Verde, Laughing at the undertaking, and faying, It was imposfible there should be any Land in those This being come to the Admiral's Ear, and his Wife Dead, he took fuch an Aversion to that City and Nation, that he resolved to go to Castile, with a little Son he had left him by his Wife, call'd D. James Columbus, who Inherited his Father's Estate. But fearing, least if the King of Castile should not Confent to his Undertaking, he might be forced to propose it to some other Prince, King Hen which would take up much time, he sent a ry VIII. of Brother he had with him, call'd Bartholomew Columbus, into England, who the' he was no Latin Scholar, was a skilfull and judicious Man in Sea Affairs, and could make Sea Charts, Globes and other Instruments fit for that Profession, having been taught by the Admiral his Brother. Bartholomew Columbus being on his way for England, it was his fortune to fall into the hands of Pyrates, who strip'd him and the rest of his Company. For this Reason and being Sick and Poor in that Country, it was a long time before he could deliver his Message, till having got some Supply by making Sea Charts, he began to make some Proposals to King Henry the VIIth, then Reigning, to whom he presented a Mapp of the World, on which were these Verses, which I found among his Papers, and shall be here inserted, rather for their Antiquity than Elegancy.

Terrarum quicunque cupis faliciter oras Noscere, cuntta decens dotte pictura docebit, Quando Strabo, affirmat, Ptolemaus, Plinius, atq; Isidorus, non una tamen sententia quisque. Pingitur bic etiam nuper sulcata carinis Hispanis Zonn illa, prius incognita genti, Torrida, que tandem nunc est notissima multis. Pro auttore, five Pittore.

And a little lower.

Janua cui patria est nomen, qui Bartholomaur Columbus de terra Rubra, opus edidit istud, Londiniis Ann. Dom. 1480, a' j, insuper Anno. Offava Decimaque die com tertia mensis Febr. Laudes Christo cantentur abunde.

The Sense of the first Lines is to this effect. Wholoever thou art, that defireft to know the Coasts of Countries, must be taught by this Draught, what Strabo, Ptolemy, Pliny and Isidorus affert, tho' not agreeing in all Points. Here is also set down, the formerly unknown Torrid Zone, now known to many. For the Author or Painter. The second Verses imply'd, That his Name was Bartholomew Columbus of the Red Earth, a Genoese, Publish'd this Work at London, Anno 1480, the 21st of February. Praise to God.

And because it may be observed that he fays, Columbus of the Red Earth; I must acquaint the Reader, that I have feen some Subscriptions of the Admiral's, before he had that Title, where he writ Columbus de terra rubra. But to return to the King of England; I fay, That he having feen the Map, and what the Admiral offer'd him, readily accepted of it, and order'd him to be fent for. But God having reserved it for Castile, the Admiral had at that time gone his Voyage and was return'd with Success, as shall be shown it its Place.

### CHAP. XII.

The Admiral's Departure from Portugal, and the Conferences that he had with their Catholick Majesties, King Ferdinand, and Queen Isabel or Elizabeth

Alm. Will now forbear Relating how Bartho 10 Spain and will return to the Admiral, who about the end of the Year 1484, Itole away privately out of Portugal, with his Son James, tor fear of being stopped by the King; for he being sensible how faulty they were, whom he had fent with the Caraval, had

a mind to restore the Admiral to his Favour, and defired he should renew the Discourse of his Enterprise; but not being so diligent to put this in Execution, as the Admiral was in getting away; he lost that good opportunity, and the Admiral got into Castile to try his Fortune, which was there to fayour him. Therefore leaving his Son in

a Monastery at Palos, call'd las Rabida. he

Court, which was then at Condoon, where being affable, and of Pleafast Conversation he contracted Friendship with fuch Persons, as he found most inclinable to his Undertaking, and fittelt to perfinade the King to inbrace in campone whom was Lenin de Santangel an Aragonian Gentleman, Clerk of the Allowances in the King's Houshold, a Man of great Prudence and Reputation. because the matter required to be handled with Learning, rather than empty words and favour, their Highneffes committed it to the Prior of Prado, afterwards Archbishop of Granada, ordering him together with some Cosmographers to take full information in this Affair, and report their Opinions there-But there being few Cosmographers at that time; those that were call'd together were not to skilful as they ought to be; nor would the Admiral fo far explain hinfelf as that he might be ferv'd as he had been in Pertugal, and be deprived of his For this Reason, the Answer Reward. they gave their Highnesses was as various as were their Judgments and Opinions. For fome faid; That since in fo many Thoufand Years as had pass'd fince the Creation, so many skillful Sailers had got no Knowledge of fuch Countries; it was not likely that the Admiral should know more than all that were then, or had been before. Others, who inclin'd more to Cosmographical Rea-Reasons a. son, said the World was so prodigious great, gainst his that it was incredible three Years Sail would Undersak- bring him to the end of the East, whither he defign'd his Voyage, and to Corroborate their Opinion, they brought the Authority of Sencea, who in one of his Works by way of Argument, faid, That many Wife Men among them disagreed about this Question, whether the Ocean were infinite, and doubted whether it could be fail'd, and tho' it were Navigable, whether Habitable Lands would be found on the other fide, and whether they could be gone to. They added, That of this Lower Globe of Earth and Water, only a small Compass was Inhabited, which had remained in our Hemisphere above Water, and that all the

rest was Sea, and not Navigable, but only

near the Coasts and Rivers. Columbus, presently went away to the Catholick King's Wife Men granted it was possible to fail from the Court of Spain to the furthest part of the West. Others of them argu'd almost after the fame manner as the Portuguefes had done about failing to Guinea, faying, That if any Man should fail streight away Westward, as the Admiral proposid, he would not be able to return into Spain, because of the roundness of the Globe, looking upon it as most certain, that who foever should go out of the Hemisphere, known to Ptolemy, would go down, and then it would be impossible to return, affirming it would be like climbing a Hill, which Ships could not do with the stiffest Gale. Tho' the Admiral fufficiently folv'd all thete Objections, yet the more Powerful his Reasons were, the less they understood him thro' their ignorance, for when a Man grows old upon ill Principles in Mathematicks he cannot conceive the true, because of the false Notions at first imprinted in his Mind. In short, All of of them holding to the Spanish Proverb. which, tho' it be contrary to Reason, commonly fays, Dubitat Augustimus, St. Augustin questions it, because the said Saint in his 21st Book and 9th Chapter of the City of God, denies and looks upon it as impossible that there should be Antipodes, or any going out of one Hemisphere into the other; and further urging against the Admiral those Fables that are current about the five Zones, and other untruths which they looked upon as most certainly true, they resolved to give Judgment against the Enterprise, as vain and impracticable; and that it became not the State and Dignity of fuch great Princes, to be moved upon fuch weak information. Therefore after much time spent upon this Subject; their Highneffes answered the Admiral, That they were then taken up with many other Wars and Conquests, and particularly the Conquest of Granada, which they had then in hand, and therefore could not conveniently attend that new Undertaking, but that in time there would be more conveniency to Examine and Execute that which he propoted. And to conclude, their Majetties would not give Ear to the great Proposals the Admiral made.

How the Admiral not agreeing with t King of Castile, resolved to go elsewhere to offer his Service.

W Hilst this was in agitation their Ca-tholick Majesties had not been al-The Almiral meets with more ways fettled in one Place, because of the disappoint- War they made in Granada, for which Reafon it was a long time before they came to 2 Resolution and gave their Answer. The Admiral therefore went to Sevil, and finding their Highnesses no way resolved more than at first; he concluded to give the Duke of Medina Sidonia un Account of his Project. But after many Conferences, feeing there was no likelyhood of coming to fuch conclusion as he wish'd for in Spain, and that the Execution of his Defign was too much delay'd, he resolved to apply himself to the King of France, to whom he had already writ concerning this Affair, defigning, if he were not admitted there, to go into England, next to feek out his Brother, of whom he had as yet no manner of News. Being so resolved to set out for the Monastery of Rabida, to send his Son James, whom he had left there, to Cordova, and then proceed on his Journey. But to the end what God had Decreed, should not be disappointed, he put it into the Heart of F. John Perez, Guardian of that House, to con-

tract fuch Friendship with the Admiral, and be so taken with his Project, that he was concern'd at his Resolution, and for the loss Spain would fustain by his Departure. Therefore he intreated him by no means to put his Design in Execution, for that he would go to the Queen, of whom he hoped, that he being her Father Confessor, she would give Credit to what he should say to her. Tho' the Admiral was quite out of Hopes and difgusted to see so little Resolution and Judgment in their Highnesses Councellors, yet, being on the other fide very defirous that Spain should reap the Benefit of his Undertakings, he complied with the Father's Defires and Request, because he now look'd upon himself as a Natural born Spaniard, because he had so long Resided there: whilst he was following his Project, and because he had got Children there, which was the Cause he rejected the Offers made him by other Princes, as he declares in a Letter he writ to their Highnesses in these words, That I might ferve your Highnesses, I have refused to take up with France, England and Portugal, the Letters from which Princes your Highnesses may see in the hands of Doctor Villalan.

### CHAP. XIV.

How the Admiral return'd to the Camp before Granada, and took his leave of their Catholick Majesties, having concluded nothing with them.

THE Admiral departing from the Monastery of Rabida near Palos, together with F. John Perez, to the Camp of St. Faith, where their Catholick Majesties the Admi- then were to carry on the Siege of Granada; the faid Father further inform'd the Queen, and press'd the business so home, that 'Her Majetty was pleafed the Conferences about the Discovery should be renew'd. Opinions of the Prior of Prado and others of his Followers varying, and on the other fide, Columbus demanding to be made Admiral and Vice-Roy, belides other Matters of great Consequence; it was thought too much to grant him, because if what he pro-·pos'd succeeded, they judg'd his Demand too confiderable, and in Case it did not, they thought it a folly to give fuch Titles, which made the business come to nothing. I · Vol. 11.

cannot forbear declaring that I make great Account of the Admiral's Wisdom, Resolution and Foresight, for he being so unfortunate in this Affair, having fo earnest a desire, as I have said before, to remain in this Kingdom, and being reduced to fuch a Condition, that he ought to take up with any thing; it was a greatness of Spirit in him not to accept of any but great Titles and Honours, demanding such things as if he had foreseen and been most certainly asfured of the Success of his Project, he could not have Articled better, or more Honourably than he did, so that at last they were forced to grant, that he should be Admiral on the Ocean, and enjoy all the Allowances, Privileges and Prerogatives, that the Admirals of Castile and Leon had in their several Seas, and that all Civil Employ-

mands.

ments, as well of Government as Admini-Columbus. Stration of Justice, in all the Islands and Convinent should be wholly at his Disposal, and that all Governments should be given to one or three Persons he should name; and that he should appoint Judges in all parts of Spain Trading to the Indies, who should decide all Matters relating to those Parts. As for Profit and Revenue, he demanded, over and above the Salary and Perquifites of the aforefaid Employments of Admiral, Vice-Roy and Governour, the tenth of all that was bought bartered, found, or got within the bounds of his Admiralship, abating only the Charge of the Conqueit; so that had there been

1000 Ducats in an Island, one Hundred were to be his. And because his Adversafaries faid he ventured nothing in that Updertaking, but had the Command of a Fleet as long as it lasted, he demanded the eighth part of what he should bring home in his Fleet, and he would be at the eighth part of the Expence. These being Matters of fuch great Consequence and their Highnesses refusing to grant them; the Admiral took leave of his Friends and went away towards Cordova, to take Order for his Journey into France, for he was refolved not to return to Portugal, tho' the King had writ to him, as fhall be faid.

#### CHAP. XV.

## How their Catholick Majesties sent after the Admiral, and granted him all he demanded.

Reasons

T was now the Month of January, in that pre-the Year 1492, when the Admiral de-vail'd with parted from the Camp of St. Faith, and that vail'd with parted from the Camp of St. Faith, and that the Queen. fame day Lewis de Santangel before mentioned, who did not approve of his going a-way, but was very defirous to prevent it; went to the Queen, and using such words as his inclination suggested to perswade and reprove her at once, faid, He wonder'd to see that Her Highness, who had always a great Soul for all Matters of Moment and Consequence, should now want the Heart to venture upon an Undertaking, where fo little was ventured, and which might redound so much to the Glory of God and propagation of the Faith, not without great Benefit and Honour to Her Kingdoms and Dominions, and fuch in short, that if any other Prince should undertake it, as the Admiral offered; the Damage that would accrew to her Crown was very visible, and that then fhe would with just cause be much blam'd by her Friends and Servants, and reproached by her Enemies, and all People would fay, the had well deferv'd that Misfortune, and tho' fhe her felf should never have cause to repent it, yet her Successors would cer-tainly feel the smart of it. Therefore, since the matter feem'd to be grounded upon Reason, and the Admiral who propos'd it was a Man of Sense and Wildom, and demanded no other Reward but what he shou'd find, being willing to bear part of the Charge, belides venturing his own Person; Her Highness ought not to look upon it as fuch an impossibility as those Scholars made it, and that what they faid that it would be a Reflection on her if the Enterprise did not fucceed, as the Admiral propos'd, was a

folly, and he was of a quite contrary opinion, rather believing they would be look'd upon as Generous and Magnanimous Princes, for attempting to Discover the Secrets and Wonders of the World, as other Monarchs had done, and it had redounded to their Honour. But tho' the event were never so uncertain, yet a considerable sum of Money would be well employ'd in clearing fuch a doubt. Besides that, The Admiral only demanded 2500 Crowns to fit the Fleet, and therefore she ought not to despise that Undertaking, that it might not be faid it was the fear of spending so small a sum that kept her back. The Queen knowing the fincerity of Santangel's words, Answered, Thanking him for his good Advice, and faying, She was willing to admit of the Proposals, upon condition the Execution were respited, till she had a little Breathing after the War. And yet if he were of another Opinion, she was content that as much Money as was requifite for fitting out the Fleet should be borrow'd upon her Jewels. But Santangel seeing the Queen had upon his Advice condescended to what she had re-fused to all other Persons, reply'd, There rates was no need of Pawning her Jewels, for he mand would do her Highness that small Service grant as to lend his Money. Upon this Resolution the Queen immediately fent an Officer Post, to bring the Admiral back, who found him upon the Bridge of Pinos, two Leagues from Granada; and tho' the Admiral was much concern'd at the Difficulties and Delays he had met with in his Enterprise, yet understanding the Queens Will and Resolution, he return'd to the Camp of St. Faith, where he was well entertain'd by their Catho-

lick Majesties, and his Dispatch and Articommitted to the Secretary John Colowho by their Highnesses Command and under their Hand and Seal, granted him all

tal fets

he Articles and Clauses we said above, he had demanded, without Altering or Diminishing any thing in them.

### CHAP. XVI.

# How the Admiral fitted out three Caravals to go upon his Discovery.

THE aforesaid Articles being granted by their Catholick Majesties, he set out from Granada on the 12th of May, this Year 1492, for Palos, the Port where he was to fit out his Ships, that Town being oblig'd to serve their Highnesses three Months with two Caravals, which they ordered should be given to the Admiral. These and another Ship he fitted out with all Care and Diligence. 'The Ship he went in was call'd the St. Mary, another was La Pinta, whereof Martin Alonfo Pinzon was Captain, and Vincent Yanez Pinzon, Brother to Alonzo, both of the Town of Pales, of the 3d which was call'di La Nina, and had square Sails. They being furnish'd with all Necessaries, and 90 Men, fet fail directly towards the Canaries, on the 3d of August, and from that time

forwards, the Admiral was very careful to

keep an exact Journal of all that happened to him during the Voyage, specifying what Wind blew, how far he fail'd with every Wind; what Currents he found, and what he saw by the way, whether Birds, or Fishes, or other things; which he always did in four Voyages he made from Spain to the Indies. I will not write all those Particulars, for tho' to give an Account of his Voyage, and to show what Impressions and Effects Answered the Course and Aspects of the Stars, and to relate what difference there is between that and our Sea and our Countries, would be now very beneficial; yet I do not think all those particulars would now be pleasing to the Reader, whom such long and superfluous Relations must tire. Therefore I shall only Discourse of those things I shall think necessary and convenient.

## CHAP. XVII.

## The Admiral arriv'd at the Canary Islands, and there furnish'd himself compleatly with all he wanted.

The next day after the Admiral's Deval gives Saturday the 4th of August, the Rudder of one of the Caravals, call'd La Pinta, broke loofe, and being therefore forceed to lie by, the Admiral foon came by her fide, but the Weather blowing hard could give no affiltance; yet Commanders at Sea are oblig'd so to do, to Encourage those that are in Distress. This he did the more readily, as misdoubting this had happened by the contrivance of the Master, to avoid going the Voyage, as he attempted to do before they set out. Pinzon the Captain being are able Seaman, foon repaired that fault with the help of some Ropes, so that they were able to continue their Voyage, till on Tuesday following, the Weather being rough, the Ropes broke, and they were forced again to lie by to mend what had given way. From which Misfortune of breaking of the Rudder twice, any body that had been superstitious, might have foreboded its future disobedience to the Admiral, when thro' the Malice of Pinzon, it twice

got away from him, as shall be mentioned hereafter.

To return to what we have in hand, They apply the best remedy they could for the present, that they might at least reach the Canary Islands, which all three Ships discovered on Thursday the 9th of August about break of day, but the Wind being contrary, they could not come to an Anchor at Gran Canaria, tho very near it, that day nor the two following. Here the Admiral left Pingon, that going ashoar he might endeavour to get another Ship; and he to the same purpose went away to the Island Gomera, with the Caraval call'd La Mina, that if they fail'd of a Vessed in one The Adn Island, they might find it in the other. ral at G Thus he came to Gomera on the Sunday fol-mera. ·lowing, being the 12th of August, and sent his Boat ashoar, which returned in the Morning, with the News that there was never a Veffel in the Island at that time, but that they hourly expected the Lady Beatrix de Behadilla, Proprietress of that same Island, who was then at Gran Canaria,

and had hired a Veffel of 40 Tun, belong Columbus, ing to one Gradenna of Sevile, which being fitt for the Voyage he defign'd, he might have taken. Therefore the Admiral refolved to expect him in that Port, believing that if Pinzon had not been able to repair his own Vessel, he might himself have got another at Gemera. Having stay'd there the two following days, and the Veffel above mentioned not appearing, he fent a Man aboard a Bark that was bound from Gomera to Gran Canaria, to acquaint Pinzon where he lay, and affift him in fixing his Rudder, writing to him that he did not go himself to assist him, because that Vessel could not sail. But it being long after the departure of that Eark, before the Admiral received any Anfiver; he refolved on the 23d of August to return with his two Vessels to Gran Canaria, and failing the next day, met in the way the afcrementioned Bark, which was not yet arriv'd at Gran Canaria, by reason of the Having taken out the contrary Winds. Man he had fent aboard the Bark, that Night he fail'd close by Tenerife, where they faw flames gush out of the high Rock commonly call'd the Peake, or rather El Pico, which his Men admiring at, he told them the occasion of

that fire, proving what he faid by the Example of Mount Erna in Sicily, and of many others like it. Leaving that Island they are rived at Gran Canaria upon Saturday the 25th, whither Pinzon with much difficulty was got in but the day before. By him he was inform'd that the Lady Beatrix was fail'd the Monday before, with that Veffel he took fuch pains to get, and the others being much troubled at it, he made the best of whatever happen'd; affirming, that fince it did not please God he should meet with that Vessel, it was perhaps because in finding it. he would at the same time have met with fome obitacle or opposition in preffing of it, and have lost time in shipping and unshipping the Goods, which would be a hindrance to his Voyage: For this reason, fearing if he returned to feek it at Gomera, he might miss of it by the way; he resolved to repair his Caraval the best he could at Gran Canaria, making a new Rudder, she having lost hers, and to change the Sails of the other Caraval call'd La Nina, which were square, to round, that she might follow the other Ships with less danger and agitation.

Canaria.

### CHAP. XVIII.

How the Admiral set sail from the Island of Gran Canaria upon his Discovery, and what happened to him on the Ocean.

WHen the Ships were refitted and in order to sail on Friday, (this by what follows ought to be Saturday) the first of September; in the Afternoon the Admiral weighed Anchor, and departed from Gran Canaria, arriving the next day at Gomera, where four days more were spent in laying in Provisions, Wood and Water; so that next Thursday in the Morning, which was on The Admi- the 6th of September 1482, which may be acral fails Westward, counted the first setting out upon the Voyage on the Ocean, the Admiral departed from Gomera, and stood away to the Westward, but made but little way by reason of the Calm. On Sunday about day, he found himself nine Leagues West of the Island Ferro, where they lost fight of Land, and many fearing it would be long before they should see it again, figh'd and wept, but the Admiral after comforting them all with great promises of Lands, and Wealth to raise their Hopes and lessen the Fear they had conceived of the length of the way, tho' they fail'd 18 Leagues that day, he pretended by his Computation it was but 15, refolving all the Voyage to keep short in his reckoning,

that his Men might not think themselves so far from Spain as they were, if he should truly fet down the way he made, which yet he privately mark'd down. Continuing thus his Voyage, on Wednesday the 12th of Seprember, about Sun-setting, being about 150 Leagues West of the Island Ferro, he discovered a large Body of the Mast of a Tree of 120 Tun, which feem'd to have been a long time upon the Water. There and somewhat further the Current set strong towards the North East, but when he had run 50 Leagues farther Westward, on the 13th of September, he found that at Night fall, the Needle vary'd half a point towards the North-East, and at break of day, half a point more, by which he understood that the Needle did not point at the North Star, but at some other fix'd and visible point. This variation no Man had observ'd before, and therefore he had occasion to be surpriz'd at it, but he was more amaz'd the 3d day after, when he was almost foo Leagues further, for at Night the Needles vary'd about a Point to the North East, and in the Morning they pointed upon the Star? On Satur-

day the 15th of September, being almost 300 of Jumbus. Leagues West of Ferro; at Night they aw a wonderful flash of Light fall from the Sky, into the Sea, about four or five Leagues distance from the Ships; towards the South-West, tho' the Weather was then fair, like April, the Wind favourable at North East, the Sea still, and the Current setting North-The Men aboard the Caraval call'd la Nima, told the Admiral they had the Friday before, seen a Heron and another fort of Bird, which the Spaniards call Rabo de Junco, which they were amaz'd at, those being the first Birds they had seen: but they Birds and were more surprised the next day, which Sea-meeds was Sunday, at the great abundance of Weeds between Green and Yellow, that appeared upon the Water, which feem'd to be newly wash'd away from some Island or Rock. They saw enough of these Weeds the next day, which made many affirm they were already near Land, especially because they faw a fmall Lobster alive among those Weeds, which they faid fomewhat resembled the Herb Star-wort, but that the Stalk and Branches were long, and it was all full of small feeds. Afterwards they observed that the Seq-water was but half as falt as before: befides, that Night abundance of Tunny Fishes

follow'd them, running along, and sticking close to them, that those aboard the Caaval Ninna, kill'd one with a bearded Iron. leing now 360 Leagues West of Ferro, they law another of those Birds the Spaniards call Rabo de Junco, because of a long Feather their Tale consists of, and in Spanish, Rabe fignifies a Tale, as Junco is a Rush, so that Rabo de Junco imports Rush Tale. On Tuefday following, being the 18th of September, Martin Alonzo Pinzon, who was gone a-head with the Caraval call'd Pinta, which was an excellent Sailer, lay by for the Admiral, and told him he had feen a great Number of Birds fly away Westward, for which reason he hop'd to find Land that Night, and he thought he faw the Land to the Northward, 15 Leagues distant; that day about Sun-fetting, looking very dark and cloudy. But the Admiral knowing for certain it was no Land, he would not lose time to discover it, as all his Men would have had him; for as much as he was not yet come to the Place where he expected by his Computation to find Land, therefore they took in their Top-fails at Night, because the Wind freshned, having for eleven days never abated one handful of Sail, going still before the Wind Westward.

### CHAP. XIX.

# How all the Men carefully observed what signs they discovered, being eager to discover Land.

LL the Men aboard the Ships being unacquainted with that Voyage, and fearfull of the Danger, because far from any Relief, there were some that began to mutter, and feeing nothing but Sky and Water, carefully observed every thing that appear d, at greater distance from Land, than any had been before. For which Reason I will relate all they made any Account of, and this only in the first Voyage; for I shall not mention lesser Tokens generally seen upon such occasions. On the 19th of September, in the Morning, a Fowl call'd Alcatraz, which is a fort of Sea Gull, flew over the Admiral's Ship, and others in the Afternoon, which made him conceive hope of Land, he and imagining they would not fly very far from o. it. Upon these hopes, as soon as the Wind abated, they founded with 200 Fathom of Line; and tho' they found no bottom, they perceived the Current now fet South-West. On Thursday the 22d, two hours before Noon, two Alcatrages came to the Ship, and another sometime after; besides, they took a Bird like a Heron, but that it was black, and had a white tuft on the head, the feet Vol. II.

like a Duck, as commonly Water-fowls have; they also caught a little Fish, and saw abundance of Weeds; and about Evening there came aboard three Land-fowls finging, but at break of day they flew away, which was fome comfort to them, confidering that the other Fowls being large, and used to the Water, might better go far from Land, but that these little ones could not come from any far distant Country. Three hours aster they faw another Alcatraz, that came from the W. N. W. and the next day after Noon, they saw another Rabo de Junco and an Alcatraz, and there appear'd more Weeds than before, towards the North, as far as they could see; which things sometimes were a Comfort to them, believing they might come from some near Land, and fometimes they caused dread, because they were so thick, that in some measure they staid the Ships, and fear making things worse than they are, they apprehended that might befall them, which is subulously reported of St. Amaro in the Frozen Sea, who is faid not to fuffer Ships to stir backwards or forwards, and therefore they steer-

ed away from those Shoals of Weeds, a Columbus much as they could. But to return to the Tokens, The next day they faw a Whale and on Saturday following, being the 22d of September, some simall Birds, and the Wind those days blew at South-West, sometimes more and fometimes less West, which tho' contrary to their Voyage, the Admiral faid he look'd upon as very good, and a help to Muttering them, because the Men continually mutteramong the ing, among other things that increased their Seamen. fear, faid this was one, That fince the Wind was always right a Stern, they should never in those Seas have a Gale to carry them back, and the' fometimes they found the contrary; they alledg'd that it was no fettled Wind, and that not being strong enough to swell the Sea, it would never carry them back fo far as they had to fail. Whatfoever the Admiral could fay, telling them that the reason was,

the Lands being now near, which did not fuffer the Waves to rife, and using the best Argument he could, yet he affirms he stood in need of God's particular affiftance, as Mofes did when he led the Ifraclites out of Egopt, who forbore laying violent hands upon him, because of the Prodigies God wrought by his means. So faid the Admiral, it happened to him in that Voyage; for upon Sunday following, the Wind started up at W. N. W. with a rowling Sea, as the Men wish'd, and three hours before Noon, they faw a Turtle fly over the Ship, and about Evening an Alentraz, a River Fowl, and other white Birds, and fome Crabs among the Weeds; and the next day they fpy'd another Alcatraz, and several small Birds that came from the Well, and finall Fishes, whereof the Men of the other Vessels stuck some with Harping Irons. because they would not bite at the Hook.

### CHAP. XX.

# How the Men muting'd to turn back, and seeing other Signs and Tokens of Land, went on well enough satisfied.

The Men

THE more the aforesaid Tokens were found vain, the more they took occafion to apprehend and mutter; caballing together, and faying, the Admiral out of a foolish fancy of his own, had deligned to make himself a great Lord at the Expence of their Lives and Danger; and fince they had done their Duty in trying their Fortune, and had gone farther from Land and any Succour than any others had done, they ought not to deltroy themselves, nor pro-ceed in that Voyage, fince if they did, they should have cause to repent; for Provisions would fall short, and the Ships fail, which they knew were already fo faulty, that it would be hard to get back fo far as they were gone, and that none would condemn them for fo doing, but they would rather be look'd upon as very brave Men, for going upon fuch a defign, and venturing To far; and that the Admiral being a Foreigner, and having no favour at Court, and so many Wise and Learned Men having condemn'd his Opinion, there would be no body now to favour and defend him, and they should sooner find Credit if they accused him of Ignorance and Milmanagement, than he whatfoever he could fay for himself. Nor did there want some who said, that to end all dispute, in case he would not acquies to them, they might make flort, and throw him over-board, and give out, that as he was making his Observations he droped into the Sea, and no Man would go about to enquire into the Truth of it, which was the readiest way for them return home and secure themselves. Thus

they went on from day to day, Muttering, Complaining and Confulting together: nor was the Admiral without Apprelientions of their Inconstancy, and ill intentions towards Therefore fometimes with good words, and fometimes with a full resolution to expose his Life; putting them in mind of the Punishment due to them if they obstructed the Voyage: He in some Measure quell'd their Apprehensions, and suppress'd their ill designs. To confirm the hope he gave them, he put them in mind of the aforefaid Signs and Tokens, assuring them they would foon find Land; which figns they were fo attentive to, that they thought every Hour a Year till they saw Land. On Tuesday the 25th of September, about Sun-setting, as the Admiral was discoursing with Pinzon, whose Ship was very near, the said Pinzon on a fudden cry'd our, Land, Land Sir! Let not my good News miscarry : And show'd him towards the South-West, a bulk which look'd very like an Island, about 25 Leagues from the Ships. This was so pleafing to the Men, that they returned thanks to God; and the Admiral who had given no Credit to these words, to please the Men and that they should not obstruct his Voyage, stood that way a great part of the Next Morning they perceived that Night. what they had seen were only Clouds, which often look like Land, for which reafon, to the great diffatisfaction of most of the Sailers, they turn'd the Sterns of their Ships Westward, as they had always done, except when the Wind hindred. Continuing

A fill attentive to the Signs, they faw an Al-Columbus. catraz, a Rabo de Junco and others Birds, Whike those above mention'd. On Thursday the 27th of September in the Morning, they faw another Alcatraz coming from the West. and failing Eastward, and abundance of Fishes with gilt backs appeared, whereof they struck one with a Harping Iron. A Ralo de Junco flew by them, and they found that the Currents, for those last days, were not so regularly fixt, as they used to be before, but turn'd with the Tide, and there were not so many Weeds as before. On Friday following, all the Ships took some Fishes with gilt backs, and on Saturday they faw a Rebo de Junco, which tho' it be a Seafowl does not rest on it, but flies always in the Air, pursuing the Alcatrages, till it makes them drop their excrement for fear, which it catches in the Air for its Nourishment, and thus it maintains its felf on the Sea, and it is reported there are many of them about the Mands of Cabo Verde. Soon after, they faw two other Alvanages, and abundance of flying Fishes, which are about a span long, and have two little wings like a Bat; they fly about a Pike high from the Water, and a. Mulquet shot in length, more or less, and fometimes they drop upon the Ships. Afternoon they faw abundance of Weeds lying in length North and South, as they had

done before, besides three Alcatrages and a Rabo de Junco that pursued them.

On Sunday Morning, four Rabo de Junco's came to the Ship, by reason of whose coming so together, it was thought the Land was nearer, especially because soon after there flew by four Alcatrages, and abundance of Weeds were seen in a line lying W.N.W. and E.S.E. and also a great Number of those Fishes they call Emperadores, which have a very hard skin, and are not fit to cat. How much foever the Admiral regarded thefe Tokens, yet he never forgot those in the Heaven, and the Course of the Stars. He therefore observed in this Place, to his great Admiration, that the Charles Wain at Night appeared in the West Point, and in the Morning they were directly N. E. by which he gather'd, that their whole Nights Course was but 3 Lines or 9 Hours, that is, so many Parts of 24, and this he made out every Night. He also perceived, that at Night fall the Compass vary'd a whole Point to the North-West, and at break of day it came right with the Star. These things confounded the Pilots, till he told them the cause of it was the Compass the Star took about the Pole, which was some fatisfaction to them; for this variation made them apprehend some Danger in fuch an unknown distance from Home, and fuch strange Regions.

### CHAP. XXI.

How they saw not only the aforementioned Signs and Tokens, but others better than they, which were some Comfort to the Men.

They difa-

N Munday the 1st of October, after Sun-riling, an Accatraz came to the their Com- Ship, and two more about ten in the Mornfurations, ing, and long streams of Weeds lay from East to West. That day in the Morning, the Pilot of the Admiral's Ship, faid, they were 578 Leagues West of the Island Ferre, the Admiral faid by his Account, they were 584 Leagues, but in Private he concluded it was 707, which is 129 Leagues more than the Pilot reckoned. The other two Ships differed very much in their Computation, for the Pilot of the Caraval Ninna on Wednesday following, after Noon, said, they had sail'd 540 Leagues, and the other of the Caraval l'inte, said 634. Adding all they had sail'd during those three days, they were still much thort of Truth, for they went always betore the Wind, and had run much more. But the Admiral as has been faid, wink'd at this gross Milake, that the Men might not be quite dejected, being to far from home. The next day, being the 2d of

a fmall Tunny, and faw a white Bird, and many other small ones, and the Weeds they faw were withered and almost fallen to Powder. The next day after, seeing no Birds but some Fish, they mistrusted they had left fome Islands on both hands, and were flip'd between without discovering them; guesling that those many Birds they had icen were passing from one Island to another. They were very earnest to steer either one way or the other, to feek out those Lands they imagin'd; but the Admiral would not consent, being unwilling to lose the fair Wind that carry'd him away to Westward, which he accounted his furest Course; and besides, because he thought it was a leffening the Reputation of his Undertaking, to run from one Place to another, feeking that which he always affirm'd he well know where to find. For this reason the Men were ready to Mutiny, continuing to Mutter and Conspire against him; but it pleased God, as was faid above, to affilf him Officher, they law abundance of Rish, catchid by the means of fresh Tokens; for on Thurs

day, the 4th of October, after Noon, above Columbus. forty Sparrows together, and two Alcatrages thew so near the Ships, that a Seaman killed one of them with a Stone; and before this they had seen another Bird like a Rabo de Junco, and another like a Swallow, and a great many flying Fishes fell into the Ships. Next day there came a Rabo de Junco, and an Alcatraz, from the Weitward, and abundance of Sparrows were feen. On Sunday, the 7th of Ottober, about Sun-rising, some figns of Land appear'd Westward, but being imperfect, no Man would speak of it; not so much for the shame that would follow of afferting what was not, as for fear of losing 30 Crowns a Year, their Catholick Majesties had promised for Life, to him that should first discover Land; and to prevent their crying Land, Land at every turn, as they might do without cause at every turn, out of Covetousness of that Allowance, it was ordered, that whofoever faid he faw Land, if it were not made out in three days after, should lose the Reward, tho' afterwards he should prove the first Discoverer. All aboard the Admiral being thus forewarn'd, none of them durst cry out Land, but those in the Caraval Ninna, which was a better failer, and kept a head, believing it to be certainly Land, fired a Gun, and put out their Colours in token of Land. But the further they fail'd, the more their Joys vanish'd, till that Appearance quite vanish'd, tho' it pleased God soon after to give them some manner of Comfort, for they saw great flights of great Fowl, and others of small Landbirds, flying from the West, towards the South-West. Therefore the Admiral being now so far The Admi- from Spain, and fure that fuch small Birds bis Course. would not go far from Land; he alter'd his Course, which till then was West, and stood to the South-West, saying, That if he changed his Road, it was, because he deviated but little from his first design, and because he would follow the Example of the Portugueses, who

had Discovered most of their Islands by means of fuch Birds, and the more because those they saw follow'd almost the same way, he had always propos'd to himself to find Land, according to the Place they were then in; fince as they well knew he had often told them, he never expected to find Land till he was 750 Leagues to the Westward of the Canaries; within which distance he had further faid, he should discover Hispaniola, which he then call'd Cipange, and there is no doubt but he had found it, had not he known it was reported to lie in length from North to South: For which reason he had not inclin'd more to the South to run upon it, and therefore that and others of the Caribbee Islands lay now on his Larboard fide, South of him, whither those Birds were directing their Courfe. Being to near to Land, was the reason they continually faw fuch abundance of Birds; and on Munday the 8th of Officer, there came to the Ship 12 Singing-birds of feveral Colours, and after flying a turn about the Ship, they held on their way. They also saw from the Ships many other Birds, flying towards the South-West, and that same Night abundance of large Fowls were feen, and flights of small Birds coming from the Northward, and flying after the rest. Besides, they saw a good Number of Tunny Fish. In the Morning they fpy'd a Jay, an Alcatraz, Ducks and small Birds, flying the same way the others had done; and they perceived the Air to be fresh and odoriferous, as it is at Sevil in April. But they were now so eager to see Land, that they had Faith in no Signs whatfoever; so that the' on Wednesday the 10 of Ottober, they saw abundance of Birds pass by both Day and Night, yet the Men did not cease to complain, nor the Admiral to blame their want of Courage; declaring to them, that right or wrong they must go on in discovering the Indies, their Catholick Majesties had sent them to.

#### CHAP. XXII.

# How the Admiral discovered the first Land, which was an Island call'd de los Lucayos.

THE Admiral being no longer able to withstand so many as oppos'd him, it pleased God, that on Thursday the 11th of October, after Noon the Men took heart and rejoyced, having Manifest Tokens that they were near Land, which were that those aboard the Admiral, saw a green Rush swim by the Ship, and then a great green Fish of that fort, that goes not far from the Rocks. Those aboard the Caraval Pints faw a Cane and a Staff, and took up another Staff curiously wrought, and a small Board, and abundance of Weeds fresh wash'd away from Those in the Caraval Ninna the Banks. faw other fuch like Tokens, and a Branch of a Thorn full of red Berries, which feem'd to be newly broke off. By these Tokens, and Reason it self, the Admiral being as-By these Tokens, fured he was near Land; at Night, after Prayers, he made a Speech to all the Men

Other Tokens.

in general, putting them in mind how great Columbus. a Mercy it was that God had brought them o long a Voyage, with fuch fair Weather. and comforting them with Tokens, which every day were plainer and plainer; therefore he prayed them to be very watchful that Night, fince they well knew, that in the first Article of the Instructions he gave each Ship at the Canary Islands, he ordain'd that when they had fail'd 700 Leagues to the Wellward, without discovering Land, they should lie by from Midnight till Day. Therefore, fince they had not yet obtain'd their defires in difcovering Land, they should at least express their Zeal in being watchful. And for as much, as he had most affured hopes of finding Land that Night, every one should warch in his Place; for besides the Gratuity their Highnesses had promised of 30 Crowns a Year, for Life, to him that first saw Land, he would give him a Velvet Doublet. After this, about ten at Night, as the Admiral was in the great Cabin, he faw a light ashoar, but said it was so blind, he could not affirm it to be Land, tho' he call'd one Peter Gutierres, and bid him obferve whether he faw the faid Light, who

faid he did; but presently they call'd one

Roderick Sanchez, of Segevia to took that way, but he could not see it, because he came not Land disup time enough where it might be feen; cover'd. nor did they see it afterwards above thee or twice, which made them judge it might be a Candle, or Torch belonging to fome: erman or Traveller, who lifted up let it fall down; or perhaps that they were People going from one House to another, because it vanish'd and suddenly appear'd again; so that tew would guess by that they were near Land. Being now very much upon their Guard, they flill held on their Course, till about two in the Morning the Caraval Pinta, which being an excellent Sailer, was far a-head, gave the fignal of Land, which was first discovered by a Sailer, whose Name was Roderick de Triana, being two Leagues from floar. But the 30 Crowns a Year was not granted by their Catholick Majesties to him, but to the Admiral, who had feen the Light in the midft of Darkness, fignifying the Spiritual Light he was then spreading in those Dark Regions. Being now near Land, all the Ships lay by, thinking it a long time till Morning, that they might fee what they had fo long. defired.

### CHAP. XXIII.

# How the Admiral went ashoar, and took Possession for their Catholick Majesties.

AY appearing, they perceived it was an Island 15 Leagues in Length, Plain, without Hills and full of Green Trees, and Delicious Waters, with a great Lake in the middle, Inhabited by abundance of People, who ran down to the shoar, astonished and admiring at the fight of the Ships, believing them to be fome living Creatures, and were impatient to know certainly what they were. Nor were the Christians less hasty to know them, whose curiosity was foon fatisfied, for they foon came to an Anchor; the Admiral went ashoar with his Boat well Arm'd, and the Royal Standard display'd, as did the Captains of the other two Ships in their Boats with their Particular Colours of this Enterprize, which were 4 Green Groß with an F on the one fide; and on the other, the Names of Ferdinand and Isabel or Elizabeth Crown'd. Having all

given Thanks to God, Kneeling on the shoar,

and kiss'd the Ground with Tears of Joy, for

the great Mercy receiv'd; the Admiral flood up, and call'd that Island St. Salvador. After that he took Possession for their Catholick Majestics in the usual words, and with the Solemnity proper in those Cases; abundance of the Natives that were come out, being Present, and consequently the Christians admitted him as Admiral and Viceroy, and fwore to obey him as representing their Highneffes Persons, and with such expressions of Joy, as became their mighty Success; all of them begging his Pardon for all the Affronts they had done him thro' their Fear, and Irresolution. Abundance of the Indians being come down to this rejoycing, and the Admiral perceiving they were Peaceable, Quiet and very Simple People, he gave them tome red Caps, and strings of Glass Beads, which they hung about their Necks, and other things of small value, which they valued as if they had been Stone of high Prize.

Vol. II

# The first Discovery of

Columbus.

# The Manners and Customs of those People, and what the Admiral Saw in that Island.

HE Admiral being gone off to his Boats, the Indians follow'd him to Islanders, them and to the Ships swimming, and others in their Canoos, carrying Parrots, bottoms of spun Cotton, Javelins, and other such Trifles to barter for Glass-Beads, Bells, and other things of small value. Like People in their Original Simplicity, they went Naked as they were born, and a Woman that was among them had no other Cloathing. Most of them were young, not above 30 years of Age; of a good Stature, their Hair lank, thick, very black and short, being cut above their Ears, except some few who had let it grow down to their Shoulders, and had ty'd it with a strong Thread about their head like Womens Treffes. Their Countenances were pleafant, and their Features good, but their too high Foreheads made them look somewhat wild. They were of a middle Stature, well shaped, plump, but of an Olive Colour, like the People of the Canaries, or Peasants that are Sun-burn'd. Some were Painted with black, some with white, and others with red; some only the Faces, others the whole Body, and others nothing but the Eyes and Nofe. They had no Weapons like our Men, nor knowledge of them; for when the Christians show'd them a Naked Sword, they took it fimply by the edge. Nor had they any Knowledge of Iron, and therefore they made their Javelins we mentioned, of Wands, with the Points hardened at the fire, Arming them with a Fish bone instead of Iron. Some of them having Scars of Wounds about them, and being ask'd by figns how they came by 'em, they answered by figns, that People came from other Islands to take them away, and they received those Wounds in their own defence. They feem'd ingenious and of a voluble Tongue, for they eafily repeated the words they once heard. There were no fort of Creatures there but Parrots, which they carried to barter among the other things we have spoke of, and in this Trade they continued till Night. Next day being the 13th of Oftober in the Morning, many of them came down to the Shoar, and went aboard in their Boats called Canoos, which were made of one Piece, being the Body of a Tree hollow'd like a Tray. The biggest of them

were so large, they contain'd 40 or 45 Men, and so less and less, till some would hold but one. They row'd with a Paddle like a Baker's Peal, or those they use in dresling Hemp; true it is, that the Oars are not fix'd on the fide with Pins to turn as ours are, but they dip them in the Water, and pull back as if they were digging. These Canoos are so light and so Artificially built, that if they overfet they foon turn them right again swimming, and empty the Water by throwing the Vessel from side to fide like a Weaver's Shuttle, and when it is above half out, they lade out what remains with dry'd Calabashes cut in two, which they carry for that purpose. That day they brought fuch things to barter for, as they had the day before, giving all they had for any small thing they could get. Jewels or any fort of Metal were not feen among them, except some small Plates of Gold which hung at their Nostrils, and being ask'd whence they had that Gold, they answered by signs, towards the South, where there was a King who had abundance of Pieces and Veffels of Gold; expressing that towards the South and South-West, there were many other Islands and large Countries. Being very Covetous of any thing of ours, and being themselves but poor, and having nothing to give in Exchange, as foon as they came aboard, if they could lay their hands on any thing, tho' it were but a piece of a broken Earthen glazed Dish or Porringer, they leap'd into the Sea and swam ashoar; and if they brought any thing abourd, they would give it for any trifling thing of ours or bit of broken Glass, so that some of them gave 16 bottoms of Cotton for three small pieces of Portuguese Brass Coin not worth a Farthing; these bottoms weighed 25 pounds, and the Cotton was very well foun. Thus they fpent the day, and at Night they all went ashoar. It is to be observed, that their Liberality in Dealing did not proceed from the great Value they put upon those things themselves, which they had of our Men, but because they valued them as being ours, looking upon it as most certain, that our Men were come down from Heaven, and therefore they earnestly defired to have something left them as a Memorial.

Canoos.

Columbus.

# CHAP. XXV.

# How the Admeral departed from that Island, and went to discover others.

TEXT Sunday, being the 15th of Ottober, the Admiral run along the Coast of the Island, towards the North-West, in his Boats, to discover something about it; and that way he went, he found a large Bay or Harbour, capable of containing all the Ships in Christendom. The People seeing him scour along, ran after, along the shoar, crying out, and promising to give him Provisions, calling others to come to see the People drop'd from Heaven upon Earth, and lifted up their Hands to Heaven, as it were giving thanks for their coming. Many of them swimming, or in their Canoos, as best they could, came to the Boats, asking by figns, whether they were come down from Heaven, and Praying them to Land and rest themselves. The Admiral gave them all Glass Beads, Pins, and other Trifles, rejoycing at their great simplicity, till he came to a Peninsula, which made a good Port, and where a good Fort might be made. There he saw six Houses of the Indians with Gardens about them, as Pleasant as they are in Castile in May. But his Men being weary of rowing, and he plainly perceiving that was none of the Land he look'd for, nor so Beneficial, as that he should make any longer stay there, he took seven of those Indians to serve him as Interpreters; and returning to his Ships, fail'd for other Islands that could be discovered from the Peninsula, and appear'd to be Plain, Green and very Populous, as the Indians themselves affirm'd. The next day being Munday, the 16th of October, he came to one that was feven Leagues from the other, and call'd it Sr. Concepti. Mary of the Conception. That fide of this on Mand. Island next St. Salvador extended North-West five Leagues in Length, but the Admiral went to that fide which lies East and West, and is above 10 Leagues in length; and being come to an Anchor towards the Welt, Landed to do as he had done in the other. Here the People of the Island ran together to see the Christians, admiring as the others had done. The Admiral perceiving this was the same thing as the last: The next day being Tuesday, fail'd Westward to another Island considerably bigger, and Anchored upon the Coast of it, which runs North-West and South-East, above 28 Leagues. This was like the others, Plain, had a fine Strand, and was call'd Fernandina. Before they came to this Island, and that of the Conception, they found a Man in a small Canoo, who had a piece of their Bread, and

a Calabash of Water, and a little Earth like Vermillion, wherewith those People Paint their Bodies, as was faid above; and some dry Leaves which they value, as being of a fweet scent and wholesome; and in a little Basket he had a string of Beads of Green Glass, and two small pieces of Portuguele Money, by which it was guess'd that he was coming from St. Salvador, that he had pass'd by the Conception, and was going to Fernan-Island Ferdina to carry News of the Christians: But nandina. because the way was far, and he weary, he came to the Ships, was taken up with his Canoo, and courteoufly treated by the Admiral, defigning as foon as he came to Land to fend him ashoar, which he did, that he might spread the News. The good Account he gave, caus'd the People of Fernandina to come aboard in their Canoos, to exchange the same fort of things the others had done before, for these People were like the rest; and when the Boat went ashoar for Water. the Indians very readily show'd where it was, and carry'd the small Cask full on their Shoulders to fill the Hogsheads in the Boat. They feem'd to be a Wifer and Discreeter People than the first, and as such bargain'd harder for what they exchang'd, had Cotton Cloath in their Houses, and Bed-Cloaths; and the Women covered their Privities with short hanging Cotton-Cloaths, and others with a fort of Swathe. Among other Notable things they saw in that Island, were some Trees which seem'd to be Grafted. because they had Leaves and Branches of four or five several forts, and yet were Na-They also saw Fishes of several shapes and fine Colours, but no fort of Land Creatures but Lizards and Snakes. The better to discover the Island, they fail'd away North-West, and came to an Anchor at the Mouth of a beautiful Harbour; at the entrance whereof was a small Island, and therefore they could not get in, there being but little Water; nor did they much care, because they would not be far from a Town that appeared at a distance: for in the biggest Island they had yet seen they had not found above 12 or 15 Houses together, built like Tents, in which they faw no other Ornaments or Moveables, but what they carry'd to the Ships to Exchange. Their Beds were like a Net, drawn together in the nature of a Sling ty'd to two Posts in their Houses, in which they lie. they faw fome Dogs like Mastives, and others like Beagles, but none of them bark'd.

# How the Admiral fail'd by other Islands that were in sight where he was.

Island Isa- Inding nothing of value in this Island, Fernandina, on Friday the 19th of October, they fail'd away to another, call'd Saomotto, to which he gave the Name of Ilabella, to proceed regularly in his Names; for the first which the Indians call'd Guanabani, he call'd St. Salvador, or St. Saviour, in Honour of God, who had show'd it and delivered him from many Dangers. The fecond for his particular Devotion, to the Conception of the Virgin Mary; and because she is the great Patroness of Christians, he call'd St. Mary of the Conception; the third he call'd Fernandina, in Honour of the Catholick King, and the fourth Isabella, in Memory of the Catholick Queen; and the next after it which was Cuba, he stiled Joanna, in respect to Prince John, Heir of Castile, having in these Names regard both to Spirituals and Temporals. True it is, That as to Goodness, Extent, and Beauty, he faid this Fernandina far exceeded the others, for belides that, it abounded in delicious Waters, Pleasant Meadows and Trees, among which were many of Aloes: There were in it some Hills, which the others wanted, being very Plain. The Admiral enamour'd with its Beauty, and to perform the Ceremony of taking Possession, Landed upon some Meadows as Pleasant and Delightful as they are in Spain in April; and there was heard the finging of Nightingals and other Birds, so sweet, that he could scarce depart. Nor were they only about the Trees, but flew thro' the Air in fuch fwarms, that they darkened the Sun, and most fof them differ'd much from our There being abundance of Waters Birds. and Lakes; near to one of them they faw a fort of Alligator feven foot long, and above a foot wide in the Belly, which being disturbed by our Men, threw its felt into the Lake, but it not being deep, they kill'd it with their Spears, not without dread and admiration, because of its fierce and frightful look. Time afterwards made them look upon this as a dainty, it being the best food the Indians had; for as much as when that horrid Skin, and the Scales that cover it are taken of, the Flesh is very white and very delicious, the Indians call them Yvanas. Yva Being very defirous to know more of that Country, and it being then late, they left that Creature for the next day, when they kill'd another, as they had done the first; and Travelling up the Land, found a Town, the People whereof fled, carrying away as much of their Goods as they could. The Admiral would not fuffer any thing of what they had left to be taken away, least they should look upon the Christians as Thieves. Therefore their fear being foon over, they came of their own accord to the Ships to Barter, as the others had done.

#### CHAP. XXVII.

# How the Admiral discovered the Island of Cuba, and what he found there.

Island of Cuba.

He Admiral having learn'd the fecrets of the Island Isabella, its Product, and the Manners of the People, would lofe no more time among those Islands, because they were many and like one another, as the *Indians* said. He therefore set fail with a fair Wind for a very large Country, much applauded by them all, call'd Cuba, which lay towards the South, and on Sunday the 28th of October, he came up with the Coast of it, on the North side. This Island at first fight appeared to be better and Richer than those before nam'd, as well by reason of the Beauty of its Hills and Mountains, as for the varicty of Trees, the large Plains, and the greatness and extent of its Coasts and Rivers. Therefore to get some Knowledge of its People, he came to an Anchor in a large River, where the Trees were very thick

and tall, adorn'd with Fruit and Bloffoms, differing from ours, and where there were abundance of Birds, the place most delicious, for the Grass was high, and nothing like ours; and tho' there were feveral forts of Herbs known to us, yet the great variety made our Men not know them. Going to two Houses that were not far off, they found the People were fled for fear, and had left their Nets, and all other Fishing tackle, and a Dog that did not bark. As the Admiral had ordered, nothing was touch'd, for it was enough for him at present to see what their Food and Necessaries were. Returning to their Ships they held on their Course Westward, and came to another River, which the Admiral call'd de Mares, or of Scas. This much exceeded the other, because a Ship could turn

it up, and the Banks were much Inhabited: Columbus but the People seeing the Ships, fled towards the Mountains, which appear'd, and were high, round, and covered with Trees and Pleasant Plants, whither the Indians convey'd all they could carry away. The Admiral being disappointed, by the Peoples fear, of Learning any thing of the Nature of the Island, and considering if he Landed with many Men, it would increase their Terrour, he resolved to send two Christians, with one of the Indians he brought from St.

. Salvador, and with one of that Country, who ventured to come aboard in his Canoo. These he ordered to Travell up into the Country, making much of the Natives they met by the way, and that no time might be loft, whilst they were going, he order'd the Ship to be lay'd ashoar to Careenher, where they observed that all the fire they made was Mastick, whereof there was plenty all the Country over. This Tree is in all respects like our Mastick Tree, but much bigger.

#### CHAP. XXVIII.

# How the two Christians return'd, and the Report they made of what they had seen.

THE Ship being Repaired and ready to Sail, the Christians returned with two Indians on the 5th of November, saying, they had Travell'd twelve Leagues up the Land, and came to a Town of 50 Pretty large Houses, all of Timber covered with Straw, and made after the manner of Pavillions, like the others; that they contain'd about 1000 People, because all that were of one Family liv'd in a House, that the Principal Men of the Place came out to meet them, and led them by the Arms to their Town, giving them one of those great Houses to Lodge in, where they made them fit down upon Seats made of one Piece, in strange shapes, and almost like some Creature that had short Legs, and the Tail lifted up to lean against, which is as broad as the Seat for the conveniency of Leaning, with a Head before, and the Eyes and Ears of Gold. These Seats they call Duchi, where the Christians being seated, all the Indians sate about them on the Ground, and then came one by one to kiss their Hands and Fect, believing they came from Heaven; and they gave them some boil'd Roots to cut, not unlike Chesnuts in taste; earnestly intreating them to stay there among them, or at least to rest themselves 5 or 6 days, because the two Indians they took with them, gave those People an excellent Character of the Christians. Soon after, many Women coming in to see them; the Men went out, and these with no less respect, kis'd their Feet and Hands, offering them what they brought. When their time came to return to the Ships, many Indians would go along with them, but they would admit only of the King, his Son and one Servant, whom the Admiral did much

Honour to; and these Christians told him,

that in their way out, and return, they had

tound feveral Towns, where they were en-

tertain'd with the fame Courtefy, but that there were not in them above five Houses together: Besides, That by the way, they met many People, who always carried a lighted Firebrand, to light fire, and Perfume themselves with certain Herbs they carried along with them, and to Roalt fome of those Roots they gave them; for as much as that was their Principal Food. They al fo faw very many forts of Trees and Plants, which were not to be feen about the Sca-Coast; and great variety of Birds, far differing from ours, but that among them there were Partridges and Nightingals. As for Four-footed Creatures, they had feen none but dumb Dogs. That there was a great deal of Till'd Land, some sow'd with those Roots, a fort of Beans, and a fort of Grain they call Maiz, which was well tasted, Bak'd, or Dry'd and made into Flour. they saw vast quantities of Cotton well spun, in Bottoms, infomuch that in one House only, they saw above 12500 Pounds of it. The Plants it comes from are not set, but grow Naturally about the Fields, like Roles, and open of themselves, when they are Ripe, but not all at the same time; for upon one and the same Plant, they had seen a little young Bud, another open, and a third coming Ripe. Of these Plants the Indians afterwards carried great Quantities aboard the Ships, and gave a Basket full for a Thong of Leather; yet none of them make Use of it to Cloath themselves, but only to make Nets for their Beds, which they call Hamacas, and in weaving Aprons for Women to cover their Nakedness. Being ask'd whether they had Gold or Pearls, or Spice, they made Signs that there was great Plenty towards the East, in a Country they call'd Bohio, which is the Island Hispaniola, but it is not yet certainly known what Place they meant. 7 L

Columbus.

#### CHAP. XXIX.

How the Admrial desisted from following the Western Coast of Cuba, and turn'd Eastward towards Hispaniola.

THE Admiral having this Account, and resolving to stay no longer in that River, order'd some Natives of that Island to be taken, defigning to carry some from all Parts Conjugat into Spain, to give an Account of his Couneffection in try; and accordingly 12 were seiz'd, Men, an Indian. Women, and Children, and this so peaceably and without any disturbance, that when they were ready to fail with them, the Husband of one of the Women, and Father of two Children that had been carry'd aboard, came to the Ships in a Canoo defiring he might be taken along with them, and not parted from his Wife and Children, which extreamly pleas'd the Admiral, who order'd he should be receiv'd, and they all well us'd and made much of. That same day, being the 13th of November, he came about to the Ealtward, deligning for the Island they call'd Bolio. The Wind blowing hard at North, he was forced to come to an Anchor again in the fame Island of Cuba, among some high Islands, lying near a largePort, which hecall'd del Principe, or the Princes Port, and the Sea, Our Ladies. These Islands lay so thick and close, that there was not above a quarter of a League diltance between them at furthest, and but a Musquet shot for the most part. The Chanels were so deep, and so well adorn'd with Trees and Greens, that it was very delightful going among them; and among the Multitude of other Trees, there were abundance of Mastick, Aloes and Palm, the Trunck green and fmooth, and other Plants of fundry forts. And tho' these Mands were not

Inhabited, yet there appeared the Tokens of many fires made by Fishermen, for as it afterwards appear'd, the People of Cuba went together in great Number, in their Canoos over to these Islands, and abundance more that lie hereabouts Uninhabited, and live upon the Fish they catch, upon Birds, Crabs, and other things they find on the Earth, for as much as generally the Indians eat abun- Foo dance of filthy things, fuch as great Spiders, Ind Worms that breed in rotten Wood and other Corrupt Places, and abundance of Fish almost raw; for as foon as taken, before they roaft it, they digg out the Eyes to eat, and many other fuch things they feed on, which besides that, they are nauseous would kill any of us should we eat them. They follow this Fishing and Birding according to the Season, sometimes in one Island, sometimes in another, as one that changes his Diet, being weary of the last, But to return to the Islands of our Ladies Sea, in one of them the Christians, with their Swords, kill'd a Beaft like a Badger, and in the Sea found much Mother of Pearl; and casting their Nets, among many other forts of Fish they caught, one was like a Swine, all cover'd with a very hard skin, no part whereof was foft but the Tail. They also observ'd that in this Sea, and the Islands, the Tide swell'd and fell much lower than in other Places, where they had been till then, and their Tides were quite contrary to ours; for it was low Water when the Moon was S. W. and by S.

#### XXX. CHAP.

How the Admiral set sail again Eastward for Hispaniola, and one of the Ships for sook him.

N Munday the 19th of November, the Admiral departed from the Princes Port in Cuba, and the Sea of our Lady, Steering Eastward for the Island of Bobio and Hilpaniola, but the Wind being contrary, he was forced to ply two or three days between the Island Isabella, which the Indians call. Semoto, and the said Princes Port, which lie almost North and South, about 25 Leagues distant, in which Sea he still found long Traces of those Weeds he had feen in the Ocean, and he perceived they fwam along the Current, and never lay athwart it. During this time Martin Alonzo Pin-

zon being inform'd by certain Indians he had Ms conceal'd aboard his Caraval, that in the lon Island Bohio, which we said was Hispaniola, Ad there was great plenty of Gold; Covetously blinding him, on Wednesday the 21st of November, he went away from the Admiral without any stress of Weather, or any other occasion, for he could have come up to him before the Wind, but would not, and so making as much way as possibly he could, his Vessel being an excellent sailer, he made forwards all Thursday, whereas they had fail'd in fight of one another all the day before, and Night coming on he quite vanish'd.

Thus the Admiral was left only with two Ships, and the Weather not being it for his Vessels to fail over towards Hispaniotar he was forced to return to Cuba. to mother Port not far from the Princes, which ne call'dSt. Catharines, there to take in Wood and Water. In this Port he accidentally faw figns of Gold on some Stones in the River where they were Watering, and up the Country there were Mountains full of fuch tall Pine Trees, as would make Masts for the biggest Ships. Nor was there any want of Wood for Planks, to build as many Ships as they would, and among them Oaks and others like those in Castile. But perceiving that all the Indians directed him to Hispaniola, he run along the Coast 10 or 12 Leagues farther towards the South-East, meeting all the way excellent Harbours, and many large Rivers. The Admiral fays fo much of the Delightfulness and Beauty of that Country, that I have thought fit here to fet down his own words, speaking of the Mouth of a River, which makes an Harbour by him call'd Puerto Santo, or Holy Harbour. Thus he fays, When I went with the Boats before me to the Mouth of the Harbour towards the South, I found a River, up whose Mouth a Gally could easily row, and the way up it was fuch, that it was not to be discover'd but close by: The Beauty of it invited me to go up a Boats length, where I found from 5 to 8 Fathom Water; and proceeding, I went a confiderable way up the River in the Boats; because, as well the Beauty and Delightfulness of the River, and the clearness of the Water, thro' which I could see the Sand at the bottom; as the abundance of Palm Trees of several forts, the finest and highest I had yet met with; the other, infinite Number of large green

Trees, the Birds and the verdure of the Plain, tempted me to fix there for ever. This Country, Most Serene Princes, is so wonderfully fine, and as far exceeds all other Beauty and Delightfulness, as the Day in brightness exceeds the Night. Therefore I often told my Companions, that the' I should never so much endeavour to give your Highnesses a Perfect Account of it my Tongue and Pen would always fall short of the Truth. And to say the Truth, I was astonished to see so much Beauty, and know not how to express it; for I have writ of the other Countries, of their Trees and Fruits, of the Plants and Ports, and of all that belong'd to them, as largely as I was able, yet not as I ought, fince all Men affirm'd it was impossible any other Country could be more delicious. Now I am filent. wishing this may be seen by others, who will write of it, that they may prove how little Credit is to be got more than I have done in Writing or Speaking of that Place considering what it deserves. The Admiral going on with his Boats, saw a Canoo among the Trees in the Port, drawn (upon Land under a Bower, which Canoo was made of the Body of one Tree, and as big Two vaft as a twelve Oar Barge, and in some Houses hard by, they found a Ball of Wax, and a Man's Skull in two Baskets hanging at a Post. The same they afterwards found in another House, which made our Men judge, they were the Sculls of the Founders of those Houses. No People appeared to receive any Information of, for as foon as ever they faw the Christians, they fled from their Houses to other Parts. Afterwards they found another Canoo about 70 Foot long, that would carry 50 Persons, made like the other we spoke of before.

## C H A P. XXXI.

# How the Admiral sail'd over to Hispaniola, and what he saw there.

Lastward along the Coast of Cuba, came to the East Point of it, which he call'd Alpla, and on Wednesday the 5th of December, struck off to fail over to Hispaniola, distant 16 Leagues from Cuba Eastward, and by reason of some Currents, could not reach it till the next day, when he put into Port St. Nicholas, so call'd by him in Memory of that Saint, whose Festival was that day. This Port is large, deep, fafe, and encompass'd with many tall Trees, but the Country is more Rocky, and the Trees are less, that is, like those of Castile, among which there were finall Oaks, Mirtle and other Shrubs, and a Pleasant River ran along a

Plain towards the Port, all about which, there were large Canoos like 15 Oar Barges. The Admiral not being able to meet with any of those People, ran along the Coast Northward, till he came to a Port he call'd the Conception, which lies almost due South of a small Island about the bigness of Gran Canaria, which was afterwards call'd Perceiving that this Island Bobio was very large, and that the Land and Trees were like those of Spain; and that at Tortugae one draught of a Net they had taken several Fishes, like those of Spain, as Soles, Salmon, Pilchards, Crabs, and some others, therefore on Sunday the 9th of December, they gave it the Name of Espannola, as call'd.

in English, Hispaniola. All of them being ve-Columbus. ry desirous to enquire into the Nature of this Island; whilst the Men were fishing on the Shoar, three Christians Travelled along the Mountain, and lighted on a Company of Indians, as Naked as those they had seen before, who feeing the Christians draw near them, in a great fright, ran into the thickest of the Wood, as having no Cloaths to hinder them. The Christians to get some information, ran after them, but could only overtake a young Woman, who had a Plate of Gold hanging at her Nose. She was carried to the Ships, where the Admiral gave her several Baubles, as Bells and Glass, and then sent her ashoar without the least disgust offer'd her, ordering three Indians of those he brought from the other Islands to go with her, and three Christians, to the Town where she dwelt. The next day he fent 11 Men ashoar well Arm'd, who having Travell'd four Leagues, found a fort of Town or Village of above 1000 Houses scattered about a Valley, the Inhabitants whereof feeing the Christians, all fled to the Woods. But the Indian Guide, whom our Men brought from St. Salvador, went after them, and faid fuch things to them of the Christians, affirming they were People come from Heaven, that he perswaded them to turn back quietly and without any Fear. Afterwards full of Astonishment they would lay their Hands on our Mens Heads by way of Honour, brought them to eat, and gave them all they defired, without asking any return, praying them to stay that Night in their Village. The Christians would not accept of the invitation, but returned to their Ships carrying the News that the Country was very Pleasant, abounding in their Provisions: that the People were whiter and handsomer than any they had yet seen in the other Islands, and that they were Tractable and Courteous, and told them the Country where the Gold was found, lay farther Eastward. The Admiral hearing this Account, set sail immediately, tho' the

Wind was contrary, and on Sunday following, being the 15th of December, as he was plying between Hispaniola and Tortuga, he found one Indian alone in a little Caseo, which they all wonder'd was not fwallowed by the Sea, the Wind and Waves were fo high. He took him into the Ship, carried him to Hispaniola, and set him ashoar with several Gifts. He told the Indians how kindly he had been used, and spoke so well of the Christians, that abundance of them came presently aboard, but they brought nothing of value, except some small grains of Gold hanging at their Ears and Nostrils, and being ask'd whence they had that Gold. they made figns there was a great deal higher up. The next day there came a great Canoo from the Island Tortuga, which was near the Place where the Admiral lay at Anchor, with 40 Men in it, at fuch time as the Cacique or Lord of that Port of Hifpaniola was upon the shoar, Bartering a Plate of Gold he had brought. When he and his faw the Canoo, they all fate themselves down upon the Ground, as a fign they would not fight. Immediately almost all those in the Canoo Landed, against whom the Cacique of Hispaniola got up alone, and with threatning words made them return to their Canoo. Then he threw Water after them, and taking up Stones off the Strand, cast them into the Sea towards the Canoo. But when they were all in fubmiffive manner return'd to their Canoo, he took up a Stone and delivered it to one of the Admiral's Officers, to throw at those in the Canoo, to express that he took the Admiral's part against the Indians, but the Officer did not throw, seeing they presently went off in their Canoo. After this, discoursing about the Affairs of that Island, which the Admiral had call'd Tortuga, he affirm'd there was more Gold in it than in Hispaniola, and that in Bohio there was more than in any other, which was about 15 days Journey from the Place where they were.

### CHAP. XXXII.

How the Principal King of the Island came aboard, and of the State he came in.

N Tuefday the 18 of December, the King that came the day before, where the Canoo of Tortuga was, and who lived 5 Leagues from the Place where the Ships lay, came in the Morning to the Town near the Sea, fome of the Spaniards at the same time being there by the Admiral's Order to see whether they brought any more Gold. These seeing

the King come, went to acquaint the Admiral, saying he brought above 200 Men along with him, and that he came not a Foot but was carry'd on a fort of Palanquine by four Men with great respect, tho' he was very Young. This King being at a small distance from the Ships, having rested a little, drew near with all his Men, concern-

ing which, the Admiral himself writes thus: Columbia. There is no doubt but your Highnesses had been very much pleas'd to have feen his Gravity, and the Respect his People pay'd him, tho' all Naked. When he came aboard, and understood I was under Deck, being then at Dinner, he furpris'd me, fitting down by me, without giving me time to go out to receive him, or rise from Ta-When he came down he made figns to all his Followers to stay above, which they did with great Respect, sitting down upon the Deck, except two Ancient Men that seemed to be his Councellours, that They faid this Man fat down at his Feet. was a Cacique. I order'd fuch Meat as I was eating, to be brought him; they just tasted of every thing, and sent the rest to their Men, who all cat of it. The same they did as to drinking, for they only kis'd the Cup and gave it about. They were all wonderful Grave, and spoke but; few words, and those they utter'd, by what I could gather, were very deliberate and staid. The two old Men observ'd the King's Mouth, and spoke for and to him. After eating, one of his Gentlemen with great Respect brought him a Girdle, not unlike those used in Castile, the differently wrought, which he took in his hand, and gave me with two pieces of wrought Gold very thin. Of which Gold I believe there is little here, and I guess'd that place was near to where they took it, which produced very I believing he would like a Carpet or Counterpain that lay on my Bed, gave it him,together with some fine Amber Beads I had about my Neck, with a pair of red Shooes, and a Bottle of Orange-flower Water, with which he was wonderfully pleas'd, and both

he and his Councellors express'd much concern because they did not understand me, nor I them, tho' I made out, that if I wanted any thing, all the Island was at my Command. I presently brought out a Letter-Case, in which I carry'd a Gold Medal weighing 4 Ducats, on which your Highnesses Effigies are cut, and showed it him, faying over again, that your Highnesses were Mighty Princes, and Posfest the best part of the World, and shewed him the Royal Standard, and the other of the Cross, which he made great Account of. Therefore turning to his Councellors, he faid, Your Highnesses were certainly Mighty Princes, fince you had fent me so far as from Heaven thither, without any fear. Much more pass'd between us, which I did not understand, but perceiv'd they admired at every thing they law; but it being then late, and he defiring to be gone, I fent him ashoar very Honourably in my Boat, and caused several Guns to be fired, and he being ashoar got into his Palanquine, attended by above 200 Men, and a Son of his was carried on a Man of Note's Shoulders. He ordered all the Spaniards that were ashoar, to have Meat given them, and to be very Courteoufly used. Afterwards a Sailer that met him on the way, told me, that every one of the things I had given him, were carry'd before him by a Man of great worth, and that his Son went not along with him on the Road, but at some distance behind him with as many more Attendance as he had, and a Brother of his a Foot, with near as many more, two great Men leading him under the Arms, to whom I had given some fmall Matters when he came aboard after his Brother.

#### CHAP. XXXIII.

How the Admiral lost his Ship upon the Flats thro the carelessness of the Sailers. and the assistance he received from the King of that Island.

HE Admiral continuing the Relation as above, fays, That on Monday the 24th of December, the Weather was very calm, without any Wind hardly, but so much as carried him from St. Thomas's Sea, to Punta Santta, or the Holy Cape, off which he lay by about a League, and about 11 of the Clock at Night he went to take his Rest, for he had not flept in two Days and a \*Admi- Night; and the Weather being Calm, the Probip Scaman that was at the Helm, left it to a Grummet, which (fays the Admiral) I had ·lorbid during the whole Voyage, bidding them, whether the Wind blew or not, never to leave the Helm to a Grummet. And Vol. II.

to say the Truth, I thought my self safe from Flats and Rocks, for that Sunday I sent my Boats to the King, they went at least three Leagues and a half beyond the faid Punta Santa, and the Seamen had view'd all the Coast, and the Shoals that lie three Leagues E. S. E. of that Cape, and observ'd which way to fail, which I had not done during the Voyage; and it pleafed our Lord, that at Midnight, seeing me gone to Bed, and we being in a dead calm and the Sea as still as the Water in a Dish, all the Men went to rest, leaving the Helm to a Grum-Thus it came to pass, that the Current eafily carried away the Ship upon one

7 M

of those Shoals, which tho' it was Night, Columbus made fuch a roaring Noise, that they might be heard and discover'd a League off. Then the Fellow who felt the Rudder strike and heard the Noise, began to cry out, and I hearing it, got up immediately, for none had yet perceived that we were a Ground. Presently the Master, whose Watch it was, came out, and I order'd him and other Sailers to take the Boat, and carry out an Anchor a Stern; whereupon he and others leap'd into the Boat, and I believing they would have done as I ordered, they row'd way, flying with the Boat to the other Caraval, which was half a League off. I then perceiving they ran away with the Boat, that the Water Ebb'd, and the Ship was in Danger, caused the Masts to be cut down, and lightned her as much as I could to see to get her off; but the Water still Ebbing, the Caraval could not budge, but turning athwart the Streams the scames opened, and all below Deck was full of Water. Mean while the Boat returned from the Caraval to relieve me, for the Men aboard perceiving the Boat fled, would not receive it, which oblig'd it to return to the Ship. No hopes of faving the Ship appearing, I went away to the Caraval to fave the Men, and because the Wind blew from the Land, and great part of the Night was spent, and yet we knew not which way to get from a-mong those Flats; I lay by with the Cara-val till day appeared, and then I drew towards Land within the Shoals, having first fent James de Arana the Provost, and Peter Gutierres your Highnesses Secretary, to acquaint the King with what had happened, telling him, That as I was going to visit him in his own Port, as he had defired the last Saturday, I had lost my Ship opposite to his Town, and a League and a half from

it upon a Flat. The King understanding Great it, with Tears in his Eyes, expressed much kinds Grief for our Loss, and immediately fent a the I board all the People in the Place, with span many large Canoos. So they and we began to unload, and in a short time carried off all that was upon Deck. The Affiftance this King gave was great; and after-wards he himself, with his Brothers and Kindred, took all possible Care both a. board and ashoar, that all things might be done orderly; and from time to time he fent some of his Kindred Weeping, to beg of me not to be dejected, for he would give me all he had. I do affure your Highneffes, better Order could not have been taken in any part of Castile, to secure our things, for we lost not the value of a Pin, for he caused all our Cloaths to be lay'd together near his Palace, where he kept them till the Houses were voided, which he had appointed for us. He placed Armed Men to keep them, who itood there all Day and all Night, and all the People Lamented, as if our Loss had concern'd them much; fo loving, tractable and free from Covetoufness they are, that I fwear to your Highnesses, there are no better People, nor a better Country in the World. They love their Neighbour as themselves, and their Conversation is the fweetest in the Universe, being Pleasant and always Smiling. True it is, both Men and Women go as Naked as they were born, yet your Highnesses may believe me, they have very commendable Customs, and the King is ferv'd with great State, and he is so staid, that it is a great satisfaction to see him, as it is to think what good Memories these People have, and how desirous they are to know every thing, which moves 'em to ask many Questions, and to enquire into the Cause and Effects of every thing.

### CHAP. XXXIV.

# How the Admiral resolved to plant a Colony where the King Resided, and call d it the Nativity.

N Wednesday the 26th of December, the Chief King of that Country came abourd the Admiral's Caraval, and expressing much Grief and Sorrow, Comforted him, offered all he would have, and saying he had already given the Christians three Houses to lay up all they got out of the Ship, and that he had given them many mose, had they stood in need of them. In the mean while a Canoo came with some tradians from another Island, bringing some Plates of Gold to exchange for Bells, which they valued above any thing. Besides the

Seamen came from Shoar, faying abundance of Indians reforted from other Places to the Town, who brought feveral things in Gold and gave them for Points, and other things of small value, offering to bring much more if the Christians would. Which the great Cacique perceiving was pleasing to the Admiral, he told him he would cause a great quantity to be brought from Cibaco, a Place that yielded much Gold. Being a Place that yielded much Gold. Being

with the Eyes, Nose and Ears of Gold, and Columbus other pretty things which they hung about their Necks. Then complaining of the Caral builds. Slaves and eat them, he was much Comfort-The Admi- ribbes, who carried away his Men to make ed, when the Admiral comforting him, show'd him our Weaponts, faying, he would be Island. defend him with them. He was much Aftonish'd at our Canon, which so terrified them, that they fell down as if they were Dead, when they heard the Report. The Admiral therefore finding to much kindness among those People, and such signs of Gold, almost forgot the grief conceiv'd for the loss of his Ship; thinking God had permitted it that he might fix a Colony there, and leave Christians to Trade, and get further Knowledge of the People and Country, learning the Language, and converting with the Natives, that when he returned from Spain with Succours, he might have some body to direct him in his Affairs, for Peopling and Subduing that Country. To this he was the more inclin'd, because many voluntarily offered themselves to stay and inhabit there. For this reason he resolved to build a Tower with the Timber of the Ship that was wreck'd, whereof he lost no part, but made use of it all. To forward his defign, the next day being Thursday, the 27th of December, News was brought, that the Caraval Pinta, was in a River towards the East Point of the Mand. To be affured of it, the Cacique, whose Name was Guacaungari, sent a Canoo with some Indians, who carried a Christian thither: He having gone 20 Leagues along the Coast, returned without any News of it, which was the Reason that no Credit was given to another Indian, who faid he had feen her some days before. Nevertheless the Admiral did not alter his Refolution of leaving fomeChristians in that Place who were all still more sensible of the Good-

ness and Wealth of the Country, the Indians bringing Masks and other things of Gold to give them, and telling them of feveral Provinces in the Island where it was The Admiral being now ready to depart, and discoursing with the King concerning the Caribbes, or Canibals, of whom they complain'd and were in great dread, therefore to pleafe him with leaving some Christians there, and at the same time make him afraid of our Arms, he caused a Gun to be fired against the side of the Ship, which shot quite thro' it, and the Bullet fell into the Water, which not a little terrified the Cacique Belides, he show'd him all our other Weapons, and how they offended with them, and defended themselves, telling him, that fince fuch Weapons were left to defend him, he needed not to fear the Caribbes, for the Christians would destroy them all, and he would leave them for his Guard, and return himself to Castile for Jewels and other things to give him. Then he particularly recommended to him James de Arana, Son to Roderick de Arana of Cordova, of whom mention has been made above. To him. and Peter Gutierres and Roderick de Eskovedos he left the Government of the Fort, and Command of 36 Men, with abundance of Commodities, Provision, Arms and Cannon, and the Boat that belong'd to the Ship, with Carpenters, Caulkers, and all other Neceffaries for fettling there, also a Surgeon, Gunner, and fuch like Persons. This done he repaired with all Pollible speed to return directly to Castile, without making any more Discoveries, fearing, fince he had but one Ship left, least some other Misfortune might befall him, which might hinder their Catholick Majesties coming to the Knowledge of those Kingdoms he had newly acquired for them.

#### XXXV. CHAP.

# How the Admiral set out to return to Spain, and found the other Caraval commanded by Pinzon.

N Friday the 4th of January, at Sunriting, the Admiral fet fail, with the Boats a-head, standing North-West, to get out of shoal Water, that was about the Port where he left the Christians, by him Historie the call'd the Port of the Nativity, because on feit Chris Christmas day he had Landed, escaping the him Colo danger of the Sca, and begun to build that Those Flats reach from Cape Santo to Cape Scrpe, which is fix Leagues, and run out above three Leagues to Sea, and all the Coast North-West and South-East is an open Strand, and Plain for four Leagues up the Country, where there are then high Mountains, and abundance of large Villages, in comparison of what is in the other Then he fail'd towards a high Illands. Mountain, which he call'd Monte Christo, and lies 18 Leagues E. of Cape Santo. So that whofoever would come to the City of the Nativity, when he discovers Monte Christo, which is round like a Pavillion, and looks almost like a Rock, must keep out at Sea two Leagues from it, and fail West till he

The other

Caraval

tound.

comes to Cape Santo, when the City of the Columbus. Nativity will be five Leagues from him, and whe must pass thro' certain (hanels among the Flats, which lie before it. The Admiral thought fit to mention these Marks, that it might be known where the first Habitation of Christians was in those Western Parts. Having failed East of Monte Christo with Contrary Winds, on Sunday the 6th of January, in the Morning, a Sailer from the round Top discovered the Caraval Pinta that was failing Westward, right before the Wind. As foon as it came up with the Admiral, Martin Alonzo Pinzon, the Captain, coming aboard the Admiral's Caraval, began to show some Reasons, and give excules for his leaving of him, faying it had happened against his Will. The Admiral, tho' he very well knew the contrary, and was fatisfied of the Man's Evil Inclination, remembring his bold manner of proceeding before in the Voyage, yet conniv d at him, and bore with all, for fear of ruining his Undertaking, which might eafily have been done, because most of his Crew were Martin Alonzo's Countrymen, and several of them his Relations. And the truth is, that when he forfook the Admiral, which was at Cuba, he

went away with a defign to fail to the Island Bobio, because the Indians aboard his Caraval told him, there was abundance of Gold When he was there and found nothing of what had been told him, he was returning towards Hispaniola, where other Indians had told him there was much Gold. and thus he had spent 20 days in failing not above 15 Leagues East of the Nativity, to a River which the Admiral call'd of Grace. and there Martin Alongo had lain 16 days, and had got Gold enough, as the Admiral had done at the Nativity, giving things of small value for it. Of this Gold he distributed one half among his Crew, to gain and please them, that he as Captain might keep the rest, and afterwards he would perfivade the Admiral that he knew nothing of all this. He now following on his way to come to an Anchor at Monte Christo; the Weather not permitting him to proceed further, he went in his Boat up a River, South-West of the Mount, where in the Sand he discovered figns of Gold dust, and therefore called it the River of Gold. This River lies 17 Leagues East of the Nativity, and is not much less than the River Guadalquiver that runs by Cordova.

#### CHAP. XXXVI.

Of the first Skirmish between the Christians and Indians, which happened about the Gulph of Samana in Hispaniola.

dians.

Fierce In- N Sunday the 13th of January, being near the Cape call'd Enamorado, or the Lovers Cape, the Admiral sent the Boat ashoar, where our Men found some Indians with fierce Countenances on the shoar, with Bows and Arrows, who feemed to be ready to engage, but at the same time were in a However, having some Confernation. Conference with them, they bought two of their Bows and some Arrows, and with much difficulty prevail'd to have one of them go Their Speech was aboard the Admiral. fuitable to their fierceness, which appeared greater than any People they had yet met with had shown, for their Faces were all daub'd over with Charcoal, it being the Cultom of all those People to Paint themtelves, some black, some red, and some white, some one way, and some another; their Hair was very long, and hung in a Bagg made of Parrots Feathers. One of them standing before the Admiral, as Naked as he was born, as all the others there till then discovered were, he said in a lofty tone, they all went so in those Parts. The Admiral thinking this was one of the Caribbes, and that the Bay parted them from Hispani-

ola; he ask'd of him where the Caribbes dwelt, who pointed with his Finger, in another Island Eastward, and that there were Pieces of Guanin, as big as half the Stern of the Caraval; and that the Island Matinino was all Inhabited by Women, with whom the Caribbes went and lay at a certain time of the Year; and if afterwards they brought forth Sons, they gave them to the Fathers to carry away. Having Answered to all the Questions put to them, partly by figns, and partly by that little the Indians of St. Salvador could understand of their Language, the Admiral gave them to eat, and some Baubles, as Glass Beads, and green and red Cloath, which done, he sent them ashoar, that they should cause Gold to be brought The Boat beif the others had any. ing ashoar, they found on the shoar among the Trees 55 of them, all Naked, with long Hair, as the Women in Spain wear it, and behind on the Crown of the Head, they had Plumes of Parrot's or other Birds Feathers, and all of them Arm'd with Bows and Arrows. When our Men Landed, the Indian that had been aboard made the others lay down their Bows and

Arrows

Arrows, and a great Cudgel they carry inolumbus. stead of a Sword, for, as has been said, they have no Iron at all: when they came to the Boar, the Christians stept a shoar, and having begun to Trade for Bows and Arrows by Order of the Admiral, the Indians who had already fold two, not only refused to fell any more, but with fcorn, made as if A 1724 they would feize the Christians, and ran to rub ibe their Bows and Arrows where they had left them, taking up with them Ropes to Bind our Men; they being upon their Guard feeing them come in that fury, tho' they were but seven, fell Courageously upon them, and cut one with a Sword on the Buttock, and shot another with an Arrow in the Breast. The Indians astonish'd at the resolution of our Men, and the Wounds our Weapons made, fled, most of them leaving their Bows and Arrows; and many of 'em had been kill'd, had not the Pilot of the Caraval, who Commanded the Boat, protected them. The Admiral was not at all

displeased at this Skirmish, imagining these

were the Caribbes all the other Indians fo much dreaded, or that at least they Border-

ed on them, they being a Bold and Refolute Pcople, as appeared by their Afpect,

Arms and Actions, and he hop'd that the I-

flanders hearing how seven Christians had behav'd themselves against 55 Fierce Indians

of that Country, they would the more Refpect and Honour our Men that were left behind at the Nativity, and would not dare to offend them. Afterwards, about Evening, they made a smoak at Land to show their Courage, wherefore the Boat went again to see what they would have, but they could never be brought to venture themselves, and so the Boat returned. Bows were of Yew, almost as big as those in France and England, the Arrows of small Twigs growing out of the ends of the Canes, which are Mattive and very streight, about the length of a Man's Arm and a half; the head is made of a finall Stick hardened at the Fire, about a quarter of a Yard and half long; at the end whereof they fix a Fishes Tooth, or Bone, and Poison it. For this reason the Admiral gave that Gulph the Name of Golpho de Flethas, that is, Gulph of Arrows, whereas the Indians call'd it Samana. There appear'd a great deal of fine Cotton, and Axi, which is the Pepper they use, and is very hot, some of it long and some round. Near Land, where there was little Water, grew abundance of those Weeds our Men faw in long strings upon the Ocean, whence they concluded it all grew near Land, and when ripe, broke loofe, and was carried out to Sea by the Current.

#### XXXVII. CHAP.

How the Admiral set out for Spain, and the Caraval Pinta was parted from him in a great Storm.

pain.

N Wednesday, the 16th of January, 1493. the Admiral set forward with ris return a fair Wind from the aforesaid Gulph of Arrows, now call'd Samana, towards Spain, because now both the Caravals were very Leaky, and they took much pains to keep them up: Cape Santelmo being the last Land they faw; 20 Leagues North-East of it, there appeared abundance of Weeds, and 20 Leagues still farther, they found all the Sea covered with small Tunny-fishes, whereof they faw great Numbers the two following days, which were the 19th and 20th of January, and after them abundance of Sca-Fowls, and all the way the Weeds ran with the Current in long Ropes, lying East and West, for they had already found, that the Current takes these Weeds a great way off, and that they keep not on long in the same way, for sometimes they go one way, and fometimes another, and this they faw almost every day, till they were almost half Seas over. Holding on their Course with a fair Wind, they made so much way, that Vol. II.

in the Opinion of the Pilots, on the 9th of February, they were South of the Islands Azores; but the Admiral said they were 150 Leagues short, and this was the Truth, for they still found abundance of Weeds, which as they went towards the Indies, they did not see till they were 2.63 Leagues West of the Island of Ferro. As they sailed A terrible on thus with fair Weather, the Wind began Storm. to rife more and more every day, and the Sea to run fo high, that they could scarce live upon it. For which reason, on Thursday the 14th of February, they drove which way foever the Wind would carry them; and the Caraval Pinta, Commanded by Pinzon, not being able to lie athwart the Sea, run away due North, before the South Wind. the Admiral Steering North-East to draw nearer to Spain, which the Caraval Pines could not do, by reason of the Darkness, tho' the Admiral had always his Light out. Thus when day appeared, they had quite loft fight of one another, each looking upon it as most certain, that the other was 7 N

lost; therefore betaking themselves to Pray-Columbus. ers and Religious Acts; those aboard the Admiral cast Lots, which of them should go in Pilgrimage for the whole Crew to our Lady of Guadalupe, which fell to the Admi-Afterwards they drew for another to go to Loretto, and the Lot fell upon one Peter de Villa, a Seaman of Port St. Mary. Then they cast Lots for a third, who was to Watch a Night at St. Olave of Moguer, and the Storm still increasing, they all made a vow to go barefoot and in their Shirts at the first Land they came to, to some Church of our Lady. Besides these general Vows, several others were made by Private Men, because the Tempest was now vehement, and the Admiral's Veffel could scarce withstand it for want of Ballast, which was fallen short, the Provisions being spent. ply which want, they thought convenient to fill all the Vessels in the Ship with Sea-Water, which was some help, and made the Ship bear more upright, and be in less danger of oversetting. Of this violent Storm, the Admiral has these Words. I had been less concern'd for the Tempest, had I alone been in danger, for I know I owe my Life to the Supream Creator, and because I have been other times to near Death, that only the least part was wanting to compleat it. But what infinitely Grieved and Troubled me was the confideration, that as it had pleafed our Lord to give me Faith and Affurance to go upon this undertaking, wherein I had now been fuccessful; so now that those who opposed it were to be convinced, and your Highnesses served by me with Honour and Increase of your Mighty State, his Divine Majesty should please to obstruct all this by my Death, which had yet been more tolerable, had it not been attended with the loss of all those Men I had · carried with me, upon promife of Happy Success. They seeing themselves in that affliction did not only Curle their fetting out, but the fear and awe my Perswasions infused into them, to diffwade their Return when outward Bound, as they had feveral times rejolved to do. But above all my Sorrow was double, when I remembered two Sons

I had left at School at Cordova, destitute of Friends, in a strange Country, before I had done, or at least could be known to have done any Service, which might be believed to incline your Highnesses to remember them. And the on the one fide I Comforted my felf with the Faith, that our Lord would not permit a thing which was so much for the exaltation of his Church, to be left imperfect, when I had with so much oppofition and trouble, almost brought it to Perfection: yet on the other fide I confidered. it was his Will, that because of my Demerits he would not permit me to obtain fuch Honour in this World, but fnatch'd it from Being in this inward Confusion, I remembered your Highnesses good Fortune, which tho' I were dead, and the Ship lost, might find some means that a Conquest so near atchiev'd should not be lost, and that it was possible the Success of my Voyage should by some means or other, come to your Knowledge. For this reason as briefly as the time would permit. I writ upon Parchment, that I had discovered those Lands, I had promis'd, as also in how many days, and what way I had done it, the goodness of those Lands, the Nature of the Inhabitants, and how your Highnesses Subjects were left in Possession of all I had Discovered; which Writing folded and Seal'd, I Superfcrib'd to your Highnesses, promising in Writing upon it a 1000 Ducats to bim, that should deliver it feal'd to you; to the end, that if any Foreigners found it, the promifed Reward might prevail with them, not to give that Intelligence to another. Then I caused a great Cask to be brought to me, and having wrapped the Writing in an Oyl'd Cloath, and then put it into a Cake of Wax, I droped it into the Cask, and having stop'd the Bung close, cast it into the Sea, all the Men fancying it was some Act of Devotion. And apprehending that might perhaps never be taken up, and the Ship still sailing nearer to Spain, I made another Pacquet like the first, and placed it at the top of the Poop, to the end that when the Ship funk, the Cask might take its chance, remaining still above Water.

#### CHAP. XXXVIII.

How the Admiral arrived at the Islands Azores, and the People of the Island of St. Mary took away his Boat and the Men in it.

They jpy Land.

CAiling on in fuch mighty danger, and the Admiral concluded it was one of the 10 great a Storm, on Friday the 15 of February, at break of day, one Ruy Garcia, from the Round Top, saw Land bear-E. N. E. from them. The Pilot and Seamen judg'd it was the Rock of Lisbon, but

Islands Azores, and tho' they were at no great distance from it, yet they could not come to an Anchor that day because of the \* Weather. Thus plying about because the Wind was East, they lost fight of that

Mland and discover'd another, about which Tolumbus. they ran struggling against Wind and Weather, with continual Labour and no respite, noe-being able to get to Land. Wherefore the Admiral in his Journal says, On Sarurday the 16th of February, I arrived at one of those Islands at Night, and by reason of the bad Weather, could not tell which of them it was. That Night I took a little rest, because from Wednesday till then, I had never flept, and was lame of both my Legs, having been continually in the open Air and wet, nor was it little that I suffered by Pro-Upon Monday Morning, being at an Anchor, I understood from some of the Inhabitants, that it was the Island of St. Mary, one of the Azores, and all of them admired I had escap'd, considering the terrible Storm, which had held for 15 days without inter-These People unmission in those Parts. derstanding what the Admiral had discovered, seem'd to rejoyce, giving Praise to God, and three of them came aboard with some fresh Provisions and many Complements from the Commander of the Island, who was far from thence at the Town; for about this Place, there was nothing to be feen but a Hermitage, which as they faid, was

Dedicated to the Bleffed Virgin. Thercupon the Admiral and all his Crew remembring they had made a Vow the Toursday before, to go barefoot and in their Shirts, the first Land they came at, to some Church of our Lady; they were all of Opinion they ought here to perform it, especially it being a Place where the People and Governour express d so much Affection and Tenderness for our Men, and belonging to a King, who was so great a Friend to him of Castile. Therefore the Admiral defired those three Men to repair to the Town, and cause the Chaplain to come that had the Atreache Keys of that Hermitage, that he might fay rous AS. These Men consenting, they Mass there. went into the Caraval's Boat, with half the Ship's Crew, that they migh, begin to perform their Vow, and being come back. the rest might go to do their Part. Being Landed barefooted and in their thirts, as they had Vow'd to do, the Governour, with abundance of People from the Town, who lay in Ambush, on a sudden rush'd our upon them and made them Prisoners, taking their Boat, without which he thought the Admiral could never get away from

### CHAP. XX.

## How the Admiral Weathered another Storm, and at last recovered hu Boat and Men.

THE Admiral thinking they stay'd too long, who were gone ashoar in the Boat; it being then Noon, whereas they went off by break of Day, he suspected fome misfortune had befallen them, either at tuguele Land or at Sea. Therefore not being able thought to from the Place where he lay, to discover feture the from the Frace where the track the the Hermitage they were gone to, he resolved Admiral. with his Ship to fail about a Point, whence the Church could be seen. Being come near, he saw abundance of People a Horsebuck, who difmounting, went into the Boat to attack the Caraval. The Admiral therefore mistrusting what might happen, ordered his Men to be in a readiness and Arm'd, but make no show of refistance, that the Portu-When they guese might come the nearer. were near the Admiral, the Captain of them stood up, demanding to Parley, which the Admiral granted, thinking he would come aboard, and might be fecur'd without breach of Faith, fince he had feiz'd his Men without Provocation. But the Portuguese durst not come nearer than to be heard, when the Admiral told him, he admired at his ir-. regular manner of Proceeding, and that none of his Men came in the Boxt since they

were gone ashoar upon a safe Conduct, and

offers of Relief, especially since the Governour himself had sent to welcome him. He therefore defired him to confider, that befides his doing an Action which Enemies would not be guilty of, and against the Laws of Honour, the King of Portugal would be highly offended at it, whose Subjects were, when they Landed, in the Dominions of their Catholick Majesties, or resided there, made much of, and treated with all manner of Civility, and were fafe without any fafe Conduct, as if they were in Lisbon; besides that their Highnesses had given him Letters of Recommendation to all Princes, Potentates, and other Persons in the World, which he would show him if he drew near. Therefore fince fuch Letters were receiv'd with Respect in all Parts, and he and the King's Subjects well treated on their Account, much more they ought to be so in Portugal, their Princes being to near Neighbours and Allies, especially, he being their great Admiral of the Ocean and Vice-Roy of the Indies he had discovered, all which he was ready to show him under their Highnesses Hands and Seals. Accordingly at that distance he show'd his Committions, and told him he might draw near without any Apprehension,

for as much as in regard to the Peace and Columbus. Amity betwixt their Catholick Majesties and v the King of Portugal, they had Commanded him to pay the utmost Civility to such Portuguese Ships as he met; adding, that though he should obstinately persist in keeping his Men, yet that would not prevent his returning to Spain, he having still Men enough to Sail to Sevil, and to do him harm, if need were, whereof he himself would be the occasion, and such Punishment would be adjudged well deserved of him, besides that his King would Punish him, as giving cause for a War between him and their Catholick Majesties. The Captain and his Men Answered, that they neither knew their Catholick Majesties, nor their Letters, nor did they fear them, and would make him know what Portugal was. By this Answer the Admiral suspected, there had some Breach happened between the two Crowns fince his Departure, and therefore gave him such an Anfwer as his Folly deferv'd. At last when they were Parting, the Captain stood up, and at a great distance said, he might go to the Harbour with his Caraval, for that all he did, was by Order of the King his Master. The Admiral hearing it, call'd all that were aboard to bear witness, and calling to the Captain and Portuguese, swore he would never go off the Caraval, till he had taken an 100 Portuguese to carry them into Castile, and to destroy all that Island. This faid, he again came to an Anchor in the Port, where he was at first, the Weather obliging him to it. But the next day the Wind still increasing, and the Place where he lay being unlate, he lost his Anchors, and was forced to stand out to Sea, towards the Island of St. Michael, where in Case he could not come to an Anchor, he had refolved to run it out at Sea, not without

much Danger, as well because the Sea ran high, as by reason he had but three able Seamen left, and some Grummets, all the rest being Land Men, and Indians -tho understood nothing of Sea affairs. But funplying the want of the abient in his own Person, he passed that Night with much Labour and Danger, till day appearing, perceiving he had loft fight of the Illand of St. Michael, and that the Weather was calmer, he resolved to return to the Island of St. Mary, to endeavour to recover his Men, Anchors, and Boat. He came up with it on Thursday the 21st of January, after Noon, and foon after the Boat came off with five Men and a Notary, who all upon Security given them, went aboard and lay there that Night, it being late. The next day they faid they came from the Captain to know for certain whence the Ship came, and whether it had the King of Spain's Commission, which being made out, they were ready to show them all manner of Friendship, which they did because they could not seize the Ship nor the Admiral, and that they might fufler for what they had done. The Admiral suppressing his resentment, said, he thank'd them for their Civil Offers, and fince they proceeded according to the Maritime Laws and Customs, he was ready to fatisfy them; and accordingly show'd them the King of Spain's General Letter of Recommendation, Directed to all his Subjects and those of other Princes, as also his Commission for that Voyage; which the Portugueses having seen, they went ashoar satisfied, and soon difinished the Seamen, with their Boat, of  $\vec{q}$ whom they understood it was reported in the 'N Island, that the King had sent Orders to all his Subjects to secure the Person of the Admiral by any means whatfoever.

### CHAP. XL.

## How the Admiral sail'd from the Islands Azores, and was forced into Lisbon by a Storm.

Another terrible Storm.

N Sunday the 24th of February, the Admiral fail'd from the Island of St. Mary for Spain, being in great want of Wood and Ballast, which he could not take in, because of the bad Weather, tho' the Wind was fair for his Voyage. Being an 100 Leagues from the nearest Land, a Swallow came into the Ship, which as was believ'd the Storm had drove out to Sea, which appeared more plainly, because the next day being the 28th of February, a great many more Swallows and Land Fowl came aboard, and they faw a Whale. On the 3d of March the Tempest was so great, that after Midnight it split their Sails, wherefore being in great danger of their Lives, they made a Vow to send one in Pilgrimage to our Lady de Cinta at Guelva, whither he was to go baresoot, and in his shirt. The Lot fell again upon the Admiral, God showing thereby, that hisOfferings were more acceptable than those of others; belides which, other private Vows were made. Thus running on without a Rag of Cloath, but bare Masts, a mighty Sea, high Winds and frightfull Thunder, each of which feem'd enough to destroy the Caraval.

it pleased God to give them fight of Land. Columbus. about Midnight, which offered no less danger than the rest; for to avoid being bearen to pieces, and running into some Place where they knew not how to get off, they were forced to make some Sail, to bear up against the Storm till day, which appearing, they found they were upon the Rock of Lubon. The Admiral was forced to put in there, to the great Aftonishment of the Peo-The Admi. ple of that Country, and their Seamen, who rd at Lis ran from all Parts to behold, as it were some Wonder, a Ship that had cscap'd so terrible a Storm; having receiv'd News of many

Ships that had Perish'd about Flanders, and in other Countries of late days. He came to an Anchor in the River of Lisbon upon Monday the 4th of March, and presently sent away an Express to their Catholick Majefties with the News of his Arrival, and another to the King of Portugal, asking leave to go up to Anchor before the City, the Place where he was, not being fafe, against any that should design to do him harm, upon pretence, it was done by the King's Order, as believing by his Ruine, they might obstruct the King of Spain's Success.

ment, and all things he stood in need of ei-

### CHAP. XLI.

How the People of Lisbon came to see the Admiral, as a Prodigy; and he went to Visit the King of Portugal.

The Admito quit bie Veffel.

N Tuesday the 5th of March, the Mafter of a great Guard Ship that lay rat refuses in the Harbour, came with his Boat full of Arm'd Men to the Admiral's Caraval, requiring him to come along to give an Account of himself to the King's Officers, as was practifed by all Ships that came into the Harbour. He Autwered, That the King of Spain's Admirals, as he was, were not oblig'd to obey any fuch Summons, nor to quit their Ships, to give any Account of themselves, and he was resolved to do his Duty. The Master bid him at least to send The Admiral reply'd, It his Boatswain. was still the same thing, whether he sent a Grummet, or went himself, and therefore it was in vain to defire him to fend any Body. The Master being sensible he was in the Right, defired him at least to show him the King of Spain's Letter, that he might fatisfy his Captain: This being but reasonable, the Admiral show'd him their Catholick Majesties Letter, with which he was satisfied, and went back to his Ship to give an Account of what had happened to Alvaro de Acumna his Capmin, who came immediately with Trumpets, Fifes, Drums, and great State, aboard the Admiral, expressing much kindness, and offering his Service. ·The next day it being known at Lisbon, that the Ship came from the Indies, such throngs of People went aboard to see the Indians, and hear News, that the Caraval could not contain them, and the Water was covered with Boats, forne of them Praising God for so great a Happiness, and others Storming that they had lost that Discovery, thro' their King's incredulity; fo that day was spent with great concourse of People. The next day, the King Ordered his Officers to pretent the Admiral with all forts of Refresh-Vol. II.

ther for himself, or his Men, without asking any Pay. At the same time he writ to the Admiral, Congratulating this Happy Arrival, and defiring, fince he was in his Dominions, he would come to see him. The Admiral was doubtful what to do in this Case, but he considered the King was in Amity with their Catholiek Majesties, and had treated him Courteoufly; and besides, to take off all suspicion that he came from his Conquests, he consented to go to Valparaiso, 9 Leagues from Lisbon, where the King was, whither he came on Saturday Night, being the 9th of March. The King ordered all the Nobility of his Court to go out to meet him, and being come into his Prefence, did him great Honour, commanding him to put on his Cap and fit down, and having with a chearful Countenance heard Nobly re the Particulars of his Prosperous Voyage, ceiv'd offered him all he stood in need of, for the the King Service of their Catholick Majelties, though he thought, that for as much as he had been a Captain in Portugal, that Conquest belong'd to him. To which the Admiral Answered, That he knew of no such Agreement, and that he had strictly observ'd his Orders, which were not to go to the Mines of Portugal, nor to Guinea. The King faid, all was well, and he doubted not but Justice would be done. Having spent a long time in this fort of Discourse, the King Commanded the Prior of Crato, the greatest Man then about him, to Entertain the Admiral, and show him all Civility and Respect, which was done accordingly. Having stay'd there all Sunday and all Monday, till after Mass, the Admiral took leave of the King, who express'd great Kindness, and made him great Proffers, ordering D. Martin de

Noronba to go along with him, and many Columbus, other Gentlemen went for Company to Hov nour him, and hear an Account of his Voyage. As he was thus on his way to Lisbon, he pass'd by a Monastery, where the Queen then was, who fent earnestly to intreat him he would not pais by without feeing her.

She was much pleased to see him, and did

him all the Favour and Honour that was due to the greatest Lord. That Night 2 Gentleman came from the King, to the Admiral, to let him know, that if he pleased to go by Land into Spain, he would attend him, provide Lodgings all the way, and furnish him all necessaries, as far as the Borders of Portugal.

### CHAP. XLII.

## How the Admiral left Lisbon to return to Castile by Sea.

to Palos.

The Admi- N Wednesday the 13th of March, two hours often day for Sevil, and on Friday following at Noon, arrived at Saltes, and came to an Anchor in the Port of Palos, whence he had fet out on the 3d of August the foregoing Year 1492, 7 Months and 11 days before his Return. He was there received by all the People in Procession, giving thanks to God for his Prosperous Success, which it was hop'd, would redound so much to the Propagation of Christianity, and increase of their Catholick Majesties Dominions; all the Inhabitants of that Place looking upon it as a great matter that the Admiral set out from thence, and that most of the Men he had with him, belong'd to it, tho' many of them, thro' Pinzon's fault, had been Mutinous and Difobedient. It happened that when the Admiral came to Palos, Pingon was arriv'd in Galizia, and defign'd to go by himself to Barcelong to carry the News to their Catholick Majesties, who sent him Orders not to go thigher without the Admiral, with whom he had been sent to Discover, at which he was so concern'd and offended, that he return'd indispos'd, to his Native Country, where within a few days he dyed for Grief: But before he got to Palos, the Admiral fet out for Sevil, defigning thence for Barcelona, where their Catholick Majesties were; and he was forced

to ftay a little by the way, tho' but never so little, to the so great Admiration of the People wherefoever he went, that they ran from all the neighbouring Towns, down to the Roads to see him, the Indians, and other things he brought. Thus holding on his way he got to Barcelona about the middle of April, having before fent their Highnesses an Account of the Happy Success of his Voyage, which was extraordinary Pleafing to them, and they ordered him a most So-Hin lemn Reception, as to a Man that had done tion them fuch fingular Service. All the Court and Bar City went out to meet him; and their Catholick Majesties sate in Publick with great State, on rich Chairs under a Canopy of Cloath of Gold; and when he went to kiss their Hands, they stood up to him as to a great Lord, made a difficulty to give him their Hands, and caused him to fit down. Having given a brief Account of his Voyage, they gave him leave to retire to his Appartment, whither he was attended by all the Court; and he was so highly Honoured and Favoured by their Highnesses, that when the King rode about Barcelona, the Admiral was on one fide of him, and the Infante Fortuna on the other; whereas before, none went by his Majesty but the faid Infance, who was his near Kinfman.

#### CHAP. XLIII.

How it was resolved that the Admiral should return with a Powerful Fleet to People the Island Hispaniola, and his Holinesses Approbation of the Conquest was obtain'd.

The Pope's grant.

Rders were given at Barcelona, with great Care and Expedition for the Admiral's Return to Hispaniola, as well to relieve those that were left there, as to enlarge the Colony and fubdue the Island, with the rest that were and should be discovered. To make their Title to them the itronger, their Catholick Majetties, by the Advice of the Admiral, procured the Pope's

Approbation and Confent for the Conquest of the faid Indies, which Pope Alexander the 6th, who then Governed the Church, readily granted; not only for what was already, but for all that should be discovered Westward, till it should come to the East, where any Christian Prince was then Actually in Poffession, forbiding all Persons in General, to intrude within those Bounds.

The same his Holiness confirm'd the next Year. Columbus. in very fignificant Terms. And their Catholick Majesties being sensible that the Admiral had been the cause of all this Favour granted by the Pope, and that his Discovery had Entitled them to the Posseilion of all those Parts, they were pleafed he should be immediately gratify'd at Barcelons, on the 28th of May, and therefore granted him a New Privilege,

or rather an Exposition, and Explanation of what he had before, confirming to him all they lead Granted before, and in plain Terms declared how far the Bounds of his Admiralship, and Vice-Royship extended. being over all that which his Holineis had granted them, thus ratifying what they had given him before, which Privileges and Prerogatives are as follows.

## CHAP. XLIV.

## Privileges and Prerogatives granted by their Catholick Majesties to the Admiral.

Ferdinand and Elizabeth, by the Grace of Gud. King and A of God, King and Queen of Coffile, of Leon, of Aragon, of Sicily, of Granada, of Toledo, of Valencia, of Galicia, of Majorca, of Minorca, of Sevil, of Sardinia, of Juen, of Algarve, of Algezira, of Gibralter, of the Canary Islands, Count and Countess of Barcelona, Lord and Lady of Bifcay and Molina, Duke and Dutchess of Athens and Neopatria, Count and Countels of Roussillion, and Cerdaigne, Marquels and Marchionels of Oristan, and Gociano, &c. For as much as you Chriflopher Columbia, are going by our Command with some of our Vessels and Men to Discocover and Subdue some Islands and Continent in the Ocean, and it is hop'd that by God's Affiftance, some of the faid Islands and Continent in the Ocean will be Discovered and Conquer'd by your Means and Conduct, therefore it is but Just and Reasonable, that fince you expose your self to such danger to serve us, you should be rewarded for it. And we being willing to Honour and Favour you for the Reasons aforesaid; Our Will is, That you, Christopher Columbus, after Discovering and Conquering the said Islands and Continent in the said Ocean, or any of them, shall be our Admiral of the faid Islands and Continent you shall so Difcover and Conquer; and that you be our Admiral, Vice Roy, and Governour in them, and that for the Future you may call and stile your felf, D. Christopher Columbus, and that your Sons and Successors in the faid Employment may call themselves Dons, Admirals, Vice-Roys and Governours of them; and that you may excercise the Office of Admiral, with the charge of Vice-Roy and Governour of the faid Islands and Continent, which you and your Lieutenants shall Conquer, and freely decide all Caufes Civil and Criminal, appertaining to the faid Employment of Admiral, Vice-Roy and Governour, as you shall think fit in Justice, and as the Admirals of our Kingdoms ufe do; and that you have Power to Punish

Offenders; and you and your Lieutenants exercise the Employments of Admiral, Vice-Roy and Governour in all things belonging to the faid Offices, or any of them; and that you enjoy the Perquilites and Sallaries belonging to the faid Employments, and to each of them, in the same manner as the High Admiral of our Kingdoms does. And by this our Letter, or a Copy of it Sign'd by a Publick Notary: We Command Prince John our most dearly Beloved Son, the Infantes, Dukes, Prelates, Marquesses, Great The Admi-Mafters and Military Orders, Priors, Com- ters Pamendaries. our Councellors, Judges, and o- tens. ther Officers of Justice whatsoever, belonging to our Houshold, Courts, and Chancery, and Conitables of Castles, strong Houses, and others; and all Corporations, Bayliffs, Governours, Judges, Commanders, Sea Officers; and the Aldermen, Common-Council, Officers, and Good People of all Cities, Lands and Places in our Kingdoms and Dominions, and in those you shall Conquer and Subdue, and the Captains, Masters, Mates, and other Officers and Sailers, our Natural Subjects now being, or that shall be for the time to come, and any of them, that when you shall have discovered the said Islands and Continent in the Ocean; and you, or any that shall have your Committion, shall have taken the usual Oath in such Cases, that they, for the future, look upon you as long as you live, and after you, your Son and Heir, and so from one Heir to another for ever; as our Admiral on our faid Ocean, and as Vice-Roy and Governour of the faid Islands and Continent, by you Christopher Columbus Discovered and Conquered; and that they treat you and your Lieurenants, by you appointed, for executing the Employments of Admiral, Vice-Roy, and Governour, as such in all Respects, and give you all the Perquifices and other things belonging and appertaining to the faid Offices; and allow, and cause to be allow'd you, all the Honours, Graces, Concessions, Preheminences,

ninences, Prerogatives, Immunities and other Columbus things, or any of them which are due to you, v by Vertue of your Commands, of Admiral, Vice-Roy, and Governour, and to be obferved compleatly, so that nothing be diminished; and that they make no Objection to this, or any part of it, nor suffer it to be made; for as much as we from this time forward, by this our Letter, bestow on you the Employments of Admiral, Vice-Roy, and Perpetual Governour for ever; and we put you into Possellion of the said Offices, and of every of them, and full Power to use and exercise them, and to receive the Perquifites and Sallaries belonging to them,or any of them, as was faid above. Concerning all which things, if it be requifite, and you shall defire it, We Command our Chancellour, Notaries and other Officers, to País, Seal and Deliver to you, our Letter of Privilege, in such Firm and Legal manner, as you shall require or stand in need of. And that none of them prefume to do any thing to the contrary, upon pain of our Dipleasure, and Forfeiture of 30 Ducats for each Offence. And we Command him, who shall show them this our Letter, that he Summon them to appear before us at our Court, where we shall then be, within 15 days after fuch Summons, under the faid Penalty. Under which same we also Command any Publick Notary whatfoever, that he give to him that shows it him, a Certificate under his Seal, that we may know how our Command is Obey'd.

> Given at Granada, on the 30th of April, in the Year of our Lord 1492. I the King, I the Queen.

By their Majesties Command, John Coloma Secretary to the King and Queen. Entered according to Order Roderick Dostor. Registred, Schastian Dolana, Francu de Madrid, Chancellors.

And now for as much as it has Pleafed The Confir- our Lord, that you have Discovered several of the faid Islands, as we still hope you will mation. by his Grace, discover and find others and the Continent, in the faid Ocean, and those Parts of the Indies, and have defired and requested of us, that we would confirm to you our faid Grant here set down, and all the Contents of it, to the end that you and your Children, Heirs and Successors, one after another, and after your days, may have and enjoy the faid Employments, of Admiral, Vice-Roy, and Governour, of the faid Ocean, Islands and Continent, as well of those you have already found and discoyered, as of those you shall for the future

. 18

find and discover with all the Power, Preheminence and Prerogative, as the Admirals, Vice-Roys, and Governours in our Kingdoms, of Castile and Leon do enjoy, and that all the Perquifites and Sallaries appertaining and belonging to the faid Offices, and Granted and Allow'd to our Admirals. Vice-Roys and Governours, may be made good to you; or that we made such Provition in this Case, as in our Goodness we shall think fit. And we having regard to the Hazard and Danger you have expos'd your felf to in our Service, in going to difcover and find out the faid Islands, and that which you now run in attempting to find out the other Islands and Continent, wherein we have been, and hope to be by you well served: To Requite and Reward you, do by these Presents, confirm to you and your Children, Heirs and Successours, one after another, now and for ever the faid Employments of Admiral of the faid Ocean, and Vice-Roy, and Governour of the faid Islands and Continent by you discovered and found out; and of the other Islands and Continent, that shall be by you, or your Industry found, or discovered for the Future in those Parts of the Indies. And it is our Will, that you, and after you your Children, Heirs and Successors, one after another, enjoy the faid Employment of our Admiral of the faid Ocean, which is ours, and Commences at a Line, we have caused to be drawn, from the Islands Azores, to those of Cabo Verde, and so from Pole to Pole, North and South; so that all beyond the faid Line Westward, is ours, and belongs to us. And accordingly we Constitute you Admiral, and your Sons and Successors, one after another, of all that Part for ever. And we also appoint you, our Vice-Roy and Governour, and after you, your Sons, Heirs and Successors, one after another, of the faid Islands and Continent, discovered, and to be discovered in the said Ocean in those Parts of the Indies, as has been faid: and we grant you the Possession of all the faid Employments of Admiral, Vice-Roy and Governour for ever, with full Committion and Authority to Use and Exercise in the faid Sea, the Office of Admiral in all those things, and in the same Manner and Form, and with the Rights and Privileges, Perquifites and Sallaries, as our Admirals of Castile and Leon, have and do use, have enjoy'd or injoy, as well in the faid Islands and Continent already discovered, as in those that shall hereafter be discovered in the said Ocean and faid Parts of the Indies, that the Planters of them all may be the better Go-And we grant you fuch Power verned. and Authority, that you may as our Vice

Roy and Governour, and your Lieutenants, olumbu: Judges, Commanders, and Officers by you created, exercise the Civil and Criminal Jurisdi-Stion, the Supream and Mean Authority, and the Absolute and Mixt Command. And in those Places you may remove, turn out, and put in others in their Places, as often as you please, and shall think convenient for our Service. And that they have Power to Hear, Judge, and Determine all Sutes or Causes, Civil or Criminal, that shall occur or arise in the said Islands or Continent; and that they have and receive the Fees and Salaries usually Annex'd, and appertaining to those Employments in our Kingdoms of Castile and Leon. And you our said Vice-Roy and Governour may hear and determine all the faid Caufes and any of them, when foever you shall please upon the first Motion by way of Appeal or Complaint, and Examine, Determine and Defide them, as our Vice-Roy and Governour; and you and your Children may do all that is reasonable in fuch Cases, and all other things appertaining to the Office of Vice-Roy and Governour, and that you and your Lieutenants and Officers appointed to this purpose, may take fuch cognizance, and use such methods as you shall think proper for our Service, and the execution of our Justice. All which you and they may do and perform Lawfully and effectually, as they might and ought to do, had the faid Officers been appointed by us. But our Will and Pleasure is, That fuch Letters Patents, as you shall grant, be Drawn and Granted in our Name, with these Words, Ferdinand and Elizabeth by the Grace of God, King and Queen of Castile and Leon, &c. and be Sealed with our Seal, which we will cause to be given you for the faid Islands and Continent. And we Command all the People, Inhabitants and other Persons in the said Island and Continent, to obey you as our Vice-Roy and Governour of the same; and those that fail on the said Seas to Obey you, as our Admiral of the faid Occan; and that all of them execute your Letters and Orders, and take part with you and your Officers, for the execution of our Justice; and give, and cause to be given you, all the Aid and Assistance you shall require and stand in need of, upon fuch Penalties as you shall impose on them, which we by these Presents do

impose on them, and do look upon them as impos'd; and do grant you Authority to execute them on their Persons and Goods. And it is also our Will, That if you shall find it for our Service, and the execution of Justice, That any Persons who shall be in the said Islands or Continent, depart from them, and do not return nor stay in them, and that they come and appear before us, you may in our Name Command, and make them depart the faid Islands. All whom by these Presents we Command, that they presently Perform, Execute and put in Practice that has been faid, without looking further, or asking Advice upon it, nor expecting any other Letter or Command from us, notwithstanding any Appeal or Petition they shall make or present against your said Order. For all which things, and any other due or belonging to the faid Offices of our Admiral, Vice-Roy and Governour, we give you fufficient Authority, with all Incidents, Dependencies, and Emergencies to them Annex'd or Inherent. Concerning all which things, if it shall be your Will, we do command our Chancellor, Notaries, and other Officers belonging to our Seals, that they Give, Pass, Dispatch and Seal you our Letter of Privilege, made as effective, firm and strong, as you shall require of them and stand in need of; and that none of them presume to do any thing to the contrary, upon Pain of our Displeature, and of 30 Ducats to be paid to our Treasury by every one that shall be guilty of the contrary. And besides, we Command him that shall show them this our Letter to Summon them to appear before us at our Court, wherefoever we are, within 15 days upon the faid Penalty. Under which we command any Publick Notary, that shall be call'd for such Purpose, that he give to him that shall show it him, a Certificate fign'd under his hand, that we may know how our Commands are obey'd. Given in the City of Barcelona, the 28th of May, in the Year of our Lord 1493.

I the King, I the Queen. By their Majesties Order, Ferdinand Aiva-

rez de Toledo, Secretary to the King and Queen, our Lord and Lady.

Peter Gutierres, Chancellor, without Fees, for Seal or Entry Deliver'd Roderick Doftor. Entred Alonzo Perez.

# CHAP. XLV.

How the Admiral went from Barcelona to Seville, and fet out thence for Hispaniola.

the Admiral departed from Barcelona for Seville their Catholick Majesties had ordered him to Vøl. II.

LL things necessary for the Peopling in June, and being come thither, so dili-of those Countries, being provided, gently sollicited the fitting out of the Fleet

provide, that in a short time 17 Ships, be-Columbus tween great and finall, were made ready, well stored with Provisions, and with all things thought necessary for Peopling of those Countries, as Hundicrafts of all forts, Labourers, Countrymen to Till the Land; besides, the Fame of Gold and other Rarities in those Countries, had drawn together so many Gentlemen and other Persons of worth; that it was necessary to lessen the Number, and not to allow in many to go aboard, at least till it appeared in some Measure how things would succeed in those Parts, and till things were a little fettled. Yet was it impossible so much to confine the Number of People that went aboard, but that it amounted to 1500 of all forts; among whom some carried Horses, Asses and other Beafts, which were afterwards of great Use and Advantage to the Planters in those Countries.

Being thus furnished, the Admiral weighed Anchor in the Road of Cadiz, where the Fleet had been fitted, upon Wednesday the 25th of September, 1493, an Hour before Sun-rifing, my Brother an I being there, and stood South-West for the Canary Islands. defigning there to take in some necessary Refreshment. On the 28th of September, being 100 Leagues from Spain, there came aboard the Admiral's Ship, abundance of i Land-Fowl, Turtle Doves, and other forts' of small Birds, which seem'd to be passing to over to Winter in Africk, and to come from the Islands Azores. He holding on his Course, on Wednesday the 2d of October, arrived at Gran Canaria, and came to an Anchor: At Midnight fail'd again for Gomera, where he arriv'd on the 5th of October, and Orders were given for taking up with all speed, whatsoever the Fleet stood in need of.

### XLVI. CHAP.

## How the Admiral departing from Gomera, croffed the Ocean and discovered the Caribbee Island

N Monday the 7th of October, the Admiral continued his Voyage towards the Indies, having first delivered a Commisfion thut up and Seal'd, to every Ship, commanding them not to open it, unless they were separated from him by stress of Weather, for he in those Letters giving an Account of the Course they were to steer, to come to the Town of the Nativity in Hispaniola, would not have that Course known to any without great need. Thus failing with a fair Gale till Thursday the 24th of October, when being 400 Leagues West of Gomera, he yet met with none of the Weeds he had feen the first Voyage, when he was out but 250 Leagues, to the great astonishment of them all; that day and the next, a Swallow flew about the Fleet. On Saturday at Night, the Body of St. Elmo was feen, with seven lighted Candles on the Round-Top, and there followed mighty Rains, and frightful Thunder. I mean, the Lights were feen, which the Seamen affirm to be the Body of St. Elmo, and they fing Litanies and Prayers to him; looking upon it as most certain, that in those Storms where he appears, there can be no danger. Whatsoever this is, I leave to them, for if we will believe Pliny, when fuch Lights appeared in those times to the Roman Sailers in a Storm, they faid they were Castor and Polluz, whereof Seneca makes mention also, at the beginning of his first Book of Nature.

But to return to our History; on Saturday, the 2d of November, at Night, the Admiral perceiving a great Alteration in the Sky and Winds, and taking Notice of the Mighty Rains, he concluded for certain that he was near some Land, and for this Reason caused most of the Sails to be furl'd, and ordered all to be upon the Watch; nor without cause, for that same Night, as Day began to break, they spy'd Land 7 Leagues to the Westward, which was a high Mountainous Mand, and he call'd it Dominica, because discovered upon Sunaay Morning. while after he law another Island North-East of Dominica, and then another, and another after that, more Northward For which Mercy God had been pleafed to bestow on them, all the Men affembling in the Poop, fung the Salve Regina, and other Prayers and Hymns very Devoutly, giving thanks to God, for that in 20 days after departing from Gomera, they had made that Land, judging the distance between them to be between 750 and 800 Leagues. And finding no convenient Place to come to an Anchor on the East side of the Island Dominica, they stood over to another Island which the Admiral call'd Marigalante, that being hi Ship's Name. Here Landing, he with al necessary Solemnity again confirm'd the Pol session he had in his first Voyage, taken o all the Mands and Continent of the West-In dies, for their Catholick Majesties.

## CHAP. XLVII.

# How the Admiral discovered the Island of Guadalupe, and what he saw there.

N Monday the 4th of November, the Admiral fail'd from the Island Marigalante Northwards, by another Great Island, which he call'd St. Mary of Guadalupe, for his own Devotion, and at the request of the Friars of the House of that Name, to whom he had made a Promise to call some Island by the Name of their Monastery. Before he came to it, at two Leagues dilbance, they discovered a very high Rock, ending in a Point, whence gush'd out a stream of Water, as thick as a large Barrel, which falling made fuch a Noife, that it was heard aboard the Ships, tho' many affirm'd it was only a white vein in the Rock, the Water was fo white and frothy by reason of its steep fall. Going ashoar in the Boat to view a sort of Town they faw from the shoar, they found no body there, the People being fled to the Woods, except some Children, to whose Arms they ty'd some Baubles to allure their Fathers when they returned. In the Houses they found Geese like ours, and abundance of Parrots with red, green, blue and white Feathers, as big as common Cocks; they also found Pompions, and a fort of Fruit, which look'd like our green Pine Apples, but much bigger, and within, full of a folid Meat, like a Melon, and much fweeter both in tafte and fmell, which grow on long stalks like Lilies or Alges, wild about the Fields, and are better than those that are brought up by Art, as afterwards appeared. They also saw other forts of Fruits and Herbs differing from ours. Beds of Cotton Nets, that is Hammacks, Bows, and Arrows, and other fuch things, of which our Men took none, that the Indians might be the less asraid of the Christians. But what they most admired was, that they found an Iron Pan, tho' I believe that the Rocks and Fire-stopes in that Country being of the Colour of bright Iron, a Person of but indifferent judgment that found it, without looking further, took it for Iron, tho' in Truth it was not fo; for as much as from that day to this, there was never any thing of Iron found among those People, nor did I hear the Admiral speak of this. And therefore I am of Opinion that he using daily to write down whatfoever happened, and was told him, that he might among other things fet down what was told him concerning this particular, by those that were ashoar. And tho it were of Iron it was not to be admired, because the Indians of the Island of Guadalupe, being Caribbees, and making their ex-

cursions to rob, as far as Hispaniola, per haps they had that Pan of the Christians or of the other Indians of Hispaniola; and it is possible they might carry the Body of the Ship the Admiral loft, to make use of the Iron, and tho' it were not the Hulk of that Ship, it must be the remainder of some other Wreck, carried thither by the Wind and Current from our Parts. But be it what it will, they that day took neither the Pan nor any thing elfe, but return'd to their Ships. The next day, which was Tuesday the 5th of November, the Admiral again fent two Boats ashoar, to endeavour to take somebody that might give him an Account of the Country, and inform him how far off, and which way Hispaniola lay. Each of the Boats brought back a Youth, who agreed in faying they were not of that Island, but of another call'd Borriquen (now St. John) and that the Inhabitants of that Island of Guadalupe were Caribbees or Canibals, and had taken them Prisoners from their own Island. Soon after the Boats returning to shoar, to take up some Christians they had left there, found fix Women with them, who had fled to them from the Caribbees, and came of their own accord aboard the Ships. The Admiral to allure the Islanders, would not keep them aboard, but gave them some Glass Beads and Bells, and made them be fet ashoar against their Wills. This was not done unadvifedly, for as foon as they Landed, the Caribbees in the fight of the Christians, took away all the Admiral had given them. Therefore either thro' the hatred they bore the Caribbees, or for the fear they had conceived of those People: a while after, when the Boats returned for Wood and Water, the faid Women got into them, beging of the Seamen to carry them aboard the Ships, and giving them to understand by figns, that those People did eat Men, and make Slaves of them, and therefore they would not stay with them; so that the Men yielding to their Intreaties, carried them back to the Ships, with two Children and a young Man that had made his escape from the Caribbees, thinking it fafer to put themselves into the hands of People they never faw, and fuch Strangers to their Nation, than to oremain among those they knew to be Wicked and Cruel, and who had eaten their Hufbands and Children, and they fay they do not kill and eat the Women, but keep them as Slaves. One of the Women told them, that towards the South, there were many Hands.

Itlands, some inhabited, others not, which columbus, both the and the other Women, feverally rodust of rubcira, Sixibei. But the Continent which they faid was very great, both they and the People of Hispaniola, call'd Zuanta, because in former times Canooes had come from that Land, to Barter with abundance of Lads, of whom they faid there were two thirds in an Island not far diffant; and they also said, that a King of that Country whither they fled, was gone with ten great Canooes, and 300 Men to make incursions into the Neighbouring Islands, and take People to eat. The fame Women gave information where the Hland Hispaniola lay; for the' the Admiral had inferted it in his Sea-Chart; yet for his further information, he would hear what the People of that Country faid of it. would immediately have fail'd that way, had he not been told, that one Captain Mark, was gone ashoar with 8 Men, without his leave, before day, and was not yet return'd. He was therefore forced to fend out to look for him, tho' in vain, for by reason of the great thickness of the Trees, there could be no discovering of them. Therefore the Admiral, that they might not be loft, or be obliged to leave a Ship behind to take them in, which might afterwards miss her way to Hispaniola, resolved to stay there till the next day; and because the Country as has been said, was full of great Woods, he ordered them to be fought after again, and that they should carry Trumpets and Muskets, to bring em to the Noife. These People having stray'd all that day, return'd to their Ships without finding or hearing any News of them. The Admiral therefore seeing it was now Thursday Morning, and no News had been heard of them fince Tuesday, and that they went without leave, resolved to continue his Voyage,

or at least make show of so doing, that it might be a Punishment to others, but at the Intreaty of some of their Kindred and Friends, he stay'd, and ordered the Ships should in the mean while take in Wood and Water, and the Men wash their Linen; and sent Captain Hojeda, with 40 Men, to look for those that were stray'd, and pry into the Nature of the Country, where he found Mastick, Aloes, Sandal, Ginger, Frankincense, and some Trees in tast and fmell like Cinnamon, abundance of Cotton, and many Falcons, and faw two of them purfuing the other Birds; they also faw Kites, Herons, Daws, Turtles, Partridges, Geele, and Nightingals, and affirm'd that in Travelling fix Leagues, they cross'd 26 Rivers. several whereof were vast deep, which makes me believe, that the Country being uncouth, they often cross'd the same River. Whilft these were admiring at what they saw, and other Companies went about the Island, feeking the Straglers, they returned to the Ships without being met by any that look'd for them, on Filday the 8th of November, faying the thickness of the Woods was the cause they had lost themselves. The Admiral to Punish their Presumption, commanded the Captain to be cast into Irons, and the rest to suffer by retrenching their Allowance of Provisions. Then he Landed, and went to some Houses, where he saw all the things above mentioned, especially a great deal of Cotton spun and unspun, Looms to Weave, abundance of Mens Skulls hung up, and Baskets full of Mens Bones. These Houses they faw, were the best, and more plentifully stored with Provisions, and other things Neccifary for the use of the Indians, than any others the Admiral faw in the Islands at his first Voyage.

### CHAP. XLVIII.

## How the Admiral departed from the Island Guadalupe, and of some Islands he found in his way.

Monferatte I-Aand.

N Sunday the 10th of November, the Admiral weighed Anchor, and failed with the whole Fleet along the Coast of the Island Guadalupe, towards the North-West for Hispaniola, and came to the Island Monferatte, calling it by that Name, because of its highth, and understood by the Indians he had with him, that the Caribbees had unpeopled it, des vouring the Inhabitants. Thence he proceeded to St. Mary Redonda, fo call'd, because it is so round, and upright, that there teems to be no getting into it without Ladders, which the Indians call'd Ocamaniro. Next he came to St. Maria la Antigua, which is a- se. bove 28 Leagues in extent. Still holding At on his Course North-West, there appeared several other Islands towards the North, and lying North-West and South-East, all very high and full of Woods, in one of which they cast Anchor, and call'd it St. Martin, S. where they took up pieces of Coral, sticking to the Anchor Flooks, which made 'em hope they should find other useful things in those Countries. Tho' the Admiral was vo2 ry defirous to know every thing, yet he refolved to hold on his Course towards Hispa-

niola,

pla, to relieve those he had left there, but Weather being bad, he came to an Anor on Thursday the 13th of November, in Island, where he ordered some Indians to taken, to know whereabouts he was , the Boat was returning to the Fleet with ir Women and three Children the Men d taken, it met a Canoo, in which there re four Men, and one Women; who periving they could not make their escape, stood on their Guard, and hit two of the Christians ith their Arrows, which they let fly with such rce and dexterity, that the Woman shot a arget quite thro, but the Boat suriously arding, the Canoo overset, so that they took em all Swimming in the Water, and one of em swimming, shot several Arrows, as if he d been upon dry Land. These had their lembers cut off, for they are taken by the tribbees in other Islands, and gelt, as we do fat Capons, that they may be more pleafing the tait. The Admiral departing hence,

continued his Voyage W. N. W. where he found above 50 Islands, which he left to the Northward, the biggest of them he call'd St. Urfula, and the others the 11000 Vir St. Urfula. gins. Next he came to the Island which he call'd St. John Baptist, but the Indians, Borri- St. John quen, and the Fleet Anchored in a Bay on or Borrithe West side of it, where they took several quen. forts of Fish, as Skate, Olaves, Pilchards, and Shads, and faw Falcons and Bushes like wild Vines. More to the Eastward, fome Christians went to certain Houses well built after their Fashion, with a Square before them, and a broad Road down to the Sea, with Towers made of Cane on both fides, and the top of them curiously interwoven with Greens, as is seen in the Gardens of Valencia. At the end of it next the Sea, was a rais'd a Gallery or Balcony that could hold 10 or 12 People, lofty and well built.

## CHAP. XLIX.

# How the Admiral Arrived at Hispaniola, where he understood the Spaniards were dead.

N Friday the 12th of November, the Admiral came up with the North fide of Hispaniola, and presently sent ashoar at amana, one of the Indians born in that Part, . vhom he brought out of Spain, being then Converted to our Holy Faith, who offered o reduce all the Indians to submit to the The Admiral continuing his Christians. Voyage towards the Town of Natal, or the Nativity, when he came to Cape Angel, ome Indians went aboard, to Barter their Commodities with the Christians. Coming to an Anchor in the Port of Monte Christo, a Boat that went ashoar, found near a River two dead Men, one of them feem'd to be Young, the other Old, who had a Rope made of a certain fort of Broom, or such like Furze that grows in Spain, call'd Esparto, about his Neck, his Arms extended, and his Hands ty'd to a piece of Wood, in the Form of a Cross, but they could not discern whether they were Christians or Indians, but look upon it as an ill Omen. The next day, being the 26th of November, the Admiral fent ashoar in several Places; the Indians came very friendly and boldly to talk with the Christians, and touching our Men's Shirts and Doublets, faid Shirt, Doublet in Spanish, to show they knew how those things were called, which delivered the Admiral from the Jealousie he had conceived,

on Account of the Dead Men, judging that if those People had wrong'd the Christians left there, they had not come to boldly aboard the Ships. But the next day, when he came to an Anchor near the Town of Navidad, or the Nativity, after Midnight, a Canoo came to the Fleet, and ask'd for the Admiral, and being bid to come aboard, for he was there, they would not do it, faying, they were refolved not to go aboard till they faw and knew him. The Admiral therefore was forced to come to the Ship's fide to hear them, and then presently two went up with two Masks, which they gave to the Admiral, from the Cacique Guacanagari, faying, he fent many Commendations. They being ask'd by the Admiral concerning the Christians left there, Answered, that some of them died of Distempers, some parted from their Company, and to were gone into other Countries, but that all of them had four or five Wives, tho' it appeared by their way of speaking, that all or most of them were Dead, yet the Admiral not thinking fit to take any Notice at that time, feat back the Indians, with a Present of some things made of Latten, and other Baubles, for Guacanagari, and themselves, and so they went away that same Night, with the Gifts for the Cacique.

Columbus.

### CHAP. L.

How the Admiral went to the Town of Navidad, or the Nativity, found it for saken and burnt, and had an interview with King Guacanagari.

N Thursday the 2 8th of November, about Evening, the Admiral with all his Fleet, came into the Port, before the Town of Navidad or the Nativity, found it all burnt, and that day no body was seen all about there: Next day in the Morning, the Admiral Landed very much concern'd to see the Houses and Fort burnt, and nothing left belonging to the Christians, but only ragged Cloaths and such like things, as is usual in a Place Plunder'd and deltroy'd, and seeing no body to enquire of, the Admiral went with some Boats up a River that was hard by. Whilft he was going up it, he ordered the Well he had made in the Fort, to be cleanfed, thinking to find Gold in it, because at his going away, fearing what might happen, he commanded those he left behind, to throw all the Gold they could get into that Well, but nothing was found in it; and the Admiral that way he went up with his Boats, could lay hold of no Indian, because they all fled from their Houses, to the Woods. Having therefore found nothing but fome of the Christians Cloaths, he returned to Navidad, where he saw 8 of the Christians, and three others, in the Fields near the Town, whom they knew to be Christians by their Cloaths, and they feem'd to have been dead about a Month. The Christians going about to feek some other Tokens, or writings of the Dead, a Brother of the Cacique Guacanagari, came with some Indians to talk with the Admiral. These could speak some Words of Spanish, and knew the Names of all the Christians, that had been left there, and faid that those Spaniards foon began to fall at variance among themselves, and to take every one what Gold and as many Women as they could; whereupon Peter Gutierres and Escovedo kill'd one James, and then they and 9 others went away with their Women to a Cacique, whose name was Caunabo, who was Lord of the Mines, Spaniards and kill'd them all; then many days after left in Hi- came with a great many Men to Navidad, spaniola, where there was only James de Arana, with 10 Men, who had remained with him to guard the Fort, all the rest being dispersed about the Island. The Cacique Caunabo coming up by Night, fired the Houses where the Christians liv'd, with their Women, for fear whereof they fled to the Sea, where eight of them were drowned, and three died ashoar, whom they show'd. That Guacanagari himself, fighting with Caunabo in de-

fence of the Christians, was wounded and fled. This Account agreed with that given by other Christians, sent by the Admiral to learn more of the Country, who went to a Town where Guacanagari lay ill of a Wound, which he faid had hindred him from waiting on the Admiral, and giving him an Account of what was become of the Christians, among whom he faid, foon after the Admiral returned for Spain, there began to be Diffention, and every one would Barter Gold for himself, and take what Women he thought fit, and not satisfied with what Guacanagari gave and allow'd to be given them, they divided into several Parcels, and dispersed fome one way and some another, and that fome Biscainers joyning together, went where they were all kill'd; and this was the Truth of what had happened, which they might tell the Admiral, defiring him by those same Christians, that he would go fee him, because he was in such a Condition that he could not leave his House, The Admiral did so, going the next day to visit him, and he with great figns of Sorrow, told him all that had happened, as has been related above, and that he and his Men had been all wounded in defence of the Christians, as appeared by their Wounds, which were not given by Christian Arms, but with Aragayas, or Wooden Swords, and Arrows pointed with Fish Bones. This Discourse being over, he presented the Admiral with 8 strings of small Beads, made of white, green, and red Stones, a string of Gold Beads, a Regal Crown of Gold, and three little Calabashes full of Gold Sand, all which might be about 4 Mark Weight in Gold, each Mark being half a Pound. The Admiral in return, gave him abundance of our Baubles, which might be worth three Royals, (or eighteen Pence) and were valued by him above a Thousand. Tho' he was very ill, he would needs go with the Admiral to see the Fleet, where he was courteoufly Entertain'd, and much pleased to see the Horses, of which the Christians had before given him an Account. And because some of those that were dead, had misinform'd him concerning our Holy Faith, the Admiral was forced to instruct him in it, and afterwards would have him wear an Image of the Virgin Mary 2bout his Neck, which at first he had refused to receive

How the were de-Aroyed.

## CHAP. LI.

## How the Admiral left the Colony of Navidad, and went to found the City which he call'd Isabella.

THE Admiral reflecting on the Disafter of those Christians, and his own Misfortune at Sea, having lost the Men and Fort ashoar, and his Ship upon the Water, and that not far off there were better and more Commodious Places to Plant a Colony; on Saturday the 7th of December, he fail'd with the whole Fleet Eastward, and about Evening cast Anchor not far from the Islands of Monte Chrisio, and the next day at Monte Christo, among those seven low little Islands, whereof mention has been made already, which the' they are without Trees, are nevertheless Pleasant; for in that Winter Seafon, they there found Flowers, and Nests with Eggs, others with Young Birds, and all other things that are feen in Summer. Thence he went to Anchor before a Town of Indians, where resolved to plant a Colony, he Landed with all the Men, Provisions and Utenfils he brought aboard the Fleet, in a Plain near a Rock, on which a Fort might conveniently be built, where he built labella a Town and call'd it Isabella, in Honour of colony in Queen Isabel or Elizabeth. This place was be West judged very convenient, for as much as the Port was very large, tho' expos'd to the North-West, and had a most delicate River a Bow shot from it, from which Canals of Water might be drawn to run thro' the middle of the Town, and beyond was a mighty open Plain, from which the Indians faid the Mines of Cibao were not very remote. For these Reasons the Admiral was so eager upon settling the said Colony, that what with the fatigue endured at Sca, and what he here went thro', he not only wanted time to write day by day what happen'd, according to his Custom, but it happened he fell fick, which interupted his writing from the 11th of December, till the 12th of March, in the Year 1494. During which time, having ordered the Affairs of the Town the best he could, for Affairs abroad he sent one Alonzo de Hojeda, with 15 Men to feek out the Mines of Cibao. Afterwards on the 2d of February, 12 Ships of the Fleet returned to Castile, under the Command of one Captuin Anthony de Torres, Brother to Prince John's Nurse, a Man of great Judgment and Honour, and in whom their Catholick Majesties and the Admiral much Confided. He had all in writing at large that had happen-ed, as also the Nature of the Country, and what it required. Not long after Hojeda returned, and giving an Account of his Jour-

ney, said, That the 2d day, after he set out for Isabella, he lay at the Pais of a Mountain, which was very difficult of Access, that afterwards, at every League's distance he found Caciques, who had been very kind to him; and continuing his Journey the 6th day after he set out, he came to the Mines of Cibao, where the Indians immediately before him, took up Gold in a small River, as they had done in many others of the same Province, where he affirm'd there was great Plenty of Gold. This News much rejoyced the Admiral, who was then recovered of his Sickness, and he resolved to go ashoar, to observe the disposition of the Country, that he might the better know what was to be done. Accordingly on Wednefday the 12th of March, 1494, he set out from Isabella for Cibao, to see the Mines, with all the People that were in Health, both a Foot and a Horseback, leaving a good guard in the two Ships and three Caravals that remained of the Fleet, and caufing all the Ammunition and Tackle belonging to the other Ships, to be put aboard his own, that none might Rebel with them as they had attempted to do whilft he was fick. Because many having gone that Voyage, upon the Belief, that as foon as they Landed they might Load themselves with Gold, and fo return rich home, (which Gold, wherefoever it is found, requires time, trouble, and labour to gather it) the thing not falling out as they expected; being therefore diffatisfied and offended, as also because of the building of the New Town, and weary of the Discates, the Climate and change of diet caused among them, they had privately Conspired to revolt from the Admiral, Conspirac and taking the Ships that remain'd, by force against il to return in them to Spain. One Bernard Admiral. de Pifa, who had been an Officer of Justice at Court, and went that Voyage in the Quality of their Catholick Majerties Controuler, was the Ring-leader and head of these Mutineers, therefore the Admiral, when informed of it, would not Punish him any otherwife, than by fecuring him aboard a Ship, with a delign to fend him afterwards sinto Spain, with his Process drawn up, as well for Mutinying, as for having writ a false Information against the Admiral, which he had hid in the Ship. Having therefore ordered all these Affairs, and having left some Perfons both at Sea and ashoar, together with his Brother D. James Columbus to look

Mines.

to, and secure the Fleet, he set forwards to-Columbia. wards Cibao, carrying along with him all the Tools and Necessaries to build a Fort, to keep that Province under, and secure the Christians left there to gather Gold, against any Attempts or Deligns of the Indians. And the more to terrify them, and take away all Hopes that they might do in the Admiral's Presence, as they had done in his Absence with Arana, and the 28 Christians left among them; he then carried along with him all the Men he could, that they might in their own Towns see and be sen-Hu Jour- fible of the Power of the Christians, and be ney to the fensible, that whensoever any wrong was done to one fingle Man of ours Travelling thro' the Country, there was a force of Men to Chastize it. And to appear the more formidable, when he fet our for Isabella and other Towns, he made his Men march with their Arms in Rank and File, as is usual in time of War, and with Trumpets founding, and Colours flying. In his way he March'd along that River, which lay about a Mufquet shot from Isabella; and a League beyond, he cross'd another less River, and went to lie that Night three Leagues off in a Plain, divided into Pleafant Fields, reaching to the Foot of a Craggy Hill, and about two Bow shoots high. This he call'd Puerto de los Hidalgos, or the Gentleman's Port, (the Spaniards call Passes on Mountains, dry Ports) because some Gentlemen went before to order the Road to be made. and this was the first Road made in the Indies, for the Indians make their ways broad enough but for one Man to pass at a time. beyond this Pass he came into a large Plain. over which he Travelled 5 Leagues the next day, and went to lie near a great River, which the Men pass'd upon Floats and in Canoos. This River, which he call'd of Canes, fell into the Sea at Monte Christo. In his Journey he pass'd by runny Indian Towns, the Houses whereof were Round, Thatch'd, and with fuch a little Door, that he who goes in must floop very low. Here, as foon as fome of the Indians brought from Isabella, went into the Houses, they took what they liked belt, and yet the owners were not at all ditpleased. As if all things were in Common. In the like manner, the People of the Country, coming near to any Christian, would take from him what they thought fit, thinking our things had been as common as theirs. But they were foon undeceiv'd, being told the contrary. In their way they pais'd over Mountains most pleafantly Wooded, where there were wild Vines, Aloes, and Cinnamon Trees, and another fort that produces a Fruit like a Fig, and were vastly thick at the Foot, but the Leaves were like those of the Apple Tree. Of this fort of Tree, the Scammony is faid to come.

### CHAP. LII.

How the Admiral came to the Province of Cibao, where he found the Gola Mines, and built the Caste of St. Thomas.

Description of the ON Friday the 14th of March, the Admiral set sorward from the River of Country. Canes, and a League and a half from it, found a great River, which he call'd the River of Gold, because in passing it, they gathered some grains of Gold. Having patled it with some difficulty, he proceeded to a large Town, where many of the People fled to the Mountains, but most of them fortified their Houses, barring their Doors with some Canes, as if that were a great defence, to hinder any Body from coming in; for according to their Custom, no Man dares break in at the Door he finds so barr'd, for as much as they have no Wooden doors, or other means to flut themselves in, and its feems these Barrs are sufficient. Hence the Admiral went to another fine River, which he call'd the Green River, the Banks whereof were covered with bright round Stones, and there he rested that Night. Holding on Lourney the next day, he pasi'd by some

great Towns, where the People had put flicks cross their Doors, like the others above mentioned, and the Admiral and his Men being tired, they flayed that Night at the Foot of a rugged Mountain, which he call'd Port Cibao, for as much as the Province of Cibao begins beyond the Mountain From this the first Mountain they pass'd was 11 Leagues distant, all which distance is a Plane, and the way directly South. Setting out the next day, he Travelled along a Path, where they were forced with much difficulty, to lead the Horles; and thence he fent back some Mules to Isabella, to bring Bread and Wine, for they began to want Provisions, and the Journey was long, and they suffered the more, because they were not yet used to the Indian Diet, as they are now who Live and Travel in those Parts, who find the Food of hat Country more easy of digestion, and prore agreeable to that Country, than what is carryed from Europe, tho'

it is not of so great Nourishment. Those Columbus that went for Provisions, being returned, the Admiral patting over the Mountain on Sunday the 16th of March, entred the Country of Cibao, which is rough and ftony, full of Gravel, plentiful of Grais, and Watered by several Rivers, in which Gold is found. The further they went into this Country, the more uncouth they found it, and encumbred with Mountains, on the tops whereof, there appeared Grain of Gold Sand; for as the Admiral faid, the great Rains carry it down from the Tops of the Mountains, to the Rivers in finall Sand. This Province is as big as Portugal, and there are in it abundance of Mines, and Gold in the Brooks, but for the most part there are very few Trees, and those along the Banks of Rivers, and are most of them Pines and Palms of feveral forts. Now Ojeda having as was faid, 'Travell'd that Country the Indians had some Knowledge of the Christians, fo it happened, that what way foever the Admiral went, the faid Indians came out to the Road to meet him, with Presents of Provisions, and some small quantity of Gold Dust they had gathered, after

they understood they came for it. The Admiral perceiving he was now 18 Leagues from Isabella, and the Country he had left behind very craggy, he ordered a Fort to be built in a very Pleafant and Strong Place, which he call'd the Castle of St. Thomas, to Command The Fort the Country about the Mines, and be a of st. Tho-Place of Safety for the Christians that went mas. thither. The Command of this New Fort, he gave to D. Peter Margarite, a Person of Account, with 56 Men, among whom were Workmen of all forts to build the Caftle, which was built with Clay and Timber, that being a fufficient strength to keep out any Number of Indians that should come against it. Here breaking Ground to lay the Foundation, and cutting a Rock to make the Ditches, when they were got two Fathom below the Stone, they found Neils made of Hay and Straw, and instead of Eggs, three or four round Stones, as big as Oranges, as Artificially made, as it they had been Cannon Palls; and in the River that runs at the Foot of that Hill, the Caftle now stands upon, they found Stones of several Colours, fome of them large, of pure Marble, and others of latter.

### CHAP. LIII.

# How the Admiral returned to Isabella, and found that Soil was very fruitful,

THE Admiral having given Orders for the finishing and Fortifying of the Caltle, let out for Ifabella, on Friday the 21 of March, and near the Green Rivet met the Mules going with Provisions, and not being able himself to stay there, because of the great Rains, he stay'd there, sending the Provisions to the Fort. Afterwards endeavouring to find the ford of that River, and of the Rever del Oro, which is bigger than tridiful. Ebre, he stayed some days in those Indian nel of Hi- Towns, eating their Bread and Garlick, spaniola, which they gave for a small matter. On Sunday the 29th of March, he came to Ifabella, where Melons were already grown, fit to eat, tho' it was not above two Months fince the Seed was put into the Ground. So Coucumbers came up in 20 days, and a wild Vine of that Country being prun'd, had produced Grapes, which were good and large. The next day, being the 30th of March, a Countryman gathered Ears of Wheat he had fown at the latter end of January. There were also Vetches, but much bigger than those they sow'd, and all they found firing up above Ground in three days, and the 25th day they eat of it. The Stones of Fruit fet in the Ground, sprouted out in seven days, and the Vine-branches Vol. II.

shot out in the same time, and in 25 days after, they gathered green Grapes. The Sugar Canes budded in feven days, which proceeded from the temperature of the Climate, not unlike to that of our Country, for it was rather cold than hot; besides, That the Waters there are very cold, thin, and wholesome. The Admiral was well enough pleafed with the Air, the Soil and the People of the Country. On Tuefday the 1st of April, there came a Messenger from Fort St. Thomas, who brought News, that the Indians of that Country fled, and that a Cacique, whose Name was Caunabo, was preparing to come and attack the Fort. The Admiral knowing how inconfiderable the People of that Country were, made little Account of that Report, especially confiding in the Horses, by whom the Indians were afraid to be devoured, and therefore were so much afraid, that they durst not go into any House where a Horse stood. However the Admiral thought fit to fend more Men and Provisions, considering that since he delign'd to go to discover the Continent with three Caravals he had left him, it was fit all things should remain quiet behind. Therefore on Wednesday the 2d of April, he fent 70 Men with Provisions and Ammrmition

nition to the Fort, 25 of which were to Columbus, keep Guard, and the others help to make another Road, the first being very troublesome, as were the fords of the Rivers. These being gone, whilst the Ships were fitted to go upon the New Discovery, he attended to order all things necessary for the Town he was building, dividing it into Streets, with a convenient Market Place, and endeavouring to bring the River to it along a large cut Canal; for which Reason he also made a Dam that might serve the Mills, because the Town being almost a Cannon shot from the River, the People would have been troubled to fetch Water fo far, especially then, when most of them were very weak and indisposed, by reason of the sharpness of the Air, which did not agree with them; fo that fome were fick, and had no other Spanish Provisions but Bisket and Wine, by reason of the ill management of the Captains of the Ships, as also because in that Country nothing keeps fo well as in Spain. And tho' they had Plenty of the Country Provifions, yet not being used to that Food, it did not agree with them. Therefore the Admiral had resolved to leave but 300 Men in the Island, and fend the rest into Spain, which Number, confidering the Nature of the Island, and of the Indies, he knew was fufficient to keep that Country in Subjection to their Catholick Majesties. In the mean while, because the Bisket grew towards an end, and they had no Flour, but Wheat; he resolved to make some Mills, tho' there was no fall of Water fit for that purpose within a League of the Town, at which Work, and all others, he was forced to stand over the Workmen, they all endeavouring to fave themselves from any Labour. After that, he refolved to fend out all the People that were in Health, except Handicraft Men, and Artificers, to the Royal Plain, that Travelling about the Country, they might Pacify it, strike a Terror into the Indians, and by degrees be us'd to their Food, fince they daily felt more want of that of Spain. Hojeda was sent to Command these Men, till they came to St. Thomas,

there to deliver them to D. Poter Margarito, who was to lead them about the Island, and Hojeda himself to Command in the Fort, he having taken the Pains, the Winter before, to discover that Province of Cibao, which in the Indian Language fignifies Stony. Hojeda fet out from Isabella on Wednesday the 29th 400 Men of April, towards St. Thomas, with all the a. fent about forefaid Men, being above 400, and hav-the Islam ing pass'd the River del Oro, apprehended the Cacique that liv'd there, and a Brother a Nephew of his, fending them in Irons to the Admiral, and cutt off the Ears of one of his Subjects, in the great place of his Town, because three Christians coming from St. Thomas to Isabella, this Cacique gave them five Indians to carry their Cloaths over the River at the Ford, and they being come to the middle of the River, returned to their Town with them, and the Cacique instead of Punishing them, took the Cloaths for himfelf, refufing to reftore them. Another Cacique who dwelt beyond the River relying on the Service he had done the Christians, resolved to go with the Prisoners to Ifabella, and intercede with the Admiral for them, who entertain'd him courteously, and ordered that the other Indians, with their hands bound, would be Publickly Sentenced to die in the Market-Place, which the Honest Cacique seeing, he with many Tears obtained their Lives, promising they should never be guilty of any other Offence. The Admiral having discharged them all, a Man a Horseback came from St. Thomas's, and gave an Account, that he had found in that same Cacique, who had been Prisoner in his Town, five Christians taken by his Subjects as they were coming for Isabella, and that he frightning the Indians with his Horse had released them, above 400 Men runing away from him, of whom he wounded two in the pursuit; and that when he had pats'd the River, he saw they turn'd upon the said Christians, whereupon he made as if he would go back against them, but they for fear of his Horse, all ran away, least the Horse should fly over the River.

### CHAP. LIV.

How the Admiral settled the Affairs of the Island, and went to discover Cuba, supposing it to be the Continent.

A Councel THE Admiral being resolved to go out to discover the Continent, appointed Hupaniola a Council to Govern the Island in his absence, the Persons it consisted of, were, D. Fames Columbus, his Brother, with the Ti-

Coronell, Regents, Alonso Sanchez de Carvajal Rector of Bacca, and John de Luxan of Madrid, Gentlemen to their Catholick Majesties. And that there might not want Meal for support of the People, he hastned tle of President, F. Boyl, and Peter Fernandez the building of the Mills, norwithstanding

nthe Rain and Flood very much obstructed From these Rains, the Admiral says, proceeds the great Moisture, and consequently the Fruitfulness of the Island, which is so wonderful, that they eat Fruit of the Trees in November, when they were Blofforning afresh, which shews that they bear twice a Year. But Herbs and Seeds grow at all times, and fo they find on the Trees, Nests with Eggs, and young Birds. As the fruitfulness of the Soil appeared extraordinary, so they daily received fresh Advices of the Wealth of the Country; for some of those the Admiral had fent out, were always returning with News of new Mines discovered, besides the Relation of the Indians concerning the great plenty of Gold found in several Parts of the The Admiral not fo fatisfied, refolved to go out to difcover along the Coast of Cuba, not knowing whether it was an Island or Continent. Therefore taking 3 Island or Continent. Ships along with him, he fet fail upon Thurfday the 24th of April, after Noon, and came to an Anchor that day at Monte Christo, West of Isabella. On Priday he went to Guacanagari's Port, thinking to find him there, but he feeing the Ships, fled for fear, tho' his Subjects fallly affirm'd he would foon return. But the Admiral not caring to stay without great Cause, departed on Saturday the 26th of April, and went to the Island Torruga, which lies 6 Leagues to the Westward: He lay by it that Night, in a calm with his Sails abroad, the Tide running

back against the Currents. Next day the North-West Winds and Currents setting from the West, oblig'd him to go back to an Anchor in the River of Guadalquiver, which is in the same Island, there to wait for a Wind that would from the Current, which both then and the Year before, he found to run strong there toward the East. On Tuesday the 29th of the same Month, the Wind being fair, he came to Cape St. Nicholas, and thence cross'd over to the Island of Cuba, running along the South Coast of it, and having fail'd a League beyond Cabo Fuerte, The Coast put into a large Bay which he call'd Puerto of Cuba-Grande, or Great Port, the Mouth whereof was 150 Paces over, and had much Water. Here he cast Anchor, and took some Refreshment of broil'd Fish and Oysters, whereof the Indians had great store. On the 1st of May he continued his Voyage along the Coast, where he found Commodious Harbours, fine Rivers and high Mountains. Upon the Sea, after he left Terriga, he met abundance of the Weeds he faw on the Ocean, in his Voyage to and from Spain. He failing close along the Shoar, abundance of People came aboard in their Canooes from the Island, thinking our Men were come down from Heaven, bring of their Bread, Water and Fish, and giving it all freely, without asking any thing for it; but the Admiral to fend them home well pleafed, ordered they should be paid, giving them Beads, Bells, and fuchlike Baubles.

### CHAP. LV.

# The Admiral discovers the Island of Jamaica.

*oast of* lamaica.

ON Saturday the 3d of May, the Admiral resolved to sail over from Cuba to Jamaica, that he might not leave it behind, without knowing whether the Report of fuch Plenty of Gold they had there, was in it, prov'd true, and the Wind being fair, and he almost half way over, discovered it on Sunday. Upon Monday he came to an Anchor, and thought it the Beautifullest of any he had yet seen in the Indies, and such Multitudes of People in great and fmall Canooes came aboard, that it was Aftonishing. The next day he ran along the Coast to find out Harbours, and the Boats going to found the Mouths of them, there came out fo many Canooes and Arm'd Men, to defend the Country, that they were forced to return to the Ships, not so much for fear, as to avoid fulling to Enmity with those People. But afterwards confidering, that if they show'd figns of tear the *Indians* would go proud upon it, they returned to-

gether to the Port, which the Admiral call'd Puerto Bueno, that is, Good Harbour. And because the Indians came to drive them off, those in Boats gave them fuch a flight of Arrows from their Brofs-bows, that fix or feven of them being wounded, they retired. Fight ending in this manner; there came abundance of Canooes from the Neighbouring Places in peaceable manner, to see and Barter Provisions, and several things they brought, and gave for the least trifle that was offered them. In this Port, which is like a Horse-shooe, the Admiral's Ship was repaired, it being Leaky, and that done, they fer fail on Friday the 9th of May, keeping so close along the Coast Westward, that the Indians follow'd in their Canooes to Trade, and get something of ours. The Wind being somewhat contrary, the Admiral could not make so much way as he wish'd, till on Tuesday the 14th of May, he resolved to stand over again for Cula, to keep along its Coult,

defigning not to return till he had fail'd 5 Columbus. or 600 Leagues and were fatisfied whether it was an Island or Continent. That same day, as he was going off from Jamaica, a very young Indian came aboard, faying, he would come into Spain, and after him came feveral of his Kindred and other People in their Canoos, earnestly intreating him to go back, but they could never alter his refolution; and therefore to avoid seeing his Sisters cry and fob, he went where they could not come at him. The Admiral admiring his Resolution, gave Order that he should be used with all Civility.

Sea-Crows, and infinite Numbers of little

Birds that fung fweetly, and the very Air

### CHAP. LVI.

The Admiral from Jamaica returns to the Coast of Cuba, still thinking it to be the Continent.

THE Admiral leaving Jamaica, on Wednefday the 15th of May, came to that Point of Cuba, which he call'd Cabo de Santa Cius, or Cape Holy Cross, and frunning along the Coast, there happened a great florm of Thunder and Lightening, which together with the Flats and Currents, put him into no finall danger and very to much trouble, being obliged at the same time to struggle against these two Evils, which required contrary Remedies, for it is a proper Remedy against Thunder, to strike the Sails, and it was requifite to spread them to avoid the Flats, and had this Calamity lasted for 8 or 10 Leagues, it had been insupportable. But the worst of it was, that all over that Sea, both North and North-East, the further they went, the more low little Mands they met with, and tho' there were Trees in some of them, yet others were Sandy, and scarce appeared above the Surface of the Water, some a League, some more and some less in Compass. True it is, that the nearer they fail'd to Cuba, the higher and Pleafanter the little Islands appeared, and being a matter of difficulty, and to no purpole, to give every one of them a Name, the Admiral called them all in general Jard'n de la Reyna, the Queen's Garden. But as many Islands as he saw that day, he saw many more and bigger the next day, than he had before, and not only to the North-East, but North-West and South West, infornuch that they counted 160 Islands that day, all parted by deep Chanels, which the Ship fail'd thro'. In some of these Islands they faw abundance of Eranes, in shape and bigness like those of Spain, but that they were as red as Scarlet. In others they found abundance of Tortoifes, and of their Eggs, not unlike a Hens, but that the shells are very hard. The Tortoifes lay these Eggs Birds and in a hole they make in the Sand, and covering them, leave them till the heat of the Sun hatches and brings forth the Tortoiles, which in rime grow as big as a Buckler, or great
In their Itlands they also faw

and Cranes like those of Spain, and

Infinite Illands.

in them.

was as fweet, as if they had been among Roses and the finest Perfumes in the World, yet the danger was very great, there being fuch abundance of Chanels, that much time was spent in finding the way out. In one of these Chanels, they spy'd a Canoo of Indian Fishermen, who very quietly, without the least concern expected the Boat which was making towards them, and being come near, made a fign to them in it, till they had done fishing. Their manner of fishing was so strange and new to our Men, that they were willing to comply with them; it was thus: They had ty'd some small fishes they call Reves, by the tail, which run themselves against other fish, and with a certrin roughness they have from the head to the middle of the back, they stick so saft to next fish they meet, that when the Indians perceive it, drawing their Line, they draw them both together; and it A pretty was a Tortoile our Men saw so taken by " those Fishermen, that fish clinging about the fishing. Neck of it, where they generally fasten, being by that means safe from the other fish biting them, and have feen them fasten upon vast Sharks. When the Indians in the Canoo had taken their Tortoise, and two other fishes they had before, they presently came very friendly to the Boat, to know what our Men would have, and by their Directions went along aboard the Ships, where the Admiral treated them very Courteously, and understood by them that there was an infinite Multitude of Islands in that Sea, and they freely gave all they had, tho' the Admiral would suffer nothing to be taken of them but the Fish, the rest being their Nets, Hooks, and Calabashes full of Water to drink. Having given them some fmall Trifles, they went away very well Pleased, and he held on his Course with a design not to do so long, because he began to want Provisions already, whereas, had he been well stored, he thought not to have returned into spain, but East about, tho' he

was very much spent, not only because he nlus. fed ill, but also because he had not st ip ~ or lain in a bed ever fince he fail'd from Spain, till the 19th of May, when he writ this, except 8 Nights, when he was much indisposed. And if he had much care upon him at other times it was doubled this Voyage, by reason of the innumerable quantity of Islands, among which he was failing, which were so many, that on the 20th of May, he discovered 71, besides many more he faw W. S. W. at Sun-fetting. Which Islands or Sands are not only frightful by their Multitude, appearing on all fides; but what is yet more terrible, is, That every Night there rifes off them a great Fogg Eastward, so dismal to behold, that it seems as if iome great shower of Hail would fall; the Thunder and Lightning are so violent, but when the Moon rifes, it all vanishes, part of it turning to Rain and Wind, which is so usual and natural in that Country, that it did not only happen all those Nights the Admiral was there, but I saw the same in those Islands in the Year 1503, in my Return from the discovery of Veragua, and generally here at Night the Wind is North, coming off the Island Cuba; and afterwards when the Sun is up, it comes about East and follows the Sun till it comes to the West.

### CHAP. LVII.

# Of the great fatigue the Admiral underwent sailing among abundance of Islands.

THE Admiral still holding on his Course Westward, among infinite Numbers of Islands, upon Thursday the 22d of May came to an Illand fomewhat bigger than the rest, which he call'd St. Mary, and Landing at a Town, there was in it not one Indian would flay to talk to the Christians, nor did my up they find any thing in the Houses but fish, which is all the Food those People live on, and several Dogs like Mastists, who eat fish too. Thus without talking to any body, or feeing any thing remarkable, he fail'd away North-East, among abundance of Iflands, in which there were many Cranes as red as Scarlet, Parrots, and other forts of Birds, Dogs like those before mentioned, and abundance of those Weeds he saw on the Ocean, when he first discovered the Indies. Thus failing among fo many Sands and 1flands, fatigued him very much, for fometimes he was forced to fland Well, sometimes North, and fometimes South, according as the Chanels would permit; for notwithstanding his care in Sounding, and keeping Men upon the Round-top to look out, yet the Ship often touch'd, and there was no avoiding it, there being no end of the Flatts on all hands. Sailing on in this manner, he came a gain to Cuba, to take in Water, whereof they had much need. And tho' there was no Town where they put in, became the Place was Wooded, yet one of the Scamen that went ashoar, going up among the Trees with a Cross-bow to kill some Bird or Beaft, found 30 People Arm d with fisch Weapons although, that is, Spears, and Staves, which they were instead of Swords, and call Macana Among them he said he saw one clad with a white Coal, or Vest, down to his Knees, and two that carry'd him had them down to their Feet, all three of them

as white as the Spaniards, but that he had no talk with them, because being afraid of fuch a Number, he began to cry out to his Companions, and the Indians ran away without looking back. Tho' the Admiral the next day fent People ashoar to know the truth of it, they could not Travel above half a League, because of the thickness of the Trees and Bushes, and because all that Coast is Boggy and Muddy, for two Leagues up the Country, where there are Hills and Mountains, so that they only saw Footsteps of Fishermen on the Shoar, and abundance of Cranes like those in Spain, but bigger. Then failing about 10 Leagues Westward, they saw Houses on the shoar, from which fome Canoocs came with Water, and fuch things as those People cat, which they brought to the Christians, who payed well for 'em; and the Admiral caused one of those Indians to be flopp'd, telling him, and the rest by his Interpreter, that he would let him go freely Home, as foon as he had directed him in his Voyage, and given some Account of that Country. At which the Indian was very much pleased, and assured the Admiral that Cuba was an Island, and that the King or Cacique of the Western Part of it, never spoke to his Subjects but by Signs, by whom all his Orders were immediately obey'd, that all that Coast was very low, and full of small Islands, which was found to be too true, that the next day, beoing the 11th of June, to pass from one Chanel to another, the Admiral was forced to have the Ships Tow'd over a Flat, where there was not a Foot Water, and all the breadth of it was not above two Ships infinite length. Bearing up closer to Cuba they saw Tortoiles. Tortoiles of a valt bigness, and in such Butter-Numbers, that they covered the Sea. Agrice.

# The first Discovery of

break of day they faw fuch a Cloud of Sea olumbus Crows that they darkned the Sun, comving from the Seaward to the Island, where they all lighted; besides them, abundance of Pigeons, and Birds of other forts were feen,

and the next day there came fuch fwarms of Butterflies, that they darkened the Air, and lasted till Night, when the great Rain carried them away.

### CHAP. LVIII.

## How the Admiral returns back towards Hispaniola.

N Friday the 13th of June, the Admiral perceiving that the Coast of Cuba ran far West, and that it was a matter of the greatest difficulty to fail that way, by reason of the Infinite Multitude of Islands and Sands there were on all fides, and that he already began to want Provisions, for which Reason he could not continue his Voyage as he had intended, he resolved to return to the Town he had began to build in Hispaniola, and to furnish himself with Wood and Water, he Anralimbay'd chored in the Island Evangelista, which is 30 Leagues in Compass, and 700 from Deminica. Having provided himself with what he wanted, he directed his Course Southward, hoping to get out better that way, and failing thro the Chanel, he faw look'd clearest, after failing a few Leagues, found it shut up, which did not a little trouble and territy the Men, seeing themselves as it were hemm'd in on all sides, and destitute of Provisions and all Comfort. But the Admiral, who was Wife and Couragious, perceiving their faint-heartedness, said with a chearful Countenance, that he thanked God for forcing him back the fame way he came, for as much as if they had continued their Voyage that way they intended to go, it might perhaps have happened they might have run themselves into some Place whence it would be hard getting out, and at a time when they had neither Ships nor Provisions to go back, which at prefent they could eafily do. Thus with great satisfaction of all the Men, he returned to the Island Evangelista, where he had Watered, and on Wednesday the 25 of June, failed thence North-West towards some small Illunds that appeared 5 Leagues off. Going ttill a little forward he came into a Sea so patched with green and white, that it look'd like one entire Sand, tho' there was two Fathon, Water; along which he fail'd 7 Leagues, till he met another Sea, as white as Milk, which he much Admired, the Water being

very thick. This Sea dazled the Eyes of all that beheld it, and feem'd to be all a shoal without Water enough for the Ships, yet there were about 3 Fathorn Water. But when he had failed about 4 Leagues upon that Sea, he came into another Sea, as black as Ink, and 5 Fathom deep, thro' which he held his Course till he came up with Cuba. Thence standing to the Eastward, with scant Winds, thro narrow Chanels and Shoals. On the 30th of June as he was writing his Journal of the Voyage, his Ship run a Ground so fust, that neither Anchors nor other Inventions, being able to get it off; it pleafed God it was drawn off a-head, tho' with fome damage, because of its beating on the Sand. However, with God's Amiltance they got off at last, and he fail'd on as the Wind and Shoal-water would permit, always thro' a very white Sea, and two Fathom deep, neither deeper nor shallower, unless he came too close to some of the Sands, where there was want of Water. Befides which trouble, every day about Sunfetting, he was troubled with mighty Showers, which rife in the Mountains from the Morasses near the Sea, which were a great fatigue to him, till he came close to Cuba. towards the East, the way he came at first. Thence, as he had found before, came off a most fragrant scent, as it were of Flowers. On the 7th of July he Landed to hear Mass, and there resorted to him an old Cacique Lord of that Province, who was Norah very Attentive at Mass; when it was ended, mords Indian by figns, and the best he could express, it was very well done to give thanks to God, because the Soul which was good, would go to Heaven, and the Body remain on Earth, but that the Wicked Souls must go to Hell And among other things, faid, he had been in the Island Hispaniola, where he knew fome of the Chief Men; that he had been in Jamaica, and a great way towards the West of Cuba, and that the Cacique of that Port, was clad like . Privit.

### CHAP. LIX.

The great Hunger and other Calamities the Admiral, and his Men endur'd, and how he return'd to Jamaica.

THE Admiral failing thence on Wednesday the 16th of July, Still attended by terrible Rains and Winds, drew near to Cape Cruz in Cuba, where he was on a sudden assaulted by such a violent Rain and Storm, as bore his Ship's side under Water, but it pleas'd God they immediately struck all their Sails, and drop'd their best Anchors, but they took in so much Water at the Deck, that the Men were not able to pump it Di- out, especially in the Condition they were, being much spent for want of Provisions: For they eat nothing but a Pound of rotten Bisket a day, and about half aPint of Wine, unless they hapned to catch some Fish, which yet they could not keep from one Day to the next, Provisions in those Parts being of a very slight Nature, and because the Weather was always more inclinable to Heat than in our Countries, and this Want being common to all, the Admiral in his Journal speaks thus concerning it. I my self am at the same Allowance, God grant it may be to his Honour, and for your Highnesses Service, for I shall never again for my own Benefit expose my self to such Sufferings and Dangers, never a Day passing, but I see we are all upon the Brink of Death. In this Danger and Distress he arriv'd at Cape Cruz the 18th of July, where he was friendly entertain'd by the Indians. They brought him abundance of Cazabi so they call their Bread made of Roots grated, a great deal of Fish, Store of Fruit and such other things as they eat. The Wind being contrary to sail for Hispaniola, he stood over to Jamaica on Wednesday the 22th of July, and sail'd along Westward close under the Shoar, the Country all along most delightful and fruitful, with excellent Harbours at every League distance, and all the Coast

full of Towns, the People whereof follow'd the Ships in their Canoos, bringing such Provisions as they eat and much better lik'd by the Christians, than what they found in the other Islands. The Great Climate, Air and Weather was the same Beauty of as the rest, for in this Western Part of Jamaica there gather'd every Evening a Storm of Rain, which lasted about an Hour more or less, which the Admiral faid, he attributed to the great Woods there in those Countries, for that he knew this was usual at first in the Canary Islands, Madera and the Azores, whereas now the Woods are cut down that shaded them, there are not so great and frequent Storms and Rains, as there were formerly. Thus the Admiral fail'd on tho' with contrary Winds, which oblig'd him every Night to take the Shelter of the Land, which appear'd green, pleasant, fruitful, abounding in Provisions, and so populous, that he thought none excell'd it, especially near a Bay which he call'd de las Vacas, because there are 9 Islands close to the Land which he faid was as high, as any he had feen, and believ'd reach'd above the Region where the Storms bred, yet it is all peopled, very fruitful and pleasant. This Island he judg'd to be 800 Miles in Compass, and when fully discover'd, computed it to be 50 Leagues in Length Being much taken and 20 in Breadth. with its Beauty, he had a great mind to stay there to be fully inform'd of the Nature of it, but the great Want of Provisions we mention'd, and the Leakiness of the Vessels would not permit. Therefore as foon as the Weather was a little fair, he sail'd away Eastward, so that on Tuesdayther oth of Aug. he lost Sight of that Island, standing over directly for Hispaniola, and call'd the most Eastward Cape of Jamaica on the South Coast Cabo del Farol.

CHAP. LX.

The Admiral discovers the South Side of Hispaniola, till he returned East about the Town of Isabella.

N Wednesan the 20th of August, the Admirsh had fight of the South fall of side of Hispanida, and rall'd the first Point Cape St. Michael, which was 30 Leagues distant from the Easterlyest Point of Jamaica, yet at present through

uth

Cape Tiburon. From this Cape on Saturday the 23d. of August, there came aboard a Cacique, who call'd the Admiral by his Name, and had some other Spanish Words, by which he was convinced this was the fame Land as His

# The first Discovery of

chor'd in an Island, which is call'd Alto

Columbus. Velo, and having lost fight of the other two Ships under his Command, he caufed some Men to go ashore in that little Island, whence being very high they might see a great way round; but they discover'd none of their Companions. As they were going aboard they kill'd Eight Sea Wolves, that lay afleep on the Sand, and took abundance of Pidgeons, and other Birds, for that Island not being inhabited, nor those Creatures us'd to fee Men, they flood still to be kill'd with Staves. The same they did the two following Days, waiting for the Ships, which had been aftray ever fince the Friday before, till at the End of Six Days they came, and all three together went away to the Island Beata twelve Leagues distant from Alto Velo. Hence they passed on coasting Hispaniola, in sight of a delightful Country, which was a Plain running up a Mile from the Sea, so populous, that it feem'd to be one continu'd Town for a League in Length. In which Plain there appear'd a Lake 5 Leagues long from East to West. The People therefore of the Country having some Knowledge of the Christians, came aboard in their Canoos bringing News, that some Spaniards from Habella had happen'd to come among them, and that they were all well, which much pleas'd the Admiral, and to the End they too might hear of his Health and his Company's and of his Return, being somewhat more towards the East, he sent Nine Men to cross the Island, passing by the Forts of St. Thomas and the Magdalen to Isabella, and he with his three Ships still keeping along the Coast Eastward, fent the Boats for Water to a Place, where a great Town appear'd. The Indians came out against them with Bows and poison'd Arrows, and with Ropes in their Hands, making Signs that they would bind the Christians they should take with them. But as foon as the Boats came to the Shoar, the Indians laid down their Arms, and offer'd to bring Bread and Water, and all they had, asking in their Language for the Admiral. Going hence, they faw in the Sea, a Fish as big as a Whale, which on its Neck had a

great Shell, like a Tortoife, and boreits Head, which was as big as a Hoghead above Water, had a Tail like a Tunny Fish, very long, and two large Finns on the Sides. The Admiral by this Fish and other Signs perceiving there would be some change of Weather, he sought for some Harbour to secure himself. And on the 1 geb of September it pleased God to show him an island, being near the East part of Hispaniola, call'd by the Indians Adamanai, and the Weather being very stormy drop'd Anchor in the Channel between it and Hispaniola, close to a small Island that lies between both, where that Night he saw the Eclipse of the Moon, which he said vary'd & Hours 23 Minutes from Cadiz, to the Place This I suppose made the where he was. bad Weather last so long, for he was forced to lie close in that very Place till the 20th of the Month, not without Fear for the other Ships, which could not get in, but it pleased God to save them. Being afterwards kogether again, on the 24th of September they fail'd to the most Easterly Point of Hispaniola, and thence pass'd over to a little Island lying between Hispaniola and S. John de Borriquen, call'd by the Indians Mona. From this island the Admiral does not continue the Journal of his Voyage, nor does he say how he return'd to Isabella, but only that going from Mona to S. John, the great Toil he had gone through, his own Weakness, and Want of Provisions, cast him into a dangerous Disease between a Pestilential Fever and a Lethargy, which presently depriv'd him of all his Senses and Memory. Whereupon all the Men aboard the Ships resolv'd to desist from the Design he had in Hand of discovering all the 1flands of the Caribbees, and to return to Isabella where they arriv'd in 5 Days, and on the 29th of September, and there it pleased God to restore his Health, tho' his Sickness lasted above 5 Months, which was attributed to the great Sufferings he had gone through during that Voyage, and to his extraordinary Weakness, for fometimes he had not slept 3 Hours in 8 Days, which feems almost impossible, were not he himself and his Men Witnesses of the Truth of it.

A Mon-

C LAP. LXI.

\*\*Hat aniola, and tock such Order, that they again.

mew Calumbus, who, as was said before, had been sent to Treat with the King of England about the Discovery of the Indies.

He returning to Spain with the Grant of his Demands, understood at Paris, by Charles King of France, that the Admiral his Brother had discover'd the Indies, and he supplied him with 100 Crowns to proceed on his Journey. Upon this News, he made all the hafte he could to overtake the Admiral in Spain, yet when he came to Sevil, his Brother was fet out for the Indies with 17 fail. Therefore, to fulfil the Orders he had left him at the beginning of the year 1494. he went away to their Catholick Majesties, carrying me and my Brother D. James Columbus, to serve Prince John as his Pages. as had been appointed by the Queen, who was then at Valladolid. As foon as we came thither, their Majesties sent for D. Bartholomew Columbus, and fent him to Hispaniola with three Ships, where he ferv'd some years, as appears by a Manuscript I found among his Papers, in which are these Words. I ferv'd as Captain are these Words. from the 14th of April 1494. till the 12th of March 1496. when the Admi-' ral set out for Spain, and then I began to 'Ast as Governor till the 24th of August 1498. when the Admiral return'd from the Discovery of Paria, when I ' again serv'd as Captain till the 11th of Decem. 1500. when I return'd to Spain. But to return to the Admiral, he returning from Cuba, made him Governor of the Indies, tho' afterwards there arose a Controversie on this Account, because their Catholick Majesties said they had not granted the Admiral Power to appoint any such. But to decide this difference, their Highnesses granted it a-new, and so for the future he was called Adelantado, that is, Lieutenant of the Indies.

The Admiral having the Assistance and Advice of his Brother, took some rest, and liv'd in quiet, tho' on the other fide he met with I rouble enough, as well from his Sickness, as because he found almost all the Indians had revolted, through the Fault of D. Peter Margarite, of whom we spoke above. He tho' obliged to Respect and Honour him that at his departure for Cuba, had left him the Command of 360 Foot and 14 Horse, to Travel over the Island, and reduce it under the Obedience of their Catholick Majesties and the Christians, and particularly the Province of Cibao, whence the chief therefore as he heard of the Admiral's Profit was expected; yet did all things io much to the contrary, that as soon as the Admiral way are, he went with all his Men to the great Plain called Vega Real, ten Leagles from Isabella, without fliring to over run and reduce the Island. Hence there ensued, Discord and Factions Vol. II.

at Isabella; he endeavouring that those of of the Council instituted by the Admiral, Columbus. should Obey his Orders, sending them very insolent Letters, till perceiving he could not fucceed in his defign of getting the whole Command into his Hands, rather than stay the coming of the Admiral, who would call him in question for his Behaviour, he went aboard the first Ships that came from Spain, and return'd in them, without giving any Account of himself, or any ways disposing of the Men left under his Command. Upon this, every one went away among the Indians, where he thought fit, taking away their Goods and their Women, and committing such Outrages, that the Indians resolv'd to be reveng'd on those they found alone, or stragling; so that the Cacique of the Magdalen, whose Name was Guatiguana had kill'd ten, and privately ordered a House to be fir'd, in which there were 11 fick. But he was feverely punish d, when the Admiral return'd; for tho' he himself could not be taken, yet some of his Subjects were made Prisoners, and sent into Spain in 4 Ships, Antony de Torres brought on the 24th of February 1495. Six or seven more, who in other parts of the Island had done harm to the Christians, suffered for it. The Caciques had certainly kill'd many, and would have destroy'd more, but that the Admiral came in time to Curb them all, who found the Island in such Disorder, that most of the Christians committed a thousand Insolencies, for which they were mortally hated by the Indians, who refus'd to submit to them. It was no difficult matter for them all to agree to cast off the Spanish Yoke, because, as has been said, there were 4 principal Kings or Caciques, to whom all the others were subject. The Names of those four, were Caunabo, Guacanagari, Rehechico, and Guarionex; and each of these had under him 70 or 80 other little Lords; not that they paid Tribute, or gave any think, but were obliged, whenfoever called upon, to assist them in their Wars, and till the Ground; but Guaca- One India nagari, one of these, who was Lord of King side that part of the Island, where the Town Spaniards of the Nativity had been built, continued a Friend to the Christians. As foon coming, he went to visit him, saying, he had no way been Aiding or Adviling with the others, which might appear by the great Civility the Christians had found in his Country, where 100 Men had been always very well us'd and furnish with all things he could get to

please them; for which reason, the other Columbus. Kings were become his Enemies, and particularly Behechico had killed one of his Women, and Caunabe had taken another; wherefore he pray'd him to Cause her to be restored, and assist him to Revenge these Wrongs. The Admiral refolved to do so, believing what he faid was true, because he wept every time he called to mind those that had been kill'd at the Nativity, as if they had been his own Children, and he was the more inclineable to it, considering that the Discord among them would make it more practicable to Conquer the Country, and punish the Revolt of the other Indians, and killing of the Christians. Therefore on the 24th of March 1495. he fet out from Isabella to carry on the War, and the aforefaid Guacanagari with him, Being very desirous to crush his Enemies; tho' the undertaking feem'd very difficult, they having rais'd above 100000 Indians, whereas the Admiral had not along with him above 200 Christians, 20 Horses, and as many Dogs. The Admiral being acquainted with the Nature and Qualities of the Indians, when he was two days Journey from Isabella, divided his Forces, giving half to his Brother the Lieutenant, that he might attack that multitude scattered about the Plains in two places, believing the Terrour of hearing the Noise in several places would put them to flight sooner than any thing else, as in effect it prov'd. The Battallions of Foot on both fides falling upon the multitude of Indians, and breaking them with the first Discharge of their Cross-Bows, and Muskets, the Horse and Dogs fell in next in most furious manner, that they might not Rally; whereupon those faint hearted Creatures fled, some one way, and some another; and our Men pursuing and killing a great number, made such havock, that in a short time, through God's Assistance, they obtain'd a compleat Victory, many of the Enemies being slain, and others taken, among whom was Cannabo, the chief Cacique of them all, together with his Wives and Children. This Caunabo, afterwards confels'd he had kill'd 20 of the Christians left with Arana in the Town of the Nativity, the first Voyage when the Indies were discovered, and that afterwards, subduing of Nations are his Gift, and under colour of Friendship, he went in great haste to see the Town of Isabella, to observe how he might best attack it, and do as he had done at the Nativity. \*Of all which things, the Admiral had

TOOPOO Indians defeated.

been fully inform'd by others; and therefore to punish him for that Offence, and this second Revolt, and gathering of Forces, he had now march'd against him, and having taken him and his Brother, he fent them all Prisoners into Spain, for he would not without the knowledge or their Catholick Majesties, execute so considerable a Person, being satisfied with punishing some of those that were most The Victory obtain'd, and this in fault. Man's Imprisonment, put the Affairs of the Christians into such a good Posture, that tho' at that time they were but 630. many of them fick, and others Women and Children; yet in the space of a year, the Admiral spent in ranging the Island. without being forced to draw Sword any more, he reduced it to fuch Obedience, that they all promised to pay Tribute to their Catholick Majesties every 3 months, that is, all that Inhabited the Province of Cibao, where the Gold Mines were, from 14 years of Age upward, to pay a large Horse-Bell full of Gold Dust, and all the rest 25 Poulids of Cotton a Head. And that it might be known, who had paid this Tribute, there was a fort of Brass and Tin Coin stamp'd, one of which pieces was to be given to every one that paid, and he to wear it about his Neck, that whosoever was found without it might be known not to have paid and And doubtless, this Order punish'd. would have proved effectual, had not not those Troubles we shall speak of afterwards hapned among the Christians; for after the taking of Caunabo, the Country was so peaceable, that for the future one fingle Christian went safely where he pleased; and the Indians themselves would carry him about on their Shoulders, which the Admiral attributed only to God, and the good Fortune of their Catholick Majesties, considering it had been otherwise impossible for 200 Men, half Sick and Ill-Arm'd, to overthrow fuch a multitude, which it pleas'd his Divine Majesty not only to bring under his Command, but to fend fuch scarcity of Provisions, and such violent Diseases among them, that they were reduced to one third of what they had been at first, to make it appear the more plain, that fuch miraculous Victories, and the or of their want of Con age, for the our Men had been subtiour to them, yet their multitude might make amends for any Advantage we had over them.

### CHAP. LXII.

Some remarkable Things in the Island, as the Customs, Ceremonies, and Religion of the Indies.

He People of the Island being brought under, and conversing more t of freely with our Men, many other particulars, and the Secrets of their Religion were found out, but particularly that there were Mines of Copper, Azure, and Amber; as also Ebony, Cedar, Frankincense, and other rich Gums and Spice of several forts, but wild, which, being cultivated, might be brought to Perfection; as for instance, Cinnamon of good colour, but bitter, Ginger, long Pepper, abundance of Mulberry Trees, for making of Silk, which bear Leaves all the year, and many other useful Trees and Plants not known in our Parts. Besides, the Spaniards were inform'd of many other things relating to their Customs, which to me seem to deserve a place in our History. To begin with their Religion, I will here fet down the Admirals own words, writ by himself, which are thefe.

I could discover neither Idolatry nor any other Sect among them, tho' every one of their Kings, who are very many, as well in Hispaniola, as in all the other Illands and Continent, has a House apart from the Town, in which there is nothing at all but some Wooden Images Carv'd, by them call'd Cemi's; nor is there any thing done in those Honses but what is for the Service of those Cemi's, they repairing to perform certain Ceremonies, and Pray there, as we do to our Churches, In these Houses they have a handsome round Table, made like a Dish, on which is some Powder, which they lay on the Head of the Cemi's, with a certain Ceremony; then through a Cane that has two Branches, clapp'd to their Nose, they Snuff up this Powder: The Words they say none of our People un-derstand. This Powder puts them befides themselves, as if they were Drunk. They also give the Image a Name, and I believe it is their Fathers, or Grand-fathers, or both, for they have more than one, and some above ten, all in Memory of their Forefathers, as I said betore. I have heard them commend one above another, and have observed them to have more Devotion, and show more respect to one that another, as we do in Processions, in time of need, and the People and Cacrosers boast among themselves of having the best Cemi's. When they go to these their Cemi's, they have

the Christians, and will not let them go into those Houses, and if they suspect they will come, they take away their Cemi's, and hide them in the Woods, for fear they should be taken from them, and what is most ridiculous, they use to Steal one anothers Cemi's. It happen'd once, that the Christians on a sudden rush'd into the House with them, and presently the Cemi cried out, speaking in their Language, by which it appear'd to be artificially made, for it being hollow, they had applied a Trunk to it, which answer'd to a dark corner of the House cover'd with Boughs and Leanes, where a Man was concealed, who spoke what the Cacique order'd him. The Spaniards therefore reflecting on what it might be, kick'd down the Cemi, and found as has been faid; and the Cacique feeing they had difcovered his Practice, earnestly begg'd of them not to speak of it to his Subjects. or the other Indians, because he kept them in Obedience by that Policy. This we may lay has some resemblance of Idolatry, at least among those, who are ignorant of their Caciques Fraud, fince they believe it is the Cemi that Ipeaks, and all of them in general are impos'd upon, and only the Cacique and he that combines with him, abuse their Credulity, by which means he draws what Tribute he pleases from his People. Most of the Caciques have 3 Stones also, to which they and their People show a great Devotion. The one they fay helps the Corn, and all forts of Grain; the fecond, makes Women be deliver'd without Pain; and the third, procures Rain or fair Weather, according as they stand in need of either. I fent your Highness 3 of these Stones by Antony de Torres, and have 3 more to carry along with me. When these Indians Die, they have several ways of performing their Obsequies, but the manner of Burying their Caciques is thus. They open and dry him at the Fire, that he Of others they take may keep whole. Others they Bury in a only the Head. Grot, or Den, and lay a Calabash of Water and Bread on his Head. Others they Burn in the House where they Die, and when they are at the last Gasp, they fuffer them not to Die, but Strangle them, and this is done to Caciques. Others are tura'd out of the House, and others put them iped a Hamack, which is their Bed, they go to these their Cemi's, they shun Jaring Bread and Water by their Head, DEVAT

never returning to fee them any more. Columbus. Some that are dangerously ill, are carried to the Cacique, who tells them whether they are to be Strangled or not, and what he says, is done. I have taken pains to find out what it is they believe, and whether they know what becomes of them after they are Dead; especially I enquir'd of Caunabo, who was the chiefest King in Hispaniola, a Man in years, knowing, and of a most piercing Wit. He and the rest answer'd, That they go to a certain Vale, which every great Cacique supposes to be in his Country, where they affirm they find their Parents, and all their Predecessors, and that they Eat, have Women, and give themselves up to Pleasures and Pastimes, as appears more at large in the following Account, in which I order'd, one F. Roman, who understood their Language, to set down all their Ceremonies and Antiquities, tho? there are so many Fables that nothing can be made of it, but that they have all some regard to a future State, and hold the Immortality of the Soul.

The MANUSCRIPT of F. Roman, concerning the Anquities of the Indians, which he, as being Skill'd in their Tongue, has carefully gather'd by Order of the Admiral.

F. Roman, a poor Anchourite of the order of S. Jerome, by Order of the most Illustrious Lord Admiral. Viceron and Government of the International Control of the ous Lord Admiral, Viceroy and Governour of the Islands and Continent of the Indies, write what I could hear and learn of the Belief, and Idolatry of the Indians, and how they ferve their Gods. Every one observe some particular Way and Stee stition and Worthipping Idols, which they call Cemis. They think there is an Immortal Being, like Heaven, Invisible, and that has a Mother, but has no Beginning, and this Being they call Jocakuva-gue Maorocon, and its Mother they call Atabei, Iermaoguacar, Apito, and Zuimaco, which are several Names. Those I here write of, are the People of the Island Hispaniola, for I know nothing of the others, having never been in them. They also know, whence they came, the Original of the Sun and Moon, how the Sca was made, and whither the Dead go. And they believe the Dead appear to them upon the Roads when any of them go alone, for when there are a great many together they do not appear to them. All this their Anceflors have made them believe, for they can neither read, nor tell beyond Ten.

### CHAP. I.

Whence the Indians came, and after what manner.

Prepafterous con-Indians.

Here is a Province in Hispaniola call'd Cannan, in which there is a Mounceits of the tain call'd Canta, where there are two Grots or Caverns; the one call'd Cacibagiagua, the other Amaiauva; most of the People that first Inhabited the Island came out of Cacibagiagua. These being in those Caverns, kept Watch by Night, and one Marocael had the charge of it, who coming one day too late to the door, they fay the Sun took him away. Seeing

therefore that the Sun had carried him away for his neglect, they shut the Door against him, and so he was turn'd into a Stone near the Door. Then they say, That others going a Fishing were taken by the Sun, and became Trees by them call'd Jobi, but otherwise Mirabolans.

The reason why Marocael watch'd and warded, was to observe whether he would fend and distribute the People, and it appears he staid to his own harm.

### CHAP. II.

# How the Men parted from the Women.

T happened, that one Guagugiana, bid another, whose Name was Giadruvava, go and gather an Herb called Digo, wherewith they cleanse their Body when they go to Wash. He went out before day, the Sun took him by the way, and he

became a Bird that fings in the morning, like the Nightingale, and as call'd Giahaba Bagiaci. Guagugian Arceiving he did not return, whom he had fent to gather Digo, resolv'd to go ou of the aforesaid Grot Cacibagiagua.

### CHAP. III.

Columbus

Pallion, feeing they did not return m he had fent to gather Digo to wash, and said to the Women, leave your hands, and let us go into other Countries, and we shall get Jewels enough. Leave your Children, and let us only carry the Herbs along with us, and we will come again for them.

## CHAP. IV.

Magugiana fet out with all the Women, and went to feek another entry, and came to Matinino, where immediately left the Women, and it into another Country, called Guanaving left the Children by a Brook crwards, when Hunger began to ch them, they fay, they cry'd, and cd their Mothers, that were gone; the Fathers could not relieve the

Children, who for Hunger, called their Mothers, faying Ma Ma, to speak, but in truth to beg of the Earth. And they thus crying and begging of the Earth, faying Too, Too, like one that very earnestly begs a thing, they were transform'd into little Creatures like Dwarfs, and call'd Tona, because of their begging of the Earth. And thus all the Men were left without Women.

### CHAP. V.

"Hat there went Women again to the faid Island of Hispaniola, formerly led Aiti, and so the Islands called im Bonchi: And forasmuch as they we no Letters, nor way of Writing, y can give no good Account how they derstand this Story of their Ancestors, d therefore they do not agree in what ey say, nor is what they relate to be put to any Order. When Guagugiana, who try'd away all the Women went off, he ok with him the Wives of his Caviques, hose Name was Anacacugia, deceiving cm as he had done the others. Besides,

a Kinsman of Guagugiana, who followed him, went upon the Sea, and Guagugiana said to his Kinsman, when he was in the Canoo, Look what a fine Cobo there is in the Water, which Cobo is the Sea-Snail, or Perwinkle; and he looking down for the Cobo, Guagugiana his Kinsman took him by the Feet and threw him into the Sea, and so took all the Women to himself, and left those at Matinino, where it is said there are none but Women to this day; and he went away to another Island called Guanin, and it was so called for what he carried to it when he went thither.

## CHAP. VI.

That Guagugiana return'd to the same Canta, whence he had carried the Vomen: They say that Guagugiana begin that Country whither he went, we he had left a Woman in the Sea, at which he was not pleas'd, and look'd aout where to Wash himself, being sulf those Blotches we call the French Pox. The Woman put him into a Guanara, hat is, a By-Place; and being there, was heal'd of his Sores.

Afterwards he ask'd her leave to go as way, and she gave it him. This of womans Name was Gnaponito; and Guangona chang'd his Name calling himself from that time forwards, B. beroci Gnahagona. And the Woman Gnaponito, gave the beautiful Gnahagiona much Gnaponito, gave the beautiful Gnahagiona much Gnaponito, she color, that he might carry them tied to his Arms; for in those Countries, the coloribiare of Stone, very like Marble;

and they wear them about their Wrists and Necks; and the Guanin.'s wear them at their Ears, making holes in them when they are little, and they found like fine They say, That Guabenito, Al-Mettle. beborael, Guahagiona, and the Father of Albeborael, were the first of these Guani-Guahagiona Staid in that Country with the Father, called Hianna, his Son from his Father took the Name Hia Guaili Guanin, which fignifies Son of Hiauna, and from thence forward, was called Guanin, and is fo to this day. And they not knowing how to write, cannot give a good Account of these Fables, nor can I write them well: wherefore I believe, I mention the last first and the first last. But all I write is related by them, and to I deliver it as thad it from the People of the commercial

CHAF

Columbus.

### CHAP. VII.

How Women came again to the aforesaid Island Aiti, now called Hispaniola.

They say the Men went one Day to Wash themselves, and when they were in the Water it Rain'd much, and they were very desirous to have Women; and that very often, when it Rain'd, they had gone to seek out the Track of their Women, and could find no news of them; but they say, that as they were Washing themselves that day, they saw fall down from the Trees, as it were sliding down the Branches, the Shape of People, which were neither Men nor Women, nor had the Secrets Parts of Man or Women, which they went to catch, but they sled as swift as if they had been Eagles. There-

fore by Order of their Cacique, they call??! 2 or 3 Men, fince they themfelves could not catch them, to watch how many there were of them, and find out for each of them a Man that was Caracaracois, for those Men had rough Hands, and therefore would hold fast. They told the Cacique they were four, and so they took four Men that were Caracaracois, which is a Distemper like the Itch, that makes the Body very rough. When they had taken those Creatures, they held a Council about them, how to make them Women, since they had neither the Privities of Man or Woman.

### CHAP. VIII.

## How they found the way to make Women.

Women

They fought out a Bird called Turiri, formerly Turire Cabuvaial, that is, a Woodpecker, that makes holes in Trees, and taking those Creatures that had neither the Parts of Man nor Woman, tied them Hands and Feet, and bound the said Bird to their Body, the which Bird taking them to be Trees, began to work as it uses, Pecking and Boreing that part where Womens Privities should be; and

thus fay the Antientest Indians, they came to have Women. I writing in hast, and not having Paper enough, could not place every thing rightly, but through mistake transpos'd some; but the mistake is not great, for they believe all that is here writ. Let us now return to what we should have said first, that is, their Opinion concerning the Original and Beginning of the Sea.

## CHAP. IX.

# How they say the Sea was made.

There was a Manthey call Giaia, whose right Name they know not, his Son was call'd Giaiael, that is, Giaia's Son. This Giaiael intending to kill his Father, he Banish'd him, where he remain'd an Outlaw 4 Months, after which his Father kill'd him, put his Bones into a Calabash, and hung it to the top of his House, where it continued some time. It happen'd that being desirous to see his Son, Giaia one day said to his Wise, I have a mind to see our Son Giaiael, and she was content. Taking down the Calabash, he turn'd it over to see his Sons Bones, and

there came out of it abundance of great and small Fishes. Perceiving that the Bones were turn'd into Fishes, they refolv'd to Eat them. Now they say, that one day, when Giasa was gone to his Conichi, that is, his Lands, he had by Inheritance, there came 4 Sons of a certain Woman called, Itiba Tahnwawa, all Born at one Birth; for the said Woman dying in Labour, they cut her open, and took out the said Sons; and the first they cut was Caracaracol, that is, Mangy; which Caracaracol had to Name..... the others had no Name.

### CHAP. X.

who died in Labour, went to take down Giana's Calabath, in which was his Son Gianad who had been Converted into Fish, and none of them durft lay hold of it but. Dimeran Caracaracel, who unhung it, and they all Ear their Belly full of Fish, but whilst they were Eating, they perceiv'd Giana was coming from his and he was Dumb.

Estate, and going about in that hurry to hang up the Calabish, they did not hang it right, so that here ran so much Water from it, as overflow'd all the Country, and with it came out abundance of Fish, and hence they believe the Sea had its Original. Afterwards they went and met with a Man whose Name was Cone, and he was Dumb. C H A P

### CHAP. XI.

## What happened to the Four Brothers, when they fled from Giaia.

S foon as they came to Baffamanaco's Door, and found he brought Cazzabi, they said, Ahiacavo Gearocoel; that is, Let us be acquainted with this Grandsire of ours. So Deminan Caracaracol, seeing his Brother's before him, went in to try whether he could get fome Cazzabi, which is the Bread they Eat there. Caracaracol going into the House of Aiamavaco, ask'd some Cazzabe of him, which, as has been faid, is Bread. He clapt his Hand on his Nofe. and threw on him a Guanguaio, full of Cogroba, which he had made that day, and is a fort of Powder they take sometimes to Purge them, and for other Purposes you shall know hereafter. they take through a Cane half a Cubit long, one end whereof they put to their Nose, and the other to the Powder, and fo Snuff it up, which Purges them very much. So he gave him that Guangua o instead of Bread, and leaving what he was about, went away very angry be-cause they ask'd it of him — After this, Caracaracol return'd to his Brothers, and told them what had happen'd to him with Baramanicoel, and the stroke he gave him on the Shoulder with the Guanguaio, and that it pain'd him very much. His Brothers look'd upon his Shoulder, and perceiv'd it was much Swollen, which swelling increas'd so much, that he was like to Dle. Therefore they endeavoured to cut it open, and could not, but taking an Instrument of Stone, they opened it, and out came a live Female Tortoise; so they built their House, and bred up the Tortoise. I understood no more of this matter, and what we have writ fignifies but little. They fay further, That the Sun and Moon came out of a Grotto, that is in the Country of Calique, whose Name is Mancia Truvel. and the Grotto is called Giovovava; and they pay a great Veneration to it, and have Painted it all after their Fashion, without any Figure, but Leaves, and the like. In the said Grotto, there were two little Stone Cemi's, about a quarter of a yard long, their Hands bound, and they look'd as if they Sweated. These Cemi's they honour'd very much; and when they wanted Rain, they fay they used to go Visit them, and they pre-fently had it. One of the Cemi's is by them called Boinauel, the other Ma-

### CHAP. XII.

What their Opinion is conserning the Wandring of the Dead, after what manner they are, and what they do.

Hey hold, there is a Place to which the Dead go, called Coarbai, and lying in a part of the Island known by the Name of Soraia. The first that was Place of the Dead.

in Coaibai, they fay, Was one Machetaurie Guasava, who was Lord of the faid Coaibai, the Habitation and Dwelling-Place of the Dead.

### CHAP. XIII.

# Of the Figure they affign the Dead.

Hey fay they are shut up in the Day, and walk abroad in the Night; that they Feed on a certain Fruit, called Guabazza, which tastes like a \_\_\_\_\_\_, that in the Day-time they are \_\_\_\_\_\_, and at Night we've Converted into Fruit, and that they Fear, and go about with the Living; and thus it is they know them: They feel their Belly, and if they Vol. II.

cannot find their Navel, they fay they are Dead; for they fay the Dead have no Navel; and therefore they are somethmes deceiv'd, when they do not observe this, and Lie with some of the Women of Coaibai, whom when they think they have in their arms, they have none, because they vanish on a suddain. This they still believe as to this Affair.

of the Dead. Whilst a Man is Living, they call the mbn. Soul Goirz, and when Dead Opia, which You Goerz they say, often appears to them, as well in the shape of a Man as of a Woman; and they say, there have been Men that would sight with it, and when they came to close it, vanish'd, and the Man clapp'd his Arms elsewhere about some Tree, to which he clung sast. This they believe all in general, great

and small, and that it appears to them in the shape of their Father, Mother, Brother, Kindred, or any other. The Fruit they say the Dead feed on, is about the bigness of a Quince. The Dead do not appear to them in the Day-time, but always at Night; and therefore if any one ventures to go abroad at Night, it is with great fear.

### CHAP. XIV.

Whence they have this, and who makes them hold such an Opinion.

Here is a fort of Men among them, called Bobuti's, who have many jugling Tricks, as we shall say hereafter, to make them believe, they Talk with the Dead, that they know all their Actions and Secret, and when they are Sick, Cure them. Thus they impose upon them, which I have feen with my own Eyes, tho' as to other particulars I relate only what I have heard from many of them, especially the principal Men, with whom I convers'd more than with others, for these believe such Fables more firmly than the others, for they have all their Superstitions reduced into old Songs, and are directed by them, as the Moors are by the Alcoran. When they Sing these Songs, they play upon an Instrument, called Maiohavan, made of Wood. hollow, strong, yet very thin, and as long as a Man's Arm; that part where they play on it is made like a Smith's Tongs, and the other end like a Club, fo that it looks like a Calabash with a long Neck. This Instrument they play on, and is so loud, that it is heard a League and half off; and to that Musick they fing those Songs they have got by The chief Men play on it, who learn it from their Infancy, and fo fing to it according to their Custom. Let us now proceed to speak of many other Ceremonies and Customs of these Gen-

### CHAP. XV.

Of the Observations of the Indian Buhuitihu's, How they profess Physick, Teach the People, and are often Deceiv'd in their Cures.

Ll or most of the People of the Island of Hispaniola have abundance of Cemi's, of several soits: Some have their Father, Mother, Kindred and Predecessor: Some Figures cut in Stone and Wood, and many of both sorts, some that Speak, others that cause Things to grow, some that Eat, and others that cause Rain, and others that make the Wind blow; which Things those ignorant People believe the Idols perform, or rather those Devils. They having no Knowledge of our Holy Fath. When any one is sick, they bring him the Bu-

buitibu, that is, as was said above, the Physician. The Doctor is obliged to be Dieted as the sick Man is, and to look like him, which is done thus. He is to Purge himself as the sick Man does, which is done by Snuffing a certain Powder, called Cohoba, up his Nose, which makes him so Drunk, that he knows not what he does, and so says many extravagant Things, which they affirm is Talking with the Cemi's, and that they tell them how the Sickness came.

### CHAP. XVI.

## What these Buhuitihu's do.

we of e Sick.

Hen they go to visit any sick Bo-dy, before they set out from their House, they take the Soot off a Pot, or Pounded Charcoal, and black all their Face, to make the fick Man believe what they please concerning his Distemper. Then they take some small Bones, and a little Flesh, and wrapping them all up in fomething that they may not drop, put them in their Mouth, the fick Man being before Purg'd with the Powder When the Physician is come aforcfaid. into the fick Man's House, he fits down, and all Persons are silent; and if there are any Children they put them out, that they may not hinder the Rubuitibu in performing his Office; nor does there remain in the House any but one or two of the chief Persons: Being thus by them-selves, they take some of the Herb Giora --- broad, and another Herb, wrapp'd up in the we's of an Onion halt a quarter long; one of the Gioia's, and the other they hold, and drawing it in their Hands they bruise it into a Paste, and then put it in their Mouths to Vomit what they have Eaten, that it may not hurt them, then presently begin their Song, and lighting a Torch, take the This done, having staid a little, the Buhuitihu rises up, and goes towards the fick Man, who fits all alone in the middle of the House, as has been said, and turns him twice about, as he thinks fit; then stands before him, takes him by the Legs, and feels his Thigs, defcending by degrees to his Feet, then draws hard, as if he would pull fomething off; then he goes to the Door, fluts it, and fays, Be gone to the Mountain, or to the Sea, or whither thou

wilt; and giving a Blast, as if he blow'd fomething away, turns about, claps his Hands together, shuts his Mouth, his Hands quake as if he were a Cold, he blows on his Hands, and then draws in his Blast as if Sucking the Marrow of a Bone, fucks the fick Man's Neck, Stomach, Shoulders, Jaws, Breaft, Belly, and feveral other Parts of his Body. This done, they begin to Cough, and make Faces, as if they had Eaten fome Bitter thing, and the Doctor pulls out that we faid he put into his Mouth at home, or by the way, whether Stone, Flesh, or Bone, as above. If it is any thing Eatable, he fays to the fick Man, Take notice you have Eaten fomething that has caus'd this Distemper; see how I have taken it out of your Body, for your Cemi had put it into you because you did not Pray to him, or Build him some Temple, or give him some of your Goods. If it be a Stone, he says, Keep it safe. Sometimes they take it for certain, that those Stones are good, and help Women in Labour; wherefore they keep them very carefully, wrapp'd up in Cotton, putting them into little Baskets, giving them fuch as they have themselves to Eat, and the same they do to the Cemi's they have in their Houses. Upon any Solemn Day, when they provide much to Eat, whither Fish, Flesh, or any other thing, they put it all into the House of the Cemi's, that the Idol may Feed on it. The next Day they carry all home, after the Cemi has Eaten. And so God help them, as the Cemi Eats of that, or any other Thing, they being inanimate Stocks or Stones.

### CHAP. XVII.

How the aforesaid Physicians have been sometimes Decerv'd.

Hen they have done a has been faid, and yet the Patient dies, if the Dead Man has many Friends, or was Lord of a Territory, and can oppose the said Bubmitibu, that is, Physician, for mean People date not contend with them; he that would do him harm, does it thus. When they would know whether the Patient Died through the Physician's

Fault, or whether he did not observe what was prescrib'd; they take an Herb, called Gueio, whose Leaves are like Basil, thick and broad, being called by another name, Zachon: They take the Juice of this Leaf, pair the Dead Man's Nails, and cut off the Hair on his Forehead, which they powder between two Stones, and mix with the aforesaid Juice of the Herb.

Herb, and pour it down the Dead Man's Throat, or Nostrils, and so doing, ask him, Whether the Physician was the occasion of his Death? and whether he observed Order? This they ask several times, till he speaks as plain, as if he were alive; so that he answers to all they ask of him, saying, The Bubuitibu did not observe Order, or was the Cause of his Death; and they say, the Physician asks him, Whether he is alive, and how he comes to talk so plain; and he answers he is dead. When they have known what they desire of him, they return him to his Grave, whence they

took him to make this Enquiry. They use another Method to know what they desire: They take the Dead Body and make a great Fire, like that us'd for making of Charcoal; and when the Wood is turn'd into a live Coal, they throw the Body into that violent Fire, and cover it with Earth, as the Collier's do the Coals, where they let it lie as long as they think sit, and there ask Questions, as was said before; who answers, He knows nothing. This they ask ten times, and then he speaks no more. They ask, Whether he is Dead? But he speaks only those ten times.

### CHAP. XVIII.

How the Kindred of the Party departed Revenge themselves, when they have got an Answer by means of the Drench.

He Dead Man's Kindred get together upon a Day appointed, wait for the aforesaid Rubnitchu, and Bastinado him, till they break his Legs, Arms and Head, fo that he is all batter'd, and fo they leave him for Dead. At Night, they say, there come abundance of Snakes of several forts, white, black, green, and of several other Colours, which lick the faid Physician's Face, and all his Body, so left, as has been said, and remains in that manner two or three days. Whilst he is thus, they say the Bones of his Legs and Arms knit together again, he gets up, and walks fair and foftly towards his House, and they that saw him, ask the question of him, Were not you Dead? He answers, The Cemi's came to his assistance in the shape of Snakes. The Dead Man's Kindred, in a Rage, because they thought they had Reveng'd their Relations Death, seeing him alive, grow desperate, and endeavour to lay hold of him to put him to Death; and if they

can catch him again, they put out his Eyes, and bruife his Tefficles; for they fay none of these Physicians can Die, tho' never so much Bastinadoed, if they do not cut out his Testicles.

How they know what they Desire of him they Burn, and how they take their Revenge.

When they uncover the Fire, the Smoke that comes from it, rifes till they lose fight of it, and makes a noise, as it breaks out. Then it turns down again, and goes into the House of the Bubuithu or Physician; and that very moment, he that did not observe Order, falls Sick, is cover'd with Sores, and all the Skin of his Body sleas off; and this they take for a sign, that he did not do his Duty, and therefore the Patient died; for which reason they endeavour to kill him, as was said in the other Case. These are the Sorceries they use.

## CHAP. XIX.

How they make and keep their Wooden and Stone Cemi's.

Those of Wood are made thus: When any one is Travelling, he says, He sees some Tree that shakes its Root; the Man in a great fright, stops, and asks, Who he is? It answers, My Name is, Bubuitubu, and he will inform you who I am: The Man repairing to the said Physician, tells him what he has seen.

The Wizard, or Conjurer, runs immediately to see the Tree the other has told him of, fits down by it, and makes it Cognoba, as was said above in the Story of the Four Brothers. The Cognoba being made, he stands up gives it all its Titles, as if it were found great Lord; and asks of it, Tell me who you are,

what you do here, what you will have with me, and why you sent for me? Tell me, Whether you will have me cut you, whether you will go along with me, and how you will have me carry you, and I will build you a House and Endow it? Immediately, that Tree, or Cemi, becomes an Idol, or Devil, anfwers, telling how he will have him do it. He cuts it into such a shape as he is directed, builds his House, and Endows it; and makes Cogioba for it several times in the year; which Cogroba is to pray to it, to please it, to ask and know of the said Cem, what Good or Evil is to happen, and to beg Wealth of it. When they would know whether they shall be Victorious over their Enemies, they go into a House, whither none but the chief Men are admitted. The Lord of them is the first that begins to make the Cogioba, and to make a noise; whilst he does it, none of the Company speak-His Prayer being ing till he has done ended, he stands a while with his Head turn'd about, and his Arms on his Knees : Then he lifts up his Head, and looks towards Heaven, and speaks. Then they all answer him with a loud Voice, and when they have all spoke, giving thanks, he tells the Vision he saw, being made Drunk with the Cogioba, he Snuff'd up his Nose, which flies into his Head; and

fays, He has Talk'd with the Cemi, and shall obtain Victory, or that his Enemies shall fly, or that there shall be a great Mortality, or War, or Famine, or some fuch thing, as occurs to him in his drun-Consider, what a Condition their Brains are in; for they fav, the Houses seem to them to be turned topsie turvy, and that the Men go upon their Heads. This Cogioba they make for Stone and Wooden Cemi's, as well as for the Dead Bodies, as has been faid above. The Stone Cemi's are of feveral forts: Some there are, which they fay, the Physicians take out of the Body of the Sick, and those they look upon as the best to help Women in Labour. Others there are that Speak, which are shaped like a long Turnip, with the Leaves long, and extended, like the Shrub bearing Capers. Those Leaves for the most part are like those of the Elm. Others have three Points, and they think they cause the Giuca to thrive. Their Roots are like a Radish. The Leaves of the Ginca have at least fix or seven Points; nor do I know what to compare them to, for I have seen nothing like it in Spain, or elsewhere. The Stem of the Ginca is as high as a Man. Let us now fpeak of their Opinions concerning the Idols and Cemi's, and how they are deceiv'd by them.

### CHAP. XX.

Of the Cemi, Bugid and Aiba.

Barbarous They say, in the time of the Wars, he was burnt, and afterwards being wash'd with the Juice of Ginca, his Arms grew out again, his Body spread, and he recovered his Eyes. The Ginca was small, and they wash'd it with the above-mentioned Water and Juice, to make it grow bigger; and they affirm it made those Sick who had made the faid Cemi, because they had not brought

it Giuca to Eat. This Cemi was called Baid ama, and when any one fell fick, they called the Buhuntibu, and ask'd him, Whence the Distemper proceeded? He answered, Baidrama had sent it, because they had not sent him to Eat by those that had Charge of his House. This the Bubustibu faid the Cemi, Baidrama, had told him.

### CHAP. XXI.

# Of Guamorete's Cemi.

Hey say, that, when they built the the House of Guamorete, who was a Man of Note, they put into it a Cemi, that was on the top of his other House, he presently got up, and went a Bow-shot which Cemi was called Corocose; and from that Place, near to a Water.

Vol. II. They

when they had Wars among themselves, Guamorete's Enemies burnt the House in which this Cemi Corocofe was. They fay to Isabella, where we waited for the Admiral, till he return'd from the relief of Madalena. As soon as he came, we went where he had ordered, with one John de Aguada, who had the Command of a Fort, which D. Christopher Columbus had built, half a League from the Place where we were to Reside. The Admiral Commanded the faid John de Aguada to allow us fuch Provisions as there were in the Fort, which is called the Conception. We continued with that Cacique, Guarionen, almost two years, instructing him in our Faith, and the Manners of Christians. At first he appear'd wellinclin'd, and gave some hopes of complying and becoming a Christian, bidding us teach him the Lord's Prayer, the Creed, and all other Christian Prayers, which many in his House learnt; and he faid his Prayers every Morning, and caus'd all his Family to do so twice a day: yet afterwards he fell off from his good purpose, through the fault of some of the principal Men of that Country, who blam'd him for fubmitting to the Law of Christ, since the Christians were ill Men, and drove them out of their Country by force. Therefore they ad-vised him never to mind any thing that belong'd to the Christians; but that he should joyn and conspire with them, for their Destruction, because they could not satisfie them, and were resolv'd to fubmit no longer. Thus he fell off from his good beginning, and we perceiving he neglected what he had learnt, refolv'd to depart thence, and go where we might be more successful in instructing the Indians in the Faith. We therefore went away to another principal Cacique,

who show'd a favourable Inclination, faying, He would be a Christian : his Name was Maviatue.

Accordingly we fet out to go to the faid Maviatue's Country; I F. Roman Pane, poor Anchorite, and F. John Borgognon of the Order of St. Francis, and John Mathew the first that was Baptized

in Hispaniola.

The second day after we set out from the Town and Habitation of Guarionex, to go to the other Cacique, called Maviaine, we found Guarionex's People Building a House near the House of Prayer, where we left some Pictures for the Carechumen's, to Kneel and Pray before them. These were the Mother, Brothers, and Kindred, of the aforesaid John Mathew, the first Christian; afterwards seven more joyn'd them, and at last all the Family became Christians, and persever'd in the Faith; fo that all the aforesaid Family was left to keep that House of Prayer, and some Jands I had caused to be Till'd. They, being so left to keep the House, two days after we were gone towards the aforesaid Maviatue, six Men went to the aforesaid House of Prayer, left in the Custody of the seven Catechumen's, and by Order of Guarionex, told them, they should take those Pictures, left by F. Roman, and Destroy them, fince he and his Companion were gone, and they knew not what was become of These six Servants of Guarienex them. found fix Children keeping the House of Prayer, who being fo instructed, said, They should not come in; but they went in by force, took the Pictures, and carried them away.

### CHAP. XXVI.

What became of the Pictures, and a Miracle God wrought to Sow his Power.

Hese Men being gone out of the House, threw the Pictures down, cover'd them with Earth, and Piss'd upon them, faying, Now you will yield This they said, because much Fruit. they Buried them in a Field that was Sown, faying, What grew there would be good, but this they did in Scorn. The Children that were keeping the House by order of the Catechumen's, seeing this, They ran to their Friends who were upon their Lands, and told them, That Guarionex's Men had abus'd and fcorn'd the Pictures; which they understanding, left what they were about, and ran crying out to give an Account of it to D. Bartholomew Columbus, who was then Governor, his Brother being gone into Spain. He as Lieutenant to the Viceroy, proceeded against the Offenders, and having Convicted them publickly, This did not deter Gueriburnt them. onex and his Subjects, from their delign of Murdering all the Christians on the

Day when they were to bring in their ubus. Tribute; but the Conspiracy was disco-~ vered, and they apprehended on the fame day they were to put it in Execu-Still they held on their Resolution, and accordingly killed four Spaniards, besides John Matthew, and his Brother Anthony, who had been Baptiz'd; and running where they had hid the Pictures, tore them in pieces. Some days after, the Owner of that Field went to dig up his Agi's, which are certain Roots like Turnips, and fome like Radishes; And in the Place where the Pictures had been Buried, two or three Agi's were grown in the shape of a Cross, as if they had been fluck one through another; nor could any Man find this Cross, but only the Mother of Guarionex, who was the worst Woman I knew in those Parts, who look'd upon this as a great Miracle, and faid to the Commander of the Fort of the Conception, this Miracle has been shown by God, where the Images were found God knows to what end.

Let us now give an Account, how they were Converted that first became Christians, and how much will be requisite to Convert them all. To say the truth, That Island stands in much need of People to punish the Lords, when they will not suffer their People to be instructed in the Faith; for they have nothing to say against it, which I can with truth maintain, because it has Cost me much Labour to know it; as I am satisfied may be gathered by what has been said hitherto; and a word to the Wise is enough.

The first Christians were those we have before-mentioned in the Island of Hispaniola, that is, Gianamuariu, in whose House there were Seventeen Persons;

who all became Christians, only giving them to understand, That there is One God, who has made all Things, and Created Heaven and Earth, without any further Arguments or Controversic, for they were easie of Belies. With others there must be Force and Ingenuity used, for all of them are not alike; for as much, as if those had a good beginning and a better end, they were none of those others that begin well, and then fall off from what has been Taught them; and therefore there is need of Force and Punishment.

The first that receiv'd Baptism in the Island Hispaniola, was John Mat-them, who was Baptiz'd on the Feast of St. Matthew the Evangelist, in the year 1496. and after him all his Family; where were many Christians, and a greater Progress had been made, had they been instructed in the Faith, and the Spaniards been in a Condition to keep them under. And if any one should ask, Why I make this so easie a Matter? I say, it is, Because I know it by Experience, especially in the Perfon of a Principal Cacique, called, Mahuviativire, who has continued now for three years in his good purpose, saying, He will be a Christian, and have but one Wife, for they use to have two or three, and the great Men, twenty five or thirty. This is what I could learn and find out as to the Customs and Ceremonies of the Indians of Hispaniola, with all the Pains I have taken; wherein I expect no Spiritual, nor Temporal Advantage. May it please our Lord, if this turns to his Honour and Service, to give me his Grace to persevere; and if it must fall out otherwise, may he deprive me of my Understanding.

The End of the Work of the Poor Anchorite Roman Pane

Columbus.

### CHAP. LXIII.

How the Admiral returned to Spain to give their Majesties an Account of the Condition he less the Island in:

O return to the main Subject of our History; I say, The Admiral having brought the Island into a peaceable Condition, and built the Town of I/abella, besides three Forts about the Country, he resolv'd to return into Spain, to acquaint their Catholick Majesties with several Matters he thought convenient for their Service; but particularly, because of many malicious Slanderers, who through Envy, ceas'd not to give the King a falfe Information of the Affairs of the Indies, to the great Prejudice and Dishonour of the Admiral and his Brothers. For these Reasons he went on Board on Thursday the 15th of March, 1496. With 225 Spaniards and 30 Indians, failed from Isabella about break of day. and turn'd it along the Coast with two Caravals, one called Santa Cruz, the other Nina, the fame he went in to difcover the Mand of Cuba. On Tuesday the 22th of March, he loft fight of the East point of Hispaniola, holding on his Course Eastward as the Wind would permit. But the Wind for the most part continuing at East, on the 6th of April, finding his Provisions fell short, and his Men were weary and discouraged, he fell off towards the South to the Caribbe Islands, and came up with them in three days, Anchoring at Marigalante on Saturday the 9th of April. The next day, tho' it was not his Cufrom to weigh Anchor on a Sunday, when in any Port, he fet Sail, because his Men mutter'd, faying, When they were to feek their Bread, they needed not so strictly observe days. So he Anchor'd at the Island Guadalupe, and fending the Boats well-mann'd ashore, before they came to Land, abundance of Women came out of a Wood, with Bows and Arrows, and Feathers, as if they would defend their Island. For this reafon, and because the Sea ran somewhat high, those in the Boats kept aloof, and fent two Indian Women, they brought from Hispaniela, ashores, swiming, of whom those other Women particularly enquir'd concerning the Christians; and understanding they only desired Provisions in Exchange for fuch things as they had, bid them go with their Ships to the North-fide, were their Husbands were, who would furnish them with what they

wanted. The Ships failing choic under the Shore, faw abundance of People Women come down to the more with Bows and like Am Arrows, who let fly upon our Men with 2011s. great Cries, tho' in vain, for their Arrows fell fhort. But perceiving the Boats full of Men were going ashore, the Indians went back into an Ambush, and when our Men drew near, came out to hinder their Landing, till being frighted with the Cannon fird at them from the Ships, they fled to the Wood, leaving their Houses and Goods, where the Christians took and destroy'd all they found. Being acquainted with the way of making Bread, they fell to work, and made enough to impoly their want. mong other things shey found in the Houses, there were great Parrots, Honey, Wax, and I on, whereof they had Hatchets to cut, and Looms like those for Tapistry-work, in which they Weave their Tents. Their Houses were square, and not round, as is usual in the other Islands. In one of them was found the Arm of a Man roafting upon a Spit. Whilst the Bread was making, the Admiral fent 40 Men up the Country, to learn something of it; who the next day return'd with to Women, and three Boys; the rest of the People being fled. Among these Women, was the Wife of a Catique, whom a Canary Man, that was very nimble had much difficulty to overtake; and she had got from him, but that feeing him alone, she thought to take him; and clofing, she got him down, and had ftifled him, but that others came in to his affiftance. These Womens Legs are Swathed with Cotton from the Ancle to the Knee, that they may look thick; which Ornament they call Coiro, and look upon it as very genteel; and they gird so hard, that if it happens to flip off the Leg, that part appears very thin. The same, both Men and Women use in Jamaica, who swath their Arms up to the Arm-Pits, that is, about the smallest Parts, like the old fashion Sleeves us'd among us. These Women are also excessive Fat, and there were fome thicker than a Man could grasp; as foon as Children can stand upon their Legs and Walk, they give them a Bow, that they may learn to shoot; and they all wear their Hair long, and look upon

V

their Shoulders, nor do they cover any part of the Body. That Lady they took, faid, The Hand was only Inhabited by Women, and that those who would have hindred the Men landing were Women, except only four Men, who were there accidentally from another Island; for at a certain time in the year they come to Sport, and Lie with them. The same was observed by the Women of another Island, called Matrimonio, of whom she gave the same Account we read of the Amazons; and

the Admiral believ'd it by what he faw among those Women, and because of the Conrage and Strength that appear'd in them. They also say, Those Women seem to be Endew'd with clearer Understandings than those of the other Islands; for in other Places they only reckon the Day by the Sun, and the Night by the Moon; whereas these Women reckoned by other Stars, saying, When the Charles Wain rises, or such a Star is North, then it is time to do so and so.

### CHAP. LXIV.

# The Admiral Sails from the Island Guadalupe for Spain.

W Hen they had made Provision of Bread for 20 Days, besides what they had abourd, the Admiral refolv'd to continue his Voyage towards Spain; but perceiving that Island was so lolet to the others, he thought hit first to satissle those Women with some Gifts, in fatisfaction for the loss they had suftain'd, and therefore fent them all ashore, except the chief Lady, who chose to go into Spain with her Daughter, among the other Indians of the Island Hispaniela, one of whom was Cuonabe, who it has been said, was the chief Man in all the Island, and that because he was not a Native of it, but of the Caribbes; and therefore that Lady was content to go into Spain with the Admiral. He having furnish'd himself with Bread, Wood, and Water, set Sail on Wednesday the 20th of April, from Guadalupe, with the Wind very fount, keeping near the Latitude of 22 Degrees; for at that time they had not found out the method of running away North to meet the South-West Winds.

Having made but little way, and the Ships being full of People, on the 20th of May, they all begun to be much afflicted for want of Provisions, which was 60 great, that they had but fix Ounces of Bread a day for each, and less than a Pint of Water, without any thing else. And though there were 8 or 9 Pilots in those two Ships, yet none of them knew where they were, but the Admiral was consident they were but a little West of the Acores, whereof he gives an Account in his Journal thus.

. This Morning the Dutch Compasses varied as they us'd to do, a Point; and those of Genera, that us'd to agree with

them, varied but a very little; but afterwards failing East, vary more; which is a fign we are 100 Leagues, or some-what more, West of the Azores; for when we were just 100, there were but a few scatter'd Weeds in the Sea; and the Dutch Needles varied a Point, those of Genous cutting the North-Point; and when we are somewhat further E. N. E. they will alter again; which was verified on Sunday following being the 22th of May: by which, and the exactness of his Account, he found he was 100 Leagues from the Islands Azores, which he was furpriz'd at, and affign'd this difference to the feveral forts of Load-Stones the Needles are made by; for till they come just to that Longitude, they all varied a Point, and there some held it; and those of Genous exactly cut the North-Star. The same was yet further demonstrated the next day being the Thus continuing their 24th of May. Voyage, though all the Pilots went like Blind Men, on Wednesday the 8th of June, they came in fight of Odemira, between Lisbon and Cape St. Vincent, all the Pilots for several days having still made for the Land, except the Admiral, who the Night before flack'd his Sails for fear of Land, faying, He did so because they were near Cape St. Vincent, which all laugh'd at; some of them affirming they were in the English Channel, and those that Err'd least, said, They were on the Coast of Galicia; and therefore ought not to take in any Sail, it being better to Die ashore than Starve miserably at Sea, the scarcity being so great, that there were many, who like the Cannibals, were for Eating the Indians they had aboutd; and others, to fave the lit-

tle Provision there was left, were for umbus, throwing them over-board, which they would have done, had not the Admiral used all his Authority to prevent it, confidering they were human Creatures, and therefore ought not to be worse us'd than Prophetical in Sea Affairs.

the rest, and so it pleased God to reward him with the fight of Land next morning, as he had promis'd them all; for which reason he was afterwards look'd upon by the Seamen as most Expert, and almost

### C H A P. LXV.

How the Admiral went to Court, and their Catholick Majesties set him out again for the Indies.

He Admiral being landed in Spain, began to prepare for his Journey to Burgos, where he was favourably received by their Catholick Majesties, who were there Celebrating the Nuptials of Prince John their Son, who Married Margaret of Austria, Daughter to Maximilian the Emperor, who was conducted into Spain, and receiv'd by most of the Nobility, and the greatest appearance of Persons of Quality that had ever been feen together in Spain: But tho' I was present as Page to Prince John, I shall not mention the Particulars of this Solemnity, as well because it does not belong to our History, as because their Highnesses Historiographers have doubtless taken care to do it. Therefore to return to what concerns the Admiral, I fay, That being come to Burges, he preing and sented their Majesties with several things he brought, as Samples, from the Indies; as well Birds, and Beafts, as Trees, Plants, Instruments, and other Things the Indians use for their Service and Diversion; also several Girdles and Masks, with Eyes and Ears of Plates of Gold; besides much Gold Sand, gross and small, as Nature produced it: Some Grains as big as Vetches, some as Beans, and some as Pigeons Eggs. This was not afterwards to much valued, because in progress of time, there were pieces of Gold found that weigh'd above 30 Pounds. Yet at this time what he brought was much valued, in hopes of what was hop'd for, and accordingly their Majeflies receiv'd it in good part. the Admiral had given them an Account of all that related to the Improving and Peopling the Indies; he was desirous to return with speed, for fear some Disaster fhould happen in his absence, especially because he had left the People there in great want of all Necessaries. Tho' he press'd hard on this Account, yet the

Affairs of that Court being subject to Delays, he could not be so soon dispatch'd, but that 10 or 12 Months Elaps'd before he obtain'd two Ships, which were fent before with Succours under the Command of Peter Farnandez Coronel. These set out in February 1498. and the Admiral stay'd to Negotiate the obtaining fuch a Fleet as was requilite for him to return to the indies. But he was forced to stay above a year at Burges and at Medina del Campo ;/where in the year 1499. their Catholick Majesties granted him many Favours, and gave the necesfary Orders for his Affairs, and for the Government, and fettling of the Indies. Whereof I here make mention, that it may appear how ready their Catholick Delays in Majesties were as yet to Reward his Me-the Aimirits and Service, and how much they af- rais Bufiterwards alter'd through the false Infor-ness. mations of Malicious and Envious Perfons, infomuch as to suffer the Wrongs to be done him, which we shall give an account of hereafter. But to return to his departure from Court to Sevil, there the fitting out of the Fleet was retarded much longer than was convenient, through the Negligence and Ill-Management of the King's Officers, and particularly of D. John de Fonseca, Arch-Deacon of Sevil. Whence it proceeded, that the faid D. John, who was afterwards Bishop of Burges, ever was an utter Enemy to the Admiral and his Affairs, and was chief of those that brought him into Disgrace with their Catholick Majesties. And to the end, That D. James my Brother, and I, who had served as Pages to Prince John, who was now Dead, might not suffer by his Delays, nor be absent from Court, till the time of his Departure; he feat us on the 2d of Nevember 1497. from Sevil, to serve still, as Pages to her Majesty Queen Isabel, or Elizabeth of Glorious Memory.

### CHAP. LXVI.

# The Admiral sets out from Spain to discover the Continent of Paria.

THe Admiral forwarding his Expedition with all possible Care, on the 30th of May 1498. fet Sail from the Bay of St. Lucar de Barrameda, with fix Ships loaded with Provisions, and other Necessaries, for the Relief of the Planters in Hispaniola, and Peopling of that

On the 7th of June, he arrived at the Island of Puerto Santo, where he heard Mass, and staid to take in Wood and Water, and what else he stood in need of; yet that same Night sailed away towards Madera, whither he came on Sunday the 9th of June, and there at the Town of Found, was courteoully receiv'd and treated by the Governor of that Island, with whom he staid to provide himself further till Saturday in the Afternoon, when he Sail'd, and on Wednesday the 19th of June, arrived at Gomera, where there was a French Ship that had taken three Spaniards; who, feeing the Admiral's Squadron, weigh'd, and stood to Sea with them. The Admiral supposing they had been Merchant Ships, and fled, believing him to be a French Man, took no care to pursue, till when they were at a great distance, he was inform'd what they were, and fent · Admi- after them three of his Ships; for fear of which, the French left one of the Ships they had taken, and fled with the other two, so that the Admiral could not fetch They might have carried the them up. other off too, had they not forsaken it; for when the Admiral appeared in the Port, in the Consternation they were in, they had not time to man it; fo that there being but four French Men aboard, and fix Spaniards of those that had been taken in it; these seeing the Assistance coming to them, clapt the French under Hatches and return'd to the Port, where the Ship was restor'd to its Master; And the French had suffered, but that D. Alvaro de Lugo the Governor, and all the Island interceeded for them, who begg'd them to Exchange for fix of their Men the French had carried away, which the Admiral granted. Still hasting on his way, he failed for the Island Ferro on Thursday the 21th of June. There he refolv'd to fend away three of his fix Ships to Hilpaniola, and to Sail away with the rest towards the Islands of Cabo Verde; thencoto Sail directly over, and

discover the Continent. He therefore appointed a Captain over each Ship, of those he sent to Hispaniola; one of which Was Peter de Araha, Cousin to that Arana who died in Hispaniola; the 2d, Alonso Sancher de Carvagal; and the third, one John Antony Columbus his own Kinfman, to whom he gave particular Instruction, that each of them should Command a Week In his turn. This done, he fet out for the Islands of Calo Verde, and those Captains for Hilpaniola. But that Climate he was then entring upon being unhealthy at that time, he had a terrible Fit of the Gout in one Leg, and four days after he fell into a violent Fever; yet notwithstanding his Sickness, he was ftill himfelf, and diligently observ'd the way the Ship made, the Alterations of the Weather that happened, as he had

done fince his first Voyage. On Wednesday the 25th of June, he

of Cabo Verde, passing by it, he came to where another, called Boa Vista, a Name re- Lepers mote from the Truth, for it, fignifies, are Cur' a good Sight, and the Place is dull and and how. wretched. Here he cast Anchor in a Channel near a small Island on the Westfide of it, near to where there are 6 or 7 Houses of the Inhabitants for Persons troubled with the Leprosie, who came thither to be Cur'd. And as Sailors rejoyce when they discover Land, so do these Wretches much more, when they fee any Ships. Therefore they presently ran down to the shore, to speak to

discovered the Island de Sal, one of those Boa Vist

those the Admiral sent ashore in the Boats to take in Water and Salt, there being also abundance of Goats there. Understanding they were Spaniards, the Porruguese, who had Charge of the Island for the Owner, went aboard to speak to the Admiral, and offer him all he demanded; for which the Admiral thank'd him, order'd him to be well treated, and fome Provision given him, because by reason of the Barrenness of the Island, they always live miserably. The Admiral being defirous to know what Method they us'd to Cure the Lepers; that Man told him, That the Temperature of the Air was one main

Cause of it; and the next was their Dict, because there came thither a vast number of Tortoises, on which the sick Feed, and anoint themselves with their 7 Z

75 4 rango

Min to of Ve.d.

, i

Blood, and continuing it a short time · they recover; but that those who are Born infected with this Distemper are longer a Curing. That the reason of having fo many Tortoifes, was the Shores being all Sandy, whither the Tortoises, in the Months of June, July, and August, came over from the Shore of Africk, most of them as big as an ordinary Target, and that every Night they came up to Sleep and lay their Eggs on the Sand; That the People went along the Shore in the Night, with Lanthorns, or other Light, seeking the track the Tortoise leaves on the Sand, which they follow till they find the Fish; which being tir'd with coming so far, sleeps so found, that it hears not its Enemy. He having found and turn'd his Belly up, without doing it any more harm, goes on to feek more; for when turn'd, they cannot ftir from the Place, or recover their Feet. Having got as many as they think fit, they come again in the morning to chose those they like best; and letting go the least, carry away the others to Eat. wretchedly do the Sick live, without any other Employment or Sustenance, the Island being very dry and barren, without Trees or Springs; fo that they Drink of certain Wells whose Water is thick and brackish. Those who had Charge of the Island, which were only that Man and four more, had no other Employment but only to kill Goats and Salt them to fend into Portugal. He faid, There

were such multitudes of these Goats on the Mountains, that some years they kill'd to the value of 3 or 4000 Ducats, and that they all came from eight Goats, carried thither by the Proprietor of the Island, whose Name was Roderick Alfonso, the King of Portugal's Secretary of the Customs. That very often the Hunters are four or five Months without Bread, or any other thing to Eat, except Goats Flesh and Fish; for which reason he made great Account of the Provision he had given him. That Man and his Companions, with some of the Admiral's Men, went out a Goat Hunting; but perceiving it requir'd much time to kill all he had need of, he would stay no longer being in great hafte.

On Saturday the 30th of June, he failed for the Island of Santiago, the chief of Santiago Cabo Verde, where he arrived the next Island. day in the Evening, and Anchor'd near a Church, fending ashopt to Buy some Cows and Bulls to carry alive to Hifpaniola: Yet observing it was a difficult matter to turnish himself so soon as he desir'd, and how prejudicial Delays were to him, he refolved to flay no longer; and the more for fear his Men should ficken, that Country being unhealthy. He fays, That all the while he was at that Island, he never faw the Sky nor any Star, but there was always a thick hot Fog, infomuch that three parts of the Inhabitants were fick, and they all

of them had a base colour.

#### CHAP. LXVII.

How the Admiral Sailed from the Islands of Cabo Verde, to discover the Continent; Of the violent Heat he Endur'd, and great Brightness of the North-Star.

N Thursday the 5th of July, the Admiral left the Island of Santiago, failing South West, with a Resolution to hold that Course till he was under the Equinoctial, and then to Steer Due-West, that he might find some other Land, or cross over to Hispaniola. But the Currents among those Islands fetting violently towards the North and North West, he could not Sail as he design'd; fo that he says, On Saturday the 7th of July, he was still in light of the Island of Fogo, which is one of those of Cabe Verde; which he fays, is very high Land on the South-side; and at a distance, looks like a great Church, with a Steeple at the

whence before the East Winds blow, there usually breaks out much Fire; as is seen at Teneriff, Vesuvius and Mount Aina. From this last Country of Christians he held on his course South West, till he came into only s degrees of North Latitude, where he was becalm'd, having till then been continually attended by the Fog we mentioned above. The Calm lasted eight days, with such violent Heat, that it almost burnt the Ships; and there was no Man could abide under Deck, and had it not Rain'd fometimes, and the Sun been clouded, he thought they would have been burnt alive together with the Ships; for the first day of East end, which is a vast high Rock; the Calm, which was fair, the Heat was

fo violent, that nothing could withstand alumbus. it. had not God miraculously reliev'd method the more than the aforesaid Rain and Fog. Having therefore got off a little to the Northward, into seven Degrees of Latitude, he refolved not to make any more to the South, but fail Due-West, at least till he saw how the Weather settled, because he had lost many Cask with the great Heat, the Hoops flew, and the Corn and all Provisions were scorch'd up. About the middle of July, he says, He very carefully took the Latitude, and found a wonderful Difference between that and the Parallel of the Azores. For there, when the Charles's Wain was on the right, that is, East, then the North-Star was lowest, and from that time began to rife; fo that when the Charle?s Wayn was over head, then the North-Star was two Degrees and an half higher, and bying once pass'd that, began again to delegnd the same five Degrees to fooded. This grees it ascended. This, he says, he ob-ferv'd several times very carefully, the Weather being very fit for that purpose. But that where he was at this time in the Torrid Zone, it happened quite contrary; for when the Chalis's Wam was in its greatest Elevation, he found the North-Star fix Degrees high, and when the Charles's Wain came to the West, in

fix hours space he found the North-Star 11 Degrees high; and then in the morning, when the Charles's Wain was quite depress'd, though it could not be seen because of the Inclination of the Pole, the North-Star was fix Degrees high, fo that the Difference was ten Degrees, and it made a Circle, whose Diameter was 10 Degrees, whereas in the other place it made but five, lowering the Polition, for there it is lowest when the other is West, and here when in its Elevation. The reason of it he thought very difficult to comprehend, and not being compleatly Master of it, without further Reflection on it, he says, he is of Opinion, that in what relates to the Circumference of the Stars Orb, it may be faid, that at the Equinoctial the full appears, and the nearer a Man goes to the Pole is feems the less, because the Heaven is more Oblique. As for the Variation, I believe the Star has the quality of all the four Quarters, as has the Needle, which if touch'd to the East-side points to the East, and so of the West, North, and South; and therefore he that makes the Compass, covers the Load-Stone with a Cloth, all but the North part of it, viz. That which has the Virtue to make the Steel point North.

### CHAP. LXVIII.

How the Admiral discovered the Island of the Trinity, and saw the Continent.

N Tuesday the last day of July. 1498, the Admiral having failed many days West, insomuch, that in his Judgment, the Caribbe Islands were North of him, he refolv'd not to hold that Course any longer, but to make for Hiffamola, not only because he was in great want of Water, but also because all his Provisions perished, and he was afraid least during his absence some Mutiny or Disorder had happened among the People he left there, as in effect there had, as we shall show hereafter. Therefore altering his Course from the West, he flood North, thinking to light on some of the Caribbe Islands, there to refresh his Men, and take in Wood and Water, whereof he had great want.

As he was thus Sailing, one Day about Noon, Alonzo Ferez Nirando, a Sailor of the Town of Gullva, going up to the Round-Top, faw Land to the Westward at about 15-Leagues distance, and there

appeared three Mountains all at the same time, but not long after they perceiv'd the same Land stretch'd out towards the North East, as far as the Eye could reach, and that did not feem to be the end. Having given thanks to God, faid the Salve Regina, and other Prayers, the Seamen use in time of Distress or Joy. The Admiral called that Land the Island of the Trinity, as well because he had before Thoughts of giving that Name to the first Land he found, as in return, because it had pleas'd God to show him three Mountains all together, as has been said. He sailed Due-West, to make a Cape that appear'd to the South of him, and making for the South-side of the Island, till he came to an Anchor, five Leagues beyond a Point, which he call d de la Galera, or, of the Galley, because of a Rock that lay near the Point, and at a distance look'd like a Galley under sail. Having now but one Cask of Water for

all his Ships Ciue, and the other Ships recontrol being in the same Condition, there beming no conveniency here to take in any, on Wednesday following in the Morning he continued his Course still West, and cast Anchor at another Point, which he called de la Plaga, or, of the Strand, where the People landed, and took Water in a delicate Brook, without feeing any Town or People there, tho' along the Coast they left behind they had scen many Houses and Towns. True it is, they found the Tokens of Fishermen, who had fled, leaving behind them fome of their Fishing Tackle. They also saw the Prints of the Feet of Beafts, and feem'd to be of Goats, and faw the Bones of one, but the Head being without Horns, they thought it might be of some Catamountain, or Monkey, as they afterwards found it to be, seeing abundance of those Cats in Paria. This same day,

being the first of Angust, failing beautiful Cape Galera and that of la Place Son wards, they discover'd the Continent. about 25 Leagues distance as they guess'd. but they thinking it to be another Island, called it, Isla Santa, or Holy Island. The Land they saw of the Trinity, between the two Points, was 30 Leagues in length East and West, without any Harbour, but all the Country very pleasant with Trees down to the Sea, and abundance of Towns. This space they ran in a very short time, because the Current of the Sea fet so very violent Westward, that it look'd like a rapid River both Day and Night, and at all Hours, notwithstanding the Tide Flow'd and Ebb'd along the Shore above 40 Paces, as happens at St. Lucar de Barrameda, when there are Floods, for though the Water rise and fall never so much. evet it never ceases running towards the Sea.

### CHAP. LXIX.

How the Admiral sailed to the Cape, called, Puntal del Arenal, and a Canoo came out to talk to him.

DErceiving they could have no Account of the People of the Country at this Cape, and that there was no conveniency of taking Water, without excessive Labour, and there was no conveniency of Careening the Ships and getting Provisions, the next being the 2d of August, the Admiral went on to another Point of Land, which seem'd to be most Westerly in that Island, and called it, del Arenal, where he came to an Anchor, thinking the Easterly Winds which reign there would not be so troublesome to the Boats in going backwards and forwards. On the way before they came to Indians of this Point, a Canoo began to follow them with 25 Men in it, and stopp'd at about a Cannon-shot distance, calling out and talking very loud. Nothing could be understood, though it was supposed they inquir'd who our Men where, and whence they came, as the other Indians used to do at first: There being no possibility of persuading them with any Words to come aboard, they began to show them feveral Things, that they might Covet to have them, fuch as little Brass Basons, Looking-glasses, and other Things, the rest of the Indians used to make great Account of. But the this drew them a little, yet they foon stopp'd again; and therefore the more to Allure them, the Admiral ordered one to get upon the Poop with a Tabor and Pipe, and some young Fellows to Dance. As foon as the Indians saw it, they put themselves into a posture of Defence, laying hold of their Targets, and shooting their Arrows at those that Danced, who by the Admirals Command, that those People might not go unpunished, or Contemn the Christians, leaving their Dance began to shoot with their Cross Bows, so that they were glad to draw off, and made to another Caraval, clapping close to its fide without any Apprehenfion. The Pilot of the Ship went over into the Canoo and gave them some things they were very well pleas'd with, and faid, if they had been ashore they would have brought him Bread from their Houses, and so they went towards Land, nor would they in the Ship stop ere a one, for fear of displeasing the Admiral. The Account they gave of them, was, That they were well shap'd People, and whiter than those of the other Islands, and that they wear their Hair long, like Women, bound with small Strings, and cover'd their Privities with little Clouts.

the Trinity.

### CHAP. LXX.

Of the Danger the Ships were in, Entring the Mouth of the Channel, they called, Boca del Drago, or, The Dragon's Mouth; and how Paria was descover'd. being the first Discovery on the Continent.

S foon as the Ships had Ankor'd at Punta del Arenal, the Admiral fent the Boats ashore for Water, and to get some Information of the Indians, but they could do neither, that Country being very low, and unpeopled. He therefore ordered them the next day to dig Trenches on the Island, and by good luck they found them ready made and 7th full of excellent Water, and it was thought the Fishermen had made them. Having taken what they wanted, the Admiral refolved to proceed on to another Mouth of Channel which appear'd towards the North West, which he after-wards call'd *Book del Drago*, or, the *Dra*gon's Mouth, to dixinguish it from that where he was, to which he had given the Name of Boca de la Serpe, or, the Serpent's Mouth. These two Mouths or Channels, like the Dardanels, were made by the two Westermost Points of the Trimity Island, and two others of the Continent, and lay almost North and South of one another. In the midst of that, where the Admiral Anchor'd, was another Rock, which he called El Gallo, that is, the Cock. Through this Mouth, he called Boca de Sierpe, the Water continually ran fo furiously Northward, as it it had been the Mouth of some great River, which was the reason of giving it that Name, because of the fright it

put them into. For as they lay very fecurely at Anchor, there came a stronger stream of Water than usual, with a hideous noise, running through that Mouth Northward. And another Current running out of the Gulph now called Paria, opposite to that before-mentioned, they Awonaer met with hideous Roaring, and caus'd ful smelthe Sea to Swell up like a high Moun- ling of tain, or ridge of Hills along that Chan- William nel, which Mountain foon came towards the Ships to the great Terrour of all Men fearing they should over-set. But it pleased God it pass'd under, or rather lifted them up without doing any harm, though it diew the Anchor of one of them, carrying the Vessel away, but by the help of their Sails they escap'd the Danger, not without mortal fear of being loft. That furious Current being pass'd, the Admiral considering the Danger he was in there, stood for the Drugon's Mouth, which was between the North-Point of the Trinity Illand, and the East-Point of Paria; yet went not through it at that time, but failed along the South-Coast of Paris Westward, believing it to be an Island, and hoping to find a way out Northwards towards Hifpaniela. And though there were many Ports along that Coast of Paria, he would put into none, all the Sea being a Harbour lock'd in with the Continent.

#### CHAP. LXXI.

How there was some Gold and Pearls found in Paria, and a People of good Conver lation.

He Admiral being at an Auchor on the 5th of August, and it being his particular Devotion never to weigh on a Sunday, he fent the Boats ashore, where they found abundance of Fruit of the fame fort they had feen in the other Islands; great numbers of Trees, and figns of People that had fled for fear or the Christians. But being unwilling to lose time, he sailed down the Coast 15 Leagues further, without going into any Harbour, for fear he should miss of Wind to bring him out. Being at an Anchor on the Coast, at the end of these 15 Leagues, there came out a Canon to the Caraval, called El Borreo, with three Men in it; and the Pılot knowing how much the Admiral coveted to receive some Information from those People, he pretended to talk to them, and let himfelf fall into the Canoo, and the Spaniards in the Boat took those three Men, and carried them to the Admiral, who made very much of them, and fent them ashore with many Gifts, where there appear'd abundance of Indians. These hearing the Indian good Account the three gave them, came go aboa all in their Canoo's to Barter, for such Things as they had, which were much the same, as had been seen in the Itlands before

before discovered, only that here they had no Targets, nor Poison'd Arrows, which these People do not use, but only the Cambals. Their Drink was a fort of Liquor as white as Milk, and another somewhat blackish, tasting like green Wine made of Grapes not quite ripe, but they could not learn what Fruit it was made of. They wore Cotton Cloths well Wove, of several Colours, about the bigness of a Handkerchief, some bigger and fome less; and what they most valued of our Things, was Brass, and especially Bells. The People seem to be more Civiliz'd and Tractable than those of H. spaniela. They cover their Nakedness with one of those Cloths above-mentioned, and have another wrapp'd about their Head. The Women cover nothing, not even their Privities; the same they do in the Trimty Island. They faw nothing of value here, except some little Plates of Gold they hung about their Necks; for which reason, and because the Admiral could not stay to Dive into the Secrets of the Country, he ordered fix of those Indians to be taken, and continued his Voyage Westward, believing that Land of Paria, which he called the Holy island, was no Continent. Soon after another island appear'd towards the South, and another no less than that towards the West, all high Land, Sowed and well Peopled; and the Indians had more Plates of Gold about their Necks than the others, and abundance of Guanini's, which is very low Gold. Ther faid that was produced in other Welbern . Islands inhabited by People, that Eat Men. de about The Women had Strings of Bu their Arms, and among them very fine The fieft large and small Pounds frang, fame Pearly whereof were got in Exchange to fend the We their Catholick Majesties as a Sample. Indies. Being ask'd where they found those Things, they made figns to show that in the Oister-shels which were taken Westward of that Land of Paria, and beyond it towards the North. Upon this, the Admiral staid there to know more of that good Discovery, and sent the Boats ashore, where all the People of the Country that had flock'd together, appeared so Tractable and Friendly, that they importun'd the Christians to go along with Acoust them to a House not far off, where they liging gave them to Eat, and a great deal of People. that Wine of theirs. Then from that House, which it's likely was the King's Palace, they carried them to another, which was his So.s, and shew'd them the same kindness. They were all in general whiter than any they had feen in the Indies, and of better Aspects and Shapes, with their Hair cut short by their Ears, after the Spanish Fashion. From them they understood that Land was called Paria, and that they would be glad to be in Amity with the Christians. Thus they departed from them, and return'd to the Ships.

### CHAP. LXXII.

How the Admiral pass'd through Boca del Drago, and the Danger he was in there.

The Admiral holding on his Voyage Westward, they still found less and less Water, insomuch that being come through four or five Fathom, they found but two and a half at Ebb, for the Tide differed from that at the Trinity Island; for at the Trinity, the Water swell'd three Fathom, and here being 45 Leagues to the Westward, it rose but one; and there always, whether Ebb or Flood, the Currant ran West; and here upon the Ebb, they ran East, and upon the Flood West; there the Water was but brackish, here it was like River Water. The Admiral perceiving this difference, and how little Water he found, durst proceed no further in his Ship, which icquired three Fathom Water, being of 100 I'un, and therefore came to an An-

chor on that Coast, which was very safe, Account being a Port like a Horse-Shooe, lock'd the Gul; with that Land on all fides. However, of Para he sent the little Caraval, called El Borree, or the Post, to discover whether there was any Pass Westward among those Islands. She having gone but a little way, return'd the next day, being the 11th of August, saying, That at the Westermost Point of that Sea, there was a Mouth, or Opening, two Leagues over from North to South, and within it a round Bay, with four other little Bays, one towards each quarter of Heaven, that from each of them flow'd a River, whose Water made that Sea so sweet, which was yet much sweeter further in, adding, that all that Land which feem'd to be Islands, was one and the same Con-

tinent; that they had every where four bus or five Fathom Water, and such abunance of those Weeds they saw in the a dej 150.

Ocean, that they hindred their Sailing. The Admiral therefore being certain he could not get out Westward, that same day stood back to the Eastward, designing to pass the Streight, which he saw between the Land the Indians call Paria. and the Trinity. In this Streight there are four little Islands East next the Point of the Trinity, which he called Cape Boca, because it was blunt, West upon the Point of the Continent, which he called Cape Lapa, and in the middle. The reason why he called this the Dragon's Month, was, because it is very dangerous, by reason of the abundance of fresh Water that struggles to get out there into the Sea, and made three boisterous Channels, extending from East to West the wich of the Streight. And because as he was Sailing through, the Wind fail'd him, and he was in danger of being drove on some Sand or Rock; therefore he with reason gave it a Name

answerable to that of the other Mouth. where he was in no less danger as was faid above. But it pleased God, that what they most dreaded should be their greatest Safety, the strength of the Current carrying them off. Therefore on Monday the 17th of August, he began to Sail Westward along the Coast of Paria. in order to stand over afterwards for Hispaniola, giving Thanks to God, who delivered him from so many Troubles and Dangers, still showing him new Countries full of peaceable People and great Wealth, especially that, which he certainly concluded to be the Continent, because of the great Extent of that Gulph of Pearls, of the Rivers that ran from it, of the Sea, which was all sweet Water; and by the Authority of Efdr.u. in the 8th Chapter of the 4th Book; where he says, That dividing the Globe into Seven Parts only, one of them is covered with Water; for all the Indians of the Caribbee Islands had told him there was a vast Land Southward.

### CHAP. LXXIII.

# How the Admiral stood over from the Continent to Hispaniola.

THe Admiral failing along Westward on the Coast of Paria, Itill fell farther off from it towards the NorthWest, the Currents in being Calm driving him that way; so that on Wednesday the 15th of August, he left the Cape, he pe Con- called, de las Conchas, or of Shells, South of him, and the Island Margarita West, largarita which Name he gave this Island, per-land, haps by Divine Inspiration, because close by it lies that of Cubagua, where an infinite quantity of Pearls has been found; and in Hispaniola and Jamaica at his return he called some Mountains of Gold, where afterwards was found the greatest quantity and largest pieces that ever were carried from thence into Spain. But to return to his Voyage, he held on his Course by fix Islands, which he called, las Guardas, or the Guards, and three others more to the North, los Teftigos, or the Witnesses. And though they still discover'd much Land of Paria Westward, yet the Admiral says, he could not from this time give such an account of it as he would wish, because through overmuch watching, his Eyes where intlam'd, and therefore was forced to take most of his Observations from the Sailors and Pilots. He also says, That this

same Night, being Thursday the 16th of August, the Compasses which till now had not varied, did at this time, at least a Point and a half, and some of them two Points, wherein there could be no mistake, because several Persons had always watch'd to observe it. Admiring at this, and griev'd that be had not the opportunity of following the Coast of Continent, he held on North-West, till on Monday the 20th of August he came to an Anchor between Beaca and Hispamola; whence he fent a Letter by some indians, to his Brother the Adelantodo, acquainting him with his fafe Arrival and Success. He was surpriz'd to find himfelf fo far Westward, for though he knew the force of the Currents fail'd, yet he did not think it had been so much. Therefore to the end his Provisions might not fail him in time of need, he stood to the Eastward for S. Domingo, into which Harbour he fail'd on the 30th go in H of Angust, for here the Lieutenant his Brother had appointed the City to be built on the East-side of the River, where it stands at present, and was called Santo Dominge in Memory of his Father, whose Name was Deminick.

# 25.52

### CHAP. LXXIV.

The Rebellion and Troubles the Admiral met with in Hispaniola, was a vy ine Wickedness of one Francis Roldan, whom he had left as Alcalde Mayor, or Chief Justice.

"He Admiral being come to S. Domingo, almost Blind with over-watching, he hoped there to rest himself after his Voyage, and find Peace among his People, but found all quite contrary, for all the People in the Island were in Diforder and Rebellion; for abundance of those he had left were Dead, and of those that remain'd, above 160 were fick of the French Pox, and besides that many were in Rebellion with Roldan, he found not the three Ships, we faid he fent before him from the Canary Islands. Of these Things it is requisite we speak orderly, beginning from the time the Admiral set out for Spain, which as we faid, was in March 1496. 30 Months before his return: The first part of which time the People continued pretty quiet in hopes of his return, and of being speedily relieved: But the first year being pass'd, the Spanish Provisions failing, and Sickness and Sufferings increasing, they began to be diffatisfied with what was, and to Despair of any better; so that the Complaints of many discontented Persons were heard, who never want fome Body to stir them up, desiring to be Head of a Party, as was now done by one Francis Roldan, born at Torre de D. Ximeno, whom the Admiral had lest in fuch Power among both Christians and Indians, by making him Chief Justice, that he was as much Obey'd as himself. For this reason it is to be suppos'd there was not that good Understanding between him and the Admiral's Licutenant, as ought to have been for the publick Good, as Time and Experience made it appear. For the Admiral, neither returning himself, nor sending any Supplies, this Roldan began to think of posfessing himself of the Island, designing for this purpose to Murther the Admirals Brothers, as those that could best oppose his Rebellion, and waited an opportunity to put this in Execution. It happened that the Lieutenant of the Island one of the Admiral's Brothers, went to a Province in the West, called Xaragua, 80 Leagues from Isabella, where the faid Roldan remained in his Employ, but Subordinate to D. James, second Brother to the Admiral. This Roldan, was so offended at, that whilst the Lieutenant was taking order how the Kings of the Island should pay Tribute to their Catholick Majesties, as the Admiral had rated all the Indians, Orlando began underhand to draw fome of them over to his Party. But that it might not prove fatal to Rife on a fudden, and without some pretence: that which Roldan laid hold of was, That there was a Caraval ashore at Isabella, built by the Lieutenant of the Itland, to fend to Spain in case of Necessity, and there being no Launching of it for want of Tackle and other Necessatics, Roldan feign'd and gave out there was some other Reason for it, and that it behov'd the publick, that Caravay should be fitted out, that some of seem might go to Spain in it, to give an Account of their Sufferings. Thus upon pretence of the publick Good, he present that it might publick Good, he press'd that it might be Launch'd, and D. James Columbus not consenting to it for want of Tackle, as has been faid, Roldan began more boldly to treat with some about Launching the Caraval in Despight of him; telling those, he thought to agree with him, that if the Lieutenant, and D. James were displeas'd at it, the reason was because they would fecure to themselves the Dominion of the Country, and keep them in Subjection, without any Ship that might carry the News of their Revolt to their Catholick Majesties. And fince they were fatisfied and convinced of the Cruelty and Ill-Nature of the Lieutenant, and what a reffless life he led them, building Towns and Forts, and that they had no hopes of the Admiral's coming with Supplies, it was fit they should take that Caraval and procure their Liberty, and not fuffer themselves under pretence of Pay, which they never receiv'd, to be kept under by a Foreigner, whereas it was in their Power to live at Ease and in Plenty; for that whatsoever could be had in the Island would be equally divided among them, and they would be ferv'd by the Indians to their own Content, without being so much in Subjection, that they could not take to Wife any Indian Woman they pleased. That the Lieutenant made them keep the Three Vows of Religious Men; and befides that, they wanted not for Fasts and Disciplines, as also Imprisonment, and

other Punishments, which they endured for the least fault. Therefore, since he had the Rod of Justice and Regal Authority, which secured them against any thing that might befal them on this Account, he advised them to do what he directed, wherein they could not do amis. With these and the like Words, proceeding from the Hatred he bore the Lieutenant, he drew so many over to his Party, that one day when the Lieutenant was come back from Xaragua to Ifa-

bella, some of them resolv'd to Stab him. looking upon it as fo easie a matter, that they had provided a Halter to hang him up after he was Dead. What at present the more incens'd them, was the Împrisoning of one Barahona, a Friend to the Conspirators, against whom, if God had not put it into the Heart of the Lieutenant not to proceed to Execution of Justice at that time, they had then certainly Murdered him.

### CHAP. LXXV.

How Francis Roldan endeavour'd to make the Town of Conception Mixing, and plundered Isabella.

Rancis Foldan, perceiving he had miss'd of the Murther of the Lieutenant, and his Conspiracy was discovered, he resolved to possess himself of the Town and iart of the Conception, thinking from thence he might casily subdue the Island. It fell out conveniently for his Design, that he was near the faid Town; for whilst the Lieutenant was abroad, he had been fent with 40 Men about that Province, to reduce the Indians that had Revolted, with the fame delign of making themselves Masters of that Town, and destroying the Christians. So that Roldan, under pretence of putting a stop to this Evil, and "freels of punishing the Indians, gather'd his Men be Rebels at the Residence of one of their Caciques, call'd Marche, defigning to put his Project in Execution upon the first opportunity. But Ballester the Commander of the Fort, having some Jealousie of him, he stood upon his Guard, and acquainted the Lieutenant of the Island with the danger he was in, who with all speed, and what Men he could gather, threw himself into the Fort. Thither Roldan came upon a Safe-Conduct, now his Conspiracy was discovered, rather to obferve by the Lieutenant what might do him harm, than through any delire of coming to an Accommodation, and with more Boldness and Impudence than became him, required the Lieutenant to cause the Caraval to be launched, or give him leave to launch it, which he and his Friends would do. The Lientenant incenfed at these Words, answered, That neither he nor his Friends were Seamen, or knew what was proper to be done in that case; and that though they had · known how to Launch it, yet they could not Sail in her for want of Rigging, and Vol. II.

other Necessaries, and therefore it would be only exposing the Men and the Caraval. And, for as much as the Lieutenant understood that Affair, as a Sedman, and they not being fuch, knew nothing of it, therefore they varied in their Judgments. These and other displeasing Words having pass'd between them, Roldan went away in a Passion, refusing to quit his Rod of Justice, or stand Trial, as the Lieutenant ordered, faying, he would do both, when their Majesties, whose the Island was, commanded him; knowing he could expect no Justice from him, because of the Hatred he bore him, but that right or or wrong he would find means to put him to Death with shame: That in the mean while, not to exceed the Bounds of reason, he would go and Reside where he should bid him. But he at present appointing him the Residence of the Cacique, James Columbus, he refused it. faying, There were not Provisions there for his Men, and that he would find a more convenient place. He set out towards Isabella, and having gathered 65 Men, perceiving he could not Launch the Caraval, he plunder'd the Magazines, he and his Followers, taking away what Arms, Stuffs, and Provisions they thought fit, D. James Columbar, who was there, not being able to oppose him, but would have been in Danger, had he not retired to the Fort with some Friends and Servants Yet in the Process afterwards drawn up on this Subject, there were some that depos'd, That Roldan promis'd to submit to him, provided he would take his part against his own Brother: Which he refuling, and Roldan not being able to do him any further harm ; as also fearing the Succours that were · - 3-B coming

coming from the Lieutenant, he went clumbus out of Town with all the Mutineers, vand falling on the Cattle that Graz'd thereabouts, they kill'd fuch as they lik'd to Eat, and took the Beafts of Burthen to serve them in their Journey, resolving to go into the Province of Xaragua, whence the Lieutenant was lately come, defigning to Settle there, that being the pleasantest and most plentiful part of the Island, the People here being more civiliz'd and wifer than the rest of the Natives of Hispaniola; but above all, because the Women were the handsomest. and of the most pleasing Conversation of any others, which most invited them to But that they might not go go thither. without making trial of their Strength, before the Lieutenant could encrease his Power, and punish them as they deserv'd, they resolved to take the Town of the Conception in their way, to Surprize it, and kill the Lieutenant, and in case this did not succeed, to Besiege him. Lieutenant having Intelligence of their Delign, Rood upon his Guard, encouraging his Men with good Words, and promising them many Gifts, and each of them two Slaves. And for as much as he understood, that most of those that were with him, lik'd the life Roldan and his Men led to well, that many of them gave Ear to his Mellages; therefore Roldan having conceiv'd hopes that they would all go over to him, had the boldness to undertake that Enterprize, which did not succeed as he expected. For the Lieutenant, having provided as has been said, being himself a Man of great Resolution, and having the best Men on his fide, was refolv'd to do that by force of Arms, which he could not compais by fair Means and Arguments. Having therefore gathered his Men logether, he march'd out of Town to attack the Rebels on the Road.

### CHAP. LXXVI.

How Francis Roldan incens'd the Indians against the Lieutenant, and went away with his Men to Xaragua.

Rancis Roldan, perceiving he was fo disappointed, and that not one of the Lieutenants Men came over to him, as he had expected, refolved to retire in time, and go away to Xaragua as he defign'd at first, not daring to meet him, yet presum'd to talk contemptibly of him, and to stir up the Indians, whereever he went, to Rebel against him, telling them, the cause of his forsaking him was his being a Man naturally Revengeful and Morole, as well towards the Christians, as indians; and abominably Covetous, imposing great Burdens and Tributes on them; which if they bore with, he would increase every year, tho' against their Catholick Majesties will; who requir'd nothing of their Subjects but Obedience, maintaining them in Jufrice, Liberty and Peace; which, if they fear'd they should not be able to maintain, he with his Friends and Followers. would affift them to affert, and would declare himself their Protector and Deliverer. After which, they resolv'd to forbid paying the Tribute, we faid had been impos'd on them, by which means it could not be gathered of those that dwelt far from the Lieutenant, nor durst he exact it of those near about him for fear of provoking them to joyn with the Rebels. Yet this Condescention towards

them, had not so good an effect, but that as foon as the Lieutenant was gone from the Conception, Guarinoex, who was the principal Cacique of that Province, with the affiftance of Roldan, resolv'd to Besiege the Fort, and Destroy the Christians that kept it. The better to effect Conspira it, He drew together all the Caciques of of the in his Party, and agreed with them pri-dians u his Party, and agreed with them pri-defirey vately, that every one should kill those the Span that were within his Precinct, because ards. the Territories in Hispaniola being too fmall, for any of them to maintain a great number of People, the Christians had been obliged to divide themselves into small Parcels of 8 or 9 in each Li-This gave the Indians hopes, that furprizing them all at the same time, they might have it in their Power to futfer none to escape. But they having no other way of fixing a time, or ordering any thing else that requires counting, but only by their Fingers, they refolv'd, that every one should be ready to destroy the Christians at the next Full Moon Guarineex having thus dispos'd his Caciques to put this in Execution, the chiefest of them being desirous to gain Honour, and looking upon the matter as very casie, and being no good Astronomers, to know when the Full Moon was, tell on before the time appointed, and were

forced to fly after many Blows. ambus thinking to find Affiftance in Guarineex found his own Ruin; for he put him to Death, as he had deferv'd, for having caused the Conspiracy to be discovered, and the Christians to be upon their guard. The Rebels were not a little concern'd at this Miscarriage; for as was reported, it had been contriv'd with their Consent, and therefore they waited to see, whether Guarineex brought Affairs to such Terms, that joyning with him they might destroy the Lieutenant: But perceiving this did not succeed, they thought not themselves secure in the Province where they were, but went away to Xaragua, still proclaiming themselves Protectors of the Indians, whereas they were Thieves in their Actions and Inclinations, having no regard to God or the World, but following their inordinate Appetites, for

٠

every one Stole what he could, and Rolden their Leader more than all of them. perfuading and commanding every Cacique to entertain him that could and would defend the Indians and Rebels from paying the Tribute the Lieutenant demanded of them, tho' at the same time he under this pretence took much more from them; for from only one Cacique, whose Name was Manicaotex, he re-ceived every three Months, a Calabash, containing three Marks of pure Gold, that is, a Pound and a half, and to be the more fure of him, kept his son and Nephew as Hostages. He that reads this, must not wonder that we reduce the Marks of Gold to the Measure of a Calabash, which we do to show, that the Indians in these Cases dealt by Measure. because they never had any Weights.

### CHAP. LXXVII.

How the Ships came from Spain with Provisions and Supplies.

He Christians being thus divided, as has been faid, and no Ships yet coming from Spain with Supplies, neither the Lieutenant, nor his Brother D. James, could keep the People quiet, that had remain'd with them; for most of them being mean Persons, and desirous to lead that easie life Roldan promis'd them, they durst not punish the guilty, for fear of being for laken; which made them so insolent, that it was impossible to keep them in order, and therefore they were forced to bear with the Affronts of the Rebels. But it being God's Will to afford them some Comfort, it pleased him to order that the two Ships should arrive, which, as was said be-fore, had been sent a year after the Admiral's departure from the Indies, not without great Application us'd by him at Court for fitting them out; for he, confidering the Nature of the Country, the Dispositions of the People he left behind, and the great danger that might accrue from his long absence, pres'd for and obtain'd of their Catholick Majesties, that those two Ships might be ient before, of 18 he had been ordered The Arrival of these, the to fit out. Supplies they brought of Men and Provisions, and the Assurance that the Admiral was safe arrived in Spain, encouraged those that were with the Lieutenant to serve him more faithfully, and made those that followed Rolden, appre-

hensive of being punish'd These being delirous to hear News, and furnish them- The Rebi felves with what they wanted, refolved refuse to to repair to S. Domingo, where the Ships fubmit. had put in, hoping to draw some of the Men over to their Party. But the Lieutenant having Intelligence of their march, and being nearer that Harbour, he mov'd towards them to hinder their passage; and having left Guards on the Palles, went to the Port to fee the Ships, and order the Affairs of that Place. being defirous the Admiral should find the Island in a peaceable Condition, and all Troubles ended, he again made new Overtures to Roldan, who was 6 Leagues off with his Men, fending to him for this purpose the Commander of the two Ships lately arriv'd, whose Name was Peter Fernandez, Coronel: as well because he was a Man of Worth and in Authority, as because he hop'd his Words would prove more effectual, fince he as an Eyewitness, could certifie him of the Admirals arrival in Spain, the good Reception he had found, and the willingness their Majesties express'd to make him still greater. But the chief Men among them. fearing the Impression this Messenger might make upon their Followers, would not fuffer him to speak in publick; so that they received him with their Bows and Arrows on the Road, and he could only speak some few Words to those that were appointed to hear him. Thus "avide

having done nothing, he returned to the Coumbus Town, and the Rebels to their Quarters min Xaragua, not without Apprehensions, least Roldan and some of the principal Men of his Gang should write to their Friends that were with the Lieutenant. desiring them when the Admiral came, to intercede for them, fince all their Complaints were against the Lieutenant. and not against the Admiral himself, for which reason they desired to be reflected to his Favour.

#### CHAP. LXXVIII.

How the Three Ships the Admiral fent from the Canary Islands arrived where the Rebels were.

of Pilots Shirs to the West of Hilpamola.

TAving spoke of the arrival of the two Ships the Admiral sent from Spain to Hispaniola, it is fit we give an Account of the three that parted from him at the Canary Islands, which proceeded on their Voyage with fair Winds till they came to the Caribbee Islands, which are the first that Sailors meet with in their way to the Port of S. Do-Igrorance mange. The Pilots then not being fo well acquainted with that Voyage, as they have been fince, it happened they knew not how to hit that Port, and were carried away by the Currents so far to Westward, that they arrived in the Province of Xaragua, where the Rebels were, who as foon as they understood that those Ships were out of their way, and knew nothing of their Revolt, some of them went peaceably aboard, pretending they were there by the Lieutenant's Orders, the better to be supplied with Provisions, and keep that Country under. But it being very easie for a Secret, that is among many, to be discovered, Alonso Sanchez de Carvajal, who was the skillfullest of the Captains of those Ships, being aware of the Rebellion and Difcord, began immediately to make Overtures of Peace to Francis Roldan, thinking to bring him to submit to the Lieutenant. But the familiar Conversation the Rebels had before entertain'd aboard the Ships, was the Cause that his Persuasions had not the defired effect; for Roldan had privately obtain'd Promises from many of those that came fresh out of Spain, that they would stay with him, and by that Accession he hoped to become still greater. Carvajal therefore finding Things were not in such a posture, that he might hope for a speedy Conclusion of what he had in hand, thought it convenient, with the Advice of the other two Captains, that the People they brought under Pay to Work in the Mines, and other Employments, should go by Land to S. Domingo, because the Winds and Currents being set there a-

gainst that Voyage, it was possible they might not perform it in two or three Months; fo that they would not only consume the Provisions, but the Men might fall fick, and the time be loft, which ought to have been employed in the Service they came for. Having a-greed upon this, it fell to John Anthony Fresh & Columbus his Lot to march with the Men, the Reb which were 40, to Arani to Sail about with the Ships, and to Caravajal to stay and endeavour to bring the Rebels to an Accommodation. John Anthony Columbus setting forward the 2d day after they landed, those Labourers and Vagabonds fent over to Work, went away to the Rebels, leaving their Captain with only fix or feven Men that stuck to him. He seeing their base Infidelity, without apprehending any Danger, went to Rolden, and told him, That fince he pretended to promote the Service of their Catholick Majestie-, it was not reasonable he should suffer those Men, that were come to People and Cultivate the Country, and to follow their Callings with Wages in hand, to stay there and loose their time, without doing any thing of that they were obliged to; and that if he had turn'd them away, it had been a token that his Words and his Actions agreed; that his staying there caused the Division and Disorder with the Lieutenant, and not any Inclination in him to obstruct the King's Service. But that which had happened turning to the Account of Roldan and his Followers, as well for the carrying on their Design, as because the Crime committed by many is generally foonest Conniv'd at; he excus'd himself as to that Point, saying, He could not use Violence towards them, and that his was a Religious Order, which refused no Man. John Anthony knowing it was not the part of a discreet Man to expose himfelf to the danger of pressing further without hopes of Success, resolved to go aboard again with those few that follow'd him; and therefore that they might not

be ferv'd so by those that were left, they umbus two Captains sail'd immediately with their two Ships towards S. Domingo, with the Wind as contrary as they had fear'd; for they spent many days, spoil'd their

Provisions, and Caravajal's Ship was much damaged upon certain Sands, where she loft her Rudder, and fprung a Leak, fo that they had much to do to bring her

# CHAP. LXXIX.

Now the Captains of the Ships that came from Xaragua, found the Admiral at S. Domingo.

The Captains with their Ships, arriving at S. Damines turn from Xaragua, found the Admiral there, after his Discovery of the Conti-He being fully inform'd of the Condition of the Rebels, and having feen the Process his Lieutenant had made against them, tho' the Crime was plainly made out to Deserve severe Punishment, yet he thought fit to form a new Process, and give their Majesties an Account of it, refolving at the same time to use all the Moderation he could in this matter, and endeavouring to reduce them by fair means. For which reason, and that neither they nor any others, might have cause to complain of him. or fay, he kept them there by force, he be Admi-al endeatember, giving leave to all that would reeduce the turn to Spain, and promising them free Passage and Provisions. And being inform'd on the other hand, That Roldan was coming towards S. Domingo with some of his Men, he ordered Michael Ballester, Commander of the Conception, to secure his Town and Fort; and in case Roldan came that way, he should tell him from the Admiral, that he was much concerned at his Sufferings, and all that was past, and would have no more said of it, granting a general Pardon to all, and defiring him to come away immediately to the Admiral, without fearing any thing, that by his Advice things might be ordered, as was for their Majesties Service; and if he required any Safe Conduct, he would fend it him in fuch Form as he required. Ballester return'd Answer on the 14th of February, That he had received certain Information, That Requelme was the day before come to the Town of Bonao, and that leaders, would meet there in seven or eight days, at which time he might there apprehend them, as he did. For having discours'd them according to the Instruaions given him, he found them obstinate and unmannerly, Roldan telling him, Vol. II.

They were not come to Treat, nor did they Desire, or Care for Peace, for he had the Admiral and his Authority at his beck, either to Support, or Suppress it, as he pleased; and that they must not talk to him of any Accommodation, till they had fent him all the Ind: an: taken at the Siege of the Conception, fince they had met together to serve the King, and upon his Promise of Security. things he added, by which it appeared, he would make no Agreement, but what was much to his Advantage. To this purpose he demanded, That the Admiral should send Caravajal to him, because he would Treat with no other but him, he being a Man that would hear Reason, and had Discretion, as he had found by Experience, when the three Ships, as has been said, were at Xaragua. This Answer made the Admiral suspect Caravajal, and not without much Cause.

First, Because before Caravajal was at Xaragua, where these Rebels then were, Carava they had often Writ and fent Meffages fufpellet yet truft to their Friends that were with the Lieutenant, telling them, They would come and deliver themselves up to the Admiral as foon as he arrived, and therefore they defired them to intercede for them, and appeale him.

Secondly, Because, since they did this as foon as they heard there were two Ships come to the Affiftance of the Lieutenant, they had much more Cause to perform it, knowing the Admiral was not come, had not the long Conference . Caravajal had with them prevented it.

Thurdly, Because if he would have done his Duty, he might have kept Roldan, and the chief Men of his gang Prifoners, aboard his Caraval, they having Adrian and Roldan, who were the Ring- been two days aboard without any Security given.

Fourthly, Because knowing as he did, that they were in Rebellion, he ought not to fuffer them to Buy aboard the Ships, as they did, 56 Swords, and 60 Cross-Bows.

Lifthly,

Pebels.

Fifthly, Because there being some Proofs that the Men who were to Land with John Anthony to go to S. Domingo, would joyn the Rebels, he ought not to fuffer them to Land, or at least when they were gone over to them, he ought to have been more Industrious to endeayour to recover them.

Sixthly, Because he gave out that he came to the Indies as Companion to the Admiral, that nothing might be done without him, for fear the Admiral should

commit some Offence.

Seventhly, Because Roldan had Writ to the Admiral by Caravaral himself, acquainting him, that he was drawing near to S. Domingo with his Men, by the Advice of Caravajal, to be the nearer to Treat of an Accommodation, when the Admiral arrived in Hispaniela, and now he was come, his Actions not Suiting with his letter, it appeared he had rather invited him to come thither, to the end that if the Admiral had been long coming, or had not come at all, he as the Admiral's Affociate, and Roldan as Chief Justice, might govern the Island in despight of the Lieutenant.

Eightly, Because at the same time that the other Captains came with the three Caravals to S. Domingo, he came by Land attended by a guard of the Rebels, and one of the Chief of them, called Gamir, who had been two days and two nights

with him aboard his Ship.

Ninthly, Because he Writ to the Rebels when they came to Bonao, and fent

them Presents and Provisions.

Tenthly, and Lastly, Because, besides that the faid Rebels would not Treat with any Body but him, they all unanimoully faid, if there had been occasion, they would have taken him for their Captain.

Yet the Admiral on the other side. confidering that Caravajal was a discreet prudent Person, and a Gentleman, and that every one of those Arguments might be answered, and perhaps what he had been told was not true, and looking upon him, as one that would not do any thing contrary to his Duty, having a great defire to put out that fire, he refolv'd to consult with all the Chief Men he had about him, about Roldan's Anfwer, and refolve upon what was to be done on this occasion. All agreeing up-The Rebels on it, He fent Conavajal, with Ballester, it most, from Roldan, but that fince they had not braught the Indians he demanded, they

fhould not without them talk of any Accommodation. Caravajal discreetly aufwering to these Words, made so taking a Discourse, that he mov'd Rolder and three or four of the chief Men to go wait upon the Admiral and Agree with him; but the others disliking of it, as Roldan and the others were mounting their Horses to go with Caravajal to the. Admiral, they fell upon them, faying, They would not allow them to go, and that if any Agreement was to be made, it should be drawn up in Writing, that they might all know what was doing. So that after some days pass'd upon this Resolution, on the 20th of October, Rol-dan by the Consent of all his Men, writ a Letter to the Admiral, laying the Blame of their Separation on the Lieutenant: and telling the Admiral, that fince he had not in Writing fent ther Security to come and give an account of themselves, they had resolved to send him their Demands in Writing, which were the Re-ward of what they had hitherto done, I hough their as shall appear hereafter. Proposals were extravagant and infolent, yet the Commander Ballester, the next day writ to the Admiral, extolling Caravajal's moving Discourse, and saying, That fince it was not of force to remove those People from their wicked Design, nothing less then granting them what they demanded would prevail, for he found them so resolute, that he looked upon it as most certain, that most of the People that were with his Lordship would go over to the Rebels. And tho? he might rely on his Servants and Men of Honour, yet they would not be able to withstand such a number, many daily reforting to them, which the Admiral already knew by Experience; for when Roldan was near S. Domingo, he muster'd all that were fit to bear Arms, if it were requisite, and observ'd, that some feigning themselves sick, and some Lame, he had not found above 70 Men, of which there were not 40 that he could Confide in. For which reason, the next day, being the 17th of October 1498. the aforefaid Roldan, and the Chief of his Followers, who would have gone to the Admiral fent him a Letter Subscribed by them, telling him, they had withdrawn from the Lieutenant to fave their Lives, he having a defign to destroy them; and that they being his Lordships Servants, whose coming they had expeded, as of one, that would look upon what they had done complying with their Duty, as good Service, they had hindred their People

ا مدا

from doing harm to any that belong'd to dumbus his Lordship, as they might easily have ~~ done. But that fince he was come, and was so far from thinking, that he infifted upon taking Revenge, and doing them harm, that they might with Honour do what they had undertaken, and be at liberty to do it, they took leave of him and his Service. Before this Letter was delivered to the Admiral, he had fent Roldan an Answer. Caravajal, whom he fent to him, telling him what Confidence he always repos'd in him, and what a good account he had given his Catholick Majesty of them, adding, that he did not write to him for fear of some inconveniency, if his Letter should be seen by the common fort, which might redound to his Disadvantage, and therefore instead of Hand and Seal, he had fent that Person to him, in whom he knew

how much he Confided, and might regard what he said, as if it were under his Seal, which was the Commander Ballester, and therefore he might consider what was proper to be done, and he should find him most ready to comply. On the 18th of Ollober, he ordered five Ships to depart from Spain, sending their Catholick Majesties by them, a most particular Account of Affairs, and faying, he had kept those Ships till then, believing that Roldan and his Men would have gone away in them, as they had given out at first; and that the other three he kept with him, were fitting out for his Brother to go in them to purfue the difcovery of the Continent of Paria, and take Order about the Fishery and Trade for Pearls, a Sample whereof he fent them by Aregial.

#### CHAP. LXXX.

How Francis Roldan went to Treat with the Admiral, but came to no Agreement with him.

R Oldan having received the Admiral's Letter, answered the third day, seeming to incline to do all he order'd him, but his Men not allowing him to go to Treat without a Safe-Conduct, he desir'd him to fend one, drawn up according to those Heads he sent under his Hand, and tign'd by the Chief Men about him. This Safe-Conduct was immediately fent him by the Admiral on the 26th of Oilober, and Roldan having received it, foon came, but rather with a Delign to draw fome Body over to him, than to conclude any thing, as appeared by his impudent Proposals. Thus he return'd without concluding any thing, faying, He would give his Company an Account of Matters, and write word what they resolv'd on. And that there might be some Body from the Admiral to Treat and Sign what was agreed on, the Admiral's Steward went with him, his Name was Salamanca. After much talk, Roldan sent Articles of Agreement for the Admiral to Subscribe, telling him, That was all he could obtain of his People, and if his Lordship thought fit to grant it, he should fend his Assent to the Conception; tor at Bonao they had no longer Provisions to sublift on, and they would expect his Answer till the next Monday. The Admiral having read their Answer and Proposals, and considering what dis-honourable Things they demanded,

would not grant them, least he should bring himself, his Brothers, and Justice it self into Contempt. But that they might have no Caufe to complain, or fay he was too stiff in this Affair, he ordered a general Pardon to be Proclaim'd, and to be 30 Days upon the Gates of the Fort, the purport whereof was as fol-

Hat for as much as during his A gener Absence in Spain, some Difference Pardon. had happened between the Lieute-nant, and the Chief Justice Roldan, and other Persons, who had fled with him, notwithstanding any thing that had hapned, they might all in general, and every one in particular, safely come to serve their Catholick Majesties, as if no Difference had ever been, and that whosoever would go into Spain should have his Passage, and an Order to receive his Pay, as was usual with others, provided they prefented themselves before the Admiral within 30 days, to receive the benefit of this Pardon, protesting that in case they did not appear within the time limited, they should be proceeded against according to Course of Law.

This Pardon, subscrib'd by himself, he fent to Roldan by Caravajal, giving him in Writing, the Reasons whe he

neither could nor ought to grant the Articles fent by him, and putting him in mind what they ought to do, if they aim'd at their Majesties Service. Caravajal went to the Rebels at the Conception, where they were very haughty and proud, laughing at the Admirals Pardon, and faying, He should soon have occasion to ask one of them. All this hapned in the space of three Weeks, during which

time, under colour of apprehending a Man Rildan would Execute, they kept the Commander Ballester besieged in the Fort, and cut off his Water, believing the want of it would oblige him to Surrender; but upon Caravajal's arrival, they rais'd the Siege, and after many Alterations made on both fides, came to ? the following Conclusion.

#### CHAP. LXXXI.

The Agreement made between the Admiral, and Roldan with his Rebels.

He Articles Sign'd and Agreed to by Francis Roldan and his Compa by Francis Roldan, and his Company, in order to their return to Spain,

are as follows:

And itself L. T'Hat the Lord Admiral give him two good Shins, and in good Ortwo good Ships, and in good Order, according to the Judgment of able Seamen, to be delivered to him at the Port of Amagua, because most of his Followers were there; and because there is no other Port more commodious to provide and prepare Victualling and other Necessaries, where the faid Roldan and his Company shall Embark, and Sail for Spain, if so God please.

II ' That his Lordship shall give an Order for the Payment of the Salaries due to them all till that day, and Letters of Recommendation to their Catholick Majesties, that they may cause

them to be paid.

III. ' That he shall give them Slaves for the Service they have done in the Island, and their Sufferings, and certisie the said Gift : And because some of them have Women Big with Child, or Deliver'd; if they carry them away, they shall pass instead of such Slaves they were to have; and the Children shall be free, and they may take them along with them.

IV. His Lordship shall put into the aforesaid Ships all the Provisions requifite for that Voyage, as has been given to others before; and because he could not furnish them with Bread, the Judge and his Company have leave to provide in the Country, and that they have 30 Hundred weight of Bisket allow'd them, or for want of it 30 Sacks of Corn, to the end, that if the Carabi, or Indian Bread should spoil, as might eafily happen, they may subsist upon the aforesaid Bisket or Corn.

V. 'That his Lordship shall give a L'Safe Conduct for such Persons as shall come to receive the Orders for their

Pay.
VI. 'For as much, as fome Goods,
Control Persons, who are ' belonging to several Persons, who are with Roldan, have been feiz'd, his Lord-' ship shall order Restitution to be

VII. 'That his Lordship shall write a Letter to their Catholick Majesties, acquainting them, That the said Roldan's Swine remain in the Island, for the Inhabitants Provision, being 120 great ones and 230 small, praying their Highness to allow him the Price for them they would have bore in the Island; the which Swine were taken from him in February 1498.

VIII. 'That his Lordship shall give the faid Roldan full Authority to Sell some Goods he has, which he must part with to go away, or to do with them as he pleases, or leave them for his own use with whom he thinks fit to make the best of them.

IX. 'That his Lordship will order ' the Judges to give speedy judgment concerning the Horse.

X. 'That if his Lordships shall find the Demands of Salamanca to be just, ' he shall write to the said Judge to

cause him to be paid. XI. 'That his Lordship shall be Discours'd concerning the Captains Slaves. XII. 'That for as much as the faid ' Roldan and his Company mistrust, That ' his Lordship, or some other Person by his Order, may offer them some Violence with the other Ships that are in the Island, he shall therefore grant them a Pass or Safe-Conduct, promifing in their Majesties Name, and upon his own Faith, and the Word of a Gentleman, as is us'd in Spain, that neither his Lordship, nor any other Perfon shall offend them, or obstruct their ' ! Voyage.

Having

Having Examin'd this Agreement made with by Alonso Sanchez de Carvajal and James of Salamana, with Francis Roldan and his Company, this day being Wednesday the 21th of November 14.8. I am content it be fully Observ'd, upon Condition, That the said Francis Roldan, nor any of his Followers, in whose Name he Subscribed and Ratissed the Articles by him delivered to the aforesaid Alonso Sanchez de Carvajal and James de Sal manca, shall not receive into their Company any other Christian of the Island, of any State or Condition whatsoever.

I transis Roldin, Judge, Do Promife and Engage my Faith and Word for my Selt, and all those with me, That the Articles above mentioned shall be observed and fulfill'd, without any Fraud, but faithfully, as is here set down, his Lordship performing all that has been agreed on between Alorso Sanchez de Carvagal, and Jianes de Salimania, and my felf, as is in the written Articles.

I 'That from the Day of the Date hercof, till the Answer be brought, for which I en Days shall be allow'd, I will admit no Person whatfoever of those that are with the Lord Admiral.

II. 'That within 50 days after the faid Answer shall be delivered to me

here in the Conception, sign'd and seal'd by his Lordship, which shall be within the Ten Days before-mentioned, we will Embark and set Sail for Spain.

III. 'That none of the Slaves freely granted us, shall be carried away by force.

IV. 'That whereas the Admiral will not be at the Port where we are to Embark, the Person, or Persons his Lordship shall fend thither, be honour'd and respected as their Majesties and his Lordships Officers, to whom shall be given an Account of all we put aboard the Ships, that they may enter it, and do as his Lordship shall think fit; as also to deliver to them fuch things as we have in our Hands belonging to their Majesties. All the aforesaid Articles are to be Subscrib'd and perform'd by his Lordship, as Alonjo Sanchez de Carvajal, and James de Salamanca, have them in Writing; the Answer whereof I expect here at the Conception for eight days to come; and if it be not then brought, I shall not be obliged to any thing here mention'd.

In Testimony whereof, and that I and my Company may Observe and Perform what I have said, I have Subscribed this Writing, given at the Conception, on the 16th of November 1498.

### C H A P. LXXXII.

How after the Agreement concluded, the Rebels went away to Xaragua, faying, They would Embark on the Two Ships fent them by the Admiral.

THings being adjusted as above, Car-S Domingo to the Admiral, and at their Request, on the 21th of Nevember, he Subscribed the aforefuld Articles brought by them, and granted a new Safe-Conduct or Leave to all those that would not go to Spain with Rolelan, promising them Pay, or the Liberty of Planters, as they liked buff, and for others to come ticely to manage their Affairs. These, the Caflellan Ballester delivered to Roldan and his Company at the Conception on the 24th of November, and they having recerv'd them, went away toward Xaragua, to prepare for their departure, as was afterwards known. And tho' the Ad-" miral was sentible of their Villany, and much concern'd that the good Service his Brother might have done in continuing the Discovery of the Continent of Vol. II.

Paria, and fettling the Pearl Fishery and Trade, was obstructed by giving them those Ships, yet he would not give the Rebels occasion to blame him, faying, He hid refus'd them their Passage. He began therefore prefently to fit out the Ships as had been agreed, tho the Equipment was fomewhat retarded for want of Necessaries. To Supply which defect, and that no time might be loft, he order'd Carvajal, to go over by Land to provide and dispose all things for the departure of the Rebels, whilft the Ships came about, giving him ample Commission for it, resolving himself to go foon to Isabella, to fettle Affairs there, leaving his Brother James at S. Domingo, to look to that Place. After his departure, about the end of January, the two Caravals, furnish'd with all Necessaties for the Voyage, fet out to take up the Rebels 8 D

Rebels, but a great Storm rising by the Columbus. way, they were forced to put into another Port till the end of March; and because the Caraval Ninna, one of the two, was in the worst Condition, and requir'd most Repairs, the Admiral sent Orders to Peter de Arana and Francis de Garai, to repair to Xaragua with another, called Santa Cruz, or the Holy Cross, aboard which Carvagal went, and not by Land. He was 11 days by the way, and found the other Caraval waiting for him-

#### CHAP. LXXXIII.

How the Rebels altered their Resolution of going to Spain, and came to a new Agreement with the Admiral.

N the mean while, the Caravals not coming, and most of Roldan's Men having no Mind to Embark, they took that delay for a pretence to stay, blameing the Admiral, as if he had not difpatch'd them as foon as he might; whereof he being inform'd, writ to Roldan and Adrian, persuading them in Friendly manner to perform the Agreement, and not fall into Disobedience. Belides Carvajal, who was with them at Xaraqua, on the 20th of April, enter'd his Protc-The Rebels station before a Notary, called Frances de Garai, afterwards Governor of Panuco, and of Jamaica, requiring them, fince the Admiral had fent the Ships, to accept of them, and Embark according to Articles. And because they would not, on the 25th of April, he ordered the Ships to return to S. Domingo, because they were destroyed by the Worms, and the Men suffered much for want of Provisions. The Rebels were no way concern'd, but rather rejoyc'd and grew haughty, feeing fuch account was made of them, and were so far from acknowledging the Admiral's Civility, that they laid it to his Charge in Writing, that it was through his Fault they staid, saying, He had a Mind to be reveng'd on them, and had therefore delayed the fending of the Caravals, which were in such ill case, that it was impossible they should go in them to Spain, and that the' they had been never so good, their Provisions were spent expecting them, and they could not get more under a long while; for which reason they had resolved to expect redress from their Majesties. Carvajal returned with this Answer by Land to S. Domingo, to whom at the time of his departure, Roldan said, He would willingly go wait on the Admiral, to endeavour for such an Accommadation, as might please all Parties, provided he would fend him his Safe-Conduct. Carvajal fent the Admiral Word of it from S. Demings, on the 15th of May, who

for the Pains he took, and fent the Safe-Conduct he requir'd, with a short Letter to Roldan, tho' very pithy, persuading him to Peace, Submission, and their Majesties Service; which he afterwards repeated at S. Domingo more at large on the 29th of June; And on the 3d of Auguft, fix or seven of the Chief Men about the Admiral, fent Roldan another Safe-Conduct, that he might come to Treat with his Lordship. But the distance being great, and the Admiral having occasion to visit the Country, he refolved to go with two Caravals to the Port of Azua in the same Island Hispamola, West of S. Domingo, to be the nearer the Province where the Rebels were, many of whom came to the faid Port; and the Admiral arriving there about the end of August with his Ships, conferr'd with the Chief of them, exhorting them to defift from their ill Courfe, and promiting them all possible Favour and Kindness, which they promised to do, provided the Admiral granted them Four Things: wiz.

I. 'That he should fend fifteen of New them to Spain in the first Ships that indes went.

Il. 'That to those that remain'd, he should give Land and Houses for their Pay.

III. 'That Proclamation should be ' made, that all what had happened was caus'd by false Suggestions, and through

the Fault of ill Men. IV. 'That the Admiral shall a-new

appoint Roldan perpetual Judge. This being concluded among them,

Roldan return'd ashore from the Admiral's Caraval, and fent his Companions the Articles, which were fo much to their Mind, and so unreasonable, that they concluded, faying, In case the Admiral fail'd in any part, it should be Lawful for them by force, or any other. firested on the 21th, commending him means, to oblige him to Performance.

refuse 10 Spain.

The Admiral being eager to conclude this difficult matter, which had lafted above two years; and confidering his Adversaries continued more obstinate than ever, and that many of those, who were with him, had a mind to joyn Companies, and Conspire together to go to other Parts of the Island, as Roldan had done; he resolv'd to sign the Articles whatsoever they were, viz. To grant Roldan a Patent for perpetual Judge, and the other Three above-mentioned Particulars, besides all they had sent in Writing, a Copy whereof was inserted above. On Tuesday following, being

the 5th of November, Roldan to Exercise his Office, and accordingly, it being a part of his Grant, he constituted Peter Requelme Judge of Bonao, with Power to Imprison Offenders in Criminal Cases, but that he should send Criminals upon Life and Death, to be Tried by him at the Fort of the Conception. The Substitute being no Honester than his Master, he presently went about to build a strong House at Bonao, had not Peter de Anana, forbid him, because he plainly perceiv'd it was contrary to the respect due to the Admiral.

### CHAP. LXXXIV.

How Ojeda returning from his Discovery, Excited new Troubles in Hispaniola.

O return to the Course of our Hiflory, the Admiral having adjusted Matters with holdan, appointed a Captain with some Men to march about the Island to pacifie it, and reduce the Indians to Pay the Tribute, and be always in a readine's, that upon the least Mutiny among the Christians, and Sign of Rebellion among the Indians, he might Suppress and Punish them, which he did with a Delign to go himself over to Spain, and carry with him his Brother the Lieutenant, because it would be difficult if he were left behind, to forget old As he was preparing for his Voyage, Alonso de Ojeda, who had been Discovering with four Ships, arriv'd in the Island. And for as much, as this fort of Men Sail about to make their Fortune, on the fifth of September he put into the Port the Christians called Brasil, and the Indians, Taquimo, deligning to take what he could from the indians, and load with Wood and Slaves. Whilst he was thus employ'd, he did all the harm he could, and to show he was a Limb of the Bishop we have mention'd, endeavoured to raise another Mutiny, gave out, that Queen Habel, or Elizabeth, was ready to Die; and as foon as she was Dead, there would be no Body left to support the Admiral, and that he as a faithful Servant to the faid Bishop, might do what he pleas'd against the Admiral, because of the Enmity there was between them. Upon these Grounds he began to write to fome that were not very found, after the late Troubles, and to hold Correspondence with them. But Roldan being inform'd of his Proceedings and Designs, by the Admirals Order, went

against him with 21 Men, to prevent him doing the harm he intended: Being come within a League and a half of him on the 29th of September, he understood he was with 15 Men at a Caciques, whose Name was Hamguaaba, making Bread and Bisket, and therefore he travelled that Night to Surprize him. Ojeda understanding that Roldan was coming upon him, and being too weak to oppose him, to make the best of a bad Case, went to meet him, faying, Want of Provitions had brought him thither, to supply himfelf in the King his Master's Dominions, without defigning any harm. And giving him an Account of his Voyage, faid, He had been Discovering 600 Leagues Westward along the Coast of Paria, where he found People that fought the Christians even hand, and had wounded 20 of his Men, for which reason he could make no Advantage of the Wealth of the Country, where he faid he had feen Deer and Rabbets, and Tygers Skins and Paws, and Gaamm's, all which he show'd Roldan aboard the Caravals, faying, He would foon repair to S. Domingo to give the Admiral an Account of all. He at this time was much troubled, because Peter de Arana had tignified to him, That Riquelme, Judge of Bonao, for Roldan, under colour of Building a House for his Herds, had made choice of a strong Rock, that he might from thence, with a few Men, do all the harm he thought fit; that he had forbid him: Whereupon Requelme had drawn up a Process, attested by Witnesses against him, and fent it to the Admiral, complaining that Arana used Violence towards him, and praying relief, that no

# I be TITIL DIJCOVERY OF

Octda Hir up the Prople to

~ . diforder might happen among them. Hereupon, tho' the Admiral knew that Man was not of a quiet Disposition, yet he thought fit to conceal his Jealousie, yet so as to be on his Guard, being of Opinion it was enough to provide against Ojeda's open Intrusion, without taking notice of that which might tolerably be conniv'd at. Ojeda holding his wicked purpose, and taking leave of Roldan in February 1500. went away with his Ships Rebellion. to Xin agua, where a great many of those lived, who had before Rebell'd with Rolder. And because Avarice is the most beneficial and ready way to promote any Mischaet, he began to give out among those People, that their Catholick Majesties had appointed him and Carvajal the Admiral's Councellors, that they might not fuffer him to do any thing, which they did not think was for their Majesties Service; and that among many other things they had ordered him todo, one was, That he should immediately pay in ready Money, all those that were in the Island in their Service; and since the Admiral was not so just as to do it, he was ready to go along with them to S. Domingo, to oblige him to Pay them out of hand; and that done, if they thought fit to turn him out of the Island, dead or alive; for they ought not to rely on the Agreement made, or the Word he had given them, for he would keep it no longer than necessity oblig'd him to it. Upon these Promises, many resolv'd to follow him, and therefore being affifted by them, he one Night fell upon others who oppos'd him, and there were some killed and wounded on both fides. And being satisfied, That Roldan, who was return'd to the Admiral's Service, would not joyn with them, they resolv'd to Surprize and make him Prisoner; but he being inform'd of their Defign, went well attended where Ojeda was, to put a stop to his Disorders, or Punish him, as he should find Expedient. Ojeda for fear of him, retir'd to his Ships, and Roldan continuing ashore, they treated about a Conference, each of them fearing to put himself into the Power of the other. Roldan perceiving that Ojeda was unwilling to come ashore, he offered to go Treat with him aboard; to which purpose he sent to ask his Boat, which he fent him well mann'd, and having taken in Rollan with fix or feven of his Followers, when they least suspected it, Rolden and his People on a sudden fell upoh Ojeda Men, with their naked Swords, and killing some, and wound-

ing others, made themselves Masters of the Boat, returning with it to Land, Ojeda having only a small Skiff left him, Ojeda in which he refolv'd to come peaceably forced a. to Treat with Roldan. Having made way fome Excuse for his Offences, he agreed to restore some Men he had taken by force, that his Boat and Men might be return'd him, alledging, if it were not reftor'd, it would be the Ruin of them all and their Ships, because he had no other sit to ferve them. Roldan readily granted it, that he might have no cause to complain, or fay, he was loft through his Means; yet making him Promise, and give Security that he would depart the illand by a time appointed, as he was obliged to do, by the good Guard Roldan kept ashore. But as it is a hard matter to root out Cockle fo that it may not Sprout up again, so is it no less difficult for People that have got a habit of doing ill to foibear relapfing into their Crimes, as hapned to some of the Rebels a few days after Ojeda was gone. For one D. Ferdinand de Guevara, being in Disgrace with the Admiral, as a Seditious Person, and having taken part with Ojeda, in Hatred to Roldan, because he would not permit him to take to Wife the Daughter of Canua, the principal Queen of Xaragua, began to gather many Conspirators to secure Roldan, and succeed him in the ill things he had done. Particularly he gain'd to his Party, one Adrian de Moxica, a chief Man among the late Rebels, and to other wicked Men, who about the middle of July 1500. had contriv'd to secure, or Murder Roldun. He ha- Another ving Intelligence of the Design, stood Rebelli upon his Guard, and ordered his Busi- Juppe 1 ness so well, that he seiz'd the aforesaid D. Ferdinand, Adrian, and the chief Men of their Party, and fending the Admiral an Account of what had happen'd, ask'd, What his Pleasure was he should do with them? The Answer was, That since they had endeavour'd without any Provocation to diffurb the Country, (and if they were not panish'd every thing must run to ruin) he should punish them according to their Demerits, and as the Law directed. The Judge did it accordingly, and proceeding legally against them, hang'd Adrian as chief Author of the Conspiracy, Banish'd others, and kept D. Ferdinand in Prison, till on the 13th of June, he delivered him, with other Prisoners, to Gonsalo Blanco, to carry them to la Vega, that is, the Plain, where the Admiral then was. This Example quieted the Country, and the In-

odiens again submitted themselves to the Christians. Such rich Gold Mines were discovered, that every Man left the King's Pay, and went away to live upon his own Account, applying himself to dig Gold at his own Expence, allowing the King the third part of all they found. This prospered so well, That a Man has gethered five Marks, (a Mark is eight Ounces) of Gold in a Day, and a Grain of pure Gold has been taken up worth above 196 Ducats; and the Indians were Submissive, dreading the Admiral, and so desirous to please him, that they readily became Christians only to oblige him. When any of the Chief of them was to appear before him, he endeavour'd to be Clad; and therefore to fettle all things the better, the Admiral resolv'd to take a progress through the Island; and accordingly, he and his Brother, and Lieutenant, set out on Wednesday the 20th of February 1499. and came to Isabella

on the 19th of March. From Isabella they let out the 5th of April for the Conception, and came thither the Tuesday following. The Lieutenant went thence for Xaragua upon Friday the 7th of June. On Christmas Day following, which was in the year 1499, being forsaken by all the World, the Indians and Rebel Christians fell upon me, and I was reduced to such Distress, that to avoid Death, leaving all behind me, I put to Sea in a little Caraval. But our Lord presently reliev'd me, faying, Thou Man of little Faith, fear not, I am with you: And fo he dispersed my Enemies, and show'd how he could fulfil my Promises: Unhappy Sinner that I am, who placed all my Hopes on the World. From the Conception, the Admiral delign'd to go to S. Domingo on the 3d of February in order to make ready to return into Spain to give their Catholick Majesties an Account of all Things.

#### CHAP. LXXXV.

How, their Catholick Majesties, upon false Informations, and malicious Complaints of some Persons, sent a Judge to take Cognizance of Affairs.

WHilst these Disorders hapned as has been faid, many of the Rebels by Letters fent from H. spaniola, and others that were return'd into Soam, did y was not cease to give in false Informations to mil the the King, and his Council, against the Admiral and his Brothers, faying, They were Cruel, and unfit for that Government, as well because they were Strangers and Aliens, as because they had not formerly been in a Condition to learn by Experience, how to govern People of Condition, affirming, That if their Highnelles did not apply fome Remedy, those Countries would be utterly deftroy'd; and in case they were not quite ruin'd by their ill Government, the Admiral would Revolt, and joyn in League with some Prince to support him, he pretending that all was his own, as having been Discovered by his Industry and Labour; and that the better to compass his Design, he concealed the Wealth of the Country, and would not have the Indians serve the Christians, nor be Converted to the Faith, because by making much of them he hoped they would be of his side, to do what he pleas'd against their Highnesses. They proceeding in these and such like Slanders, importun'd their Catholick Majesties, ever talking Vol. II.

Ill of the Admiral, and complaining there were feveral years Pay due to the Men, gave occasion to all that were at Court to rail. So that when I was at Granada, at the time the most Screne Prince Michael hapned to Die, above 50 of them, like shameless Wretches, brought a Load of Grapes, and fate down in the Court of Alhambra, (a Castle and Palace) crying out, That their Highnesses and the Admiral made them live fo miserably by not paying them, with many other scandalous Expressions. And their Impudence was so great, that if the Catholick King went abroad, they all got about him, crying, Pay, Pay. And if it hapned that my Brother, or I, who were Pages to her Majesty, pass'd by where they were, they cried out in a hideous manner, making the Sign of the Cross, and saying, There are the Admiral of the Mosquito's Sons; he that has found out false and deceitful Countries, to be the Ruin and Burial Place of the Spanish Gentry; adding many more such Infolencies, which made us cautious of appearing before them, their Complaints rupning to high, and their constant impor cunity with the King's Favourites, it was refolv'd to fend a Judge to Hilpaniola, to enquire into all these Affairs, or-

 dering him in case he found the Admiral Columbus, guilty of what was alledg'd, to fend him to Spain, and stay there himself as Go-The Person their Majesties Boyadilla made choice of for this purpole, was the Judge one Francis de Bovadilla, a poor Knight in Hilpa- of the Order of Calatrava; who, on the 21th of May 1499, had full and ample Commission given him at Madrid, and Blank Letters, Subscrib'd by their Majesties, to such Persons as he should think fit in Hispaniola, commanding them to be Aiding and Affilting to him. Thus furnished, he arrived at S. Domingo at the latter end of August 1500, at such time as the Admiral was at the Conception, fetling the Affairs of that Province, where his Brother had been affaulted by the Rebels, and where there were more Indians, and those, more Understanding People than in the rest of the Island. So that Bovadilla at his arrival finding no Body to keep him in Awe, the first thing he did was to take up his Quarters in the Admiral's Palace, and Seize, and make use of all he found there, as if it had fallen to him by Inheritance; and gathering together all he could find the had been in Rebellion, and many others that Hated the Admiral and his Brothers, he presently declar'd himself Governor. And to gain the Affections of the People, he caus'd a general Freedom to be proclaim'd for 20 years to come; requiring the Admiral to repair to him without any delay, because it was coove nient for his Majesties Service he sould do fo. And to back his Summons on the 7th of September, fent him the Line Letter by F. John de la Sera, which was to this effect.

To D. Christopher Columbus, gar Admiral of the Ocean.

WE have Ordered the Commendary Francis de Bovadilla, the Bearer, to acquaint you with some Things from us: Therefore we Defire you to give him entire Credit, and to Obey him. Given at Madrid, the 21th of May 1499. I the King. By Command of their Highneffes, I the Queen. Mich. Perez de Almazan.

#### LXXXVI. CHAP.

How the Admiral was Apprehended and sent to Spain in Irons, together with his Brothers.

jesties Letter, came away presently to S. Domingo, where the aforesaid Judge was, who being eager to remain Governor there, at the beginning of Ollober 1500. without any delay, or legal Information, fent him Prisoner aboard a Ship, together with his Brother Boradilla, James, putting them in Irons, and a good Guard over them, and ordered upon fevere Penalties, that none should dare to speak for them. After this, (by Abington Law) he began to draw up a Procels against them, admitting the Rebels his Enemies as witnesses, and publickly favouring all that came to speak ill of them, who in their Depositions gave in such Villanies and Incoherencies, that he must have been Blind that had not plainly perceiv'd, they were False and Malicious. For which reason, their Catholick Majesties would not admit of them, and cleared the Admiral, repenting that they had fent such a Man in that Employment; and not without good canie, for this Bovadilla ruin'd the Island, and squander'd the King's Revenues, that all

Men might be his Friends, saying, Their

THe Admiral having seen their Ma-

Majesties would have nothing but the Honour of the Dominion, and that the Profit should be for their Subjects. he neglected not his own Share, but fiding with the richest and powerfullest Men, gave them Indians to serve them, upon Condition they should share with him all they got by their means, and fold by Auction the Possessions and Rights the Admiral had acquir'd for their Majesties, saying, They were no Labourers, nor did not desire to make a Profit of those Lands, but only kept them for the Benefit of their Subjects. He thus Selling all things under this colour, endeavoured on the other fide that they should be Bought by some of his own Companions, for one third of Besides all this, He made no the value. other use of his Judicial Power but to Enrich himself, and gain the Affections of the People, being still afraid least the Lieutenant, who was not yet come from Xaragua, should put a stop to his Proceedings, and endeavour to fet the Admiral at liberty by force of Arms; in which particular, the Brothers behav'd themselves very prudently, for the Admiral

The Pra-

Admiral sent them word immediatenlms. ly, that they should come peaceably ~ to him, the Kings Service fo requiring, that the Island might not be put into an uproar; for when they were in Spain they should more easily obtain the Punishment of such a senseless Person, and Satisfaction for the wrong done them. Yet this did not divert Bovadilla from Batting him and his Brothers into Irons, allowing the baser fort to Rail at them publickly, blowing Horns about the Port where they were Ship'd, belides many scandalous Libels set up at corners of Streets against them; so that the' he was inform'd that one James Orter, Governor of the Hospital, had writ a Libel and read it publickly in the Market-Place, he was so far from punishing of him, that he feem'd to be very well pleas'd, which made every one endeayour to show himself in this fort. And perhaps for fear the Admiral should Swim back, he took Care when they were to Sail, to deure Andrew Martin the Master of the Ship, to look to him, and to deliver him in Irons as he was, to the Bishop D. John de Fonseca, by whose Advice and Direction it was concluded he did all these Things; tho' when they were at Sea, the Master being sensible of Bovadilla's Unworthiness, would have knock'd off the Admiral's Irons, which he would never permit. faying, That since their Catholick Ma-jesties, by their Letter directed him to perform whatsoever Bovadilla did in their Name Command him to do, in Virtue of which Authority and Commission he had put him into Irons, he would have none but their Highnesses themselves to do their Pleasure herein; and he was refolv'd to keep those Fetters as Relicks,

and a Memorial of the Reward of his many Services, as accordingly he did; for I always faw those Irons in his Room, which he ordered to be Buried with his Body; notwithstanding, that he having on the 20th of November 1500, writ to their Majesties acquainting them with his arrival at Cadiz, they understanding the Condition he came in, immediately gave Orders that he should be releas'd, The Almi and fent him very gracious Letters, fay-ral defing, They were very forry for his Sufferings, and the unmannerly Behaviour of Bovadilla towards him, ordering him to go to Court, where Care should be taken about his Affairs, and he should be shortly dispatch'd with full Restitution of his Honour. Nevertheless, I cannot but blame their Catholick Majesties, who chose for that Imployment a base and ignorant Man; for had he been a Man, who knew the Duty of his Office, the Admiral himself would have been glad of his coming; fince he by Letter had defired that one might be fent, to take true Information of the Perverseness of those People, and of the Crimes they committed, that they might be punish'd by another hand, he being unwilling to use that Severity which an impartial Perfon would have done, because the original of those Tumults had been against his Brother. And tho' it may be urg'd, That tho' their Majesties had such bad Accounts of the Admiral, yet they ought not to fend Bovadilla with so many Letters, and fuch Power, without limitting the Commission they gave him. It may be answer'd in their behalf, That it was no wonder they did so, because the Complaints against the Admiral were very many, as has been faid above.

### CHAP. LXXXVII.

How the Admiral went to Court to give their Catholick Majesties an Account of him (elf.

the Admiral's coming, and being in Irons, they fent Orders on the 12th of December for him to be fet at liberty, and writ to him to repair to Granada, where he was received by their Highneffes with a favourable Afpect, and kind Words, telling him, His Imprisonment had not been by their Defire or Command, and therefore they were much offended at it, and they would take Care those that were in fault should be pu-

S foon as their Majesties heard of nish'd, and full Satisfaction given him. Having spoke these and such like gracions Words, they ordered his Business should be immediately gone upon, the Refult whereof was, That a Governour fould be sent to Hispaniola, who was to right The Ad the Admiral and his Brothers, and Bove- ral we dills should be oblig'd to restore all he receiv had taken from them; and that the Admiral should be allow'd all that belong'd to him, according to the Articles their Highnesses had granted him; and that

the Rebels should be proceeded against and punish'd according to their Offences. Nicholas de Obando, Commandary of Laws, was fent with this Power; he was a wise and judicious Man, but as afterwards, appear'd Partial, craftily concealing his Passions, giving Credit to his own Surmises, and malicious Persons; and therefore acting cruelly and revengefully, as appears by the Death of the 80 Kings we have spoke of before. But to return to the Admiral; as their Majesties were pleas'd to send Obando to H.fpaniela, so they thought it proper to send the Admiral upon some Voyage that might turn to his Advantage, and keep him employ'd till the said Obando could pacific and reduce the Island H. Spaniola, because they did not like to keep him so long out of his right, without any just occasion, the Information sent by Bovadilla, plainly appearing to be full of Malice, and not containing any thing whereby he might forfeit his Right. But there being some delay in the Execution of this Design, it being now the month of Ollober 1500. and Ill Men endeavoured to prevail that a new Information might be expected, the Admiral resolved to speak to their Majesties, and beg of them that they would defend him against all Dangers, which he afterwards This they prorepeated by Letter. mis'd him by Letter, when the Admiral was ready to fet out upon his Voyage; the Words of it are to this effect :

And be affured that your Impri-fonment was very displeasing to us, which you were sentible of, and all Men plainly saw, because as soon as we heard of it, we applied the proper And you know with how Remedies. -much Honour and Respect we have always ordered you to be treated, which we now direct should be done, and that you receive all worthy and nobleUfage, promising that the Privileges and Prerogatives by us granted you shall be preserv'd in ample manner, according to the Tenor of our Letters Pattents, which you and your Children fhall Enjoy without any Contradiction, as is due in reason: And if it be requisite to Ratisse them a-new, we will do it, and will Order that your Son be put into Possession of all, for we defire to Honour and Favour you in greater Matters than these. And be

fatisfied we will take the due Gare of your Sons and Brothers, which shall be done when you are departed; for the Employment shall be given to your Son, as has been said. We therefore pray you not to delay your departure. Given at Valentia de la Torre, on the 14th of March 1502.

This their Majesties writ, because the Admiral had refolv'd not to trouble himfelf any more with the Affairs of the Indies, but to Ease himself upon my Brother, wherein he was in the Right; for he faid, that, if the Services he had al ready done, were not sufficient to de ferve to have those villainous People pu nish'd, all he could do for the futur would never obtain it, fince he had al ready perform'd the main thing he un dertook before he discover'd the Indie which was to show that there was a Continent and Islands Westward, that th way was easie and navigable, the advan tage visible, and the People gentle and unarm'd. All which, fince he had ve rified himself in Person, there now re mained nothing but for their Highnesses t pursue what was begun, fending People t discover the Secrets of those Countries for now the Gate was open'd, any on might follow the Coast, as some did al ready, who improperly call themselve Discoverers; not considering they hav not Discovered any new Country, bu that for the future they purfue the fire Discovery, the Admiral having show them the Islands and Province of Paris which was the first Land of the Conti nent discover'd. Yet the Admiral ha ving always had a great Inclination t ferve their Catholick Majesties, and par ticularly the Queen, he was content t return to his Ships, and undertake the Voyage we shall speak of; for he was convinced there would daily be found out great Wealth, as he writ to their Highnesses the year 1499. speaking of the Discovery in this manner. It is not to be discontinued, for to say the truth, because one time or other something material will be found. As has fince appeared by New Spain and Peru, though at that time, as generally happens to most Men, no Body gave Credit to what he said, and yet he said nothing but what proved true, as their Catholick Maje-sties testifie in a Letter of theirs writ at Barcelona on the 5th of September 1498

#### CHAP. LXXXVIII.

'miral went from Granada to Seville, to fit out a Fleet for How the another Discovery.

THe Admiral having been well difpatch'd by their Catholick Maje-Dies, fet out from Granada for Seville in the year 1501. and being there so earnestly solicited the fitting out his Squadron, that in a small time he had Rigg'd and provided four Ships, the biggest of 70. the least of 50 Tun Burthen, and 140 Men and Boys, of which number I was one.

We fet Sail from Cadiz on the 9th of fourth May 1502. and failed to S. Carharine's, whence we parted on Wednesday the 11th of the same month, and went to Arzılla to relieve the Portugueses, who were reported to be in great Distress, but when we came thither, the Moores had raised the Siege. The Admiral therefore fent his Brother, D. Bartholomem Columbus, and me, with the Captains of the Ships ashore, to visit the Governor of Arzılla, who had been wounded by the Moores in an Assault. He return'd the Admiral Thanks for the Visit and his Offers, and to this purpose sent some Gentlemen to him, among whom fome were Relations to Donna Philippa Moniz, the Admiral's Wife in Portugal. The same day we set Sail, and arriving at Gran Canaria, on the 20th of May, cast Anchor among the little Islands; and on the 24th, went over to Maspalomas in the same Island, there to take in Wood and Water for our Voyage. The next Night we fet out for the indies, and it pleas'd God the Wind was fo fair, that without handing the Sails, on Wednesday the 15th of June, we arrived at the Mand Matinino with a rough Sea and Wind. There, according to the Custom of those that Sail from Spain to the Indies, the Admiral took in fresh Wood and Water, and made the Men wash their Linen, staying till Saturday; when we stood to the Westward and came to Dominica, ten Leagues from the other. So running along among the Caribbee Islands, we came to Santa Cruz; and on the 24th of the same month, ran along the South-fide of the Island of S. John. Thence we took the way for S. Dominge, the Admiral having a mind to Exchange one of his Ships for another, because it was a bad Sailor; and belides, could carry no Sail, but the fide would lie al-most under Water, which was a hin-Vol. II.

drance to his Voyage, because his design was to have gone directly upon the Coast of Paria, and keep along that shore, till he came upon the Streight, which he certainly concluded was about Veragua and Nombre de Dios. But seeing the Fault of the Ship, he was forced to repair to S. Domingo to change it for a better.

And to the end, the Commendary Lores fent by their Majesties to call Bovadilla to an Account for his Male-Administration, might not be furpriz'd at our unexpected arrival, upon Wednesday
the 29th of June, being near the Port,
the Admiral sent Peter de Terrero, CapHe fore tain of one of the Ships to him, to fig- feesagre. nifie what occasion he had to change storm & that Ship; for which reason, as also be- refus'dA cause he apprehended a great Storm was mittance coming, he desired to secure himself in mola. that Port, advising him not to let the Fleet Sail out of the Port for eight days to come; for if he did it would be in great danger. But the aforefaid Governor would not permit the Admiral to come into the Harbour, nor did he hinder the going out of the Fleet that was bound for Spain, which confisted of 18 Sail, and was to carry Bovadilla, who had Imprison'd the Admiral and his Brothers, Francis Roldan, and all the rest, who had been in Rebellion against them, and done them so much harm, all whom it pleased God to infatuate, that they might not admit of the Admiral's good Advice. And I am satisfied it was the hand of God; for had they arriv'd in Spain, they had never been punish'd as their Crimes deserv'd; but rather been favoured and preferred, as being the Bishop's Friends. This was prevented by their setting out of that Port for Spain; for no fooner were they come to the East Point of the Island Hispaniola, but there arose so terrible a Storm, that the Admiral of the Fleet funk, in which was Bovadilla, with most of the Rebels, and made fuch havock among the reft, that of 18 Ships, only three or four were faved. This hapned upon Thursday the last of June, when the Admiral having foreseen the Storm, and being refused admittance into the Port, for his Security drew up as close to the Land as he could, thus sheltering himself, not without much

diffitisfaction among his Men, who for olumbus being with him were denied that Recep-gers, much more to them that were of the same Nation, for they fear'd they might be fo ferv'd, if any Misfortune should befal them for the future. And tho' the Admiral was concern'd on the same Account, yet it more vex'd him to behold the Baseness and Ingratitude us'd towards him in that Country he had given to the Honour and Benefit of Spain, being refused to shelter his life in it. Yet his Prudence and Judgment secured his Ships, till the next day the Tempest increaling, and the Night coming on very dark, three Ships broke from him every one its own way: The Men aboard each of them, tho' all of them in great danger, concluded the others were loft; but they that suffered most were those aboard the Ship, called Santo, who to fave their Boat, which had been ashore with the Captain Terreros, dragg'd it a-stern, where it over-set, and were at last forced to let it go to save themselves. But the Caraval Bermuda was in much more danger, which running out to Sea, was almost covered with it, by which it appeared the Admiral had reason to endeavour to change it, and all Men concluded, that under God, the Admiral's Brother was the faving of her by his Wisdom and Resolution; for as ':as been faid above, there was not at that time a more expert Sailor than he. so that after they had all fuffered very much, except the Admiral, it pleased God they met again upon Sunday following in the Port of Azua on the South-fide of Hispaniola, where every one giving an Account of his Misfortunes, it appeared that Bartholomew Columbus had weather'd fo great a Storm, by flying from Land like an able Sailor; and that the Admiral was out of Danger by lying close to the Shore like a cunning Aftrologer, who knew whence the Danger must come. Well might his Enemies blame him therefore, faying, He had rais'd that Storm by Art Magick, to be Reveng'd on Bovadilla, and the rest of his Enemies that were with him, feeing that none of his four Ships perish'd; and that of 18,1 which set out with Bovadilla, only one fo called la Aguja, or The Needle, the worst ca of them all, held on its Course for Spain. where it arrived fafe, having on Board 4000 Peso's in Gold, worth eight Shillings a Pefo, belonging to the Admiral, the other three that escap'd, returning to S. Domingo shatter'd, and in a distresfed Condition.

#### CHAP. LXXXIX.

How the Admiral departed from Hispaniola, and discovered the Islands of Guanaia.

He Admiral in the Port of Azua, gave his Men a Breathing time after the Storm; and it being one of the Diversions used at Sea, to Fish, when there is nothing else to do, I will mention two forts of Fish among the rest, which I remember were taken there; the one of them was pleasant, the other wonderful. The first was a Fish called Saavina, as big as half an ordinary Bell, which lying a-fleep above Water, was flruck with a Harping-Iron from the 2 strange Boat of the Ship Bisceina, and held so fast that it could not break loose; but being tied with a long Rope to the Boat, drew it after it, as swift as an Arrow ; fo that those aboard the Ship, seeing the Boat scud about, and not knowing the occasion, were assonished it should do so without the help of the Oars, till at last the Fish sunk, and being drawn to the Ships side, was there hall'd up with the Tackle. The other Fish was taken after

another manner, the Indians call it Manati, and there are none of the fort in Europe. It is as big as a Calf, nothing differing from it in the colour and tafte of the Flesh, but that perhaps it is better and fatter; wherefore those that affirm there are all forts of Creatures in the Sea, will have it, that these Fishes are real Calves, fince within they have nothing like a Fish, and feed only on the Grass they find along the Banks. To return to our History; the Admiral having a little refreshed his Men, and repaired his Ships, left Port Azua, and went to that of Brasil, which the Indians call Giacchemo, to shun another Storm that was coming. Hence he failed again on the 14th of July, and was so Becalm'd, that instead of holding on his Course, the Current carried him away to certain Islands near Jamasca, which are very small and sandy, and he called them, Los Poros, or The Wells, because not find-

Fiftes.

ing Witer in them, they dug many Pits in the and, and took up that Water for the Co. nent, we came to certain Islands, whe. . went assore upon the biggest only, called Guanasa, whence those that make Sea-Charts, took occafion to call all those Islands of Guanaia, which are almost 12 Leagues from the Continent, near the Province now call'd Honduras, tho' then the Admiral called it Cape Casinas. But these Men making fuch Charts without having seen the World, they commit vast Mistakes; which fince it now comes in my way, I will here fet down, tho' it interrupts the Course of our History. These same Islands and Continent are by them twice fet down in their Charts, as if they were different Countries; and whereas Cape Gracias a Dios, and that they call Cape ..... are but one and the same, they make two of it. The occasion of this mistake, was, That after the Admiral had discovered these Countries, one John Diaz de Solis, from whom the River de la Plata, that is, of Silver or Plate, was called Rio de Solis, because he was there killed by the Indians, and one Vincent Tanez, who commanded a Ship the first Voyage, when the Admiral discover'd the Indies, set out together to discover in the year 1508. deligning to follow along that Coast the Admiral had discovered in his Voyage from Veragua Westward; and he following almost the same Track, they put into the Coast of Carta, and passed by Cape Gracias a Dios, as far as Cape Calmas, which they called Honduras, and the aforesaid Islands they called Guanajas giving the Name of the biggest to them all. Thence they proceeded on further, without owning the Admiral had been in any of those Parts, that the Discovery might be attributed to them, and to have it believ'd they had found large Countries; notwithstanding that, Peter de Ledesma, one of their Pilots, who had been before with the Admiral in his Voyage to Veragua, told them, He knew that Country, and that he had been there with the Admiral Discovering it, from whom I afterwards had this. But the Nature of the Charts plainly demonstrates it, for the same thing is twice fet down, and the Island is in the same Shape, and at the same Distance, they having at their return brought a true Draught of that Country, only faying, it lay beyond that which the Admiral had discover'd. So that the same Country is twice describ'd

in one Chart; which, if it please God, time will make appear, when that Coast is better known; for they will find but one Country of that fort, as has been faid. But to return to our Discovery, being come to the Island of Guanaia, the Admiral ordered his Brother Bartholomew Columbus to go ashore with two Boats, where they found People like those of the other Islands, but not of such high Forcheads. They also saw abundance of Pine-Trees, and pieces of Laps Calaninaris, us'd to mix with Copper, which fome Seaman taking for Gold, kept hid

The Admiral's Brother being ashore

a long time.

in that Island, very desirous to know fomething of it, fortune fo order'd it, that a Canoo, as long as a Galley, and A cover. eight foot wide, all of one Tree, and Canoo. like the others in shape, put in there, being loaded with Commodities brought from the Westward, and Bound towards New Spain. In the midst of it was a covering like an Awning made of Palm-Tree Leaves, not unlike those of the Venetian Gondola's, which kept all under it so close, that neither Rain nor Sea-Water could wet the Goods. this Awning were the Children, the Women, and all the Goods, and tho' there were 25 Men aboard this Canoo, they had not the Courage to defend themfelves against the Boats that pursued The Canoo being thus taken without any Opposition, was carried aboard, where the Admiral Bleffed God, for that it had pleased him at once to give him Samples of the Commodities of that Country, without exposing his Men to any danger. He therefore ordered fuch things to be taken, as he judg'd most fightly and valuable; such as some Quilts, and Shirts of Cotton, without Sleeves, curioufly wrought and dy'd of feveral Colours, and some small Clouts to cover their Privities, of the same What fort; and large Sheets in which the In- Goods dian Women aboard the Canoo wrapp'd bad. themselves, as the Moorish Women-ar Granada use to do; and long Wooden Swords with a Channel on each fide, where the edge should be, in which there were sharp edges of Flint fix'd with Thread, and a bituminous fort of matter, which cut naked Men, as if they were of Steel, and Hatchets to cut Wood like those of Stone the other Indians use, but that these were made of good Copper; also Bells of the same Metal, Plates,

and Crucibles to Melt the Metal. For

their Provision, they had such Ruots and

-Grain

Cotombu

Grain as they in Hispaniola Eat, and a fort of Liquor made of Maiz, like the English Beer; and abundance of Cacao Nuts, which in New Spain pass for Money; which they seemed to value very much; for when they were brought aboard among their other Goods, I obferved that when any of these Nuts fell, they all stoop'd to take it up, as if it had been a thing of great consequence: Yet at that time they feem'd to be in a manner besides themselves, being brought Prisoners out of their Canoo aboard the Ship, among fuch strange and fierce People, as we are to them; but so prevalent is Avarice in Man, that we ought not to wonder, that it should prevail upon the Indians above the apprehension of the danger they were in. I must add, Modelty of That we ought to admire their Modelty, for it falling out, that in getting them aboard, some were taken by the Clouts they had before their Privities, they would immediately clap their Hands to cover them, and the Women would hide their Faces, and wrap themselves up as we faid the Moorish Women 140 at Gra-This mov'd the Admiral to use nada. them well, to rest their Canoo, and give them some Things in Exchange for those that had been taken from them. Nor did he keep any one of them but an old Man, whose Name was Giumbe, the feemed to be the wifest and chief of them, to learn fomething of him concerning the Country, and that he might draw others to Converse with the Christians, which he did very readily and faithfully all the while we fail'd where his Language was understood. Therefore, as a Reward for this his Service, when we came where he was not understood, the Admiral gave him fome Things, and fent him home very well pleased, which was before he came to Cape Gracias a Dios, on the Coast of Orecchia, whereof mention has been made already.

ile hidi-4113.

#### CHAP. XC.

How the Admiral would not go to New Spain, but Sail to the Eastward to find out the Streight in the Continent.

TOtwithstanding the Admiral had heard so much from those in the Canoo, concerning the great Wealth, Politeness, and Ingenuity of the People Westward towards New Spain; yet thinking that those Countries lying to the Leeward, he could Sail thither when he thought fit from Cuba, he would not go that way at this time, but held on his Defign of discovering the Streight in the Continent, to clear a way into the South Sea, which was what he aim'd at in order to come at the Countries that produce Spice, and therefore refolv'd to fail Eastward towards Veragua and Nombre de Dios, where he imagin'd the said Streight to be, as in effect it was; yet was he deceiv'd in the matter; for he did not conceit it to be an Isthmus, or narrow neck of Land, but a small Gulph running from Sea to Sea. Which mistake might proceed from the likeness of the Names, for when they faid the Streight might be understood either of Land or Water; and he took it in the most usual Senie, and for that he most earnestly detir'd. And yet tho' that Streight is Land, yet it was, and is, the way to the Dominion of both Seas, and by which fuch immanie Riches have been discovered and

conveyed; for it was God's Will, a matter of fuch vast concern should not be otherwise found out, that Canoo having given the first Information concerning New Spain.

There being nothing therefore in The A those Island of Guanaia worth taking no- ral / tice of, he without further delay fail'd in Easter order to feek out the Streight towards the Continent, to a Point he called Casinas, because there were abundance of Trees that bear a fort of Fruit that is rough, as a fpungy Bone, and is good to Eat, especially Boil'd, which Fruit the Indians of Hispaniola Call Casinas. There appearing nothing worth taking notice of all about that Country, the Admiral would not lose time to go into a great Bay the Land makes there, but held on his Course Eastwards along that Coast, which runs along the same way to Cape Gracias a Dies, and is very low and open. The People nearest to Cape Casinas, wear was at Veragua and Nombre de Dies, it, those painted Shirts or Jerkins beforementioned, and Clouts before their Privities, which were like Coats of Mail made of Cotton strong enough to defend them against their Weapons, and even to bear off the stroke of some of

But itse People higher Eastward towards C . Gracias a Dies, are almost plack, of Afpett, goes stark Na-ted, is very und as the Indian that was taken, said, Eats Man's Flesh, and raw Fish just as it is taken. They have their Ears bor'd with fuch large holes, that they may put a Hens Egg into them, which made the Admiral call that Coast de las Orejas, or of the Ears. There on Sunday the 14th of August 1502. Bartholomew Columbus went ashore in the Morning with the Colours, the Captains, and many of the Men, to hear Mass; and on Wednesday following, when the Boats went ashore to take possession of the Country for their Catholick Majesties, above 100 Men ran down to the shore, loaded with Provisions; who as soon as the Boats came ashore came before the Lieutenant, and on a sudden retir'd back without speaking a word. He ordered they should give them Horse-Bells, Beads, and other Things; and by means of the aforesaid Interpreter, inquir'd concerning the Country, tho' he having been but a short time with us, did not understand the Christians, by reason of the distance of his Country from Hispaniola, where feveral Persons aboard the Ships had learnt the Indian Language. Nor did he understand those Indians; but they being pleas'd with what had been given them, came the next day to the came Place, above 200 of them loaded with several forts of Provisions, as Hens of that Country, which are better than

ours, Geese, roasted Fish, red and white Beans, like Kidney Beans, and other Things like those they have in Hispaniola. The Country was green and beautiful, tho' low, producing abundance of Pines, Oaks, Palm-Trees of leven forts, and Mirebalans of those in Hispaniola they call Hobi, and almost all forts of Provisions that Island affords were here to be found. Abundance of Leopards, Deer, and others, as also all forts of Fish there are in the Islands and in Spain. The People of this Country are much like those of the Islands, but that their Foreheads are not fo high, nor do they feem to have any Religion. There are several Languages among them, and for the most part they go Naked, but cover their Privities. Some wear short Jumps down to their Navel without Sleeves. Their Arms and Bodies have Figures wrought on them with Fire, which make them look oddly; and fome have Lions, others Deer, and others Castles with Towers, or other Things painted on their Bodies. Instead of Caps, the better fort of them wear red and white Cloths of Cotton; and some have Locks of Hair hanging on their Foreheads. But when they are to be fine against a Festival Day, they colour their Faces, some black, and some red; others draw streaks of several Colours; others Paint their Nose, and others black their Eyes; and thus they adorn themselves to appear beautiful. whereas in truth they look like Devils.

### CHAP. XCI.

How the Admiral left the Coast he called de las Orejas, and by Cape Gracias a Dios came to Cariari, and what he did and saw there.

The Admiral sailed along the said Coast de las Orejas Eastward to Cape Gracias a Dios, which was fo call'd, because there being but 60 Leagues to it from Cape Casinas, we laboured 70 days by reason of the Currents and contrary Winds upon the Tack to gain it, standing out to Sea, and then making the shore, sometimes gaining and sometimes losing ground, as the Wind was scant or large when we came about. And had not the Coast afforded such good Anchoring we had been much longer upon it; but being clear, and having two fathom Water half a League from the shore, and two more at every Leagues distance; we had always the conveniency of Anchoring at Night when there Vol. II.

was but little Wind, so that the Course was Navigable by reason of the good Anchoring, but with difficulty.

When on the 14th of September we came up to the Cape, perceiving the Land turn'd off to the South, and that we could conveniently continue our Voyage with those Levam Winds that reign'd there, and had been so contrary to us, we all in general gave Thanks to God, for which reason the Admiral called this Cape Gracias a Dios. A little beyond it, Cape G we pass'd by some dangerous Sands that Class a ran out to Sea, as far as the Eye could Dioserach.

It being requisite to take in Wood and Water; on the 16th of September, the Admiral sent the Boats to a River that 8 G

feem'd to be deep, and to have a good entrance, but the coming out proved not so; for the Winds freshing from Sea, and the Waves running high against the current of the River, so distress'd the Boats, that one of them was lost with all the Men in it, wherefore the Admiral called it the River de la Defgratia, that is, of the Disaster.

In this River and about it, there were Canes as thick as a Man's Leg; and on Sunday the 25th of September, Still running Southward, we came to an Anchor near a little Island called Quiriviri, and a Town on the Continent, the Name whereof was Canari, where were the best People, Country, and Situation, we had yet feen, as well because it was high, full of Rivers, and abounding in Trees, as because the Island was thick Wooded, and full of Forests of Palm, Mirobalan, and other forts of Trees. For this reason, the Admiral called it Indians of Hicite. It is a small League from the

Camari williz'd.

Town the Indians call Carrari, which is near a great River, whether reforted a great multitude of People from the adjacent Parts, some with Bows and Arrows, others with Staves of Palm-Tree, as black as a Coal, and hard as a Horn, pointed with the Bones of Fishes, others with Clubs; and they came together as if they meant to defend their Country. The Men had their Hair braided and wound about their Heads; the Women fhort like ours. But perceiving we were peaceable People, they were very defirous to Barter their Commodities for ours, theirs were Arms, Cotton-Ierkins, and large pieces like Sheets, and Guamm's, which is pale Gold, they wear about their Necks, as we do Relicks. things they Swam with to the Boats, for the Christians went not ashore that day nor the next; nor would the Admiral allow any thing of theirs to be taken, that we might not be taken for Men that valued their Goods, but gave them some of oc. s. The less they saw us value the Exchange, the more eager they were, making abundance of Signs from Land. At last, perceiving no Body went ashore, they took all the things that had been given them, without referving any, and tying them together, left them in the same place where the Boats first went ashore, and where our Men found them on the Wednesday following when they landed. The Indians about this place, believing, that the Christians did not Confide in them, they fent an Ancient

upon a Staff, and two Girls, the one about 8; the other about 14 years of Age, who putting them lato the Boat, made Signs that the Christians might fafely Land. Upon their Request, they went ashore to take in Water, the Indians taking great care not to do any thing that might fright the Christiane, and when they faw them return to their Ships, they made Signs to them to take along with them the young Girls with their Guanini's about their Necks, and at the Request of the old Man that conducted them, they complied and carried them aboard. Wherein those People show'd more friendly than others had done; and in the Girls appear'd an undauntedness, for tho' the Christians were fuch Strangers to them, they express no manner of concern, but always look'd pleasant and modest, which made the Admiral Treat them well, Cloathed, Fed, and fet them afhore again, where the 50 Men were, and the old Man that had delivered them received them again with much satisfaction. The Boats going ashore again that same day, found the same People with the Girls, who restor'd all the Christians had given them. The next day the Admiral's Brother going ashore to learn something of those People, two of the chief Men came to the Boat, and taking him by the Arms between them, made him fit down upon the Grass; and he asking some Questions of them, ordered the Secretary to write down what they answered; but they feeing, the Pen, Ink, and Paper, were in such a Consternation, that most of them ran away; which, as was believed, they did for fear of being Bewitch'd, for to us they feem'd to be Sorcerers, or Superstitious People, and that not without reason; because, when they came near the Christians, they scatter'd fome Powder about them in the Air. and burning some of the same Powder endeavour'd to make the Smoak go towards the Christians; besides, their refuling to keep any thing that belong'd to us, show'd a Jealousie; for, as they say, A Knave thinks every Man like himself. Having staid here longer than was convenient, considering the hast we were in, after repairing the Ships, and provided all we wanted, upon Sunday the 2d of October, the Admiral order'd his Brother to go ashore with some Men to view that Indian Town, and learn something of their Manners, and the Nature of the Country. The most remarkable things Man of an awful Prefence with a Flag they faw were, in a great Wooden Pa-

 lare covered with Canes, feveral Tombs, nbut in one of hithere was a Dead Body dry'd up a. ?mbakm'd; in another, two Bodies, wrapp'd up in Cotton-Sheets without any ill Scent , and over ach Tomb, was a Board with the Figures of Beafts carv'd on it; and on Tome of them, the Effigies of the Person buried there, adorn'd with Guanini's, Beads, and other Things they most va-These being the most civiliz'd Indians in those Parts, the Admiral order'd one to be taken, to learn of him the Secrets of the Country; and of Seven that were taken, two of the chiefest were pick'd out, and the rest sent away with some Gifts, and Civil Entertainment, that the Country might not be left in an uproar, telling them, they were to serve as Guides upon that Coast, and then be set at liberty. But they believ-ing they were taken out of Covetousness, that they might Ransom themselves with their Goods and Things of value, the next day abundance of them came down to the Shore, and fent four aboard the Admiral, as their Ambassadors, to Treat about the Ransom, offering some Things, and freely giving two Hogs of the Country, which tho' small, are very wild. The Admiral therefore observing the Policy of this People, was more defirous to be acquainted with them, and would not depart till he had learnt something of them, but would not give Ear to their Offers. He therefore ordered some Trifles to be given to the Messengers, that they might not go away dif-

satisfied, and that they should be paid for their Hogs, one of which was Hunted Indian after this manner. Among other Creatures that Country produces, there is a ferce wild kind of Cats of a greyish colour, and as Cat. big as a small Greyhound, but have a longer Tail, and fo strong, that whatfoever they clap it about is as it were tied with a Rope. These run about the Trees like the Squirrels, leaping from one to another; and when they leap, they do not only hold fast with their Claws, but with their Tail too, by which they often hang, either to rest them, or fport. It hapned that one Ballester brought one of these Catsout of a Wood, having knock'd him off a Tree, and not daring to meddle with it when down, because of its sierceness, he cut off one of his fore Legs, and carrying it fo wounded aboard, it freighted a good Dog they had; but put one of the Hogs they had brought us into a much greater fear; for as foon as the Swine saw the Cat it ran away, with signs of much dread, which we were surprized at; because before this hapned, the Hog ran at every Body, and would not let the Dog rest upon the Deck. The Admiral therefore ordered it to be put close to the Cat, which presently wound her Tail about its Snout, and with that fore-Leg it had left, fastned on its Pole to Bite it, the Hog for fear grunting most violently. By this we perceived that these Cats hunt like the Wolves or Dogs in Spain.

#### CHAP. XCII.

How the Admiral went from Cariari, to Caravaro and Veragua, till he came to Portovelo, all along a very fruitful Coast.

Pon Wednesday the 5th of Ollober, the Admiral sail'd, and came to Ciravaio, the Bay of Caravaro, which is 6 Leagues in length, and above 3 in breadth, where there are many fmall Islands and 2 or 3 Channels to get in or out at any time. Within these Islands the Ships sail as it were in Streets between islands, the Leaves of the Trees striking against the Shrouds. As foon as we Anchor'd in this Bay, the Boats went to one of the Islands, where there were 20 Canoes upon the Shore, and the People by, as Naked as they were Born, and had only a Gold Plate about their Neck, and some an Eigle of Gold. These, without showing any tokens of fear, the two Indians

of Cariari interpreting, gave a Gold Plate for three Horse-Bells; it weigh'd ten Ducats, and they faid there was great plenty of that Metal up the Continent not far from them.

The next day being the 7th of Ostober, the Boats went ashore upon the Continent, where meeting ten Canoes full of People, and they retuling to Chaffer away their Gold Plates, two of the chief of them were taken, that the Admiral might learn something of them with the assistance of two Interpreters. Gold Plate one of them work and 14 Ducats, and the others Eagle 22.

These said, that a day or two's Journey Product the Country, there was abundance of try.

Gold Gold Plate one of them wore weigh'd

Gold found in some Places which they Columbus named. In the Bay a vast deal of Fish was taken, and ashore there were abundance of thoseCreatures above mention'd at Cariari; also great plenty of their Food, such as Roots, Grain, and Fruit. The Men, who are Painted all over Face and Body of several Colours, as red, black and white, go naked, only covering their Privities with a narrow Cotton Cloth.

Abulena. From this Bay of Caravare, we went to another close by it, called Aburena, which in some measure is like the

> On the 17th we put out to Sea to continue our Voyage; and being come to Guaiga, a River 12 Leagues from Abnrena, the Admiral commanded the Boats to go ashore, which as they were doing, they faw above 100 Indians on the Strand, who assaulted them furiously, running up to the middle into the Water, brandishing their Spears, blowing Horns, and beating a Drum in Warlike manner, to defend their Country, throwing the Salt Water towards the Christians, chewing Herbs and spurting it towards them. Our Men not stirring endea-voured to appeale them, as they did, for at last they drew near to Exchange the Gold Plates they had about their Necks, fome for 2, and some for 3 Horse Bells, by which means we got 16 Gold Plates, with 150 Ducats. The next day being Friday the 19th of Oltober, the Boats went to Land again to Barter; yet before any Christian went ashore, they called to some Indians, who were under some Bowers they had made that Night to defend their Country, fearing the Christians would Land to do them some wrong. Tho' they called never fo much. yet none of them would come, nor would the Christians Land without knowing first what mind they were in; for, as afterwards appear'd they waited in order to tall on them as foon as they landed. But perceiving they came not out of the Boats, they blew their Horns, beat the Drum, and making a great noise, ran into the Water as they had done the day before, till they came almost to the Boats, making figns as if they would cast their, Javelins if they did not return to the Ships. The Christians offended at this their proceeding, that they might not be so bold, and despise them, wounded one with an Arrow in the Arm, and fir'd a Cannon, at which they were so trighted, that all ran away to Land. Then four Christians landed, and calling

them back, they came very peaceably, leaving their Arms behind them, and exchang'd three Gold Plates, faying, They had no more, because they came not provided for to Trade, but to Fight.

All the Admiral look'd for in this Journey, was to get Samples of what fatility those Parts afforded; and therefore without further delay, he proceeded to Catiba, and cast Anchor in the Mouth of a great River. The People of the Country were feen to gather, calling one another with Horns and Drums; and afterwards fent a Canoe with two Men in it to the Ships, who having talk'd with the Indians that were taken at Cariari, presently came aboard the Admiral without any Apprehension of Fear; and by the Advice of those Indians gave the Admiral two Plates of Gold they had about their Necks, and he in return gave them fome Baubles of ours. When these were gone ashore, there came another Canoe with three Men wearing Plates hanging at their Necks, who did as the first had done. Amity thus settled, our Men went ashore, where they found abundance of People with their King, who differ'd in nothing from the rest but that he was cover'd with one Leaf of a Tree, because at that time it rain'd hard; and to give his Subjects a good Example, he exchang'd a Plate, and bid them Barter for theirs, which in all were This was the first 19 of pure Gold. Place in the Indies where they faw any fign of a Structure, which was a great Mass of Wall, or Imagery, that to them feem'd to be of Lime and Stone; the Admiral ordered a piece of it to be brought away as a Memorial of that Antiquity.

He went away Eastward, and came to Cobravo, the People of which Place lie near the Rivers of that Coast, and because none came down to the Strand, and the Wind blew fresh, he held on his Course, and went on to five Towns of great Trade, among which was Veragua, where the Indians faid the Gold was gathered and the Plates made.

The next day he came to a Town, called Cubiga, where the Indians of Cari-ari faid, the Trading Country ended, which began at Carabora, and ran as far as Cubiga, for 50 Leagues along the Coast.

The Admiral, without making any ftay, went on till he put into Perto Belle, Porto giving it that Name, because it is large, beautiful, well-peopled, and encompais'd by a well cultivated Country. He entred this Place on the 2d of November, paffing

passing between two small Islands, within which the Ships may lie close to the Shore, and turn it out if they have occasion. The Country about that Harbour higher up, is not very rough, but Till'd and full of Houses, a Stones throw or a Bow shot one from the other; and it looks like the finest Landskip a Man can

imagine. During seven Days we continued there on account of the Rain and Ill Weather, there came continually Canoos from all the Country about to Trade for Provisions, and Bottoms of fine Spun Cotton, which they gave for some Trifles, such as Points and Pins.

### C H A P. XCIII.

How the Admiral came to Port Bastimentos, or, Nombre de Dios, and continu'd his Voyage till he put into Retrete.

N Wednesday the 9th of November we sailed out of Porto Bello, eight Leagues to the Eastward; but the next day were forced back four Leagues by ftress of Weather, and put in among the Islands near the Continent, where is now the Town of Nombre de Dies; and to de because all those small Islands were full of Grain, he call'd it, Puerto de Bastimentos, that is, the Port of Provisions.

There a Boat well Mann'd, pursuing a Canoo, the Indians imagining our Men would do them some harm, and perceiving the Boat was within less than a Stones throw of them, they all threw themselves into the Water to Swim away, as in effect they did; for tho' the Boat row'd hard, it could not in half a League the pursuit lasted, overtake any of them; or if it did happen to over-take one, he would Dive like a Duck, and come up again a Bow-shot or two from the place. This Chase was very pleasant, seeing the Boat labour in vain, which at last returned empty.

Here we continued till the 23th of November, refitting the Ships, and mending our Cask; and that day we failed Eastward to a Place called Guiga, there being another of the same Name between Veragua and Cerago. The Boats going ashore, found above 300 Persons on it, ready to Trade for such Provisions as they have, and some small Things of Gold they wore hanging at their Ears and Nofes.

But without making any stay here, on Saturday the 24th of November, we put all into a small Port, which was called Retrete, that is, Retir'd Place, because it could not contain above five or fix Ships together, and the Mouth of it was not above 15 or 20 Paces over, and on both fides of it Rocks appearing above Water as sharp as Diamonds; and the Channel between them was so deep that they found no bottom, the' if the Ships la-Vot. II.

clin'd never so little to either side, the Men might leap ashore, which was it that fav'd the Ships in that narrow place, which was the fault of those who went in the Boats to view it, they being covetous to deal with the Indians, and perceiving the Ships would lie there conveniently for it close to the Shore. In this Place we continued nine days with bad Weather; and at first the Indians came very familiarly to Trade for such as they had, but when they faw the Christians steal privately out of their Ships, they retir'd to their Houses, because the Seamen like covetous, dissolute Men, committed a thousand Infolencies; infomuch that they provok'd the Indians to break War with the Peace, and some Skirmishes hapned Indians. They increasing daily, between them. took Courage to come up to the Ships. which, as we faid, lay with their fides close to the Shore, thinking to do some harm, which Defiga of theirs had turn'd to their own Detriments, had not the Admiral always endeavour'd to gain them by Patience and Civility: But at last, perceiving their Infolence, to strike a Terrour into them, he caus'd some pieces of Cannon to be fir'd, which they answer'd with Shouts, thrashing the Trees with Staves, and threatening by Signs, showing they did not fear the noise, for they thought it had been only a thundering to terrifie them. Therefore to abate their Pride, and make them not Contemn the Christians, the Admiral caused a shot to be made at a Company of them that was got together upon a Hillock, and the Ball falling in the midst of them, made them sensible there was a Thunderbolt as well as Thunder; fo that for the future they durst not appear, even behind the Mountains. People of this Country were the properest they had yet feen among the Indians, for they were tall and spare, without any

great Bellies, and well countenanced.

8 H

The

The Country was all Plain, bearing Columbus. little Grass, and few Trees; and in the Harbour there were vast great Crocodiles, Alligators, or Alligators, which go out to flay and sleep ashore, and scatter a Scent as if all the Musk in the World were together; but they are so ravenous and cruel, that

if they find a Man sleeping, they drag him to the Water to devour him, tho they are fearful and cowardly when attack'd. These Alligators are found in many other Parts of the Continent, and fome do affirm they are the fame as the Crocodiles of Nile.

#### CHAP. XCIV.

How the Admiral being drove by stress of Weather, stood again to Westward, to get Intelligence concerning the Mines, and enquire concerning Veragua.

N Monday the 5th of December, the Admiral perceiving the violent East and North-East Winds did not cease, and that there was no Tradeing with those People, he resolved to go back, to be satisfied concerning what the Indians said of the Mines of Veragua, and therefore that day he return'd to Porto Bello, ten Leagues Westward; and continuing his Course the next day, was assaulted by a West Wind, which was opposite to his new Design, but favourable to that he had for 3 Months past. But he believing this Wind would not last long, did not alter his Course, but bore up against the Wind for some days, because the Weather was unsettled; and when the Weather seem'd a little favourable to go to Veragua, another Wind would ftart up and drive him towards Porto Bello; and when we were most in hopes to get into Port, we were quite beat off again, and sometimes with such Thunder and Lightning, that the Men durst not open their Eyes, the Ships feem'd to be just Sinking, and the Sky to come down. Sometimes the Thunder was fo continued, that it was concluded, some Ship fired its Cannon to desire Affistance. Another time there would fall fuch Storms of Rain, that it would last violently for two or three days, infomuch that it look'd like another Univerfal Deluge. This perplex'd all the Men, and made them almost Despair, seeing these could not get half an hours rest, being continually wet, turning sometimes one way and fometimes another, ftruggling against all the Elements, and dreading them all; for in such dreadful Storms, they dread the Fire in flashes of Lightning, the Air for its fury, the Water for the terrible Waves, and the Earth for the hidden Rocks and Sands, which sometimes a Man meets with near the Port, where he hop'd for Safety, and not knowing them, chooses rather to contend with the other Elements in whom he has less share.

Besides all these Terrours, there occur'd another no less dangerous and wonderful, which was a Spout rising from the Sea, on Tuesday the 13th of December, which if they had not Diffolv'd by faying the Gospel of St. John, it had certainly funk whatfoever it fell upon; for as has been faid, it draws the Water up to the Clouds like a Pillar, and thicker than a Butt, twisting it about like a Whirlwind. That same Night we lost fight of the Ship called Caine, and had the good fortune to fee it again after three dreadful dark days, tho' it had lost its Boat, and been in great danger, being so near Land as to cast Anchor, which it lost at long run, being forced to cut the Cable. Now it appeared that the Currants on that Coast follow the Wind, running Westward with the East-Wind, and the contrary, the Water still going after the prevailing The Ships being now almost shattered to pieces with the Tempest, and the Men quite spent with Labour, 2 day or two's Calm gave them some refpite, and brought fuch multitudes of Mulest Sharks about the Ships, that they were of shar dreadful to behold, especially for such as are Superstitious; because, as it is reported, That Ravens at a great distance smell out Dead Bodies; so some think these Sharks do, which if they lay hold of a Man's Arm or Leg, cut it off, like a Razor, for they have two rows of Teeth in the nature of a Saw. Such a multitude of these was killed with the Hook and Chain, that being able to destroy no more, they lay Swimming upon the Water, and they are so greedy, that they do not only Bite at Carrion, but may be taken with a red Rag upon the Hook. I have seen a Tortoise taken out of the Belly of one of these Sharks, and it afterwards liv'd aboard the Ship; but out of another was taken the whole Head of one of his own Kind, we having cut it off and thrown it into the Water,

Terrible Tempest s for many days.

Water, as not good to Eat, no more than they are themselves, and that Shark ~ had swallowed it, and to us it seem'd contrary to reason, that one Creature should swallow the Head of another of its own bigness, which is not to be admir'd because their Mouth reaches almost to their Belly, and the Head is shaped like an Olive. Tho some look'd upon them to forebode mischief, and others thought them bad Fish, yet we all made much of them by reason of the want we were in, having been now above 8 Months at Sea, so that we had confum'd all the Fish and Flesh brought from Spain; and what with the heat and moisture of the Sea, the Bisket was so full of Maggots, that, as God shall help me, I saw many that staid till Night to Eat the Pottage or Brewice made of it, that they might not see the Maggots; and others were so us'd to Eat them, that they did not mind to throw them away when they faw them, because they might lose their Supper if they were to very curious.

Upon Saturday the 17th, the Admiral put into a Port 3 Leagues East of Pennon, which the Indians called Harva. It was like a great Bay, where we rested 3 days, and going ashore, saw the Inhabitants dwell upon the tops of Trees, like Birds, laying Sticks across from Bough to Bough, and building Huts upon them, rather than Houses. Tho' we knew not the Reason of this strange Custom, yet we guess'd it was done for sear of the Griffins there are in that Country, or of Enemies; for all along that Coast, the People at every League distance are great Enemies to one another.

We failed from this Port on the 20th with fair Weather, but not settled; for as foon as we were got out to Sea, the Tempest began to Rage again, and drove us into another Port, whence we departed again the third day, the Weather feeming somewhat mended, but like an Enemy that lies in wait for a Man, rush'd out again, and forced us to Pennon, where when we hop'd to put in, the Wind started up so contrary, that we were drove again towards Veragua. Being at an Anchor in the River, the Weather became again so Stormy, that all the favour we had from it, was, that it allowed us to get into that Port, where we had been before on Thursday the 12th of same month. Here we continued from the 2d day in Christmas, till the 3d of January the following year 1503. when having repair'd the Ship called Gallega,

and taken aboard abundance of Indian Wheat, Water and Wood, we turn'd back towards Veragua with bad Weather and contrary Winds, which chang'd crossly, just as the Admiral alter'd his And this was so strange and wonderful Courfe. unheard of a thing, that I would not changes of have repeated so many changes, if, be- Westler. fides my being then present, I had not feen the same written by James Mendez. who fail'd with the Canooes of Jamaica, whereof I shall speak hereafter, and writ an Account of this Voyage, and the Letter the Admiral fent by him to their Catholick Majesties, which is Printed, will inform the Reader how great our Sufferings were, and how much Fortune persecuted him she ought most to tavour. But to return to the Changes of Weather, and of our Course, which put us to fo much trouble between Veragua and Porto Bello, for which reason, that Coast was called Costa de Contrasses, that is, Coast of Thwartings.

Upon Thursday, being the Feast of the Epiphany, we cast Anchor near a River, which the Indians call Yebra, and the Admiral nam'd Belem, or Bethlem, because we came to that Place upon the Feast of the three Kings. He caus'd the Mouth of that River, and of another Westward, to be Sounded; the latter the Indians call Veragua, where he found but shoal Water, and in that of Belem, 4 Fathom at high Water. The Boats went up this River to the Town, where, they were inform'd the Gold Mines of Veragua were. At first the Indians were fo far from converling, that they affembled with their Weapons, to hinder the Christians landing. The next day, our Boats going to the River of Veragua, the Indians there did as the others had done, and that not only ashore, but stood upon their Guard with their Canooes in the Water. But an Indian of that Coast, who understood them a little, going ashore with the Christians, and telling them, we were good People, and desir'd nothing but what we paid for, they were somewhat pacified, and truck'd 20 Gold Plates, some hollow pieces like Joints of Reeds, and some Grains never melted; Indian Powhich to make their value the more tuy. they said were gathered a great way off upon uncouth Mountains, and that when they gather'd it, they did not Eat, nor carry Women along with them, which fame thing the People of Hispaniola said,

when it was first discovered.

#### CHAP. XCV.

How the Admiral went into the River of Belem, and resolv'd to Build a Town there, and leave his Brother the Lieutenant in it.

N Monday the 9th of January, the Trade with cains, went up the River, and the Indians the Indians came presently to truck for such Things as they had, particularly Fish, which at certain times of the year comes out of the Sea up these Rivers in such quantities as feems incredible to fuch as do not fee it; and they exchang'd fome little Gold for Pins, and those things they most valued they gave for Beads or Hawks-Bells. Next day the other two Ships came in, which they had not done at first, because there being but little Water at the Mouth of the River, they were forced to stay for the Flood; tho' there the Sea never rifes or falls above half a Fathom.

> Veragua being fam'd for Mines and extraordinary Wealth, the third day after our arrival, the Admirals Brother went up the River with the Boats to the Town of Quibio, so the Indians call their King, who hearing of the Lieutenants coming, came down the River in his Canooes to to meet him. They met in very friendly manner, giving one another interchangeably fuch things as they valu'd most, and having discours'd a long time together, every one went away peaceably. Next day the said Quib.o came aboard to visit the Admiral, and having discour'd together about an Hour, the Admiral gave him some things, and his Men truck'd Bells for fome Gold, and fo he return'd without any Ceremony the same way he came.

I loud.

We being thus very easie and secure, rous judden on Wednesday the 24th of January, the River of Belem suddenly swell'd so high, that before we could provide against it. or carry a Cable ashore, the fury of the Water came so impetuously against the Admirals Ship, that it broke one of its two Anchors, and drove her with such force against the Ship Gallega, which lay a-stern of it, that it brought the Foremast by the Board, and were both carried away foul of one another in utmost danger of perishing. Some judg'd the mighty Rains to have been the Cause of this mighty flood, they having never ceafed all the Winter in that Country; but had that been it, the River would have swell'd by degrees, and not all on a sudden, which made it be believed fome great Shower had fallen on the Mountains of Veragua, which the Admiral called St. Chr. stophers, because the highest of them was above the Region of the Air, where

Meteors are bred, for no Cloud was ever feen above, but all below it. To look to it is like an Hermitage, and lies at least 20 Leagues up the Country, in the midst of woody Mountains, whence we believed that Flood came which was so dangerous, that tho' it brought Water enough to carry the Ships out to Sea, the Wind was then so boisterous, that they must have been shatter'd to pieces at the Mouth of the River, distant half a Mile from whence they broke loofe. This Tempest lasted so long, that we had time enough to refit and Caulk the Ships. The Waves broke so furiously upon the Mouth of the River, that the Boats could not go out to Discover along the Coast, to learn where the Mines lay, and choose a Place to build a Town; the Admiral having resolved to leave his Brother there with most of the Men, that they might fettle and fubdue that Country, whilst he went to Spain to fend Supplies of Men and Provisions. Upon this Prospect, the Weather growing Calmer, on Monday the 6th of February, he sent his Brother with 68 Men by Sea to the Mouth of Veragua River, a League distant from Belem Westward, and he went a League and half up the River, to the Caciques Town, where he staid a day enquiring out the way to the Mines.

On Wednesday they travell'd four Leagues and a half, and came to lie near a River, which they pass'd 44 times, and the next day advanced a League and half towards the Mines, show'd them by Indians fent by Quibio to guide them. In two hours time after they came thither, every Man gather'd some Gold about the Roots of the Trees, which were there very thick, and of a prodigious heighth. This Sample was much valued, because none of those that went had any Tools to dig, or had ever gather'd any. Therefore the Delign of their Journey being only to get Information of the Mines, they return'd very well pleas'd that same day to Veragua, and the next to the Ships. True it is, that, as was afterwards known, these Mines, were not those of Veragua, Goldm which lay much nearer, but of Vrira, a of Urn Town whose People are Enemies to those of Veragua, to do whom a displeasure, Quibio ordered the Christians to be con-

ducted thither, and that they might go .

away to those and leaverlys.

#### CHAP. XCVI.

How the Admirals Brother went to see some Towns of that Province; with an Account of the Country, and Customs of those People.

N Thursday the 14th of Febr. 1503. the Admirals Brother went into the Country with 40 Men, a Boat folcame to the River of Urira, 7 Leagues from Belem Westward. The Cacique came out a League from his Town to meet him, with 20 Men, and presented him with fuch Things as they feed on, and fome Gold Plates were Exchang'd here. Whilst they were here, the Cacique, and Chief Men, never ceased putting a dry Herb into their Mouths and Chewing it, and sometimes they took a fort of Powder they carried with that Herb, which looks very odd. Having rested here a while, the Christians and Indians went together to the Town, where abundance of People came out to them, and assign'd them a great House to lie in, giving them much to Eat. Soon after came the Cauque of Dusuri, which is a Neighbouring Town, with a great many Indians, who brought some Gold Plates to truck; all these Indians said, there were Caciques up the Country, who had plenty of Gold, and abundance of Men arm'd like ours. Next day, the Lieutenant ordered the rest of his Men to return by Land to the Ships, and he with 30, he kept with him, held on his Journey obraba, towards Zobraba, where the Fields for above 6 Leagues were all full of Maiz, like Corn-Fields. Thence he went to Cateba, another Town; at both Places he was well entertained, abundance of Provisions given him, and some Gold Plates truck'd, which, as has been faid, are like the Paten of a Chalice, some bigger and some less, weighing 12 Ducats more or less; they wear them about their Necks, hanging by a String, as we do Relicks. The Lieutenant being now very far from the Ships, without finding any Port along that Coast, or any River bigger than that of Belem to fettle his Colony, he came back the same way on the 24th of February, bringing above ..... Ducats in Gold he had Exchanged for. As foon as he return'd, presently order was taken . for his stay, and 80 Men being appointed to remain with him, they agreed by ten and ten, or more or less in a Gang, and began to build Houses upon the Bank finlany of the aforesaid River of Belem, about a Cannon shot from the Mouth of it, Vol II.

within a Trench that lies on the right hand, coming up the River, at the Mouth of which there is a little Hill. Besides these Houses, which were all of Timber, and covered with Palm-Tree Leaves, which grew along the Shore, another large House was built, to serve as a Store-House and Magazine, into which several pieces of Cannon, Powder, and Provifions were put, and other Necessaries for the Support of the Planters. But for Wine, Bisket, Oil, Vinegar, Cheese, and much Grain, which was all they had to Eat; these things were left in the safest place, aboard the Ship call'd Gallega, that was to be left with the Lieutenant, that he might make use of it either at Sea, or ashore, having all its Cordage, Nets, Hooks, and other Fishing Tackle; for as we have faid, there is vast plenty of Fish in that Country in every River, several forts at certain times running along the Coast in Shoals, on which the People of the Country feed more than upon Flesh; for tho' there be some forts of Beasts they are not enough to maintain them. Customs of these Indians are for the most part much like those of Hispaniola, and the Neighbouring Islands; but these People of Veragua, and the Country about it, when they talk to one another, and Eat, turn their Backs, and are always Chewing an Herb, which we look upon to be the occasion that their Teeth are decay'd and rotten. Their Food is Fish, which Indians they take with Nets, and Hooks made of manner Tortoise-shell, which they cut with a Fishing. Thread, as if they were Sawing; the fame they afe in the Islands. They have another way of catching some very small Fishes, which in Hispaniola they call Titi. These at certain times being drove to the Shore by the Rains, are so persecuted by the bigger Fish, that they are forced up to the Surface of the Water, where the Indians take as many as they will of them in little Mats, or small Nets, and wrap them up in Leaves of Trees, as Apothecaries do their Drugs; and having dried them in an Oven, they keep a long time. They also catch Pilchards almost in the same manner; for at certain times these Fishes fly from the great ones fo violently, and in fuch fear, that they leap out two or three Paces upon the dry Land, so that there is no more

'itela.

Indian

Wines.

to do, but to take them as they do the Committee others. These Pilchards are taken after another manner; for in the middle of their Canooes, from Stem to Stern, they raile a partition of Palm-Tree Leaves two yards high, and plying about the River they make a noise, and beat the Shore with their Oars, and then the Pilchards, to fly from the other Fish, leap into the Canoo, and hitting against those Leaves fall in, by which means they take as many as they please. Several forts of Fish pass along the Coast in Shoals, whereof wonderful quantities are taken, which they keep roasted a long time. They have alfo abundance of Maz, which is a fort of Grain growing in an Ear, or hard Head like Miller, whereof they make white and red Wine, as Beer is made in England, and mix of their Spice with it, as pleases their Pallat; it has a pleasant taste like a sharp brisk Wine: They also make another fort of Wine of certain Trees like Palms; and I believe they are of that kind, but that they are smooth, and have fuch Prickles on the Trunk as the Thorn. From the Pith of this Palm, which is like

Palmitoes squeez'd, they draw a Juice, whereof they make Wine, Boiling with it Water and Spice; and this they make great account of. , They make another Wine of the Fruit we faid is found in the Island Guadalupe, which is like a great Pine-Apple: It is planted in great Fields, and the Plant is a Sprout growing out at the top of the Fruit it self, like that which grows out of a Cabbage or Lattice. One Plant lasts 3 or 4 years, and bears. They make Wine of other forts of Fruit, particularly of one that grows upon very high Trees, and is as big as a large Limon, and every one has two, three, and fome nine Stones like Nuts, but they are not round, but long, or like a Chefnut. The Rind of this Fruit is like a Pomgranate, and when first taken from the Tree it resembles it exactly, save only that it wants the prickly Circle at the top. The Taste of it is like a Peach: of these some are better, some worse, as is usual among other Fruit. There are of them in the Islands, and the Indians call them Mamei.

CHAP. XCVII.

How for the greater Security of the Christian Colony, Quibio, and several of the principal Men were made Prisoners, and how through the Carelessness of his Keepers, he made his Escape.

71 c Mouth up with Sand.

A LI things were now fettled for the Christian Colony, and 10 or 12 Houses Built and Thatch'd, and the Adverchoal'd miral ready to Sail for Spain, when he fell into greater Danger for want of Water, than he had been before by the Inundation. For the great Rains of January being over, the Mouth of the River was fo choak'd up with Sand, that whereas when they came in, there was about ten Foot Water, which was scant enough, when we would have gone out there were not two foot, so that we were shut up without any help, it being impossible to get the Ships over the Sand, and though there had been such an Engine, the Sea was so boisterous, that the least Wave which beats upon the Shore was enough to beat the Ships in pieces, especially ours, which were at this time like a Honey Comb, being all Worm-eaten through and through. We had nothing left but to have recourse to God, and beg Rain of him, as before we pray'd for fair Weather; for the Rain we knew would swell the River, and clear the Sand from the Mouth of it, as is usual in those Rivers. It being in the mean while

discovered by means of the Interpreter, that Quibio, the Cauque of Veragua intended to fet Fire to the Houses and Destroy the Christians, because all the Indians were against their Planting upon that River. It was therefore thought fit, as a Punishment to him, and a Terror and Example to others, to make him a Prisoner with all his chief Men, and fend them into Spain, and that his Town should remain at the disposal of the Christians.

To this purpose, the Lieutenant, on the 30th of March, went with 76 Men to the Town or Village of Veragua; and because I call it a Town or Village, it is to be observ'd that in those Parts their Houses are not close together, but they live as in Biscay at some distance from one another. When Quibio understood that the Lieutenant was come near, he fent him word not to come up to his House, which stood upon a Hill above the River of Veragua; and the Lieutenant, that he might not fly for fear of him, refolv'd to go with only 5 Men, ordering those he left behind to come after him, two and two, at some distance

n from one another, and when they heard , us a Musquet fired, they should beset the ~ House, that none might escape. Being come up to the House, Quibio sent another Messenger, bidding him not go in, for he would come out to talk to him, tho' he was wounded with an Arrow, which they do that their Women may not be feen, being wonderful jealous of Accordingly he came and fat at the Door, bidding only the Lieutenant come near him, who did so, ordering the rest to fall on, as soon as he laid hold of his Arm. He ask'd the Cacique some Caci- Questions concerning his Indisposition, spre, and the Affairs of the Country by the
Affiftance of an Indian he had, whom
we had taken not far off above Three Months since, and he willingly went a-long with us. This Man was then much afraid, for knowing that Quibio delign'd to destroy all the Christians, and not knowing our Strength, he thought that might eafily be done by the great multitude of People there was in that Province. But the Lieutenant minded not his fear, and pretending to look where the Cacique was wounded, he took him by the Arm, and tho' they were both very strong, yet the Lieutenant took such good hold, that he lost it not till the other four came up, which done, one of them fir'd a Musquet, and on a sudden all the Christians running out of their Ambush, beset the House, in which there were 30 People great and small, most of which were taken and never a one wounded, for they seeing their King taken, would make no Relistance. Among these there were some Wives and Children of Quibio, and other Men of Note, who offered great Wealth, saying, There was a great Treasure in the adjoyning Wood, and they would give it all for But the Lieutenant not their Ransom. regarding their Promises, ordered Quibio, with his Wives and Children, and the principal Men, to be carried aboard, before the Country took the alarm, staying himself there with most of the Men, to go after his Kindred and Subjects who were fled. Then having consulted with the Captains and Chief Men, whom they

should intrust to Conduct the Prisoners to the Mouth of the River; he at last delivered them to John Sanchez de Cadiz, a Pilot, and a Man in good Reputation, he offering to carry them, the Cacique being bound Hands and Feet; and this Pilot being charg'd to take special Care that the Cacique should not escape, he anfwered, He would give them leave to pull of his Beard if he got from him. So he took him into his Custody, and went down the River of Veragua. Being come within half a League of the Mouth of it, and Quibiocomplaining that his hands were too hard bound, John Sanchez out of Compassion, loosed him from the Seat of the Boat, to which he was tied, and held the Rope in his Hand. A little after, Quibio observing he did not mind him, threw himself into the Water; and John Sanchez not being able to hold fast the Rope, let go that he might not draw him after into the Water. Night coming on, and those in the Boat being all in a Confusion, they could not see or hear where he got ashore, so that they heard no more of him than if a Stone had fallen into the Water: That the like might not happen with the rest of the Prisoners, they held on their way to the Ships with much shame for their Carelessness and Overfight. The next day, the Lieutenant, perceiving the Country was very mountainous and woody, and that there were no regular Towns, but one House here and another at a great distance, and that it would be very difficult to pursue the Indians from place to place, he resolved to return to the Ships with his Men, not one of them being either killed or wounded. He presented the Admiral with the Plunder of Quibio's House, worth about 300 Ducats, in Gold Plates, little Eagles, and small Quills which they string and wear about their Arms and Leggs, and in gold Twists which they put about their Head in the Nature of a Coronet. All which Things, deducting only the 5th part for their Catholick Majesties, he divided among those that went upon whe Expedition: And to the Lieutenant, in token of Victory, was given one of those Crowns or Coronets above-mentioned.

#### C H A P. XCVIII.

How after the Admiral was gone from Belem to return to Spain, Quibio affaulted the Christian Colony, in which Engagement there were many kill d and wounded

of it; wherefore the Admiral refolv'd to Columbus depart with all speed for Hispaniela, to The Admiving waited for a Calm that the Sea might not beat upon the Mouth of the River, we went out with 3 Ships, the Boats going a-head and Towing us. Yet never a one went out so cleverly, but his Keel raced upon the Sand, and had been in danger notwithstanding the Calm but that those are loose moving Sands. Then we presently took in all we had unladed to lighten the Ships that they might get As we lay waiting for a fair Wind upon the open Coast, a League from the Mouth of the River, it pleas'd God miraculously to give us an occasion of fending the Admirals Boat ashore, as well for Water, as for other necessary Affairs, that by the lofs of thefe, both those ashore, and those in the Ships might be sav'd, which hapned thus. When Quibio, and the Indians, saw that the Ships were without, and could not relieve them that were left behind, they affaulted the Christian Colony at the same time that the Boat came to the shore. They having not been discover'd by reason of the thickness of the Wood; when they came within ten nen Colony Paces of our Mens Houses, fell on with great Shouts, casting Javelins at those they spied, and at the very Houses, which being covered with Palm-Tree Leaves, were easily struck through and through, and so sometimes they wounded those within. Having thus surpriz'd our Men thinking of no fuch thing, they wounded 4 or 5 before they could put themselves into a posture of Defence. But the Lieutenant being a Man of great Resolution, he went out against the Enemy with a Spear, encouraging his Men, and falling furiously on the Indians, with 7 or 8 that tollowed him, so that he made them retire to the Wood, which as we faid was close to the Houses. Thence they return'd and skirmish'd, casting their Javelins, and then retiring, as the Spaniards use to do wie the Sport they call Juego de Cannas, many of them flying from the Christians after they had felt the edge of their Swords, and the Teeth of a Dog, who furioully fell in among them; so that at length they fled, having kill'd one Christian, and wounded 7, one of which was the Lieutenant, who was hurt with a Javelin in the Breaft; from which danger two Christians took care to preserve themselves, which Story I will relate to show the Comicalness of the one, who was an Italian of Lombardy, and the Grawith the steer who was a Spaniard. The Lombard running hastily to hide himself in a House, James Mendez, of whom mention will be made hereafter, faid to him, Turn, Turn back Sebaftian, Whither are you going? He answered, Let me go, you Devil, for I am going to secure my Person. The Spaniard was Captain James Triffan, whom the Admiral fent afhore in the Boat, who never went out of it with his Men, tho' the fray was just by the River; and being blam'd by some for not assisting the Christians, he answer'd, He said he did it that those ashore might not run to the Boat and so all perish, because if the Boat were lost, the Admiral would be in danger at Sea. and therefore he would do no more than he had been commanded, which was to take in Water, and to see whether there was any need of his affiftance. Refolving therefore to take in the Water immediately, that he might carry the Admiral an Account of what had hapned, he went up the River for it, where the Sweet did not mix with the Salt, tho' fome advis'd him not to go for the danger there was of the Indians and their Canooes; to which he answered, he did not fear that danger, fince he was fent for that purpose by the Admiral. Accordingly he went up the River, which is very deep within, and shelter'd on both sides with abundance of Trees, which come to the edge of the Water, and so thick that there is scarce any going ashore, except in some Places which are the Fishermens Paths, and where they hide their Canooes. As foon Ind as the Indians perceived he was got about hell a League from the Colony up the River, Spi they rush'd out from the thickest on both in fides the River in their Canooes, and ma-Box king a hideous Noise, blowing their Horns, assaulted him boldly on all sides with great odds on their side, because their Canooes being swift, and one Man being enough to command and turn them which way they please, especially those that are little, and belong to the Fishermen,3 or 4 Men came in each of them, one of whom row'd, and the rest cast their Javelius at those in the Boat; I call them Javelins because of their bigness, tho' they have no Iron-Heads, but only Points of Fish Bones. There being but 7 or 8 Men in our Bost who row'd, and the Captain with 3 or 4 Men for Fight, they could not cover themselves against the many Javelins they threw at them, and therefore they were forced to quit the Oars to take up their Targets. But there was fuch a multitude of Indians, who pour" in on all fides, coming up and retiring in

good order, as they thought fit, that fpecially the Captain, who was hurt in many Places; and tho' he stood unmov'd incouraging his Men, it avail'd him nothing; for he was befet on all sides, and could not ftir, nor make use of his Musquets, till at last they struck a Javelin into his Eye, and he fell down Dead; and all the rest came to the like Fate, except one John de Noia of Sevil, who by good luck in the heighth of the Fray fell into the Water, and Diving got to the shore, and made his way through the thickest of the Wood to the Colony to carry the News of what had hapned. This so ter-News of what had hapned. rified our Men, that feeing they were but a few, some of their Companions being kill'd, and others wounded, and that the Admiral was at Sea without a Boat, and in danger not to return to a Place whence he might fend them relief, they resolved not to stay there; and accordingly would have gone away inmediately without any Orders, had not the Mouth of the River hindred, the bad Weather having shut it up again, for neither could the Ship they had left them get out, nor durst any

Boat attempt it, because the Sea beat so violently, fo that there was no fending the Admiral Advice of what had hapned. He was in no less danger himself, riding in an open Road, having no Boat, and but few Men, so many having been kill'd. So that we were all in the same Trouble and Confusion, as they were within, who confidering what had hapned, and feeing those that had been killed in the Boat drive down the River covered with Wounds, and followed by the Country Crows, look'd upon these things as ill Omens, and dreaded coming to the same end; and the more because they perceived the Indians were puff'd up with their Success, infomuch that they gave them not a Minutes respite by reason of the ill Situation of the Colony; and there is no doubt but they must have all suffer'd. had they not advis'd to remove to an open Strand Eastward, where they made a work round them with the Casks and other things, and planting the Cannon in convenient Places defended themselves, the Indians not daring to come out of the Wood, because of the mischief the Bullets did among them.

#### CHAP. XCIX.

Hop the Indians that were kept Prisoners aboard made their Escape, and the Admiral was inform'd of the Ill Success of his Men.

ians. will 1thers

Hilst these things hapned, the Admiral waited ten days with much Trouble, and fuspecting what might fall out, till the Sea would fettle, that he might fend another Boat to know what it was that detain'd the first; but Fortune thwarting him in all things, would not allow us to hear of one another; and to add to our Affliction, it happed that the Sons and Kindred or Quibio, whom we kept Prisoners aboard the Ship Bermuda, to carry them to Spain, found means to escape thus. At Night, they were kept under Hatches, and the Scuttle being fo high that they could not reach it, the Watch forgot to fasten it with a Chain as they used to do, especially because some Seamen lay upon it, The Priloners therefore one Night, gathering the Stones that were in the Hold under the Scuttle, and raising themselves on them, set their Shoulders against it, and forced it open, tumbling those that lay on it over and over, and fome of the principal Men, leaping out, cast themselves into the Sea. The Seamen taking the Alarm, many of them could not get out; and the Scuttle being fastned with the Chain, better care was Vol. II.

taken, but those that remain'd in Despair, because they could not get off with their Companions, hang'd themselves with the Ropes they could come at, and fo were found the next Morning, their Feet and Knees dragging upon the bottom of the Hold, the Place not being high enough for them to hang without touching, so that all the Prisoners aboard that Ship escap'd or died. Tho' this loss was not material to the Ships, yet belides that it increas'd the number of Mistortunes, it was fear'd it might be hurtful to those ashore; because Quibio would willing W have made Peace with them to gar I is Ghildren, and now there being no Holtage left, there was cause to suspect he would make War with the greater fury. Being thus afflicted amidst so many Troubles and Disasters, having nothing to trust to but our Anchors and Cables, without knowing any thing from shore, there wanted not those, who said, that since those Indians only to obtain their liberty, had ventur'd to leap into the Sea above a League from shore, they to save themfelves, and so many more, would be content to Swim ashore, provided that Boat which 8 K

which remain'd would carry them as far Columbus as where the Waves did not break. I say one Boat remain'd which was that of the Ship Bermuda, for that of the Biscaina we faid before was lost in the fray, so that they had only that one Boat at present among the 3 Ships. The Admiral hearing these Seamens honest proposal, allow'd of it, and so the Boat carried them within a Musket shot of Land, not being able to go nearer without great danger, because of the great Waves that broke on it. There one Free de Ledesma, a Pilot of ard Swims Sevil, threw himfelf into the Water, and with a good Heart got to shore, where he learnt the Condition our Men were in, and how they all unanimously faid, they would not upon any account remain there in that for lorn Condition and therefore defired the Admiral not to Sail till he had

taken them off, for to leave them there was Sacrificing of them, and the more because there were already Divisions among them, and they Obey'd neither the Admirals Brother, northe Captains, and all their Care was upon the first fair Weather, to secure a Canoo and go aboard. because this could not be conveniently done with only one Boat that was left. them; and if the Admiral would not receive them, they would endeavour to fave their Lives aboard that Ship which was left them, and rather trust Fortune than be at the Mercy of the Indians, who would inhumanly Butcher them. With this Answer, Peter de Ledesma, returned to the Boat which waited for him, and thence to the Ships, where he gave the Admiral an Account how Matters flood.

#### CHAP. C.

How the Admiral brought off the Men he had left at Belem, and fruck over to Jamaica.

He Admiral understanding the Rout, the Confusion, and Despair those afhore were in, he refolv'd to flay and bing them off, tho' not without great danger, because his Ships lay in an open Road, out of all shelter, and without hopes of escaping had the Weather grown more boisterous. But it pleased God in 8 days he continued there, the Weather mended fo much, that those ashore with their Boat, and large Canooes fast bound together. that they might not over-fet, began to gather their Goods, and every one striving to be none of the last, they used such diligence, that in two days nothing was abindon'd. left ashore but the Hulk of the Ship, which by reason of the Worms was unfit Thus rejoycing we were for Service. all together again, we failed up that Coast Eastward; for tho' all the Pilots were of Opinion that we might return to St. Demingo standing away to the North, yet only the Admiral and his Brother, knew it was requifite to run a confiderable way up that Coast, before they struck across that Gulph that is between the Continent and Hispaniola, which our Men were much displeased at, thinking the Admiral de-fign'd directly for Span, whereas he neither had Provisions, nor were his Ships fit for that Voyage. But he knowing best what was fit to be done, we held on our Course till we came to Perte Belle, where we were forced to leave the Ship Biscains it was so Leaky, being all Worm-eaten through and through. And holding along up the Craft, we pass'd by the Port we

call'd Retrete, and a Country near which there were abundance of fmall Islands. which the Admiral called las Barbas, but the Indians and Pilots, call that the Territory of the Cacique Pocorofa: Hence we held on 10 Leagues to the last Land we faw of the Continent, called Marmora, and on Monday the first of May 1503. we stood to the Northward, the Wind and Currents East, which made us lie as near the Wind as we could. And tho' all the Pilots faid, we should be East of the Caribbee Islands; yet the Admiral fear'd he fhould not make Hispamola, which prov'd fo; for upon Wednesday the 10th of the fame Month of May, we were in fight of two very small and low islands, full of Tortoifes, as was all the Sea about; infomuch that they look'd like little Rocks, for which reason those Islands were call'd Tortug Tortugas, or, Tortoises. Sailing on Northwards, on Friday following about Evening, 30 Leagues from those Islands, we came to those called Jardin de la Reina, or the Queen's Garden, which is a great number of Islands on the Southfide of Cuba. Being here at an Anchor, 10 Leagues from Cuba, with Men and Trouble enough, because they had nothing to Eat but Bisket, with some little Oil and Vinegar, labouring day and night at the Pump, because the Ships were so Worm-eaten they were ready to fink, a great Storm arose in the night, and the Ship Bermuda not being able to ride it out, ran foul of us, and broke our Stem, and its own Stern, and the' with much difficulty, because of

the roughness of the Sea and high Wind, .bus. it pleas'd God they got loofe from one another, and tho' we cast all our Anchors none would hold, but the Sheet-Anchor, whose Cable when day appeared, we found held but by a Thread, which if the night had lafted an hour longer, must have given way, and all that place being full of Rocks, we could not miss splitting upon fome of those that a-stern us. But it pleas'd God to deliver us here, as he had done from many other Dangers. And fo Sailing hence with much Toil, we came to an Indian Town on the Coast of Cuba, called Mataia, where having got some Refreshment, we sail'd for Jamaica, for the East Winds and great Currents setting Westward, would not permit us to stand for Hispaniola, especially the Ships being

fo Worm-eaten, that, as has been faid, we

never ceas'd day and night working at 3

Pumps in each of them, and if any one

broke, whilst it was mended, we were

forced to supply the want of it with Ket-

tles. For all this, the Night before Mid-

fummer-Eve, the Water was so high in our Ship, that there was no draining of it, for it came almost up to the Deck; and with much Labour we held out in that manner till day appearing we put into a Harbour in Jamaica called Puerto Bueno, or, Good Harbour; which tho' good to take shelter against a Storm, had no fresh Water, not any Town near it. Having made the best shift we could, on the day after the Feast of St. John, we fet out for another Harbour Eastward, called Sama Gloria, or Holy Glory, which is enclos'd with Rocks. Being got in and no longerable to keep the Ships a- The Almi bove Water, we run them ashore as far in ral runs as we could, stranding them close together is Shipe board and board, and shoaring them up on aground. both fides, fixt them fo that they could not budge, and in this posture the Water came up almost to the Deck, upon which, and the Poop and Forecastle, were Sheds made for the Men to lie in, to secure our felves, that the indian might not hurt us, because the Island was not then Inhabited or Subdued by Christians.

#### CHAP.

How the Admiral fent Canoo's from Jamaica to Hispaniola, to give Advice that he was cast assore there with his Men.

Being thus fortified in our Ships about a Bow-shot from Land, the Indians, who were a peaccable good natur'd People, came in their Canoo's to Sell Provisions, and such things as they had, for our Commodities. Therefore, that there might not be some disorder committed among the Christians, and that they might not take more in Exchange than was fitting, and the others might have their Due, the Admiral appointed two Persons to overfee the Buying of such Things as they brought, and to divide daily among the Men what was Exchanged, because there was nothing left aboard to sublist on, as well because most of the Provisions were fpent, as for that the rest was spoil'd and some lost when the Men came away from Belem, where the Haste and Confusion hindred things being brought off as they should. That we might be supplied with Sustenance, it pleased God to direct us to that Island, which abounds in Provisions, and is Inhabited by Indians who are willing enough to Trade, and therefore they reforted from all Parts to Barter such Commodities as they had. For this reason, and that the Christians might not disperse about the Island, the Admiral chose to fortific himself upon the Sea, and not settle a dwelling alhore, because we being naturally Difobedient, no Command or Punishment would have kept the Men from running about the Country and into the Houses of the Indians, to take from them what they found, and thus they would have anger'd their Wives and Children, which would have caus'd Quarrels and made them our Enemies, and the taking their Provisions by force, would have reduc'd us to great want and diffress This could not happen now, because the Men were aboard, and there was no going ashore without leave, which pleas'd the Indians, who fold 2 fluties, which are little Creatures like Rabbets, for a Bit of Tin, and Cakes of Bread, they call Zabr, for 2 or 3 red or yellow Glass-Beads, and when they brought a quantity of any thing, they had a Hawks Bell, and fornetimes we gave a Cacique, or Great Man, a little Looking glass, or red Cap, or a pair of Sizzers to please them. This good Order kept the Men plentifully supplied with Provisions, and the Indians were well pleased with our Company. But it being requifite to find some means to return to Spain, the Admiral sometimes consulted with the Captains and principal Men about the means of getting out of that Confinement, and at least returning to Hispaniela; for to stay there in hopes

fome Ship might arrive was a mere folly,

( aron's

10 Hilpa-

Columbus, and to think to build a Vessel was imposfible, having neither Tools nor Workmen fit to do any thing to the purpose, but what would take up a long time, and not produce fuch a Vellel as was fit to fail against the Winds and Currents that prevail among those Islands, and therefore it had been only time loft, and would rather have prov'd our Ruin than Relief. Therefore after many Confultations, the Admiral refolv'd to fend to Hispaniola to give an Account that he was cast ashore on that Island, and defired a Ship might be fent him with Provisions and Ammunition. To this purpose he made choice of two Persons that might perform it faithfully and couragiously: I say conragiously, because it seem'd impossible to go over from one Island to the other in Canooes, and there was no other way for These being Boats, as has been said above, made of one fingle Tree hollow'd, and so contrived that when they are loaded, they are not a Span above Water. Belides they must be indifferent large for that passage, because little ones would be more dangerous, and the biggest by reaion of their own weight were not fit for a long Voyage, or to perform what was delign'd. Two Canoo's fit for the purpose being chose, the Admiral in July 1 503. order'd James Mendez de Segura, his chief Secretary to go in one of them with fix Christians and 10 Indians to row, and in the other he fent Bartholomem Fresco, a Genocfe Gentleman, with the like number of Men; that as foon as James Mendez. got over to H. soaniela, he might continue his Journey to St. Domingo, which was 250 Leagues from the Place where we

were, and Fiesco might return to bring the News that the other was safe arriv'd, and we might not be left in fear least some Disaster had befallen him, which there was much cause to fear; considering, as has been faid, how unfit a Canoo is to live upon a rough Sea, especially when there were Christians in it; for if there were none but Indians the danger. had not been so great, because they are so dextrous, that tho' a Canoo oversets when they are half way over, they turn it up again, Swimming and get into it. But Honour and Necessity putting Men upon bolder Attempts than this, the Perfons above-mentioned took their way along the Coast of Jamaica to the Eastermost Point of it, which the Indians call Anamaquique from a Cacique of that Province fo called, 33 Leagues from Mama. where we were. There being 30 Leagues distance between the two Islands, and nothing in the way but one little Island or Rock 8 Leagues from H. spaniela, it was requisite to expect a Calm in order to crois over so great a Sea in such poor Vessels, which it pleas dGod they soon had. Every Indian having put aboard his Calabash of Water and Carrabi, or such Provifions as they use, and the Christians with Swords and Targets, and the necessary Sustenance, they put out to Sea; and the Admirals Brother, who went to that Point of Jamaica to fee that the Indians of the Island should no way hinder them. staid there till night coming on, he lost fight of them, and then return'd eafily towards the Ships, in his way perceiving the People of the Country to Converse and be Friendly with us.

#### CHAP. CII.

How the Brothers, called Porras, with many of the Men, Mut.nied against the Admiral, Saying, They would go to Spain.

Hen the Canoo's were gone for Ilispaniola, the Men left aboard the ships began to fall fick, as well by reason of the Hardships endur'd during the Voyage, as the change of Diet; for at present they had no Spanish Provisions, nor Wine, nor Flesh, except some of those Iluies we have spoke of, they hap-s ned to get in Exchange. So that those who were Sound, thinking it very hard to be so long confin'd, did not forbear to Mutter among themselves in private; faying, the Admiral would return into Spain no more, because their Catholick Majesties had turn'd him off, nor much

less to Hispaniola, where he had been refus d admittance at his coming from Spain, and that he had fent those in the Canoo's into Spain to follicite his own Affairs, and not to bring Ships or other Succours, and that he delign'd, whilst they were solliciting their Catholick Majesties to stay there to fulfill his Banishment, for otherwise Bartholomew Fiesco had been come back by this time, as was given out he was to do. Besides, they knew not, whether he and James Mendez were drown'd by the way; which, if it had hapned, they should never be reliev'd, if they did not take care for it themselves, fince the Admiral

Mutiny aguinti the Almir.il.

Admiral did not feem to look to it for lumbus the Reasons aforesaid, and because of the Gout, which had fo feiz'd all his Limbs, that he could scarce itir in his Bed, much less undergo the Fatigue and Danger of going over to Hispaniola in Canoo's. For which Reasons, they ought with a good Heart to fix their Refolution, fince they were well, before they fell fick, with the rest, that it would not be in the Admirals Power to hinder them; and being once in Hispamola, they would be so much the better receiv'd, by how much the danger they left him in was greater, because of the Hatred and Enmity born him by the Commendary Lares, then Governor of that Island; and that when they went into Spain they might go to the Bishop D. John de Fonseca, who would favour them, as would the Treasurer Morales, who kept for his Miltress the Sister of those Porras's, the Ringleaders of the Mutineers, and chief Fomenters of the Sedition, who did not doubt but they should be well receiv'd by their Catholick Majesties, before whom all the Fault would be laid upon the Adiniral, as had been in the Affairs of Ilifpamola with Roldan; and their Majesties would the rather Seize him and take all he had, than be oblig'd to perform all that was agreed upon between them and him. These and the like Arguments they us'd among themselves, and the Persualions and Suggestions of the aforesaid Brotheis, one of whom was Captain of the Ship Bermuda, and the other Controller to the Squadron, prevailed with 48 Men to join in this Conspiracy, taking Porrafor their Captain; and every one provided what he could against the day and hour appointed; and being all ready with their Arms, on the 2d of January in the morning, the aforesaid Captain Francis de l'on as came upon the Quarter-Deck of the Admirals Ship, and faid to him, My Lord, What is the meaning that you will not go into Spain, and will keep us all here perishing? The Admiral hearing these unusual insolent Words, and suspecting what the matter might be, very calmly answer'd, He did not see which way they could go, till those that were gone in the Canoo's fent a Ship. That no Man was more defirous to be gone than he, as well, for his own private Interest, as for the good of them all, for whom he was accountable; but that if he had any thing else to propose, he would again call together the Captains and principal Men to Confult, as had been done feveral times before. Porru; replied, It was no time to tak, but that he should Embark quickly, or fray there by himfelf, and fo turning

his Back, added in a loud Voice, I am going to Spain with those that will follow me, at which time all his Followers, who were present, began to cry out, We will go with you, We will go with you, and running about, possess themselves of the Forecastle, Poop, and Round Tops, all in Confusion; and Crying, Let them Die; others, For Spain, for Spain; and others, What shall we do Captain? Though the Admiral was then in Bed so Lame of the Gout that he could not stand; yet he could not forbear rifing and stumbling out at this Noise. But 2 or 3 worthy Persons, his Servants, laid hold of, and with labour laid him in his Bed, that the Mutineers might not Murder him. Then they ran to his Brother, who was couragiously come out with a Half-Pike in his Hand; and wresting it out of his Hands, put him in to his Brother, deliring Captain Porras to go about his Bulinels, and not do some Mischief they might all suffer for that he might be fatisfied they did not oppose his going; but if he should kill the Admiral, he could not expect but to be severely punish'd, without hopes of any Benefit. The Tumult being somewhat appeas'd, the Conspirators took ten Canoo's, that were by the Ships side, and which the Admiral had bought all about the Island, and went aboard them as joyfully as if they had been in some Port of Spain. Upon this, many more, who had no hand in the Plot, in Despair to see themselves as they thought for laken, taking what they could along with them, went aboard the Cinoo's with them, to the great Sorrow and Affliction of those few faithful Servants, who remain'd with the Admiral, and of all the Sick, who though themselves last for ever, and without hopes of ever getting off. certain, that had the People been well, not 20 Men had remain'd with the Admiral, who went out to Comfort his Men with the helt Words the posture of his Affairs would suggest; and the Mutineers, with their Captain, Francis de Porras, in their Canoo's, went away for the Mutine East-point of the Island, whence James go awa Mendez and Fresco went over for Hispani- the Co. ola; and wherefoever they came, they Island, infulted the Indians, taking away their Provisions, and what else they pleas'd by force; and telling them, they might go to the Admiral and he would Pay them, but in case he did not, they might kill him, which was the best thing they could do; because he was not only Hated by the Christians, but had been the Cause of all the Mischief had befallen the Indians of the other Island, and would be the same

## The first Discovery of

by them, if they did not prevent it by his Death, for that was his Delign in staying there. Thus travelling to the Easternmost Point of Jamaica, the first Calm they set out for H. spaniol.1, carrying some Indians in every Canoo to row. But the Weather not being well fetled, and their Canoo's over loaded, they refolv'd to return to Jemaica before they were 4 Leagues at Sea, the Wind turning against them, and they being able to make but little way. Besides, they not being skillful at managing the Canoo's, it hapned a little Water flash'd in over the sides; to remedy which, they lightned, throwing all they carried over-board; so that nothing remain'd but their Aims, and as much Provision as would ferve them back. The Wind fill fiefhing, and they thinking themselves in some danger, it was resolv'd to Murder the Indiani, and throw them into the Sea; this they accordingly executed upon some of them; and others, who for fear of Death, truffing in their skill in Swiming, leap'd over into the Water, and being very weary would hang by the Canoo's to Breath a little, had their Hands cut off, and were wounded in other Parts; fo that they Butcher'd 18, leaving only a few alive to Steer the Canoo's, because they knew not how to do it. And had not the need they had of them prevented it, they had compleated the greatest Act of Cruelty imaginable, leaving not one of them alive, after they had by Intreatics, and Deceitfully drawn them to their assistance in that dangerous Voyage. Being come to Shore, they differ'd in Opinions; for fome faid it was hetter to go to Cuba, and that from that Place where they were, they might take the East-Winds and Currents upon their Quarter, and so run over without any trouble in a short time, and fo cross over from thence to Hispaniola, not knowing they were 17 Leagues afunder: Others faid it was better to return to the Ships, and make their Peace with the Admiral, or take from him by force what Commodities and Arms he had left; others were for staying till another Calm, to attempt the same Passage again. This being thought the best Advice, they staid in that Town of Acamaquique above a Month, waiting for fair Weather, and destroving the Country. When the fair Weather came, they imbark'd again twice, but made nothing of.it, the Wind being contrary. Being thus disappointed of that Passage, they set out towards the West from one Town to another, with an Ill-Will, without Canoo's or any Comfort, fometimes Eating what they found, and taking it where they could by force, according to their Strength, and that of the Caciques, through whose Territories they pass'd.

#### CHAP. CIII.

What the Admiral did, after the Mutincers were gone from him, and the Advantage he made of an Eclipse.

TO return to what the Admiral did, after the Rebels were gone, he took great Care that the Sick should be furnithed with such things as were proper for their Recovery, and that the Indiani should be so civilly treated that they might not torbear bringing Provisions to Exchange for our Commodities; which things were fo well manag'd, and with fuch Application by him, that the Christians soon recover'd, and the Indians continued fome days providing all things plentifully. But they being a People that take little Pains in Sowing; and we Eating more in one day than they did in 20; besides having no longer any Inclination to our Commodities, and making little account of them, they began in some measure to take the Advice of the Mutineers, fince they faw is fo great a part of our Men against us, and therefore brought not fuch Plenty of Prowillions as we stood in need of. This brought us to great Distress; for if we would have taken it by force, the greatest

part of us must have gone ashore in warlike manner, and have left the Admiral aboard in great danger, he being very ill of the Gout; and if we expected they should bring it of their own accord, we must live in Misery, and give ten times as much for it as we did at first, they knowing how to make their Bargains, as being fenfible of the Advantage they had over But God, who never forsakes those that have recourse to him, as the Admiral had, put him in the way how he should be furnish'd with all he wanted, which He bethought himself, that was thus. within 3 days there would be an Eclipse of the Moon in the first part of the night; and then sends an Indian of Hispamola, who was with us, to call the principal Indians of that Province, faying, He would talk with them about a matter of Concern. Being come that day before the Eclipse was, he ordered the Interpreter to tell them, That we were Chistian, and Believ'd In God, who dwelt

in Heaven, and took Care of the Good, fumlus, and Punish'd the Wicked: That he seeming the Rebellion of the Spaniards had not permitted them to go over to Hilpaniola, as James Mendez and Fiesco had done, but had made them run through all those Sufferings and Dangers all the Island had heard of: That as for the Indians, feeing how negligent they were in bringing Provitions for our Commodities, he was angry with them, and had Decreed to punish them with Plague and Famine; which because perhaps they would not believe; God had appointed to give them a manifest token of it in the Heaven that they might plainly know the Punishment was to come from him. Therefore, he bid them that night, observe when the Moon appear'd, and they should see her Rise Angry and of a bloody Hue, to denote the mischiefGod intended should fall on them.

Having faid this to them, the Indians went

away, fome afraid, and others looking

upon it as an idle Story: But the Eclipse

beginning as the Moon was Rifing, and

increasing, the higher she was, the Indians

took notice of it, and were so frighted,

that they came running from all Parts

loaded with Provisions, crying and la-

menting, and pray'd the Admiral by all

means to intercede with God for them,

that he might not make them feel the Ef-

fects of his Wrath, and promising for the future carefully to bring him all he wanted. The Admiral faid he would speak with God, and thut himself up whilst the Eclipse lasted, they still crying out to him to assist them; and when the Admiral faw, the Eclipse began to go off, and the Moon would foon shine, he came out of his Cabin, faying, He had pray'd to his God for them, and promis'd him in their names they would be good for the future, and use the Christians well, bringing them Provisions and other Necessaries; and that therefore God forgave them, and as a token of it they should see the Angryness and Bloody colour of the Moon would go off. This proving fo, just as he spoke it, they gave the Admiral many thanks, and prais'd his God, continuing fo till the Eclipse was quite pass'd. From that time forwards they always took Care to provide all that was necessary, ever praising the God of the Christians, for they believ'd the Eclipses they had seen at other times, had denoted Mischiess to befal them; and being ignorant of the canse of them. and that they hapned at certain times, not believing it possible to know on Earth, what was to happen in the Heavens, they certainly concluded the God of the Chrifrans had reveal'd it to the Admiral.

#### CHAP. CIV.

Of another Mixing among those that remained with the Admiral, which was included by the coming of a Vessel from Hispaniola.

Fight Months being pass'd after James Mendez and Bartholomew Fiesco went away, and there being no News of them, the Admirals Men were very much cast down, suspecting the worst; some saying they were loft at Sea; others, that they were kill'd by the Indians in H. Spamola; and others, that they had Died with Sickness and Hardships; for from the Point of that Island, which lay next Jamaica, there was above 100 Leagues to S. Domingo, whither they were to go for Relief, the way by Land being over uncouth Mountains, and by Sea against the prevailing Winds and Currents. To confirm their Suspicion, some Indians affur'd them they had feen a Canoo over-fet and carried on the Coast of Jamaica by the Current, which its likely had been spread abroad by the Mutineers to make those that were with the Admiral Despair of getting off. They therefore concluding for certain that no Relief would come to them; one Bernard, an Apothecary of Valencia, with two Companions, whose

Names were Zamora and Villatoro, and most of those that had remain'd fick, secretly conspir'd together to do the same the others had done before. But Almighty God, who knew how dangerous this fecond Sedition must be to the Admiral, was pleas'd to put a stop to it by the coming of a Vessel sent by the Governor of Hilpaniola. It came to an Anchor one Evening near the Ships that were aground; and the Captain of it, whose Name was James de Escobar, came in his Boat to visit the Admiral, saying, The Commendary and Governor of Hispaniola fent him his Commendations; and not being able so soon to send a Ship sit to carry off all those Men, had sent him in his Name to Visit him, and presenting him a Cask of Wine and two Flitches of Bacon, retarn'd to his Caraval, and without taking any Letter, fail'd away that very Evening. The Men, somewhat comforted with his coming, took no notice of what they had conspir'd to (o; tho' at the same time they much worked that

the Caraval had stole away so privately, and in such haste; and they suspected, that perhaps the Governor of Hispaniola would not have the Admiral go thither. He being aware of it, told them he had so ordered it, because he would not go away without carrying them all off, which that Caraval was not big enough to perform; he being willing to prevent any Disorders his stay might occasion, from the Mutineers. But the Governor of Hispaniola was afraid that if the Admiral neturn'd to Spain, their Catholick Majesties would restore him to his Government, and so he should be forced to quit it; for which reason he would not provide as he might have done for the Admiral's Voyage to Hispaniola; and therefore had fent that little Caraval to for and observe the Condition the Admiral was in; and to know whether he could contrive with fafety to have him destroyed, which he knew, by what had hapned to James Mendez, who fent an Account of his Voyage in Writing, by the Caraval, which was as follows.

#### CHAP. CV.

An Account of what hapned to James Mendez, and Fiesco in their Voyage.

Ames Mendez, and Fresco, setting out from Janaica, that day they found the Weather setled Calm, and so held on till night, encouraging and perfuading the Indians to row with those Paddles they use instead of Oars; and the Weather being violently hot, they would some-times leap into the Water and Swim, and then come fresh again to Row. holding on their way, at Sun-fet they loft fight of Land, and half the Christians and Indians taking their Watch together at night to Row, and take care the Indians should not prove treacherous, they advanced all that night without staying, so that when day appear'd they were all weary enough. But the Commanders encouraging their Men, and sometimes Rowing to give a good Example; after Eating to recover their Strength, and the Fatigue of the Night, they fell to their Labour again, seeing nothing but Sky and Water. And tho' this was enough to afflict them sufficiently, yet we may say of Great Di- them that they were in Tantalus his Conibef for dition; who having the Water within a Span of his Mouth, could not quench his Thirst; so they were in Distress; for through the Ill-Management of the Indians, and the great Heat of the foregoing day and night, all the Water was drank up, without any regard to the future: And all Heat and Labour being intolerable without Drink, the higher the Sun ascended the second day after they set out, the more the Heat and Thirst increas'd, fo that by noon they had no Strength left. And as upon such occasions, the Head is bound to supply the Defect of the Hands and feet; so by good fortune, the Cap-tains found two Caeks of Water, where-with now and then relieving the Indians, they keps them up till the Cool of the Exening, encouraging them, and affirming they stald be then near a small island called Nabazza, which lay in their way 8 Leagues distant from Hispaniola. with their extraordinary Thirst, and the Labour of Rowing two days and a night, quite cast them down, believing they had lost their way; for according to their reckoning they had run 20 Leagues, and ought now to be in fight of the Island. But it was weariness that deceiv'd them, as well because a Canoo that Rows well cannot in a day and night Row above 10 Leagues, as by reason the Currents are against them that go from Jamasca to Hispaniola, which they always judge to be more that suffer most by it. Night being come, having thrown one into the Sea who died with Thirst, and others lying ftretch'd out on the bottom of theCanoo, they were so afflicted in Mind, and so weak and spent that they hardly made any way. Yet, taking sometimes Sea Water to refresh their Mouths, which we may say was the Comfort given our Saviour, when he faid, I thirst; they gently held on their way till the second night came on without fight of Land: But they being of those God intended to save, it pleased him, that in that time of need, when the Moon began to rife, James Mendez perceiv'd she got up over Land, for a little Island cover'd her in the Nature of an Eclipse. Nor could they have seen it otherwise, because it was small, and at that time of night. Comforting them chearfully, and showing them the Land, he so encouraged them supplying them in their great Thirst with a little Water out of the Barrels, that the next morning they found themselves near the small Island, we faid was 8 Leagues from Hispaniola, and called Nabazza. They found it to Naba be all round a hard Rock, and about half 18 m.t a League in circumferente. Landing there the best they could, they all gave God Thanks for that Mercy; and there being

theft.

bus taking up Rain-Water with their Calabashes, which lay in holes among the Rocks; which it pleas'd God to give them fuch plenty of, that they fill'd their Bellies and Vessels; and tho' the wifer fort advis'd the others to use Moderation in Drinking, yet Thirst made some of the Indians exceed all Measure, whereof some died there, and others got desperate Distempers. Having rested that day till Evening, diverting themselves, and Eating fuch things as they found along the Shore, for James Mendez had all Utenfils to strike Fire, rejoycing to be in fight of Hispaniola, and fearing some bad Weather might start up, they made ready to put an end to their Voyage, and

accordingly about Sun-fetting in the cool

of the Evening, they fet out towards

Cape St. Michael, the nearest Land of

Hilpamola, where they arriv'd the next

morning, being the fourth day after

they fet out. When they had rested here

two days, Bartholonien Fiefeo, who was a

Gentleman that stood upon his Honour,

would have return'd as the Admiral had

commanded him, but the Men who were

Sailors, and Indians, being spent and in-

no Spring nor Tree, they went about

dispos'd with their past Labour, and Drinking Sea-Water, and thought they had been delivered out of the Whales-Belly, their 3 days and nights answering to those Jonas lay there, he could not get a Man to go with him. James Mendez, as being most in haste, was gone up the Coast of Hispaniola in his Canoo, notwithstanding he suffer'd under a Quartan Ague caus'd by his great Sufferings at Sea and at Land, in that Condition, travelling over Mountains and bad Roads, he came to Xaragua, which is a Province in the West of Hispaniola, where the Governor then was, who feem'd to rejoyce at his coming, tho' afterwards he was tedious in dispatching him, for the Causes abovemention'd, till after much importunity, it was obtain'd of him, that he should give James Mendez leave to go to St Dominco, there to buy and fit out a Vellel with the Admiral's Money: which Ship being by hun got ready, was fent to 70 maica at the latter end of May 1504, and failed for Spain, according to the Admirals Direction, to give their Catholick Majesties an Account of the Success of his Voyage.

#### CHAP. CVI.

How the Mutineers fet themselves against the Admiral, and would hear of no Agreement.

YOw to return to the Admiral, who with all his Company had now receiv'd some Comfort and certain hopes of being delivered, by the Account of . James Mendez his arrival, and the coming of the Caraval; he therefore thought fit to make it known to the Mutineers, ' that their Jealousie ceasing, they might return to their Duty. He therefore fent two Men of Note, who had Friends among them, and knowing they would not believe, or at least not feem to believe the coming of the Caraval, he fent them part of the Bacon, the Captain of it had These two being come presented him. where Captain Porras was, with those he confided most in, he came out to meet them, that they might not move, or persuade the Men to repent them of the Crime they had committed, imagining, as the Truth was, That the Admiral fent them a General Pardon. Yet it was not in the power of the Brothers fo to curb their Men, but that they heard the News of the coming of the Caraval, the Health of those that were with the Admiral, and the Offers he made them. After feveral Consultations among themselves, Vobli.

and the principal Men, the Refult was, that they would not trust to the Pudon the Admiral fent them, but would ge peaceably away to H./pan.cla, if he would promife to give them a Ship to go in, provided two came; and if there came but one, he should assign them half of it: and in the mean while, become they had loft their Cloths, and Commodities they had to Trade upon the S.a, he should share what he had with them. To which the Messengers answering, That those were no reasonable Proposals, they interrupted them faying, That fince it was not granted them by fair means, they would have it by force. Thus they dif- The Rebels mis'd the Admirals Messengers, missinterpreting his Offers, and teiling their Followers, that he was a cruel revengeful Man; and tho' they feat'd nothing for themselves, because the Admiral durst not prefume to wrong them, because of the favour they had at Court, yet they had reason to fear he would be reveng'd on the rest, under colour of just Punishment; and that for this reason, Roldan and his Friends in H fp mote and not trufted him, nor his Offers, and it fuc-8 M (reeded

ceeded well with them, they finding fo columbus. much favour, that they had him fent into Spain in Irons. And that the coming of the Caraval with the News of James Mendez, might make no Impression on them, they intimated to them, that it was no true Caraval, but a Phantom made by Art Magick, the Admiral being very Skillful in that Art, alledging, It was not at all likely, that if it had really been a Caraval, the Men aboard it would

not have had some further Discourse with those about the Admiral, but would have vanish'd so soon. Nay, it was more probable, that had it been a Caraval, the Admiral himself would have gone aboard it, with his Son and Brother. With thele and other Words to this purpose, they again confirm'd them in their Rebellion & and then brought them to refolve to repair to the Ships to take what they found by force, and secure the Admiral.

#### CHAP. CVII.

How the Mutineers being come to the Ships, the Admiral's Brother went out to Fight them. overcame them, and took Portas their Captain.

THe Mutineers continuing obstinate in their wicked Resolution, came to a Town of the Indians within a quarter of a League of the Ships, then called Maima, where afterwards the Christians built the Town they called Sevil; which the Admiral understanding, and being inform'd of their Design, he resolved to send his Brother against them, to endeavour to reduce them by good Words; but so attended, that if they offer'd him any wrong, he might be able to oppose To this purpose, the Lieutenant drew out 50 Men, well arm'd, and ready for any Service. These being come to a small Hill, a Bow-shot from the Town where the Rebels were, sent those two before, who had gone on the first Mesfage, to require them to be peaceable, and that their Captain should come peaceably to a Conference. But they being nothing inferior in Strength or Number, and almost all Seamen, persuaded themselves, that those who came with the Lieutenant were weak Men, and would not Fight them; therefore they would not permit the Messengers to talk to them, but with their naked Swords, and the Spears, they had all in a Body, crying, Kill, Kill, fell upon the Lieutenants Party, fix of the Rebels, who were accounted the boldest, having taken an Oath, not to part, but go directly against the Lieutenant, for if he were kill'd, they made no account of the rest; wherein it pleas'd God they were disappointed; for they were fo well receiv'd, that 5 or 6 of them drop'd at the first Charge, most of them being of those that aim'd at the Lieutenant, who fell upon his Enemies in such manner, that in a very short time, John Sanchez de Cadiz, from whom Quibio made his escape, was kill'd, as was John, Barba; the first I saw draw his Sword when they ran into Rebellion, and fome others fell very much wounded, and Francis de Porras their Captain was Seeing themselves so roughly handled like base Rebellious People, they The Re turn'd their Backs and fled as fast as they , out a could. The Lieutenant would have purfued, had not some of the chief Men abont him been against it, saying, It was good to punish, but not so severely, least when he had killed many of them, the Indians should think fit to fall upon the Victors, fince he saw they were all in Arms, waiting the event of the fray, without taking either side. The Lieutenant approving of the Advice, return'd to the Ships, carrying along with him the Captain of the Rebels and some other Prisoners, where he was well received by the Admiral, his Brother, and those that had remain'd with him, all of them giving Thanks to God for that Victory, which they attributed to him, and wherein the Guilty had receiv'd their just Punishment, and their Pride been humbled, none being wounded on our fide but the Lieutenant in his Hand, and one of the Admiral's Gentlemen of the Chamber, who died of a fmall wound he receiv d with a Spear in his Hip. But to return A 100 to the Rebels, Peter de Ledesma, that Pi- fo lot we mention'd above, who went with or . Vincent Yanez to Honduras, and Swam 4. ashore at Belem, fell down certain Rocks, and lay hid that day and the next, Itill the Evening, no body affifting him, or knowing where he was, except the Indians, who with Amazement, not knowing how our Swords would cut, with little Sticks opened his Wounds, one of which was in his Head, and his Brains were feen through it, another on his Shoulder, fo large that his Arm hung, as it were loofe, and the Calf of one Leg almost cut off, so that it hung down to his Ankle, and one soot, as if it had a Slipper of it, being fliced

o from the Heel to the Toes. Notwith-Inhus. Standing all which desperate Hurts, when the Indians disturb'd him, he would say, Let me alone, for if I get up, &c. And they at these Words would fly in a great Consternation. This being known aboard the Ships, he was carried into a Thatch'd House hard by, where the Dampness and Gnats were enough to have kill'd him. Here instead of Turpentine, they dress'd his Wounds with Oil, and he had fo many, besides those already mention'd, that the Surgeon who dress'd him swore, That for the first 8 days, he still found out new ones, and yet at last he recover'd, the Gentleman of the Chamber dying, in whom he apprehended no danger. The next day, being the 20th of May, all those that had escap'd, sent a Petition to the Admiral, humbly begging he would be merciful to them, for they repeated them of what was past, and were ready

to submit themselves to him. The Admiral granted their Request, and pass'd The Rebel a general Pardon, upon Condition the Submit, Captain should continue a Prisoner, as he and are was, that he might not raise another Mutiny. And because they could not be so easie, and conveniently aboard the Ships, and there might arise some provoking Words among the common fort, which would cause disturbance, and rub up old Sores, which might be the cause of fresh Tumults, and because it would be a hard matter to Quarter, and maintain fo many Men conveniently, those few there were beginning to fuffer want, he refolv'd to fend them a Commander with Commodities to Exchange, that he might go with them about the Island, and contain them within the Bounds of Justice, till fuch time as the Ships came, which he daily expected.

#### C H A P. CVIII.

How the Admiral went over to Hispaniola, and thence into Spain, where at Valladolid .t pleased God to take him to himself.

"He Christians being all again return'd to their Duty, and the Indians for that same reason being more careful to supply them for their Commodities, some days pass'd which made up a year since we arrived at Jamaica. After which, there arrived a Ship, which James Mendez had bought and fitted out at St. Domingo with the Admirals Money, aboard which all the Men, as well Enemies as Friends, were Shipp'd, and fetting Sail on the 28th of June, we proceeded on our Voyage with much difficulty, the Winds and Currents, as we have faid before, being very contrary to go from Jamaica to St. Domingo, where we arriv'd in great need of rest on the 13th of August 1504. and the Governor made a great Reception for the Admiral, lodging him in his own House; tho' this was a treacherous kindness; for on the other fide, he set Porras who had headed the Mutineers at liberty, and attempted to punish those who had a hand in apprehending of him, and to try other Causes and Offences that belong'd only to their Catholick Majesties, who had appointed the Admiral Captain General of their Fleet, and yet he fawn'd upon the Admiral, using all Demonstrations of Kindness in his presence. This '- led till our Ship was refitted, and anher hir'd, on which the Admiral, his "indred, and Servants embark'd, most o. the rest retaining in Hispaniola. We

failed on the 2d of September, and being but two Leagues at Sea, the Mast of the Ship came by the board; for which reafon the Admiral caus'd it to return into the Harbour, and we in the other held on our Course for Spain. Having run ahout the 3d part of the way, there arose fuch a terrible Storm, that the Ship was in great danger. The next day, which was the 19th of Oliober, the Weather being fair, and we very still, the Mast flew into four pieces; but the Courage of the Lieutenant, and the Admiral's Ingenuity, tho' he could not rife out of his Bed for the Gout, found a Remedy for this Misfortune, making a Jury-Mast of a Yard, and strengthning the middle of it with Ropes, and some Planks they took In another from the Poop and Stern. Storm we spent our Foremast, and yet it pleased God we fail'd 700 Leagues in that Condition, and arriv'd at the Port of St. Lucar de Barrameda, and thence to Sevil, where the Admiral took some rest after the Fatigues he had gone through; and in May 1505. fet out for the Catholick King's Court, for the glorious Queen Isabel had the year before Exchang'd this Life for a better, which was no small trouble to the Admiral, she having always favoured and supported him, whereas the Catholick King had prov'd unkind, and averse to his Affairs; which plainly appear'd by the Reception he gave him;

for the to appearance he show'd him a Columbus favourable Afpect, and pretended to reftore him to his full power, yet he would have quite stript him of all, had not shame hindred him; which as has been faid, has great Power over Noble Spirits, and the King himself and Queen had both ingag'd their Faith to him, when he went upon his last Voyage. But the Indies daily more and more discovering what they were like to be, and the King perceiving how great a share fell to the Admiral, by Virtue of the Articles granted him, he strove to have the absolute Dominion in himselt, and to dispose of all those Employments which belong'd to the Admiral, according to his own Will and Plea-Hereupon he began to propose new Terms to him by way of Equivalent, which God would not permit to take Effect; because just then King Philip the first came to Reign in Spain; and at the time his Catholick Majesty went from Valladoled to meet him, the Admiral much oppress'd with the Gout, and troubled to see himself put by his right, other Distempers coming on him, gave up his Soul to God upon Ascension-Day, being the 20th of May 1506. at the aforesaid City of Valladolid, having devoutly receiv'd all the Sacraments of the Church, and faid these Words last, Into thy hands, OLord, I commend my Spirit: which through his infinite Mercy we do not question but he received into his Glory: To which may he admit us with him.

His Body was afterwards convey'd to Sevil, and there by the Catholick King's Order magnificently Buried in the Cathedral, and an Epitaph in Spanish cut on his Tomb, in Memory of his Renowned Actions, and Discovery of the Indies. The Words are these:

A CASTILIA, YA LEON, NUEVO MUNDO DIO COLON.

That is,

Columbus gave Custile and Leon a New World.

Words well worth Observing, because the like cannot be found either among the Ancient or Moderns.

It will therefore be ever remembred, that he was the Discoverer of the West-Indies, tho' fince then, Ferdinand Cortes and Francis Pizarro have found out many other Provinces and vast Kingdoms on the Continent; For Cortes discovered the Province of Tucatan, and the City of Mexico, called New Spain, then posses'd by the great Moniezuma, Emperor of those Parts; and Francis Pizarro found out the Kingdom of Peru, which is of a vast Extent, and full of Endless Wealth, which was under the Dominion of the great King Atabaliba. From which Countries and Kingdoms there come every year into Spain, many Ships laden with Gold, Silver, Brazil, Cochinele, Sugar, and many other Commodities of great value, besides Pearls and other Jewels, which are the Cause that at this time Spain and its Princes flourish and abound in Wealth.

## DESCRIPTION

OF THE

# PYRAMIDS

IN

## $\mathcal{A} \mathbf{F} \mathbf{G} \mathbf{Y} \mathbf{P} \mathbf{T}$

By JOHN GREAVES, Professor of Astronomy in the University of OXFORD.

Romanorum Fabricæ & antiqua opera (cum venià id dictum sit) nihil accedunt ad Pyramidum splendorem, & superbiam. Bellon. lib. 2. Observ. cap. 42.

8 N THE

## THE

## PREFACE.

OW high an Estimation the Ancients had of the Regyp-tian Pyramids, appears by the several Testimontes of Herodotus, Diodotus, Strabo, and Pliny.

\* Καίτοι αξιόλογός γε κ) φυραμίδες λόβε μιτίζονες, κὶ ὸ τν Σάμφι. Τη μι νωῖ αί αυραμίδες λόβε μιτίζονες, κὶ σολλών έκος η σύτεων 'λλ-λυμκών έςων κὶ μέριςων αγλαζία. Herod. l. 2-

mos ; yet the Pyramids were worthier of Rela-tion: Each of which single, might be comparted with many of the most sumptuous Structures of the Grecians. Diodorus Siculus confirms as much; who as he prefers the Works of the Agyptians for Magnificence before those of other Nations, so he prefers the Pyramids before the rest of the Agyp-tians: It is contested,

" faith be, that these Works far excel the

rest in Ægypi, not on-

ly in the massiness of

the Structures, and in the Expences, but also

in the Skilfulness of the Architects. He farther adds, The Greatness of

the Work, and Art of

the Work-men, strike an admiration into the

Spectators. Strabo

alfo restifies, That three

of them are very me-

morable, two of these

are accounted amongst

the feven Miracles of

the World Lastly, 4 Plis

ny, though he judges

them to be an idle and

knowledges, that though

there were a Temple

at Ephesus very re-

nowned, as also at Sa-

vain Oftentation of the Wealth of Kings, yet be grants that three of them have filled the World with their Fame. Which three, by his Description, and by such Indications as may be collected out of Diodorus and which now are extant, and of which I intend especially to discourse. For Diedofus writes, That they are seated on Libya-fide, an CXX Stadia (or Furlongs) from Memphis, and from Nilus XLV. We

Strabo, must necessarily be these three.

likewise read in Stra-bo, XL Stadia from the City (Memphis,) there is a certain Brow of an Hill in which are many Pyramids; who,

presently after describing more particularly the three greatest, gives us this Charafter. These three stand near to one another upon the same Plain. And if this be not sufficient to point them out, Pliny delivers

many evident marks whereby to discover spice undique innaviganti them : These three (as he informs us,) are ve ry conspicuous to those that fail upon the Nilis, they are scared business, they are feared business, they are feared on Africa side, upon a dere illas. Plin. 1. 30 c.1 Rocky and Barren Hill,

between the City Memphis and that place which we faid is called the Deha, from the Nilus less than IV Miles, from Memphis VI; there being a Village apposite to them, which they name Bustris, from whence they use to alcend up to them. All tobich Characters, there, and are appliable to none but only to these three.

Having thus discovered their true Place, or Situation, we shall next difcourse of the Authors who have written of them. Amongst the Ancients, there were many who thought it worth their labour to describe them. For Pausanias, as it were, complaining that the Grecians had been very curious in de-feribing these, whilst they had omited many

This LETTER underneath was written by M' Greaves to the famous Claudius Hardy, who published Euclid's DATA, and was in great Esteem for his Learning in the Mathematicks, and his Skill in the Oriental Languages.

Clarissimo Dostissimoque Viro D. C. H.

Uatuor anni elapli funt (vir clariffinè) ex quo propter longinquam peregrinationem à me in Orientem susceptain, nulla mihi opportunitas data elt, affectum, fincerumque tibi anımum teffandı. Tandem favente Numine, falvo & incolumi reverfo, conceditur nonminil otn , & de periculis præteritis, & de amicis veteribus, cogitandi. Inter quos si rectè de liumanitate, studissque tuis judico, nemo crit qui de reditu meo, majori, quam tu, latitià afficiatur. Fáque tantò erit ac cumulatior, cum intellexeris iter tam periculofum non alias ob causas initum, msi ut linguis Orientalibus, & studiis Astronomicis, peregrè seliciès incumberem, in quibus utrisque quantum proseceris, eruditis tuis scriptis, literatis omnibus fatis comprobasti. Quapropter breviter, strictimque, ubi commoratus sim, quid præstiterim, & quos li-bros inecum adduxerim, pro veteri amicitià tibi indicabo. Primum annum Constantinopoli egi, ut me totum linguæ Arabicæ addicerem, fed fpe falfus, idoneis deltitutis magistris, ad alias curas animum induxi, cúmque diligenti librorum MSS. disquisitioni applicui. Quo quidem in genere non pœnitendam operam locavi. Nam præter varios codices Arabicos, Perficos, Turcicos, propemodum de universis scientiis scriptos, & przter Lexica melions notz tribus hisce linguis deservientia, coemi insuper penè omnes antiquos Mathematicos Gracos, in idioma Arabicum ante aliquot facula traductos, unà cum operibus præcipue Astronomorum recentium, anud Arabes, & Indos, maxime infignium. Inter verò illos antiquos, non leviter gaudeo adhuc superstites reperiri, quatuor libros Apollonii Pergzi Geometrz subtilissimi

في وطع الخطوط على النسس

quorum Pappus, aliigue meminerunt. Constantinopoli cum classe Turcica solvi, co anni tempore, quo solent, multis navigiis simul, pro more Gentis, Alexandriam peterc. Fretus latis prospera navigatione Rhodum appuli, ubi, propter auctoritatem Polidonii, clanculum in lubinoenianis Christianorum hortis altitudinem solis sæpe observavi : inde post sex dies è portu discedens, octo dierum spacio, flantibus leniter Etesis, Alexandriam perveni; ubi corruptis Judzis, qui vectigalibus ibi przfunt, instrumenta mea Altronomica fine periculo exposui. Erant autem diversa, ex are ut plurimum sabresacta, & ab egregio artifice summa cum diligentia con-Aructa, quorum maximum quadrans erat totus zneus, radium obtinens septem eorum pedum, qui apud Anglos veteri edicto Regio usin pantur. Alexandriz fex menses continuos hasi, soli stellisque intentus, quoties per caligines, aut pluvias, licebat, quas illic, media przcipue hyeme, contra receptam opinionem, & crebras, & violentas.

To the most Westhy and most I canned D. C. H.

T is now four Years, worthy Sir, lince my long Travels into the East have deprived me of the opportunity of giving you Jume Testimony of my Affection, and incere inclinations to you. B ing at length, by the help of God, returned in safety, I have some lessure to think on past Dangers, and old Friends; among whom, if I be not mistaken in your Favour and Inclinations, none will more rejoyce at my Return than you. And your Satisfaction will be the greater, when you understand that I undertook so dangerous a Journy upon no other Account, but to apply my self more successfully in Foreign Parts, to the Sindy of Astronomy, and the Oriental Languages; in both which, how great a Proficient you are, has been sufficiently made appear to the Learned World by your Writings, full o' Eru-I will therefore, in pursuance of our former Friendship, butly inform you in what Parts I re-sided, what I did there, and what Books I have the Arabick Tongue; but being decerved in my expectation, and waning able Majers, I bear my Affind 10 other Affans, and apply'd my seif to a diligent Senich of Manuscript Books. Wherein I have not lost my Labour: For besides several Atabick, Perlian, and Tutkish Books, which treat of almost all Sciences, and besides the best Lexicone for the understanding of the three Languages, I have bought almost all the ancient Greek Mathematicians, translated some Ages since into the Arabick Tongue, together with the Works of the most renowned modern Altronomers among the Arabians and Indians. But among thole ancient one. I do not a little rejoyce, that there are fill found in being four Books of Apollonius Pergeus, the mest subtile Geometrician,

### Conicorum libri quatuor.

of which Pappus, and others make mention. I sail'd from Constantinople with the Turkish Fleet, at the time the great Convoy of that Nation afes to set out for Alexandria. My profisee were good, and I arriv'd at Rhodes, where, in respect to Possidonius's Authority, I often took the San's Altitude privately in the Gardens of the Chistians without the Walls. Departing that Port after hix Days, a gentle Easterly Gale, in eight Days, brought me to Alexandria; where bribing the Jewes, who have the collecting the Customs, I landed, my Astronomical Instruments in safety. I rad several of them, short of them of Bigs, and made by a notable Workman, with extraordinary accinacy; the largest whereof was a Brass Quadrant, wt see Radius was seven ancient Statute Foot of England. I continued six whole Months at Alexandria, observing the Sun and Stars, as often as Fogs and Rains would permit; which, contrary to the received Opinion, I found to be frequent and violent, specially in the

depth of Winter. Being spent with Labour and Watching, I went twice to divert my felf to Mem-Plus, or to speak more property, Alkahita a For the profest Bikahita (Grand Carro) is at least seven Miles to the Eastward of the ancient Memphis. Thence I repair d to the Sepulchres of the ancient Egyptians, and entred those subserva-nean Cells, or Caverns; thence I went to the Pyra-mids, and having fit Instruments for that purpose, took their exact. Dimensions, observing there many things, as I curvossly viewed them, which have no been deliver'd in writing euber by the ancient or modorn Authors. They are indeed amuzing Structures, and defervedly reckoned by the Ancients money the Wonders of the World, but not yet described as they enght to be by any one that I know of.

I carefully took the Dimensions of the inner Chamber, and some more prevate places, which Time bas not yet, nor, il I mistake not, ever will destroy, with English Measures; and that so exaltly, that I believe there is not one part over or under of 20000, into which 20 Foot are divided by Crofs, or rather Diagenal Lines. Which I was the more exact in, to the end that the Measures of all Nations that now are, or formerly were, may be transmitted to Poleruy from some lasting Monument, by comparing them with these. Had this been formerly done by Mathematicians, choosing for the purpose some proper Places not exposed to the Injury of Time, we should not at prefent be fo uncertain in the fearch after the Attenfures of the Ancients. I leave ut so the Learned to determine, what Judyment is to be made if this new Design; for my part I neliber repent my usestiempt nor mey Lubour. I intreat and conjure you (most see that no land me the French Weights and

Hures of their own, writes thus: h That the Grecians admired things of Strangers more than of their own, feeing that some Historiand of Note had most occurately described the Pytamids of Agypt, whereis the Treatury of Mini w, and Walls of Tiryns, (pleces in Boot i,) no less to be

admired than thefe, had been omitted by them. Pliny gives us a large Catalogue of Authors that had purpofely

nent . Those which Our de its Conflerint, or Hondotus, Echonorus, have writ of them, are, Herodorus, Euhemerus, the Sames Ariflagoras Herodotus, Euhemetus, 20 milias, Antemdoria, Alexador Polyhillor Butrades goras, Dionyfius, Arifladio Polyhillor Butrades goras, Dionyfius, Arabiboses, Demetines, Determidorus, Alexander goras, Dionyfius, Arremidoris, Alexander Polyhistor, Butorides, Antifthenes, Demetri-

Ariftagoras , mitcles, Apron. Phn. Nat. Hift. 1. 36. C. 12.

us, Demoteles, Apion. Where we are belief ding to him for preferring the Names of so many Writers, though their Works (unless these of Herodotus,) by the injury and calamity of Times, have long fince perished. Besides these, Diodorus Siculus, Strabo, Pomponius Me-la, Pliny, Solinus, and Ammianus Marcellinus, (the Names of Modern Authors I purposely omit,) have given us some Relations of them. But it may be, if the Writings of Aristides had not perified, who in his Nos G. Ailualio Speaks thus of humself, \* After that I she had entred into Æthiepia, and tour if Al. times travelled all over Ægypt, and had

many remarkable Stru- left nothing unhandled, neither the Pyramids, nor Labyrinth, nor Temples, nor Channels, and partly had procured out of their Writings tuch measures as might be had, and partly with the Pricits had meafured fuch things as were not obvious, yet could I not preserve them intire for thee, feeing the Books which thy Servants, by my appointment, tran-feribed, have perifhed: Or, if we had the Sacred Commentaries of the Ægyptians, Jo often cited

by Diodorus, we might 1 'Ως cv F ispals ava-Treceive hetter fatisfifeepais begin bit reflexe

" Hueguides 3 maris λίτου) ώξετα βασίλικα σι-Ιοθόχα α καθεσκάτασε 'Ιω-σής. 'Ετυμόλ. μίζα.

Much less can I affent to that Opinion of d Siephanus, Nicetas, Nonnus, and the Author of the Greek : 'Elupoko-Tixov mila, with some others, who derive the Name of the Pyramids λπο 4 wugs, that is from Corn, and not wood from the Figure of a Flame of Fire, which they resemble because, fay most of them, these were built by the Patriarch Fo-fcph, as (Ποσδχα, Receptacles and Granaries of the seven plentiful For, befides that this Figure is most improper for fuch a

purpose, (a Pyramid being the least capacious of any regular Mathematical Body) the straightness and fewness of the Rooms within, (the rest of the Building being one folid and intire Fabrick of Stone) do utterly overthrow this conjecture. Wherefore the Relations of Herodotus, Diodorius Siculus, and of fome others, but especially of these two, both of them having travelled into Ægypt, and converted with the Priests, (besides that, the latter made ule of their Commentaries,) will give us the best and clearest Light in Matters of fo great Antiquity.

For Herodotus writes thus concern-

ing the first of these Pyramids, that h until King Rhampfinitus's time the Ægyptians report the Laws to have

h Herod. lib. 2. Mixe μ νως Paulivite βοσι λη Φ ΤΟ er Alfunfo σας crrowilw exergr, &c.

flourished in Ægypt: After whom Cheops succeeding in the Kingdom, fell into all manner of Vice, for, Shutting up the Temples, he forbad the Ægyptians to facrifice; besides, he commanded that they should be imployed in his Works, ( he means this Pyramid of which he discourseth,) that some of them should receive the Stones dug out of the Quarries of the Arabian Mountain, and that from thence they should carry them to the Nilus; these being wasted over the River, others were to receive them, and to draw them to the Mountain which is called Libycus. There were imployed in the Work ten Myriads of Men, every three Months a Myriad: The People Spent ten Years in the way in which they drew the Stones, which seems to me no less a Work than the building of the Pyramid # felf. \* Diodorus Siculus dif- \* Diod. courfing of the same Argument, gives Sic. 1. 1. the Erector of this another name, different from that of Herodotus, Itiling him Chemmis; but in the Time, and Person, they both agree, each of them affirming him to have fucceeded Rhampfinitus, and to have been the Father of Mycerinus, and to have reigned over the Ægyptians fifty Years. This difference of Names between therodorus and Dio-

the Scriptures, being denominated from TIME, that is, Laughter, is by Alexan-Fuleb. named T'éhos.

Lapidicinis the building of this Pyramid. Trecenta LX hominum milla amis XX eam construxisse pro-

> Concerning the fecond Pyramid, Herodotus and Diodorus affign the Author of it to have been Cephren, Brother to the former King. Diodorus adds, that by fome he is also called Chabryis, and was the Son of Chemmis; a difference which I imagin to have been occasioned out of the diversity of Pronunciation of Chabryis for Cephren; there being an easie Transmutation in Letters of the same Organ, as Grammarians use to speak.

Cheops, as ' Herodotus 1 Herod, lib. 3. Tendinforms us, being de-ให้σενή છે ਹ τέτε, ἐκδίξαδς Τ΄ βατιλείω τ΄ ἀδδρεὸν αὐceased, bis Brother Cephren reigned after him, who imitated him, 98 χερεήρα, &c. as in other things, so in the making of

a Pyramid, the Magnitude of which is less than that of his Brothers. And Dio-

Diodor. lib. 1. Tyd-Joseph J. Bestives to dorus relates, That confidence is exclused to the Brother Cephen in the week to serve the bis Brother Cephen in the week to the serve succeeded bim in the

Kingdom, and reigned Fifty six Years: Some fay, that not his Brother, but his Son, which was samed Chabry's, reigned after him. This is affirmed by the con-

fent of all, that the Successor of the tormer King, in imitation of bini, built the Greeve fecond Pyramid like to the first, in ve-Spett of the Art and Workmanstop, but far inscriour to it in respect of Misenitude.

cerinis, fome call him the Brain to Obligate 1 as it is Beredot, lib. 2. observed by Prederus, who mai es him the Son of Chemmis, as Herodeius doth of Cheops; the difference between them being, as we noted before, rather nominal than real. The lame

ron.

authoribus.

The Arabians, whose Excellencies I judge to have been in the speculative Sciences, and not in the Histories and Occurrences of ancient Times, affign other Founders of these three, different from those mentioned by the Greeks. The Author of the Book intitled, Morat Alzeman, writes, They differ concerning him that built the Pyramids: Some say Joseph, some say Nimrod, some Dalukah the Queen, and some that the Ægyptians built them before the Flood: For they forefaw that it would be, and they carried thither their Treasures, but at profited them nothing. In another place he tells us, That the Coptites (or Ægyptians) report, that thefe two greater Pyramids, and the leffer, which is coloured, are Sepulchres. In the East Pyramid is King Saurid, in the West Pyramid his Brother Hougib, and in the coloured Pyramid Fazfarinoun the Son of Hougib: The Sabzans relate, that one of them is the Sepulchre of Shiit, (that is Seth.) and the second the Se-pulchre of Hermes, and the coloured one the Sepulchre of Sab, the Son of Hers mes, from whom they are called Saba-They go in Pilgrimage thither, and facrifice at them a Cock, and a black Calf, and offer up Incense. Ibn Abd Alhokm: another Arabian, discoursing of of this Argument, confesses, That he could not find amongst the Learned Men in Ægypt, any certian Relation

concerning them, (wherefore) what is more reasonable (faith he,) than that the Pyramids were built before the Flood? For if they had been built after, there would have been some Memory of them amongst Men. At last he concludes. The greatest part of Chronologers affirm. that he which built the Pyramids, was Saurid ibn Salhouk the King of Ægypt, who was before the Floud 300 Tears. And this Opinion he confirms out of the Books of the Ægyptians: To which he adds, The Coptites mention in their Books, that upon them there is an Infeription ingraven; the Exposition of it in Arabick is this, I Saurid the King, built the Pyramids in such and such a time, and finished them in six Years; be that comes after me, and Juys he is equal to me, let him destroy them in six hundred Years; and yet it is known, that it is easier to pluck down than to build: and when I had finished them, I covered them with Satin, and let him cover them with Mats. The fame Relation I find in feveral others of them, that this Saurid was the Founder of these three Pyramids, which the admiration of After-times inrolled amongst the Miracles of the World. And these are those three, which are still fair and intire, and standing near to one another, formerly not far diffant from the great and ancient City Memphis, built by \* Uchoreus, (of which there is now not \* 00) fo much as the Ruins left,) and less di- sale fall

itant from the River Nilus, as Diodo-Minor, rus, Strabo, and Pliny, rightly describe. cm pare Befides these three, we find mention satisfied in Herodotus and Diodorus, the rest in Names and Authors of some others, Diodor. not much inferiour to these in magni-lib. 1. tude, long fince ruined, and defaced by time. On the contrary, there are many now standing in the Lybian Desert, whose Names and Authors, neither He-

rodotus nor Diodorus, nor yet any of the Ancients, have expressed.

After Mycerinus, according to " He- " Herod. rodotus, (for Diodorus is here filent,) lib.2.

Afychis fucceeded in the Kingdom, \* Table who being desirous to excel his Prede- Tape cessors, left for a Monument a Pyramid λευνων made of Bricks, with these words in autor !

\* Plin. Ibid.

graven in Stone, Compare not me with the Pyramids built of Stone, which I as far excel as Jupiter doth the other Gods. For striking of the bottom of the Lake with long Poles, and gathering the Dirt which stack to them, they made thence . Bricks, and formed me in this manner.

The same Author relates, that many Ages after this Asychus, Sanacharib King of the Arabians and Asyrians, who certainly is the same which is mentioned in the Scriptures, having expelled Sethon the King of the Æeyp-tians, and the Priest of Vulcan, the Ægyptians recovering their liberty, made choice of twelve Kines, (which is also confirmed by Diodorus,) dividing Ægypt into so many Parts; for they could as no time live without a King; these by a common consent, built a Labyrinth above the Lake of Maris: At the Angle where the Labyrinth ends, there is a Pyramid of XL Orgyix, (that is, of CCXL beet,) in which are ingraven huge Resemblances of Boasts, the Possage to it is under-ground. And this is that Pyramid, as may evidently be collected out of 'Strabo, in which Imandes lyes buried, whom we may probably suppose to have been the Builder of it: His words are these, At the end of this Building, (that is, of this Labyrinth,) which contains a Furlong in length, there

Diedous na certain Sepulchre, being a quadri-chaes, that lateral Pyramid, each side of which is ver the lateral Pyramid, each side of which is sepulchre CCCC Feet, and the Attitude is the

fame, the Name of him a Circle of Gold of 365 Cubis compass, and a Cubit in that tyes buried there is Imandes, whom the Authickness, in which the Days thor of the Epitome of the Year were inscribed, and divided into a Cubit a calls Maindes, and Strapiece, with a description acbe himfelf not long afcording to their Nature, of the fetting and rifing of the Stars, and also their Operater Ismandes; Diodorus names him Osymanduas. tions, after the Ægyptian A-Which of these two, firologers. They fay, this Circle was carried away by whether Herodotus or Strabo, hath given the Cambyfes and the Persians, at what time they conquered Egpt. (Dibdor, Sicul. fib. 1.) truest measure of it, unless the Pyramid were He which shall seriously connow extant, cannot be lider this, and feveral other Passages in Herodotus and Diodoms, of the stupendious Works of the Egyptians, mast sent and below that the state of the students of the Egyptians, decided by us. Though Phay adheres to the dimensions of Herodotas; must needs acknowledge, that but whereas Herodotus for Magnificence, if not for Art, they far exceeded the occians and Romans, even their Empires were at the high art. and there but one Pyramid, he makes mention of

mart their Empires were at the manual state of the highest, and mod Rourilleing. And therefore, those Admiranda Roma, collected by 
Lysim, are skipen to be admired, if compared with some 
of their, Ar this Day there is hardly any wast Column or 
Otelisk remissing in Rome, giveny of Noge, which fash 
not anciently have become the statem was of Mappe.

Strabo mention

many: And whereas Strabo makes this to be quadrilateral, he describes Greaves. these (if I miltake not his words, ) to be Sexangular. \* Superque Nemefes XV. b Plin. adiculis incluserit Pyramides complures lib. 36. (that is, above this Labyrinth which cap. 13. which he places in Heracleopolite Ncmo,) quadragenarum Ulnarum VI radice muros obtinentes.

Long before these four Pyramids of Cheops, Cephren, Mycerinis, and A/achis, who immediately fucceeded one another in the Kingdom, but after this of Imandes, Myris 45 he is called by Diodorus, (but Herodotus, Strabo, and Phny, name him Mæris ) another Ægyptian King, built two admirable Pyramids; the description of which, tho' in Herodotus, it immediately follows that of the twelve Kings; yet as it may evidently be collected out of him and Diodorus, these two of Maris must

many Ages have preceded. For Herodo-' Herod. lib. 2. συτον [Mlua] καθέλεσο οἰ icpies cx βίδλε άλλων βαres tells us, that from Menes ( the first King σιλέων τειπκοσίων]ε. τειπ-κον]α ενόμα]α έχα] - αὐ-τμ Μοίζες. of the Ægyptians, whom Diodorus names Menas,) the Priests reci-

ted out of their Books CCCXXX Kings the last of which was Moeris; long afrer whom reigned Sefostris, who is called by Manethos, Sethofis; and by Diodorns, Sesoftris, and Sesoosis; who more particularly than Herodotus, expreffes Sesostris to have been deven Ages do Diod. after Maris, and to have reigned long Sic. lib. 1.

before these twelve Kings. The which Sefoftris, or Sethofis, immediately fucceeding Amenophis, (according to Manethos in Fosephus, as we shall shew in the enfuing Discourse, ) mult have been before Cheops, Cephren, Mycerinus, and Asychis; and therefore consequently, that Mæris must long have pre-ceded these twelve Kings. This Mæris undertook, and finished that most admirable Lake denominated after his name, as it is teltified by Herodotus, Diodorus, Strabo, and Pliny. A Work the most useful and wonderful, if it be rightly confidered, that I think was ever by any Man attempted; in the midft of which, he erected two Pyramids, the one in memory of himfelf, the other of his Wife, each of them being IOC Feet in height, the descrip-

tion of both which, and of his Lake, we Diod. have in Herodotus, the latter we find in Sic. lib. 1. Strabo, but in none fo fully as in Dio- 1 woken Led I'une gottale situlu seufe en fi congencia Sau tartus, raf J puryble F befor Arrese, &c.

dorus.

-4.

dorses, and therefore I shall relate his Greaves. words. Ten Schoenes, (that is, 10C Furlongs; though Strabo and Artemidorus beiore him, observe a difference of Schanes in Ægypt,) above the City (Memphis,) Myris dug a Lake of admirable use, the greatness of which Work is incredible. For they relate, that the circumference of it contains CIO CIO CIO IOC Furlongs, the depth of it in many places is fifty Fathom, (that is, two hun dred Cubits, or three hundred Feet, ) who therefore may not deservedly ask, that shall consider the greatness of the Work. how many Myriads of Men, and in how many Years they made it? The common benefit of it to those that inhabit Ægypt, and the Wisdom of the King, no Man can sufficiently commend. For since the rising of Nilus is not always alike, and the Country is the more fruitful by the moderateness of this, he digged a Lake to receive the Superfluity of the Water, that neither by the greatness of the In-undation unseasonably drowning the Country, it should occasion Marshes or Lakes; or flowing less than it should do, for want of Water, it should corrupt the Fruits; he therefore cut a Ditch from the River to the Lake, eighty Furlongs long, and three hundred Feet in breadth. By which, sometimes receiving in, and fometimes diverting the River, he exhibited a scasonable quantity of Water to the Husbandmen, the Mouth of it sometimes being opened, and sometimes shut, not without much Art, and great Expences. For he that would open the Bars (or Sluces,) or shut them, it was necessary that he spent at the least fifty Talents. The Lake in this manner benefitting the Ægyptians, bath continued to our Times, and from the Author of it at this day, is called the Lake of Myris. The King that digged it, left a place in the midst, in which he built a Sepulchre and two Pyramids, each a Furlong in height; the one for himself, the o-ther for his Wife, placing upon them two Marble-Statues, sitting on a Throne, imagining by these Works he should propugate to Posterily an immortal Memory of his worth. The Revenue of the Fish of this Lake, he gave to his Wife for her Unguents, and other Ornaments, the fishing being worth to ber a Talent a day: For they report, there are two and twenty forts of Fishes in it, and that fuch a Multitude is taken, that those who are perpetually imployed in falting them, of which there is a very great number, can hardly dispatch the Work.

Thus far Diodorus. Which description, as it is much more full than that of Herodotus, so Herodotus hath this memorable Observation omitted by Diodorus : 'That this Luke was made by ' Herode hand, and hollowed, it is apparent, be-lib. 2. , cause almost in the midst of it, there stands two Pyramids fifty Fathoms above the Water, and as many Fathoris of the Building under-water: Upon the top of each of which, there is a Coloslus of Stone fitting upon a Throne; so that the Pyramids are an hundred Fathoms bigh. Strabo I know not by what overlight omits thele two Pyramids. whereas he acknowledges the Lake of Maris in which they stood, " 10 be ad. Gauge mirable, being like a Sea for Greatness stw 5 and for Colour. Moierd & nagunulum ogazian má mezéb!, n. 78 ?

Befides these which we have handled, and whose Founders are upon record in the Writings of the Ancients, there are many others in the Libyan Defert where it bounds Ægypt, of which there is no particular mention extant, either

in the Greeks, Latins, or Arabians, unless we shall apply these words of "Diodorus words of Diodorus
to some of them. There
are three other Pyramids, each side of which
contain two hundred
Fiet, the Strutture of
them, excepting the
Magnitude is like to Magnitude, is like 10 ordásai yuraikir.

h Diodor. Sic. I. I. F

the former, (that is, as he there specifies, to those three Pyramids of Chemmis, Cephren, and Mycerinus,) these three Kings before mentioned, are reported to have erelled them for their Wives The bigness of fome of these now extant, doth well answer the measure assigned by Diodorus: But if these three Kings built them for their Queens, it may be wondred why they should have placed them so remote from their own Sepulchres; or why they should stand at fuch large and inequal differences of feveral Miles from one another. I find as little fatisfaction in 1 Pliny, 1 Plin. where he writes, Multa circa bec vani- lib. 36. tas illorum hominum fuit, vistigiaque cap. 12 collect out of him, and likewise out of that Ode in Horace:

iorat. )de 30. b. 3

Plun. b. 26.

10 12-

ıb. 8.

1h. 8.

Exegi monumentum are perennius: Recalique situ Pyramidum altius.

That they were the Works of Ægyptuan Kings; but of which of them, and at what time, we are altogether uncertain. Regum pecunia, \* faith Pliny, otiofa, ac stulta ostentatio. Of the same Opinion is Leo Africanus, in his accurate Description of Africa, after co Afric. many Years travel in those Parts. Hac per desertum arenaceum, itur ad Pyramides, nempe ad priscorum Ægypti Regum Sepulchra, quo in loco Memphin olim extitisse asserunt. It may be it was the Royal Prerogative, and that it was prohibited to private Men, how wealthy and potent foever to be thus intombed; but without fome farther Light from the Ancients, it would be too great a presumption to determine any thing.

Lucan, I know not upon what I tucan. ground, makes as if the Ptolemies had imitated the Ægyptian Kings in this

particular:

Ciem Prolemeorum manes seriemque pudendam

Pyramides claudant.

Surely if they did, these are none of those: For they would have built them at Alexandria, which was then the Regal Seat, and not at Memphis, "Didor, the which as "Diodorus affures us, began to decay after the Building of A-

lexandria, like as the ancient Thebes ( as the " Grecians stiled it; or the Greaves. City of the Sun, as the Ægyptians, ac- Plato, &c cording to . Diodorus, called it; or ali. Diospolis, as Diodorus and Strabo al Diodor. fo name it, ) did after the building of lib. 1. Memphis. Those which imagin the blib. 17.
Monument or Sepulchre, mentioned by Plutarch at Alexandria, into which Plutarch. Cleopatra fled for fear of Augustus, to in Antonio. have been a Pyramid, are much decei-

ved. For in the Life of Mark Antomy, where he informs us, that there were Sepulchres near the Temple of Isis, of exquisite Workmanship, and very high; into which she conveyed the richelt of her Treasures, he describes one of them, wherein she hid her felf, to have had a Window above the Entrance, by which she drew up with Cords the Body of Antony, and by which afterwards Proculeius entred, and furprized her. This Window is not in any of those Pyramids I have seen; neither can I apprehend, if these were of as solid and massie Stones, and of the same shape as those at Memphis, and the Chambers within as remote from the outward Superficies, of what use it could be, either in respect of Light or Ornament; and therefore I conjecture these Monuments of the Ptolemies to have been of a different Structure from those of the Pyramids.

In all other Classical Authors, I find no mention of the Founders of the rest in the Libyan Defert; and after fuch a distance of time, we must be content

to be filent with them.

### Of the Time in which the PYRAMIDS were built.

O define the precise Time in which these Pyramids were erected, as it is an Inquiry of much Difficulty, fo of much Importance, in regulating the various and uncertain Traditions of the Ancients concerning, the Ægyptian Chronology. For if we shall peruse those Fragments of Manethos, an Ægyptian Priett, preser-

nerodot. lib. 2.

Tears; or lastly, those Dynasties mentioned by Africanus and Eusebius, but pretermitted by Herodotus and Diodo-rus; the first of which Joseph Sca-Scal in liger places in the VII CD and IX Ensebii Year of that Julian Period, which by Chronic.

Joseph line. Anniq.cap.7.

him is called Periodus Juliana postula-Greaves. titia, and the time tempus prolepticum, preceding the Creation by CIO CCC XXXVI Years, we shall find our selves intangled in a Labyrinth, and Maze of Times, out of which we cannot, without much perplexity, unwind our felves. And if we farther confider, that amongst those many Names delivered by Manethos, and preserved by Josephus, Africanus, Eusebius, and Syncellus, how few there are that concur with those of Herodotus, and Diodorus, or with those in Plato, Strabo, Pliny, Plutarch, Cenforinus, and fome others: And that which is of greater consequence, how difficult it is to reconcile these Names and Times to the Ægyptian Kings recorded in the Scriptures, we shall find our felves befet, and as it were invironned on every fide with great and inextricable Doubts. What therefore in Inquiries of this nature, is approved as the most folid and rational Foundation, that is, to find out fome common and recoved Epocha, in which either all or most agree, that shall be our Guide in Matters of fo great Antiquity. Now, of all the antient Epocha's which may conduce to our purpose, there is none that we may fafelier rely upon than that of the migragation of the Israelites ut of Algypt, which had the same hand taithfully to pen it, that was the most active and miraculous instrument of their departure. And though prophane Historians differ much in the manner of this Action, either as they were tainted with Malice against the Hebrews, or misled with the Calumnies and False Reports of their Enemies, the Ægyp-" pairo Trans; of whom, " Josephus may feem 20 1 to have given a true censure, That all meis nuas the Ægyptians in general are ill affett-Justification that Moses was the chief Author, and conductor of this Expedition. If therefee, λίτων fore we shall discover the time in which γιοι. Joi. Moses flourished, and in which this lib. 1 con-great Enterprize was performed by him, it will follow by way of confequence, that knowing what Pharach, or King in Egypt, was coetaneous and concurrent with him, we may by Syncbronifm, comparing facred and prophane Authors, and following the Line of their Successions, as it is delivered by good Authority, at length fall upon the Age in which Cheops, and those other King reigned in Ægypt, whom we affigued out of Herodotus and Diodorus, to have been the Founders of these Pyramids.

And here, for our Inquiry, what Ægyptian King was concurrent with Mo-Jes, we must have recourse to the Relations, not only of the Scriptures, but also of other approved Authors amongst the Jews and Gentiles; in which last, though we often find more than an Ægyptian Darkness, yet sometimes thorough this we may discover some glimmerings of Light. By the Scriptures alone, it is impossible to infer, what King of Agypt was coetaneous with Moses; seeing the Name, which is there given him, of Pharaob, is a common denomination applyable to all of them; much like Cafar or Augustus with the Roman Emperours, or sometime Cofroe with the Persians, and no distinctive Appellation. Yet in Herodotus we find one King, the Successor of Sefostris, to have been called ' Phe- \ \Segio. ron; which I suppose is Pharaoh, and seit ? his proper and peculiar Name. But The ?! who this Pharaok should be, whose garlos, Heart God hardned, and upon whom Exeror Moses wrought so many Wonders, is Basknik worth our disquisition. Fosephus in his # , wald first Book contra Apionem, out of Ma-au 78 90 nethos contends, that Tethnofis (who rodot l. is termed also Amosis by Africanus and Eusebius,) reigned then in Ægypt. The whole force of his Argument lyes in this, that Manethos mentions the Expulsion of the Nation of Shepherds to have been by Tethmesis: But the Hebrews were a Nation of Shepherds: Therefore the Hebrews were expelled out of Ægypt, or in the Scripturephrase, departed out of Ægypt under Tethmosis; and consequently, that Mo-ses, who was their Conductor, was coeraneous with him. That the Hebrews were a Nation of Shepherds, and fo accounted of themselves, and were efteemed by others, is very perspicuous. And Joseph faid unto his Brethren, & G. and unto his Father's House, I will go 31, up and shew Pharaoh, and say unto him, My Brethren and my Father's House which were in the Land of Canaan, are come unto me : And the Men are Shepherds, for their Trade hath been to feed Cattel, and they have brought their Flocks, and their Herds, and all that they have. And it shall come to pass, when Phatroch shall call you, and shall say, What is your Occupation?

7es xวกที tra Apio-

abomination to the Ægyptians. But before we shall disprove this Affertion of Josephus, which carries much speciouincis with it, and therefore is approved and followed

by Tatianus, by Ju-fin Martyr, and by

" Clemens Alexandri-

maus by name being our

'i In mainne contra Grain parametico ad cof-

we shall put " lib. 1. Stromatum. down the words of Alanethos himself, as they Joseph. lib. 1. contra are reported by " Justepion. Four Garindis phus in his First Book contra Apionem.

King, under him I know not how God was difficated, and beyond expellation, out of the Euflern Countries, Mencf objoure Buth incamped themselves in the Country, and casily, and without Battel, took it by force, binding the Princes, and besides, cruelly burning the Cities, and overthrowing the Temples of the Gods. Last of all, they made one of themselves a King, who was named Salatis; be reigning nineteen Years, died. After bem, another named Bxon reigned forty four Years; next to him Apachnas; another, thirty fix Years Seven Months ; then Apophis, fixty one; Janias fifty, and and one Month; after all Affis, forty nine Years and two Months. And thefe were the first six Kings of them always conquering, and defiring to extirpate Rigypt. Then Nation was called Hyc-105, that is, Kingly Shepherds. For Hyc in the facred Tengue, fignifies a Ring; and Sos a Shepherd, or Shepherds in the common Dialed, and thence Hycfos is compounded. But some say, that these were Arabians. [In other Copies I have found, that by the denominution Hyc, Kings are not fignified, added of but on the contrary, captive Shepherds. when it is pronounced with a broad Sound, plainly fignifies Captives; and this feems more probable to me, and better agreeing to the ancient History.] Those Kings therefore which we before ment, ned, and those which were called Pastores, and those which descended of them, ruled Egypt five hundred and eleven Years. After this, he mentions that by the Kings of Thebes, and of the rest of Ægypt; there was an Invasion made against these Shepherds, and a very great and lasting War. The which, he says, were conquered by a King, whose name was Alissragmuthosis, whereby they loft all Egy at, being shut p into a place containing in circuit ten Vol. II.

thousand Acres. This space Manethos fays, the Shepherds incompassed with a Greaves. great and strong Wall, that they might fecure all their Substance and their Spoils in a defensible place. But Themosis the Son of Alisfragmuthosis indescouring to take them, with Four hundied thousand armed Men, beleaguer'd the Walls, who despairing to take them by Siege, made conditions with them that they freuld leave Ægypt, and go without any damage whither they would: They upon this agreement, no lefs than Two hundred and forty thousand, with all their Subflance, went out of Tegypt by the Pefert into Syria, and fearing the Power of the Affyrians (who then ruled Afia,) in that Country, which is now called Judwa, they built a City capable to receive fo many Myriads of Mon. Men, naming it Hierusalem. By way of answer to Fosephus, we say, that though the Israelites might

properly be called Shepherds, yet it can-

not hence be interred out of Manethos, that these Shepherds were Ifrachtes. Nay, if we compare this Relation of Manethos with that in Exedus, which " Josephus being a Jew, cannor but ap- Exod. 1. prove of, we shall find the contrary. For there they live under a heavy Slavery and Perfecution, whereas here they are the Perfecutors and Afflictors; there they groan under their Task-mafters the Ægyptians, here they make all Ægypt to groan under them: Laftly, whereas there they are imployed in the lowest Offices, and Morter and in Brick, Exod. 1. and in all manner of Service in the 14. Field: Here, after the destruction of many Cities, and Men, and infinite Outrages committed upon the Egyptians, they make one of themtelves a King, and for fix Descents keep themfelves in Polfession of the Royal Throne, of which, after a long and bloody War, they are deprived. Their building likewife of a City in Judea, and naming it Ferufalem, according to Manches, is a strong Argument against Josephus, that these Shepherds could not have been the Ifraelites. For before the Entrance of the Israelites into Canaan, we and that Ferusalem was a Fort of the Jebusites upon Mount Sion, unconquered by Joshua. As for the Jebussies the Josh. 15, Inhabitants of Jerusalem, the Children 63- of Israel could not drive them out. But they were long after fubdued by David. And David and all Israel went . 2 Chron. to Jerusalem, which is Jebus, where the 11.4, 5. Jebusites were the Inhabitants of the

8 O 2

17164 gords of

And the Inhabitants of Jebus → Land. Greaves. faid to David, Thou shalt not come hither; nevertheless, David took the Castle of Zion, which is the City of David. Besides all this, the History and Chronology of those ancient Times, if we compare facred and prophane Authors, will in no fort admit that these Shepherds must have been the Israclites. For if these that departed out of Ægypt in the Reign of Tethmosis, King of Thebais, or of the upper part of A-gypt, were the Children of Ifrael, then must Moses their Conductor have been as ancient as Tethmosis, or Amosis, that is, as ancient as Inachus, the first King of the Argives. For Apion, in his Fourth Book of the Histories of Agypt, thews out of Ptolemaus Mendesius, an Agyptian Priest, that this Amosis lived in the time of Inachus, as it is recorded by Tatianus, " Ju-

<sup>7</sup> Euseb. Chron.

tradiderunt ex nostris Clemens, & Africanus; ex Judais, Josephus, & Justus, veteris historia monimenta replicantes. Now Inachus, according to 'Castor an ancient Chronographer, with whom Eusebius also concurs, began to reign a Thousand and eighty Years before the first Olympiad, that is, CIO CCLXVIII before the destruction of the Temple under Zedekiah, and before Christ's Nativity, after the Dionysian or common Account, CIDIDCCČLVI. That of the Olymprads is so affured an Epocha, and so strongly and clearly proved by Eclipfes of the Sun and Moon, which are the best demonstrations in Chronology, thele being expressed by some of the Ancients to have hapned in fuch a Year of fuch an Olympiad, as by Ptolemy! others in such a Year of the Epocha of Nabonassar, that we cannot err in our Calculations an hour, much less an intire day. By this therefore we shall fix the time of Zedekiah, and the destruction of the Temple: And confe-

quently, if, by our continuation of the Years mentioned in the Sacred Story,

Moses, either to the first Olympiad, or to Zedekiah and the destruction of the Temple, there cannot be fo great a distance as these suppose, we may safely then conclude, that Moses lived not in the time of this Tethmosis, and is not so ancient as Fosephus makes him. and that these Shepherds were not the Israclites, but very probably Arabians, as Manethos here also reports; Some say that these were Arabians; who to this day, for the greatest part, like the Nomades, wander up and down, feeding their Cattel, and often make incurfions upon the Ægyptians and Syrians. Which occasioned Sesostris the great (as we find it in 'Diodorus,) to make a Wall Diod.S on the East-side of Egypt a Thousandlib. 1. and fifty Furlongs in length, from Pelu-fium by the Desert to Heliopolis, against the inrodes of the Syrians and Arabians. As at this day the Chinese have done against the irruptions of the Tartars on the North and West Parts of China, for many hundred Miles; the which appears by a large Map of mine of that Country, made and printed in China. On the contrary, if the fuccession of Times from Moses, recorded in the Holy Writ, better agrees with the Age of Amenophis, the Father of Ramesses, whose Story of Josephus hath preserved out of Joseph Manethos, and whose Time and Rank lib. 1, or in the Dynasties, Africanus and Euse tra Apic bius deliver out of the same Manethos, we may with more probability affirm, that the migration of the I/raelites and time of Moses, was when Amenophis was Pharaoh, or King of Ægypt, than that it was when Tethmosis reigned, as Josephus and others contend, out of a defire to make Moses ancienter than in

it shall appear, that from the time of

And though this Argument from the Series and Successions of Time is so demonstrative and conclusive, that nothing can be opposed against it, and therefore might be fufficient to evince our purpole: Yet if we confiderately examin another Relation of Manethos, (which is flighted and depressed by Fosephus, because it made not for his purpose, ) it must necessarily be that by those Shepherds he meant not the Ifraelites, but rather by the Ifraclites the leprous People, which is his computation are

truth he is.

· Euscb. Chron.

1 Ptolemaus èv NEGAN ovilati.

That Amenophis, who was a great worshipper of the Gods, as Orus one of the former Kings had been, being defirous to fee the Gods, one of the Priests of the same Name with him, told him he might, if he cleansed the Country of leprous and polluted People. This leprous People chose for their Captain one of the Priefts of Heliopolis, named Ofarfiphus, who changing his Name, was called Moles; he causing Amenophis for fear to fly into Æthiopia, was afterward by him, and by his Son Sethon, who was also called Ramesses, by the name of his Father, overthrown in Battel, and the leprous People were purfued by them unto the Confines of Syria. Thus far out of Manethos. Here, which is very remarkable, we have exprefly the name of Moses; whereas in the former Relation of Manethos there is no mention of him, but of fix other Kings, with their peculiar Names. Whereas it is not probable he would have omitted the Name of Moses if he i the had lived in that Age, being a Name fo famous, and fo well known to them; Triror is and by Fosciphus acknowledged, that it differ admirable and droine Man. The purchase for them into the Confirm of them into the Confirm of them into the Confirm of them. για, χ', Set or fuing of them unto the Confines of Sying of the I/raclites by Pharaoh and his lib. 1. con- Hoft. For his terming them a leprous and polluted People, we must confider him to have been an Ægyptian, and therefore not unlikely to throw as many Aspersions as he could upon the Ifraclites; whom they deadly hated, it may be out of memory of their former Plagues. However it were, Cheremon hath almost the same Lib. 1. contra Apionem.

fuiffe affirmat. Luieb. Chron.

Laying therefore afide these vain and uncertain Traditions, we have no more affured way exactly to fix the time of Moses, and by Moses the time in which the Pyragoids were built, than to have recourfe to the facred Scriptures, and 10metimes to compare fuch Authors of the Gentiles with these, against whom we have no just Exceptions. For by we may those, and these conjointly, continue his time to the first Olympiad, and thence to the deltruction of the Temple, by Nebuchadnezzar King of Babylon: That of the Olympiads being a most certain and known Epocha with the Greeks, as that of the destru-Chon of the Temple with the Fews. From Moses then, or the migration of the Unachtes out of Ægypt, to the building of Solomon's Temple, are CCCCLXXX Years current, or Four hundred feventy nine complete; and to also " Eu/ebius computes them. The words of the Text plainly conclude this Sum: P And it came to pass in the Four bundred and fourth-score Year, after the Children of Israel were come out of the Land of Egypt, in the fourth Year of Solomon's Reign over Israel, in the Month Zif, which is the second Month, that he began to build to House of the Lord. From the building of the Temple to the destruEtion of it in the Reign of Zedekias, by the calculation and confession of the best Chronologers, are betwixt Four hundred and twenty and Four hundred and thirty Years. Which is thus deduced: After the first Foundation of

the Temple, Solomon reigned thirty feven Years, Rehoheam with the feed Annuth to build the House of the whose time we are to place Shifbak, or Sefochosis, the King of A-And it came to gypt. pass in the fifth Year of King Ruhoboam, that Shifhak King of Ægypt, came up against Jerusalem; and he took away the Treasures of the House of the Lord, and the Treasures of the King's House, he even

Now ' in the fourteenth Year of

2 Kings

18.13, 16. King Hezekiah, did Sennacharib King of Assyria, come up against all the fenced Cities of Judah, and took them. afterwards, when he came to befiege \*2 Kings Ferufalem - " It come to pass that 19.35, 36. night, that the Angel of the Lord went out, and smote in the Camp of the Astyrians an hundred four score and sive thousand; and when they arose early in the morning, behold, they were all dead Corpses. So Sennacharib King of Allyria, departed, and went, and re-turned and dwelt at Nineveh. In the time of this Sennacharib, Sethon fucceeding Anylis reigned in Ægypt, according to "Herodotus, who in his " Herod. Euterpe hath plainly the name of Sa-Zor-xdnacharib, stiling him King of the Arau€÷. bians and A//yrians, and making him to have received a miraculous Defeat, which it may be was that of Hezekiab, though he applies it to Sethon King of the Ægyptians. His Story is well worth our observation, which runs thus: After this (Anylis) the Pricst of lib 2. M. Vulcan, by name Sethon, reigned, who la i natov abusing the Men of War of the Fout + ipea gyptians, and contemning them as not F'Hoai- useful to him, besides other Ignominies 58, The deprived them of their Lands, which had been given to every Company of Leswight. Twelve by the former Kings. Whence it bapned, that when afterwards Sanacharib, the King of the Arabians and Affyrians, invaded Ægypt, the Ægyptian Soldiers refused to affist bim. Then the Priest destitute of Counsel, shut bimself up, lamenting before the Image bow much he was in danger to suffer; in the midst of his Mourning falling a-Ilcop, a God appeared to bim, incouraging him that he should suffer no distress, if he would march against the Armies of the Arabians; for he would fend him Succour. He therefore giving credit to this Dream, taking with bim such Volunteers of the Egyptians as followed bim, proched his Army at Pelufium, for there Egypt is easiest

invaded: Neither did any of the Soldiers follow him, but Trades men, and Greaves. Artificers, and Merchants. Coming the ther by Night, an infinite number of Mice entring up in his Enemies, grateed their Quivers and Bows, and the Leathers of their Shields, fo that the next day the Enemies destitute of Arms, fled, many of them being flain. And therefore now this King stands in the Temple of Vulcan, in a Statue of Marble, holding in his hand a Mouse with this Inferrption, He that looks upon me, L't him be religious. League with the Ægyptians, hoped to overthrow the Babylonians. This League we find intimated in ' Ezekiel; and we read in d Jeremiah and · Josephus of Succours and Affistance sent by the King of Ægypt, when Zedekiah and fe-rusalem were first distressed by the Chaldeans, or Forces of the King of Babylon. Then 7.6,8. Pharaoh's Army war come forth out of Æ-gypt, and when the Chaldeans that be-

fieged Ferusalem, heard tidings of them, they departed from Jerusalem. The fame is reiterated by him: Behold Pharab's Army which is come forth to help you, shall return to Ægypt to their own Land. And the Chaldeans Shall come again, and fight against this City, and take it, and burn it with All which we fee was performed by Nebuchadnezzar in the eleventh Year of Zedekiah; and a Judgment also denounced against the King of Ier. 44. Ægypt. Thus faith the Lord, Behold, I will give Pharaoh Hophra King of Ægypt, into the hands of his Enemies, and into the hand of them that seek his Life; as I gave Zedekiah King of Judah, into the hand of Nebuchadrezzar King of Babylon, his Enemy, and that fought his Life. The same is " Ezek, 30. often threatned by the Prophet " Ezekiel, who lived in the time of Hezekiah, as Feremiah did: I am against Pharaoh King of Ægypt, and I will scatter the Ægyptians among the Nations, and will disperse them throughout the Countries: And I will strengthen the Arms of the King of Babylon, and put my Sword in his hand, but I will break Pharaob's Arms. Which Prophecies we may discover most manifeltly to have been fulfilled in the reign of Apries, as 'Herodotse names him, or Apryes, as Diodorus calls

· Herod. lib. 2. \* Diodor. lib. 1.

The whole Story and Manner is at large in Herodotus, neither did divine Venge- " Hero ance long forbear to purfue the Traitor. lib. 2. For Cambyses the King of the Persians and of Babylon, coming with an Army against him, possess d himself of Ægypt, as the Prophets had forerold. Nor could the Agyptians ever to this day recover the Monarchy. For after the Persians succeeded the Macedonians, after them the Romans, then the Arabians, next the Mamalukes or Circaffians, and last of all the Turks or Scythians. So that we may conclude from the Occurrences then happening, (the Relations of Herodotus exactly agreeing with the Threatnings of the Prophets, ) as also from the computation of Times, and from the affinity and analogy of Names, that Hophra, and Apries, or Vaphres, must have been the very same Ægyptian King coetaneous and concurrent with Zedekiah.

To reassume then what hath been demonstrated by us: From the migration of the Ifraelites out of Agypt, under the conduct of Moses to the building of Solomon's Temple, are Four hundred feventy nine Years complete; and from the building of the Temple to the destruction of it, are Four hundred and thirty Years and fix Months. But because it is not probable, that amongst fo many Kings, all of them should have reigned completely fo many Years as are expressed in the Text; it being the usual stile of Kings to reckon the Years current of their Reign as complete, I shall limit this uncertainty hetween CCCCXX and CCCCXXX Years, which is a sufficient Latitude. If any one should defire a more exact Calculation, he may compute them by comparing other places of the Scriptures with these, to be but CCCC XXV Years current, according to the Opinion of the most Reverend and Judicious Primate of Ireland, to which I willingly subscribe; though either computation be sufficient for my purpose.

This destruction of the Temple, by our best Chronographers, is placed in the first Year of the forty eighth Olympiad, and in the bundled and sixtiers.

nineteenth (as the Scripture often makes mention) of Nebuchodonofor, the Son of Nabolassar, (as Be-Nacexosorbeog ] o rosus in Fosephus names him,) which Nabolaf.

in his Canon Regnorum fucceeds. The nearness of the Names, and agreement of the Times from Cyrise, in whom the facred Scriptures and prophane Authors equally concur, do frongly prove them to be the fame. Wherefore we may conclude, that from the time of Moses, or the migration of the Israelites out of Ægypt, or from the end of Amenophis, (coetaneous with Moses,) the last King of the eighteenth Dynasty, (as Eusebine out of Manethos ranks him, ) to the Reign of Apries, or Vaphres, or Hophra, the eighth King of the twenty fixth Dynafly, (according to the same Eusebius following Manethos,) being coetaneous with Zedekiah King of Judah, and Nebuchadnezzar King of Babylon, are IO CCCC IV Years, and from Mofes to the first Olympiad IO CCXV and not CIOLXXX as they who make Moses as ancient as Inachus affirm. In which space we may with much certainty, if we give credit to Herodotus and Diodorse, place the Kings the Founders of the three greatest and faireft Pyramids; which is the principal Herodot. intention of this Discourse. For both lib. 2. Dio- of them describe these to have reigned many Ages before Apries, and long after Sefoffris the Great. Which Sefoffris, or Sesoosis, as Diodorus also stiles him, must have been the same King whom Manethos in Fosephus calls Sethosis, and Ramesses, and Respects, Son to we may lose our selves in it, ) we have no other possible means left, after the

Greek names Sethos, the Latin Tranflations of St. Hierom, both MSS. Greaves and printed Copies Sethus, and by all of them is the first King of the XIX Dynasty. The great Acts and Conquests assigned by Herodotus to Sefofiris, and as great attributed by Manethos to Sethofis, or Ramesses, which cannot well be applied to any other precedent or subsequent Kings, together with the Relation of them both, that while he was in pursuit of his Victories abroad, his Brother, whom

mais, and Danaus (in Herodotus his Name is omitted,) rebelled against him at home. and the nearness of the time, which may be collected out of both, do very much confirm the probability of this Affertion. Sefostris then, and Sethofis, being one and the same, is by Manethos in Josephus ranked immediately after Amenophis, (coeta-taneous with Moses, as we have proved,) and in the same Manethos in the Tradition of Eu. sebius after Menophus, that is Amenophis, both in the Greek and Latin Copies. Wherefore the Founders of these Pyramids having lived after Sesostrie, must like-wise have been after Amenophis. If we will come to a greater precifeness yet of time. for this Latitude of Nine hundred and four Years, which we affigned from Moses to the destruction of the first Temple, in the time of Zedekiah King of Judah, and Apries King of Ægypt, is so great, that

Manethos names Ar-

veral others. From who descended the Danaida, c of the Races of the Kings Argos; of all which there frequent mention in the G Historians and Chronos phers: Wherefore we c not be ignorant either of i naus or of his Brother's til naus or of his Brother's till I hall only add, for fart illustration, what I find Africanes, Aspecie & & Leave of the Africanes, Aspecie & & Leave of the Africanes, Aspecie & & Leave of the African of סוֹאם סבי אוֹן טהוֹצ בדח בוו. Vol. II.

of Cheops or Chemmis, of Cephren or Greaves. Chabryis; or of Mycerinus, the Authors of the three greater Pyramids, mentioned by Herodotus and Diodorus; or of Asychis, the builder of a fourth, according to Herodotus. Wherefore what their Writings have not supplied us with that Reason must. For fince these Ægyptian Kings, as we have proved, lived between Amenophis and Apries, " Eufeb. and by " Eusebius out of Africanus, Chron. Amenophis is the last of the XVIII Dynafty, and Apries or Vaphres, the VIII of the XXVI Dynafty, we must necesfarily place them in one of the intermediate Dynastics. But seeing all the intermediate Dynastics have their peculiar Kings, unless it be the XX, we have no reason to exclude them, and

pers: But rather, with great probabi-Liv. I. 1. lity, (for I must say here with \* Livy, Quis rem tam veterem pro certo affirmet?) we may affign to them the XX Dynasty. In which we find not the Name of any one King, but yet the space left vacant of CLXXVIII Years,

to bring these in their places as Usur-

according to Eusebius.

Here therefore we shall place First, Cheops or Chemmis, the Founder of the first Pramid, who began his Reign in the CIO CIO CIO CCCC XLVIII Year of the Julian Period, that is CCCCLXXXX Years before the first Olympiad, and IOCLXXVII before the first Destruction of the Temple, and CIO CCLXVI before the beginning of the Years of our Lord. He reigned Fifty Years, faith Herodotus, and built this Pyramid, as Diodorus observes, a thousand Years before his time, or the CLXXX Olympiad, whereas he might have faid a thousand two hundred and feven.

Secondly, Cephren of Chabryis, the Builder of the fecond, who reigned fif-

ty ' fix Years. y Herod.

lib. 2. Dio-Thirdly, Mycerinus, the Erector of dor. lib. 1. the third, feven Years.

Fourthly, Asychis the Author of the How long these two reigned is no Fifthly, Any sis the where expressed. • menophis.

Sixthly, Sabachus the Æthiopian. He conquered Ægypt, and reigned \* fifty

lib. 2. Dio- Years. dor. lib. 1.

The Sum is CLXIII Years, this being fubducted out of CLXXVIII Years. (the whole time allowed by Eufebius

to this Dynasty,) the remainder is XV Years; which space we may without any inconvenience, divide between A-Sychis and Anysis.

If any shall question why the Names of these Kings are omitted by Manethos, an Ægyptian Priest, in the XX Dynafly, I can give no other reason than

what we read in Herodotus : . Thefe Kings (speaking of Cheops and Cephren,) the Ægypti-ans out of hatred will not so much as name, but they call them the Pyramids of Philition a

Τέτες του μίσε ... κας αθέλεσι Αίζυπ Ιοι όνοmaker, and is Tas wurg. μίδας κόμετοι ποίκου φι. λ.Πίων Θ, ος τέτον τ΄ χρόνον ενεμε κ. Μώςα χ. Ταῦτα ταxweia. Herodot. lib. 2.

Shepherd, who in those times at that place, fed his Cattel. The which hatred, occasioned by their Oppressions, as b Diodorus also mentions, might b Diodor. cause him to omit the rest, especially lib. 1.

Sabachus, an Æthiopian, and an Usurper.

Following this computation of Eufebius of CLXXVIII Years for the XX Dynasty, and not that of Africanus, who affigns only an CXXV, of whom · Joseph Scaliger hath this Cen- · Scalig. fure, In iftis dynastis, aliquid turbasse in Eusch. videtur Africanus, ut consuleret ratio-Chron.

nibus fuis; it will follow by way of consequence, as the most Reverend and Learned Primate of Ireland, in his Chronologia Sacra hath fingularly well

observed.

First, That the XVIII Dynasty ends with the migration of the Israelites out of Ægypt, and with the death of Amenophis; which is clearly fignified by Manethos, and the Times of Belus and Danaus, noted by the Greek Chronographers, do evidently confirm it. I mean the Ægyptian Belus or Ameno-phis, the Father of Ægyptus, or Sethosis and Danaus, flot the Babylonian Belus the Father of Ninus, whom Mythologists confound with this, feigning him to have transported Colonies out of Ægypt to Babylon. The time allotted by Thallus, an ancient Chrono-and En grapher, to Belus of CCCXX Years sebbefore the Trojan War, doth exactly agree with this Ægyptian Belus or A-

Secondly, That the XX Dynasty will receive those fix Kings, which out of Herodotus we have placed there; the number of whose Years exceed the time

limited by Africanus.
Thirdly, That the XXII Dynasty will fall upon the latter time of King Se-

lomon, whereby Sesonchis the first King of it, may be the same with Sesac, or · Kings Shifhac, who in the \* fifth Year of Re-14.25, 26. hoboum, the Son of Solomon, invaded Judga; which was the only reason that moved 'Scaliger to suspect, that f Scaling. in Euleb. formething had been altered by Africanus in these Dynasties.

By the same series and deduction of Times, we may conclude, that the Labyrinth adjoining to the Pyramid of Osymanduas, raised by a common ex-\*Herodor. pence of the XII Kings, who \* fucceeded Sethon to have been CIO CIO lib. 2. CCCXXIV Years fince, ID CLXXX before Christ. For Sethon living in the

time of Sennacharib, and these immediately following Sethon in the Govern- Greave. ment of the Kingdom, th y must have reigned either in the lume Age the Scripture affigns to Sennacharib, or not long after.

Those other Pyramids, the one of Osymanduas in biodorus, or Ismandes, b Diodor. in ' Strabo; and those two of Mæris lib. 1. or Myris, in herodotus, and Diodo Strabo, rus, it is evident they preceded Sefo herodotus, firs the Great, and must therefore have herodot her been above three thousand Years fince, Diodor but by how many Kings or how many lib. 1. Ages, is hard to be defined.

Of the End or Intention of the PYRAMIDS, that they were for Sepulchros; where, by the way is expressed, the manner of Imbalming used by the ÆGYPTIANS.

↑HAT thefe Pyramids were intended for Sepulchres and Monuments of the Dead, is the constant Opinion of most Authors,

Two of Basilies Tra-Jasudasarles autas saulois τάφης σωέβη μηθέτε-gradith τ συκαμίση α-lapwa. Diod. Sic. lib. 1.

which have writ of this Argument. \* Diodorus expresly tells us, that Chemmis and Cephren, although they designed (thefe two greater)

for their Sepulchres, yet it hapned that neither of them were buried in

à rapis.

them. b Strubo judges Terlacianila of the first to have been the Seseon tie oppus of the seon ties of the se (Memphis,) there is a certain Brow of an Hill

in which are many Pyramids, the Sepulchres of Kings. And in particular, he calls another near the Lake of Ma-'Ivarsh's ris, the 'Sepulchre of Imandes. To ovoua which also the Writings of the Arabians are consonant, who make the and upon him were Charallers writ three greater the Monuments of Saurid, Hougib, and Fazfarinoun. the Sabaans the first of them, the Sepulchre of Seth, the second of Hermes, the third of Sah, from whom they suppose themselves denominated Sabeans, as we formerly mentioned. And if none of these Authories were extant, yet the Tomb

found in the greatest Pyramid to this day of Cheops, as Herodotus names him, Pyramid to be opened Tabout eight hundred Years fince, ] ' they found in it towards the top a Chamber, with an hollow Stone, in which

there was a Statue like a Man, and within it a Man, upon whom was a Breast-plate of Gold may have recourse. set with Jewels, upon

this Breast-plate was a Sword of inestimable price, and at his Head a Carbuncle of the bigness of an Egg, shining like the Light of the Day, with a Pen, which no Man underftood.

But why the Ægyptian Kings should have been at fo vast an Expence in the building of these Pyramids, is an Inquiry of an higher nature. 'Aristotle Polit. judges them to have been the Works of Polit. Tyranny: And Pliny conjectures, that they built them, partly out of Ostenta-

or Chemmis, according to Diodorus, puts it out of Controversie. Which may farther be confirmed by the Testimony of d Ibn Abd Alhokm an Arabian, where he discourses of the Wonders of Ægypt, who relates, that after Almamon the Calif of Babylon, had caused this

otrofa.

But the true Reason depends upon higher and more weighty Confiderations; though I acknowledge thefe alledged by *Pliny* might be fecondary Motives. And this fprang from the Theology of the Ægyptians, who, as Scrvius shews in his Comment upon these words of b Virgil, describing the Funeral of Polydorus,

Aneid. lib. 3.

#### — Animamque Sepulchro Condimus. -

believed, that as long as the Body endured, so long the Soul continued with it, which also was the Opinion of

1 Stoici medium sequentes, tam diu animam durare dicunt, quam din durat de corpus. Serv. Com. in lib. 3. pus.

Æneid. \* Unde Ægypti periti sa-pientia condita diutius reser-vant cadavera, scalicet ut anima multo tempore perdinet, (5 corport fit obnoxia, ne cito ad alived transcat. Romani centra faciebant combinentes cadavera, ut statim anima in generalitatem, id eft, in suam naturam rediret. Serv. Com. in lib. 3. Æncid.

the 'Stoicks. ' Hence the Ægyptians skilful in Wisdom, do keep their Dead imbalmed fo much the longer, to the end that the Soul may for a long while continue, and be obnoxious to the Body, lest it should quickly pass to another. The Romans did the contrary, burning their Dead, that the Soul might suddealy return into the generality, that is, in-

to its own nature. Wherefore that the Body might not, either by Putrefaction be reduced to Dust, out of which it was first formed, or by Fire be converted into Ashes, (as the manner of the Grecians and Romans was,) they invented curious Compositions, besides the intombing them in stately Reconditories, hereby indeavouring to preferve them from Rottenness, and to make Pompon them Eternal. Nec cremare, aut fodere fas putant, verum arte medicatos intra penetralia collocant, faith Pomponius Mela: And Herodotus gives the 'shall describe out of Herodotus and Reason why they did neither burn nor Herodor. Book, of the cruelty of Cambyfes, and lib. 3. Er of his commanding that the Body of Janabo in the body of the body of the body of the body of the state of the body of the body. For

the Persians imagin the Fire to be a God, and neither of them are accustomed to burn the dead Body. The Persuans for the reason before alledged, because they conceive it unfitting for a God to devour the Carcass of a Man; and the Agyptians, because they are persuaded the Fire is a hving Creature, devouring all things that it receives, and after it is satisfied with Food, dies with that which it hath devoured. Nor is it their

custom of groing the dead Body " to Beasts, but of imbalming (or falting) it, not only for this reason, but that it may not be consumed with Worms. The term used by Herodotus Taesxaliew, of fulting or imbalming the Dead, is also used by Baruch and by " Plato, and by <sup>9</sup> Lucian in his Difcourse de Luciu, treating of the feveral forts of Burial practifed by feveral Nations. 'The Grecian doth burn [the Dead the Persian bury, the Indian doth anoint with the Fat of Swine. the Scythian eats, and the Ægyptian ταριχώς, embalms, (or pouders.) Which manner also is alluded to by Antoninus under the word τάριχ Φ, that which the other day was excrementitious Matter within few days shall

" This barbarous Cuftom is full practifed in the Fall-Indies, as Teixen a ( who from his own Travels, and the Writings of Emir Cond, a l'erfian. hath given us the best Light of those Countries,) truly intorms us. Wherefore, we may give credit to that of Tully: Magorum mos est non humane corpora suorum, n's à feris fint antea lamata, In Hyrchania Plebs publicos alit canes, optimates domelius, (Nobile autem genus cinum illud scimus esse,) sed pro sua quijque facultate parat, à quibus lanietus, eanique optimum illi effe cenfent jepulturam. euher be τάριχΦ, an imbalmed Body, or meer Ashes: In the one expressing the Custom of the Agyptians, in the other of the Romans; where Doctor ' Cafaubone, the Learned Son of a Cafaub. Learned Father, hath rightly corrected ann in 1.4 the Errors of those who render  $\tau \alpha' e_f$ . Annon.  $\chi \Theta$  to be a certain fort of Fish. By this means the falling the Palm. this means then falting the Body, and imbalming it, (the manner of both we Diodorus,) the Soul was obliged (according to the belief of the Ægyptians) to abide with the Body, and the Body came to be as durable as Marble. Informuch as Plato, who lived in Ægypt with Eudoxus no less than XIII Years, as "Strabo witnesseth, brings it for an Argument in his Phedon to prove

the Immortality of the Soul. by the

Mel. I. 1. c. 9.

long duration of these Bodies. Which furely would have been more conclusive with him, could be have imagined that to these Times, that is, till CID CID Years after him, they should have continued to folid and intire, as to this day we find many of them. Where-

\* Ægyptis vero soli credunt Resurrectionem, quia diligenter curant cadavera mortuorum, morem enim habent ficcare corpnu, & quasi anea reddere, Gubbaras ca vocant. Aug. Serm. 120. De Diverfis.

fore \* St. Augustin truly affirms, that the Ægyptians alone believe the Refurrection, because they carefully preferve their dead Corpfes. For they have a custom of drying up the Bodies, and rendring

them as durable as Brajs; these [in their Language] they call Gabbares. Whence the Gloss of Isidore, Gabares mortuorum, in Vulcanius, his Edition; 'Sponda- or as ' Spondanus reads Gabares mor-

nus de Ca-tuorum condita corpora. met. facris,

The manner how the Ægyptians pre pared and imbalmed these Bodies, is very copiously, and by what I observed, very faithfully described by Herolotus and Diodorus, and therefore I shall put down their own words: Their Mourn-\*Herodo- ing, faith \* Herodotus, and manner of us, lib. 2. Burial are in this kind: When any option of Man of Quality of the Family is dead Man of Quality of the Family is dead. all the Women besmear their Heads and Faces with Dirt, then leaving the Body with their Kindred, they go lamenting up and down the City with their Kins-folks, their Apparel being girt about them, and their Breasts naked. On the other fide, the Men having likewise their Clouths girt about them, beat themfelves. These things being done, they Amongs carry it to be imbalmed. For this there these imbalmed Bothese, when the Body is brought to them,

hiptian Idols, Onmi-genumque Deum monstra, do Litrator Anu-bis, to use Virgil's Expression, (An. 8.) Some of these are in great, fome in little Portractures, formed either of Potter's Earth baked, or elfe of Stone, or Metal, or Wood, or the like, in all which Kinds I have bought fome. One of them tor the rarity of the Matter, and for the illustration of the Scriptures deserves to be here mentioned; being cut out of Magnes, in the form and bigness of the xdvbag , or Sca-

rabaus; which as \* Plutarch testifies, was worshiped by the Agyptians, and was by Military Men, ingraven as an Emblem on their Seals. To Tells 2 ma- which fort of Idols, it may be Moses alluded, μαχίμοις when speaking of the Gods of Agyp he terms

\*\*Aγγρ the Original is rendred by Junus, and Tremel

\* These Coffins are fashiond in the Similitude of a Man, or rather refembling one of hose imbalined Bedies, which is we deteribed before, are cound with Ribbands, and wrapped in a Shroud of Li-For as in those there is he shape of a Head, with a kind of painted Vizard, or hace fafined to it, but no apperrince wi hour of the Arms and Legs. So is it with thefe Collins, the top of them haththe thate of the Head of a bian, with a bace painted on n refembling a Woman, the refidue being one continued Trunk . At the end of this Trunk is a Pedeital, iomewhat broad, upon which re fto d upright in the Reconditory, as Herodotus here mentions. Some of these Cof-fins are handlemly painted without, with feveral Hieroglyphicks. Opening two of them, I found within, over the Body, divers Scroles fastned to the Linen Shrowd. These were painted with sacred Characters, for the Colours very lively, and fresh, amongst which, were in a larger Size the Pitures of Men, or Women, fome headed like Hawks,

1 me like Dogs, and sometimes Dogs in Chards standing alone. These Scroles either ran down the Belly and Sides, or elfe were placed upon the Knees, and Legs. On the Feet was a Linen Cover, (and so were all the Seroles before-mentioned of Linen,) painted with Hieroglyphicks, and saftioned like to a high Shpper. The Breast had a kind of Breast-plate covering it, made with Folds of Linen cut Scolop-wife, richly painted, and guilt. In the midst of the bead at the top of it, was the bace of a Woman with her Arms expanded, on each fide of them, at the two outmost ends the Head of an Hawk fairly gilt, by which they re-presented the Divine Nature, according to Plutarch (in his Book Ve IJide & Ofinde,) as by a Serpent with the Tail in his Mouth, the Revolution of the Year was refembled; in which had also I have seen fair Sculptures in Gems, found at Are indita: And as by the Sign of the Cross they did den to tition evenom, in Ruffinus's expression. Of these Crof-16.31 have feen feveral amongst their Hieroglyphicks; some prented, and some ingraven in this manner + and some order, amongst their Mummies formed of Stone (or baked both) in this ligure.

At Rome, on the Statue of Ofiris, it is ingraven us. T. Which may serve for confirmation of what Sothus . T. is ites, and Sozomen, relate, that at Alexandria, the Temple of Sarapis or Ofiris (for

A , Ymbry ) enge geg ky \* Plutarch judges Sarapis and Ofiris to be one and the Plat. de II. & Ofir. fame,) being by the com-mand of Theodofius demolish-

ed, they found Characters refembling Cooffes cut in Stone; there in the Interpretation of the Wife Men of Azypt, signified \$100 in graphia of the Wife Men of Azypt, signified \$100 in graphia of the form coasioned the Conversion to Christians of the content of the Gentles. Sor. Hist. Eccles. lib. 5. cm. 15.

Body. When they have done this, they restore the Body to the Kindred, doing nothing more. The third manner of preparing the Dead, is of them which are of meaner Fortune : With Lotions they wash the Belly, and dry it with Salt seventy Days, then they deliver it to be carried away.

Diodorus Siculus, as his manner is, Diod. Sic. more diffunctly and clearly with fome lib. 1. remarkable Circumstances, expresseth the same thing. If any one die amongst the Ægyptians, all his Kindred and Friends casting durt upon their Heads. go lamenting about the City, till such time as the Body is buried. In the mean time, they abstain from Baths and Wine, and all delicate Meat; neither do they wear costly Apparel. The manner of their Burial is three fold. The one is very cossily, the second less, the third very mean. In the sirst, they say there is spent a Talent of Silver, in the second twenty mina, in the last there is very little Expence. Those who take care to dress the Body are Artizans receiving this Skill from their Ancestors. These shewing a Bill to the Kindred of the Dead, of the Expences upon each Kind of Burial, ask them in what manner they will have the Body to be prepared. When they have agreed upon it, they deliver the Body to fuch as are usually appointed to this Office. First, he which is called the Scribe, laying it upon the ground, describes about the Bowels on the left side, how much is to be cut away. Then be which is called the Cutter, taking an Æibiopick Stone, and cutting away as much of the Elesh as the Law commands. presently flies away as fast as he can; they which are present, running after him, and casting Stones at him, and curfing him, (hereby) turning all the Execration upon him. For whofoever doth offer violence, or wound, or do any kind of injury to a Body of the same nature with himself, they think him worthy of hatred. But those which are called the Imbalmers, they esteem them worthy of Honour and Respect. For they are familiar with their Priests, and they go into the Temples, as holy Men without any Prohibition. As foon as they meet about the dressing of the disselled Body, one thrusting his Hand by the Wound of the dead Body into his Enerails, takes out all the Bowels within, besides the Heart and Kidneys: another cleanses all

the Entrails, washing them with Wine made of Palms, and with Odours. Lastly, the whole Body being carefully anointed with the Juice of Cedar, and other things for above thirty days, and afterwards with Mirrhe and Cinamon, and fuch other things, which have power not only to keep it for a long time, but alfo to give a fweet Smell, they deliver it to the Kindred. This being thus finished, every Member of the Body is kept so intere, that upon the Brows and Eye lids, the Hairs re-

f I find in the Travels of nonfieur de Breves, Embas-ador at Constantinople, that this being in Ægyt about orry Years fince, they law ome of these imbalmed Bodies, with Hairs remaining on heir Heads, and with Beards; which I eafily believe. Nous n vismes aucuns la teste de les neds descouverts (à cause que es dites bandes estorent pourns,) qui avoient encore les beveux, la harbe & les ongles. Les Voyages de M. de Breves.

main, and the whole Shape of the Body (continues) unchanged, and the Image of the Countenance may be known. Hence many of the A.gyptians keeping the Bodies of their Ancestors in magnificent Houses. do see so expressly the Faces of them dead mamy Ages before they were born, that beholding the bigness of each

of them, and the dimensions of their Bodies, and the lineaments of their Faces, it affords them wonderful content of Mind, no otherwise than as if they were now living with them. Thus far Diodorus. By which Description of his, and that of Herodotus, we see the

· Condiunt truth of what \* Tully writes: The Ægyptians imbalm their Dead, and mortuos, or keep them at home: Amongst themeos domi schoes above-ground, faith Sextus Em-Tuscul. qu. pericus: And h intra penetralia in lıb. r. Pomponius Mela's Expression: Lib. 1. in lettulis, according to Athanasius in the Life of Antony. Lucian adds farсар. 9.

ther in his Tract de ' ΟὖτΟ μθύτοι ή (λέζω lullu. They bring the O italy benedict trees, cuiderton & for trees, cuiderton & superstant in the consideration of the condition dried Body (I speak what I have scen,) as a Gueft to their Feasts, and Invitations, and often times one necessitous of Money is Sup-

plyed, by giving his Brother or his Father in Pledge. The former custom is intimated by Solins \* Italicus, speaking of the several Manners of Burial practifed in divers Nations.

Ægyptia tellus Claudit odorato post funus stantia Corpora. & à menfis exanguem haud levarat umbram.

The latter is confirmed by Diodo Condo Greave. depositing for a Pleage the Bodies of Diodor. their dead Parents. It is the greatest \$\int\_{\text{Diodor.}}\text{Ignominy that may be not to redeem} them; and if they do it not, they themselves are deprived of Burial. And therefore fays he immediately before, Such as for any Crime or Debt, are hindred from being buried, are kept at home without a Cossin, whom after-wards their Posterity growing rich, discharging their Dehts, and paying Money in compensation of their Crimes, honourably bury; for the Ægyptian's Glory, that their Parents and Ancestors were buried with Honour.

This manner of the Ægyptians imbalming, we find also practised by Fo-Scph upon his Father Facob in Ægypt :

And if we will believe Tacitus, " the Hebrews (in general) learned dicisse, condere cadavera, po from the Ægyptians rather to bury their Dead than to burn them. Where " Spondanus in-

" Judeos ab Ægyptiis di tiùs quam cremare. Tacul Hittor, lib. 5.

" Spondan. lib. r. part 1 stead of condere cada. cap. 5. de cometeriis facris. vera, reads condire, as

if it had been their custom of poudering or imbalming their Dead. Wash them and Anoint them we know they did, by what was done to our Saviour and to the Widow Dorcas; and long betore it was in use amongst the Gentiles, as well as Jews, as appears by the Funeral of Patroclus in Homer, and An Austin of Missenus the Trojan in Virgil.

Te, xì HAE Exain. Had. lib. 19. " Aneid. lib.

Corpusque lavant frigentis, & ungunt.

And of Tarquinius the Roman in Ennius:

Tarquinii corpus bona fæmina lavit, U unxit.

But certainly the Ægyptian manner of Imbalming, which we have described out of Herodotus and Diodorus, was not received by them; or if it were, Martha the Sister of Lazarus John 11. needed not to have feared, that after four 39. days the Body should 4 They have stunk. which infer out of the bunc ritum ex Agypto fees Funeral of Asa, King of Fudab, that it was

bility for their Affertion. ' We read, Greaves that they buried him in his own Sepulchre, which he had made for himself in the City of David, and laid him in the Bed, which was filled with sweet Odors, and divers kinds of Spices prepared by the Apothecaries Art; and they made a very great burning for him. This very great burning is so contrary to the pra-ctice of the *Ægyptians*, to whom it was an abomination, as appears by the Authorities before cited of Herodotus and Mela, besides the little affinity of filling the Bed with fweet Odors, and the Ægyptians filling the Body and the place of the Entrails with fweet Odors, according both to Herodotus and Diodorus, that we shall not need to in arge our felves in any other Confutation. But as for that of Jacob and Joseph, the Father and the Son both living and dying in Ægypt, the Text is clear, they were imbalmed after the fashion of the Gen. 50. Ægyptians. And Joseph commanded his Servants the Physicians to imbalm his Father, and the Physicians imbalmed

Ifrael, and forty days were fulfilled for him (for so are fulfilled the days of those which are imbalmed; ) and the Ægyptians mourned for him threescore and ten days. In the same Chapter we Gen. 50. read, So Joseph died being an hundred and ten Years old, and they imbalmed him, and he was put in a Coffin in Ægypt. Both which places are very conionant to the Traditions of Herodotus and Diodorus, and may serve to shew what necessity there is of having oft times recourse to the Learning of the Heathen, for the illustration of the Scriptures. Forty days were fulfilled

for the imbalming of Facob: This " Diodo-<sup>11</sup> Diod. Sic. lib. 1. Κατ θόλε 3 σαν το σώμα το μ rus tells us was their कहळारा प्रस्तिस्य में पायोग स्रोताह टेलाम्बर्सिकः दिख्या क्रिकार्यक्षेत्रस्य प्रस्तित्र custom, They anointed the dead Body with the Juice of Cedar, and onorla, हमसीय ज्यापुरमा में xivather things for above μώμω, &cc. thirty days, and after-

ward with Myrrhe and Cinamon, and the like; which might make up the residue of the forty Days: And the Egyptians mourned for him threescore and ten Days. This time out of Herodotus may be collected to have been from the first Day of the Death of the Person, till the Body was returned by the Phylicians after seventy Days perfeltly imbalmed. The Text says, And Herod very lively represented by \* Herodotus.

The Kindred receiving the dead Body from the Imbalmers, make a Coffin of Wood in the similitude of a Man, in which they put it. This Coffin then, as it is probable, of Joseph, was of Wood, and not marmorea theca, as Cajetane imagines, the former being the cuftom of the Ægyptians. Besides, that this was much eafier, and fitter to be carried by the Ifraelites into Canaan, marching on foot, and for ought we read de-stitute of Waggons and other Car-

The Tradition of in their Commentaancient Hebrews ries, is very probavinitatis, alteram Josephi, il

of the Covenant, this the Ark (pr Coffin) in which they carried Foseph's Bones out of Ægypt. This Coffin (if it be lawful for me to conjecture after the Revolution of Three thousand Years,) I conceive to have been of Sycomore, (a great Tree very plentifully growing in Ægypt,) of which fort there are many found in the Mummies, very fair, intire, and free from Corruption to this day. Though I know the Arabians and Persians have a different Tradition, that his Coffin was of Glass. 2 They

Note, In Mr. Greave Edition of this Work, pri put his blessed Body, after they had washed it, ed at London, Anno 164 into a Coffin of Glass, the Arabick is cited at lar and buried it in the to which the curious Read Channel of the River may have recourfe. Nilus, faith Emir Cond, a Persian.

the Children of Israel, saying, God will
surely visit you, and ye shall carry up
my Bones away hence with you: For
his Redu being houseled, and then imhis Body being boweled, and then imbalmed, after the manner of the Egyptians, not only the Bones, but the Skin, the Flesh, and all besides the Entrails, (which according to Plutarch, were Plat thrown into the River,) would have Sapien continued perfect and intire, a mach conviv

longer space than from his Death to their migration out of Ægypt.

Having thus by Art found out ways to make the Body durable, whereby the Soul might continue with it, as we thewed before, which elfe would have been at liberty to have paffed into fome other Body, at his also

of Hewres 3 2 4 3 7 be for Algorial to add with the control of the

other Body, dthis also being the Opinion of the Ægyptians, from whom Pythagoras borrowed he μειμψύχωσις, or Transanimation, (the which made him to forbid his Disciples

the eating of Fleth, Ne force bubulam quis de aliquo proavo suo obsonaret, as Tertullian wittily speaks;) the next care of the Egyptians was to provide Conditories, which might be as lasting as the Body, and in which it might continue safe from the injury of Time and Men. That occasioned the ancient Kings of Thebes in Egypt to build those, which Diodorus thus describes: There are, they say, the wonderful Sepulchres

ic. 110. I. .vai j pasi nj of the ancient Kings, which in magni-. ficence exceed the imitation of Posterity. Of these in the sacred Commentaries, is Xalor forty seven are mentioned, but in the time of Ptolemaus Lagi, there remained but XVII. Many of them at our being in Ægypt, in the hundred and eightieth Olympiad, were decayed; neither are these things alone reported by the Ægyptians out of the Sucred Books, but by many also of the Gracians, who in the time of Ptolemans Lagi went to Thebes, and baving compiled Histories, (among st whom is Hecateus,) agree with our Relations. And this might occasion also those others recorded by Strabo, which he calls equaia, or Mercuriales tumulos, seen

by him near Siene, in the upper parts of Ægypt, very strange and memorable, Passing in a Charles of Strabo, lib. 17. "Habber riot from Siene to Philips significant apholes Plain, about an hundred with respect to the strain, about an hundred with respect to the strain and the way always week the strain and the way always and signed a, &c. faw in many places mer-

curial Tombs; a great
Stone, smooth, and almost spherical, of
that black and hard Marble out of which
Martars are made, placed upon agreater
Stone, and on the top of this another,
some of them lying by themselves; the
greatest of them was no less than twelve
Feet diameter, all of them greater than
the half of this. Many Ages after,

when the Regal Throne was removed from Thebes to Memphis, the same Re- Greaves. ligion and Opinion continuing amongst the Ægyptians, that so long as the Body indured, so long the Soul continued with it, not as quickning and animating it, but as an Attendant or Guardian, and as it were unwilling to leave her former Habitation: It is not to be doubted, this incited the Kings there, togegether with their private Ambition, and thirst after Glory, to be at so vast Expences in the Building of these Pyramids; and the Ægyptians of lower Quality, to spare for no cost, in cutting those Hypogea, those Caves or Dormitories in the Libyan Deferts, which by the Christians now a-days are called the Mummies. Diodorus Siculus excellently expresses their Opinion and Belief in this particular, together with their extreme cost of building Sepulchres, in these words: \* The

The Agyptians make small account of the time of two time of two times of ti

the living inns, because for a short space we inhabit these: But the Sepulchres of the Dead they name eternal Manssons, because they continue with the Gods for an infinite space. Wherefore in the Structures of their Houses they are little solicitous, but in exquisitely adorning their Sepulchres they think no cost sufficient.

Now why the \*\*Egyptians\* did build their Sepulchres often in the form of Pyramids, (for they were not aways of this Figure, as appears by those iemāa, or \*Mercuriales tumuli\*, before cited out of Strabo, which were spherical; and by those \*Hypogaa\*, or Caves still extant in the Rocks of the Desert,) Pierius in his Hieroglyphicks, or \*\*rather Anonymus Author\* at the end of him, gives several Philosophical Rea-

him, gives several Philosophical Rea- Ex Erufons: By a Pyranid, saith he, the discussed antient Ægyptians expressed the nature finem Hie-

Per Pyramidem veteres (Ægyptii) rerum naturam, & substantiam illam informem formas recipientem significare voluerunt; quod ut Pyramis à pundlo, dy summo fastigio incipiens, paulatim in omnes partes dilatatur, sic rerum omnium natura abunico principio dy sonte, qui dividi non potest, nempè à Deo summo opisice professa, varias deinde formas sucipit, dy in varia genera atque species dissinutiva, omniaque apici illi dy pundlo conjungit, à quo emnia manant dy sluunt. Verium dy alia bujus rei tatto nempè Astronomia reddi potest, dyc.

8 O

of things, and that informed Substance Greaves receiving all Forms. Because as a Pyramid having its beginning from a point at the top, is by degrees dilated on all parts; fo the nature of all things praceeding from one Countain and Beginming, which is indivisible, namely from God, the chief Work-mafter; afterwards receives several Forms, and is diffused ento various Kinds and Species, all subject it conjoins to that Beginning and Point, from whence every thing issues and flows. There may also be given another Reason for this, taken from Aftronomy: For the Ægyptians were excellent Astronomers, yea, the first invenack, and all things under it, into twelve Signs. ] will have each Sign to be a kind of Pyramid, the Basis of which shall be in the Heaven; (for the Heaven is the Foundation of Astronomy,) and the Point of it shall be in the Centre of the Earth; seeing therefore in these Pyramids all things are made, and that the coming of the Sun, which is as it were a Point in respect of those Signs, is the cause of the production of natural Things, and its Departure the cause of their Corruption, it seems very fitly that by a Pyramid, Nature the Parent of all Things, may be empressed. Also the same Agyptians under the Farm of a Pyramid, shademed out the Soul of Man, making under huge Pyramids the magnificent Sepulchres of their Kings and Heroes, to testifie that the Soul was still existent, notwithstanding the Body were dislotved and corrupted, the which should generate and produce another Bedy for it self, when it should seem good to the first Agent, (that in, the Circle of thirty six thousand Years being transacted:) Like as a Pyramid (as it is known to Geometricians,) the top of it standing fix'd, and the Base being moved about, describes a Circle, and the subale Body of it a Cone, so that the Circle ex-presses that space of Tours, and the Cone that Body which in that space is produced. For it was the Opinion of the Ægyptians, that in the Revolution of thirty fix thousand Tears, all things should be respond to their sommer State, Plate witnesses, that he received it from them; who seems also to me in his Timans, to attest this thing, that is, that our Soul hath the Form of a Pyramid which (Soul) according to the Commit which (Soul) according to the Commit which (Soul) according to the Commit mid, which (Soul) according to the fame Plato, is of a fiery Nature, and adhereth to the Body as a Pyramid doth to

the Basis, or ar Fire doth to the Fuel. Thus far the Anonymus Author in Pierius: Most of which Reasons of his are but pretty Fancies, without any folid Proof from good Authors. For he might as well fay, that the Ægyptians were excellent Geometricians, as well as Aftronomers, (as they were very skilful in both,) and that they made these Pyramids, to express the first and most simple of Mathematical Bodies; or else being excellent Arithmeticians, to represent the Mysteries of Pyramidal Numbers; or being well feen in the Opticks, to shadow out the manner of Vision, and the emission of Rays from luminous Bodies, as also the effluvium of the species intentionales from the Object, all which are suppofed to be Pyramidal. But this were to play with Truth, and to indulge too much to Fancy. Wherefore I conceive the Reason why they made these Sepulchres in the Figure of a Pyramid, was, either as apprehending this to be the most permanent Form of Structure, as in truth it is; (for by reason of the contracting and lessening of it at the top, it is neither overpressed with its own weight; nor is so subject to the finking in of Rain as other Buildings:) or hereby they intended to represent fome of their Gods. For anciently the Gentiles expressed them, either by Columns fashioned like Cones, or else by quadrilateral Obelisks, the Ægyptian manner; in which latter Kind, I have feen many standing very intire, some of them plain, and some with Hieroglyphicks inferibed. Now fuch Obelisks are but leffer Models of the Pyramids, as the Pyramids are but greater Kinds of Obelisks. The first Institu-

tion of them, as · Pli-Mitres an Agyptian

term Ofiris in Greek στολυόφθοθμον, manv Eyes, or many Rayes; the which being emitted, as the Opticks demonttrate, in Pyramidal or Conical Forms, might not unaptly by the Gentiles be represented in either Figure. Hence the

Phanicians, next Neighbours to the Ægyptians, and probably first imitators of this their Idolatry, worshipped the Sun, whom they named Elaugubalus, or as ancient Coins render him, Alegabalus, and some Inscriptions Heliogabalus, an Idol, in the Similitude of a Cone. PHerodian(1.5.)

Γ Τέτον [ἢ ἥλιον] οἰ Επιχώςιοι σέξησι, τὰ φοινί-The Phanicians worship the Sun, calling him in κων φωνη 'Ελπια Γα ζολίον καkun gwyn i racia ja Cago rac kules, vews 3 au tol με [i-50, &c. Hero-dan. lib. 5. their Language Elæagabalus; to whom there is cretted a very spacious Temple, allorned with Gold, plenty of Silver, and precious Stones. It

is not only worshipped by the Natives, but likewise the great Men, and Kings of the Barbarians every Year, with a kind of Emulation, send honourable Presents to the God. There is no Statue, as among the Greeks and Romans, which polished by hand, may express the Image of the God. But there is a certain great Stone circular below, and ending with a sharpness above, in the Figure of a Cone, of black Colour. They report it to have fallen from Heaven, and to be the Image of the Sun. This Idolatry by commerce with the Ægyptians and Phanicians, came afterward to be communicated to the Gracians, and other Nations; and from these, what at the first Institution was proper to the Sun, came Vol. II.

according to " licroby Superstition to be applied to their other Gods. Thus Tacitus (Lib. 2 Greaver Hift.) at Cyprus in the Temple

If we imagine upon the fides of the Basis, which is perfectly square, four equilateral Triangles mucually inclining, till they all meet on high as it were in a point, (for so the top seems to them which stand below,) then shall we have a true Notion, of the just dimension and figure of this Pyramid; the Perimeter of each Triangle comprehending Two thousand seventy nine Feet, (besides the Latitude of a Little Plain or Flat on the top, ) and the Perimeter of the Balis Two thoufand feven hundred seventy two Feet. Whereby the whole Area of the Basis ( to proportion it to our Measures, ) contains Four hundred eighty thousand two hundred forty nine fourre Feet, or eleven English Acres of Ground, and 1089 of 43560 parts of an Acre. A proportion to monthrous, that if the Assistant did not attelf as much, and tome of them deferibe it to be more, this Age would hardly be induced to give credit to it. But Herodotus describing each fide to contain eight hundred Foet, the Area must of necessary be greater than that by me affigued, the Sum amounting to Six hundred and forty thousand; or computing it as Disgorus Sicustis doth, the Area will comprehend Four hundsed and ninety t: And in the calculation

of Pluny, it we shall square Eight hundred eighty three, (which is the num-Greaves her allotted by him to the measure of each fide, ) the product Seven hundred seventy nine thousand six hundred eighty nine, will much exceed both that of Herodoius and this of Diodorus. Tho' certainly, Pliny is much militaken in aftigning the measure of the fide to be Eight hundred eighty three Feet, and the Bafis of the Pyramid to be but eight Jugera, or Roman Acres. For if we take the Roman Jugerum to contain in length Two hundred and forty Feet. and in breadth One hundred and twenty, as may be evidently proved but of \* Vairo, and is

the Superficies or whole Extension of the Jugerum be equal to Twenty eight thousand eight hundred Roman Feer; venty nine thousand fix

hundred eighty nine, the refult will be twenty Leven Roman Jugera, and 2089 of 28800 Parts of an Acre. Wherefore, if we take those Numbers Eight hundred eighty three of Pliny to be true, then I suppose he writ twenty eight Jugera instead of eight, or else in his proportion of the Side to the

Area of the Bafis, he bath erred.

expressly affirmed by Jugenum quadrates dues y Quintilium, then will assume the Assus quadratus qui de latus el pedes CXX, de longus totidem la modius ac mina appellatur. Varro de Re. R. 1 1. c. 10.

y Jugeri menjuram CCXL

longitudinis pedes effe dimidiihundred Roman Feet; que in latitudinem pater non with which, if we differ quiquam est qui ignoret. vide Seven hundred se. Quinul. l. 1. c. 10.

The Ascent to the top of the Pyramid is contrived in this manner: Front all the Sides without we afcend by degrees; the lowermost degree is near four Feet in height, and three in breadth; this runs about the Pyramid in a Level; and at the first, when the Stones were intire, which are now somewhat decayed, made on every fide of it along, but narrow Walk. The second degree is like the first, each Stone amounting to almost four Feet in height, and three in breadth; it retires inward from the first near three Feet, and thus runs about the Pyramid in a Level, as the former. In the same manner is the third tow placed upon the fecond, and so in order the rest, like so many Stairs rifing one above another to the top. Which ends not in a Point, as Mathematical Pyramids do, but in a little Flat or Square. Of this, Herodotus hath no where left us the Dimensions: But \* Henricus Stephanus, \* Hen. an able and deserving Man, in his Steph in Comment hath supplied is for him. 2 lib. Her rodoti.

Hands extended length, that is, for the Fathom or fix Feet, then should it be for-

ty eight Feet in breadth at the top. But the truth is, Stephanus in this particular, whilst he corrects the Errours of Valla's Interpretation, is to be correfled himfelf. For that Latitude which Herodotus assigns to the admirable Bridge below, (of which there is nothing now remaining,) he hath carried up, by a mistake, to the top of the Pv-Diodor. ramid. Diodorus Siculus comes nearer to the truth, who describes it to be d Pliny makes the Plin.1.36. but nine Feet. breadth at the top to be twenty five Feet. Altitudo (I would rather read it Latitudo,) à cacumine pedes XXV. By my measure it is XIII Feet, and 280 of 1000 parts of the English Foot. Upon this Flat, if we affent to Procl. the Opinion of Proclus, it may be Comm. I. supposed that the Ægyptian Priests made their Observations in Astronomy; and that from hence, or near this place, they first discovered, by the rifing of Sirius, their annus xunixos, or Cani-cularis, as also their periodus Sothiaca,

or annus magnus xunixos, or annus

Heliacus, or annus Dei, as it is termed

by ' Censorinus, con-

fifting of 1460 fidereal

Years, in which space

their Thoth Vagum, and

Fixum, came to have

the fame beginning:

f Censorin. de die Natali. Quem Graci nunixòv, Latine canicularem vocamus. Hic annus etiam beliacus à quibusdam dicitur, & ab aliis, à 348 criail .

That the Priests might near these Pyramids, make their Observations I no way question; this rising of the Hill being, in my judgment, as fit a place as any in Ægypt for fuch a design, and so much the fitter by the vicinity of Memphis. But that these Pyramids were defigned for Observatories, (whereas by the Testimonies of the Ancients I have proved before, that they were intended for Sepulchres,) is no way to be credited upon the fingle Authority of Proclas. Neither can I apprehend to what purpose the Priests with fo much difficulty should ascend so high, when below with more ease, and as much certainty, they might from their own Lodgings hewn in the Rocks, upon which the Pyramids are erected, make the same Observations. For seeing all Ægypt is but as it were one

continued Plain, they might from these Cliffs have, over the Plains of Ægypr, as free and open a Prospect of the Heavens, as from the tops of the Pyramids themselves. And therefore Tul. . ly writes more truly : " A gyptii, aut : Citer, & Babylonii, in camporum patentium aquo- Divin.l. 1 ribus habitantes, cum ex terra nihil . emineret, quod contemplationi cali of-ficere posset, omnen curam in siderum cognitione posuerunt. The top of this Pyramid is covered not with one or Les Vov three massly Stones, as some have get de imagined, but with nine, befides two lamont. which are wanting at the Angles: The Sand's degrees by which we ascend up, (as Travels. I observed in measuring many of them.) are not all of an equal depth, for some are near four Feet, others want of three, and these the higher we ascend, do so much the more diminish: Neither is the breadth of them alike; the difference in this kind being, as far as I could conjecture, proportionable to their depth. And therefore a right Line extended from any part of the Basis without to the top, will equally touch the outward Angle of every degree. Of these it was impossible for me to take an exact Measure, fince in such a Revolution of time, if the inner Parts of the Pyramid have not loft any thing of their first Persection, as being not the texposed to the injury of the Air and of Age fall of Rains; yet the outward Parts, is confe that is, these degrees or rows of Stone, sed by

Vapour: Which appears both by the great Dews, that happen a the Deluge of Nilus for Several Months; as also in th have discovered at Alexandria, in the Winter time, see obscure Stars in the Constellation of Ursa major, not visible England; the which could not be discerned, were there a greater Refraction at that place than with us, and co a greater Refraction at that place than with us, and co quently a greater condensation of the Medium, or Air, a Opticks demonstrate. But I cannot sufficiently wonder at Ancients, who generally deny the fall of Rain in Æ Plate in his Timans, speaking of Ægpe, where he haved many Years, writes thus: Kasay & now never many Years, writes thus: Kasay & now with a new profit of the series in expension with a configuration, mire tamen fertiles. Whereas for two Monamely December and January, I have not known it Ra constantly and with so much violence at London, as I found at Alexandria, the Winds continuing North North-Which caused me to keep a Diary as well of the Wes which caused me to keep a Diary as well of the Wes as I did of my Observations in Astronomy: And not as I did of my Observations in Attronomy: And not there, but also at Grand Cairo, my very noble and w Friend, Sir William Pallow, at the same time observed, there fell much Rain. And so likewise about the emarch following, being at the Mummies, somewhat be the Pyramids, to the South, there fell a gentle Rain for an whole day: But it may be the Ancient mean the Parts of Market beyond Theme, about Sieme, and per large of Market beyond Theme. Parts of Alegia beyond Theles, about Siege, and no Catadapa, or Catadapa for Catadapa, or Catadapa told by the Alegians, that it is rains. And therefore Senera (115. 4. Natur. Quali.)

the Wealth of bis Kingdom, that in
the end the commendation of the Artiscer should be the greatest.

A Description of the PYRAMIDS in ÆGYPT, as I found them in the clock viii Year of the Hegira, or in the Years clo lo exxxviii, and clo lo exxxix of our Lord, after the Dionysian Account.

AVING discovered the Founders of these Pyramids, and the time in which they were erected, and lastly, the End for which these Monuments were built: Next, in the Method we proposed, the Saugraphy of

them is to be fet down: Where, we shall begin with the Dimensions of their Figure without, and then we shall examine their several Spaces and Partitions within.

A Description of the First and Fairest PYRAMID.

Greaves.

THE first and fairest of the three greater Pyramids, is fituated on the top of a rocky Hill, in the fandy Defert of Libya, about a quarter of a Mile distant to the West, from the Plains of Ægypt: Above which, the Rock rifeth an hundred Feet or better, with a gentle and eafie Ascent. Upon this advantageous Rife, and upon this folid Foundation the Pyramid is erected; the heighth of the Situation adding to the Beauty of the Work, and the Solidity of the Rock giving the Superstructure a permanent and stable Support. Each fide of the Pyramid, com-

puting it according to

d Herodotus contains in length 10 CCC Greci-

an Feet; and in Diodorus Siculus, account

ID CC; Strabo rec-

kons it less than a Fur-

long, that is, less than IOC Grecian Feet, or

fix hundred twenty five

Roman; and Pliny

equals it to ID CCC

Diodorus Siculus in my

judgment comes near-

est to the truth, and may serve in some Kind to confirm those Proportions, which in another Discourse I have affigned to the Gre-For measuring the cian Measures. North-fide of it, at the Basis, by an exquisite Radius of ten Feet in length, taking two feveral Stations, as Mathematicians use to do, when any Obstacle hinders their approach, I found it to be Six hundred ninety three Fect, according to the English Standard; which quantity is fomewhat less than that of Diodorus. The rest of the Sides were examined by a Line, for want of an even Level, and a convenient Distance to place my Instruments, both which the Area on the former fide afforded.

The Altitude of this Pyramid was long fince measured by Thales Mile-Oraccontra Syrius lived about the fiftieth Olympiad: But his Observation is no where

Plin. 36. c. 12. Mensu-ram altitudinis eurum, omniumque similium deprebendere invenit Thales Mi-lesius, umbram metiendo, quâ bora par effe corpori solet.

by the Ancients expresfed. Only ' Pliny tells us of a course proposed by him, how it might be found, and that is by observing such an hour, when the Shadow of the Body is

equal to its heigth: A way at the best, by reason of the Faintness, and scattering of the Extremity of the Shadow, in fo great an Altitude, uncertain and fub-

ject unto Errour. And reports,

in 'Strabo's Computation it exceeds; but

" Diodorus rightly acknowledges it to be less than a Stadium. less; which, if we measure by its Perpendicular, is 499 Feet; but if we take it as the

Pyramid afcends inclining (as all fuch Figures do,) then is it equal, in respect of the Lines subtending the several Angles, to the Latitude of the Bafis, that is, to Six hundred ninety three

Feet. With reference to this great Altitude " Statius calls them,

yet bologenes Laertius in the Life of Thales, hath the fame
Story from the Authority of Hieronymus. Loopey eles eioi. Hieronymus that he measured the Pyramids by their Shadow, marking when they are of an equal Quantity. Wherefore I shall pais by his, and give my own Observations. The Altitude is something defective of the Latitude; tho'

> > And

To have writ true, In ea parte que in Æthiopiam vergit (fpeaking of Ægypt ) aut nulli imbies funt, aut i ri. But where he after fays, Alexandi ia nives non cadant, it is false : For at my atter 12/5, Anchor 12/5, and Manay, at Night at Inowed. However, far-ther to the South than Ægyst, between the Tropicks, and near the Line, in Habassa, or Æthiopia, every Year, for many Weeks, there falls it ire of Rain, as the Habaffines themselves weeks, the area of the state of those of Athoria) that they have abundance of Rains. This then is the true Cause of the Inundation of Nilus in the Summer time, being then higheft, when other Rivers are loweft, and not these which are alledged by Herodotus, Diodorus, Plutrath, Arilides, Heliodorus, and others. Who are extremely troubled to give a Reafon of the Inundation, imputing it either to the peculiar Nature of the River, or to the Obstruction of the Mouth of it by the Etefix; or to the melting of Snows in Aimpia, (which I believe feldom fall in those hot Countries, where the Natives, by reason of the extream Heats, are all black, and where, if we credit Seneca, Argentum replumbatio, Silver is melted, by the fcorclang Heats) or to some such other Reatons of little weight. In Diodorus I find Agathachides Cnidus, to give almost the same Reason assigned by me: But thoic Times gave little Credit to his Affertion. Yet Diodorus tions to affect to its, (Did Lib. 1.) Agath ichides Childus hath come ne ne still the Truth, for he lath: Freey Tar in the Mountains about 1. clinging, there are continual Ratins from the summer Solitec, to the autumnal Equinos, which came the linguation. The time of this is accounted generally to certain, that I have teen the Agyptian Aftronomers to put it down many Years before, in their Ephemerides. That juch a Day, on such a Month, the Nilus begins to rile.

> by both. And therefore they cannot conveniently now be afcended, but either at the South-fide, or at the Fast-angle, on the North: They are well fliled by Herodoins, Boulines, that is, little Altars: For in the form of Altars they rife one above another to the top. And these are all made of massy, and polish ed Stones, hewen according to Heredotus, and Diodoius, out of the Arabian Mountains, which bound the upper part of Agypt, or that above the Delta, on the East, as the Lybian Mountains terminate it on the West, being so vast, that the breadth and depth of every Step,

is one fingle and entire Stone. The Relation of \* Herodotus, and \* Pomponius Mela, is more admirable, who make the least Stone in this Pyramid to be thirty

Fcet. And this I can grant in some, yet furely it cannot be admitted in all, unless we interpret their words, that the least Stone is thirty Square, or to speak more properly, thirty Cubical Feet which Dimension, or a much greater, in the exteriour ones, I can without any difficulty admit. The number of these Steps is not mentioned by the Ancients, and that caused me, and two that were with me, to be the more diligent in computing them, because by modern Writers, and fome of those too of Re pute, they are described with much di-Greave verfity and contrarilty. The Degrees, faich ' Bellomus, are about two hundred Bellomi and fifty, each of them fingle contains in hb. 2. of height forty five Digits, at the top it terv. c. 4 is two Paces broad. For this I take to be the meaning of what Clusius renders thus: A basi autem ad cacumen ipsius Supportationem facientes, comperimus cuiciter CCL gradus, singuli altitudinem babent V folearum calcei IX pollicum longitudines, in fastigio duos passus babet. Where I conceive his passus is in the same sense to be understood here above, as not long before he explains himself in describing the basis below, which in his Account is CCCXXIV

paffus paululum extenfis crunibus. 4 Albertus Lewenstainius reckons the Steps to be two hundred and fixty, each of them a Foot and a half in depth. Johannes Helfricus counts them to be two hundred and thirty. Schaffius Ser-

lius, upon a Relation of Grimano, the Patriarch of Aquileia, and afterwirds Cardinal, (who in his Travels in Agypt meafur'd these Degrees)

computes them to be two hundred and ten; and the height of every Step to be equally three Palms and an half. It would be but lost Labour, to mention the different and repugnant Relations of feveral others: That which by Experience, and by a diligent Calculation, I, and two others found, is this, that the Number of Degrees from the bottom to the top, is two hundred and feven; tho' one of them in descending reckoned two hundred and eight.

Such as please, may give Credit to

those fabulous Traditions of fome, That a Turkish Archer standing at the top, cannot shoot beyond the bottom, but that the Arnow will necessarily fall upon thele Steps. It the Turkish Bow (which by those Figures that I have feen in ancient

Monuments, is the same with that of the Parthians, so dreadful to the Romans) be but as swift, and strong, as the English: As furely it is much more, if we consider with what incredible

Ammianus Marcellinus hath almost ' Ammia. the fame Relation, Umbras quoque me-Marcel. chanica ratione consumit. Lastly, 4 Caflib. 22. d Caffiodor. fiodorus confirms the same, Pyramides in Egypto, quarum in suo statu se umbra consumens, ultra constructionis spa-

cia nullà parte respicitur. All which in the Winter Season I can in no form admit to be true: For at that time! have feen them cast a Shadow at Noch And if I had not seen it, yet Reast and the Art of measuring Altitudes Shadows, and on the contrary, of kno ing the length of Shadows by Altitudes, doth necessarily infer as much. Besides, how could Thales Milesius, above two thousand Years fince, have taken their height by Shadows, according to Pliny, and Laertius, as we mentioned before, if so be these Pyramids have no Shadows at all? To reconcile the Difference, we may imagine, Solinus, Ausonius, Marcellinus, and Cashodorus, mean in the Summer-time; or which is nearer the Truth, that almost for three Quarters of the Year, they have no Shadows: And this I grant to be true at Mid day.

#### A Description of the Inside of the First PYRAMID.

HAving finished the Description of the greater Pyramid, with the Figure, and Dimensions of it, as they prefent themselves to the View without: I shall now look inwards, and lead the Reader into the feveral Spaces, and Partitions within: Of which, if the Ancients have been filent, we must chiefly impute it to a reverend and awful Regard, mixed with Superstition, in not prefuming to enter those Chambers of Death, which Religion, and Devotion, had confecrated to the Rest, and Quiet iot. of the Dead. Wherefore Herodotus mentions no more, but only in general, that some secret Vaults are hown in the Rock under the Pyramid. Diodorous Siculus is filent; tho' both enlarge themselves in other Particulars less necessary. Strabo also is very concise, whose whole Description both of this, and of the Second Pyramid, is included in this short Expression: Forty Stadia from the City (Memphis,) there is a certain Brow of an Hill, in which are many Pyramids, the Sepulchres of Kings: Three of them are memorable, Two of these are accounted amongst the Seven Miracles of the World each of these are a Furlong in beight: The Ligure is Quadrilateral, the Altitude somewhat exceeds each side, and the one is somewhat bigger than the other. On high, as it were, in the midft between the sides, there is a Stone that may be removed, which being taken out, there, is an oblique (or shelving) Entrance (for: fo I render that which by him is termed? in 1.36. ouppe sin ia) leading to the Tomb. The expredies nothing within, but only Well (which is Itill extant) of eight to They answered, Tea, and will de-Cubus in depth; to which he problem in And there remained a certain imagins, by fome fecret Acatalan Water of the River Nelses

ю,

Reverence of Antiquity, than out of any Greaves. special Satisfaction. The Arabian Writers, especially such as have purposely treated of the Wonders of Ægypt, have given us a more full Description of what is within this Pyramid: But that hath been mixed with so many Fictions of their own, that the Truth hath been darkned, and almost quite extinguished by them. I shall put down that which is confessed by them, to be the most prohable Relation, as it is reported by Ibn Abd Albokm, whose Words out of the Arabick are these: The greatest part of Chronologers agree, that he which built the Pyramids, was, Saurid Ibn Salhouk, King of Ægypt, who lived three hundred Tears before the Flood. The occasion of this was, because he saw in his Sleep, that the whole Earth was turned over with the Inhabitants of it, the Men lying upon their Fices, and the Stars falling down, and striking one another, with a terrible Noise; and being troubled, he concealed it. After this he fuw the fix'd Stars falling to the Earth, in the similitude of white Fowl, and they Inatched up Men, carrying them between two great Mountains; and these Mountains closed upon them, and the shining Stars were made dark. Awaking with great Fear, he affembled the chief Priests of all the Provinces of Agypt, an hundred and thirty Priests, the chief of them was called Aclimun: Relating the whole Matter to them, they took the Al-Litude of the Stars, and making their Bregnostication, foretold of a Deluge. King Said, Will it come to our Coun-Tears for www., ..... the mean space to build the a Vault to be made, into tries of the West and

Greaves. Things that were told him by wife Men,
as also all prosound Sciences, the Names

\* Alakalın Amongft other fignifications, is the name of a precious Scone; and therefore in Abulfeda it is joyned with Tacut, a Ruby. I imagine it here to fignific form Magical Spell, which it may be was engraven in this Scone.

and Sciences, the Names of Alakakirs, the Uses and Hurts of them. The Science of Astrology, and of Arithmetick, and of Geometry, and of Physick. All this may be interpreted by him that knows their Charalters, After he had a ween O.

After be bad given Orand Language. der for this Building, they cut out vast Columns, and wonderful Stones. They fetch massy Sones from the Æthiopians, and made with thise the Youndations of the three Pyramids, fastning them together with Lead and Iron. They built the Gates of them forty Cubits under Ground. and they made the height of the Pyramids one hundred Royal Cubits, which are fifty of ours in these times; he also made each side of them an hundred Royal The beginning of this Building was in a fortunate Horoscope. After that he had finished it, he covered it with coloured Satten, from the top to the bottom; and he appointed a Solemn restival. at which were present all the Inhabitants of his Kingdom. Then he built in the Western Pyramid thirty Treasuries, filled with store of Riches, and Utenfils. and with Signatures made of precious Stones, and with Instruments of Iron, and Vessels of Earth, and with Arms which rust not, and with Glass which might be bended, and yet not broken, and with strange Spells, and with several kinds of Alakakirs, single and double, and with deadly Porfons, and with other things besides. He made also in the East Pyramid, divers Calestial Spheres and Stars, and what they severally operate, in their Aspects, and the Perfumes which are to be used to them, and the Books which treat of these Matters. He put also in the Coloured Pyramid, the Commentaries of the Priests, in Chests of black Marble, and with every Priest a Book, in which were the Wonders of his Profession, and of his Adlions, and of his Nature, and what was done in his Time, and what is and what shall be, from the beginning of Time, to the end of it. He placed in every Pyramid a Treasurer: The Treasurer of the Weller D. furer of the Westerly Pyramid was a Sta-tue of Marble stone, standing upright with a Lance, and upon his Head a Serpent wreathed. He that came near it. and stood still, the Serpent bit him of one side, and wreathing round about his Throat, and killing him, returned to his

place. He made the Treasures of the East Pyramid, an Idol of black Agare, bis Eyes open and shining, sitting upon a Throne with a Lance; when any look'd upon him, be heard of one fide of him a Voice, which took away his Sense, so that he fell prostrate upon his Face, and ceafed not till be died. He made the Treasurer of the Coloured Pyramid a Statue of Stone, (called) Albut, fitting: He which looked towards it was drawn by the Statue, till be stuck to it, and could not be Separated from it, till such time as he died. The Contites write in their Books, that there is an Inscription engraven upon them, the Exposition of which in Arabick is this: I King Saurid, built the Pyramids in such and such a time, and finished them in six Years: He that comes after me, and says that he is equal to me, let him destroy them in six hundred Years; and yet it is known, that it is easier to pluck down, than to build up. I also covered them, when I had finished them, with Satten; and let him cover them with Mats. After that, Almamon the Calif, entred Agypt, and faw the Pyramids: He desired to know what was within, and therefore would have them opened: They told him, It could not pojfibly be done : He replied, I will have it certainly donc. And that Hole was opened for him, which flands open to this Day, with Fire and Vinegar. Two Smiths prepared and sharpned the Iron, and Engines, which they forced in, and there was a great Expence in the opening of it: The Thickness of the Wall was found to be twenty Cubits; and when they came to the end of the Wall, behind the place they had digged, there was an Ewer (or Pot) of green Emrauld; in it were a thousand Dinars very weighty, every Dinar was an Ounce of our Ounces: They wondred at it, but knew not the meaning of it. Then Almamon faid, Cast up the Accompt, how much hath been spent in making the Entrance: They cast it up, and lo it was the same Sum which they found, it neither exceeded, nor was defective. Within they found a fourse Well, in the Square of it there were Doors, every Door opened into an House (or Vault), in which there were dead Bodies wrapped up in Linnen. They found towards the top of the Pyramid, a Chamber, in which there was an hollow Stone: In it was a Statue of Stone like a Man, and distin it a Man, upon whom was a Breast-plate of Gold, set with Jewels, upon his Breast was a Sword of unvaluable Price, and at his

Hend a Carbuncle of the bigness of an Egg, shining like the Light of the Day, and upon him were Churallers written with a Pen, no Man knows what they signifie. After Almamon had open'd it, Men entred into it for many Years, and descended by the slippery passage, which is an it; and some of them came out safe, and others died. Thus far the Arabians; which Traditions of theirs, are little better than a Romance, and therefore leaving these, I shall give a more true and particular Description, out of mine own Experience, and Observations.

On the North-side ascending thirty

eight Feet, upon an artificial Bank of Earth, there is a fquare and narrow palfage leading into the Pyramid, thorough the Mouth of which (being equi-diffant from the two fides of the Pyramid) we enter, as it were; down the Steep of an Hill, declining with an Angle of twenty fix Degrees. The breadth of this Entrance is exactly three Feet, and 463 Parts of 1000 of the English Foot: The length of it beginning from the first dedivity, which is some ten Palms without, to the utmost extremity of the Neck, or straight within, where it contracts it felt almost nine beet continued. with scarce half the depth it had at the first entrance (tho' it keep still the same breadth) is ninety two Feet and an half. The Structure of it hath been the Labour of an exquifite hand, as appears by the smoothness and evenness of the Work, and by the close knitting of the Joints. A Property long fince observed, and Diodor.Sic. commended by Diodorus, to have run thorough the Fabrick of the whole Body of this Pyramid. Having passed with Tapors in our Hands this narrow Straight, tho' with fome difficulty, (for at the farther end of it we mult creep upon our Bellies) we land in a place fomewhat larger, and of a pretty height, but lying incomposed; having been dug away, either by the Curiofity, or Avarice of fome, in hope to discover an hidden Treasure; or rather by the Command of Almanion, the deferredly Renowned Calif of Babyion. By whomfoever it were, it is not worth the enquiry, nor doth the place merit describing, but that I was unwilling to pretermit any thing: Being only an Habitation for Bats, and those to ugly, and of so large a fize, (exceeding a Foot in length) that I have not elsewhere seen the like. The length of this obscure and broken Space, containerh eightv nine

Feet, the breadth and height is various, and not worth confideration. On the left Orca hand of this, adjoining to that narrow Entrance thorough which we passed, we climb up a fleep and maffy Stone, eight or nine Feet in height, where we immediately enter upon the lower-end of the first Gallery. The Pavement of this rifes with a gentle acclivity, confifting of fmooth and polithed Marble, and where not fineared with Filth, appearing of a White and Alabafter Colour: The Sides and Roof, as Titus Livius Burretinus, a Venetian, an ingenious young Man, who accompanied me thither, observed, was of impolished Stone, not fo hard and compact as that on the Pavement, but more foft and tender: The breadth almost five Feet, and bout the same quantity the height, if he have not mistaken. He likewise discovered some irregularity in the breadth, it opening a little wider in fome places than in others; but this inequality could not be discerned by the Eye, but only by measuring it with a careful Hand: By my Observation with a Line, this Gallery contained in length an hundred and ten Feet. At the end of this begins the Second Gallery; a very stately Piece of Work, and not inferiour, either in respect of the Curiofity of Art, or Richnels of Materials, to the most sumptuous and magnificent Buildings. It is divided from the former by a Wall, through which stooping, we paffed in a fquare Hole, much about the fame bignels, as that by which we entred into the Py-

ramid, but of no confiderable length Thisnarrow passage lieth level, not rifing with an accli vity, as doth the Pavement below, and Roof above, of both these Galleries. At the end of it, on the right hand, is the Well mentioned by Pliny; the which is circular, and not fquare, as the Arabian Writers describe: The Diameter or it exceeds three Feet, the Sides are lined with white Marble, and the Descent into it is by fastning the Hands and Feet in little open spaces cut in the fides within, oppofite, and answera-

ble to one another in a perpendicular.

In the fame manner are almost all the

→ Wells and Passages into the Cisterns at Greaves. Alexandria contrived, without Stairs or Windings, but only with Inlets, and square Holes on each fide within; by which, using the Feet and Hands, one may with eate descend. Many of these Cifterns are with open and double Arches, the lowermost Arch being supported by a Row of Speckled and Thebaick Marble Pillars, upon the top of which stands a second Row, bearing the upper and higher Arch: The Walls within are covered with a fort of Plaister, for the Colour white; but of so durable a fubstance, that neither by Time, nor by

> the Water, is it yet corrupted and impaired. But I return from the Cifterns and

In Pyramide maximâ est intus puteus LXXXVI cubitorum, flumen illo admiffum arbitrantur. Plin. 36. cap. 12.

Wells there, to this in the riamid; which in Pliny's Calculation, is eighty fix Cubits in depth; and it may be

was the passage to those secret Vaults mentioned, but not described by Herodotus, that were hewn out of the Rock, over which this Pyramid is erected. By my Measure, sounding it with a Line, it contains twenty Feet in depth. The Reason of the difference between Pliny's Observation and mine, I suppose to be this, that fince his time it hath almost been dammed up, and choaked with Rubbish, which I plainly discovered at the bottom, by throwing down some combustible Matter set on fire. Leaving the Well, and going on straight upon a Level, the distance of fifteen Feet, we entred another square passage, opening against the former, and of the same big-The Stones are very mally, and exquifitely jointed, I know not whether of that gliftering and speckled Marble, I mentioned in the Columns of the Ci-sterns at Alexandria. This leadeth (running in length upon a Level an hundred and ten Feet) into an arched Vault, or little Chamber; which by reason it was of a Grave-like Smell, and half full of Rubbish, occasioned my lesser This Chamber stands East and West, the length of it is less than twenty Feet, the breadth about fevent teen, and the height less than fifteen-The Walls are entire, and plastered over with Lime, the Roof is covered with large smooth Stones, not lying flat but shelving, and meeting above in a kind of Arch, or rather an Angle. On the East side of this Room, in the middle of it, there feems to have been a passage leading to some other place. Whither this way the Priests went into

the hollow of that huge Sphinx, as Strabo and Pliny term it, or Andro-Pii
sphinx, as Herodotus calls such kinds a (being by Pliny's Calculation CII Feet in compass about the Head, in height LXII, in length CXLIII: And by my Observation made of one entire Stone) which stands not far distant without the Pyramid, South-East of it, or into any other private Retirement, I cannot determine; and it may be too this ferved for no such purpose, but rather as a Theca or Nichio, as the Italians speak, wherein some Idol might be placed; or else for a Piece of Ornament (for it is made of polished Stone) in the Architecture of those Times, which ours may no more understand, than they do the Reason of the rest of those strange Proportions, that appear in the Passages and Inner rooms of this Pyramid. turning back the same way we came, as foon as we are out of this narrow and square Passage, we climb over it, and going straight on, in the trace of the fecond Gallery, upon a shelving Pavement (like that of the first) rifing with an Angle of twenty fix Degrees, we at length came to another Partition. The length of the Gallery, from the Well below to this Partition above, is an hundred fifty and four Feet; but if we measure the Pavement of the Floor, it is fornewhat less, by reason of a little vacuity (some fifteen Feet in length) as we described before, between the Well and the fquare Hole we climbed over. And here to reassume some part of that which hath been spoken, if we consider the narrow entrance at the Mouth of the Pyramid by which we descend; and the length of the first and second Galleries by which we afcend, all of them lying as it were in the fame continued Line, and leading to the middle of the Pyramid, we may eafily apprehend a Reason of that strange Ecchoe within, of four or five Voices, mentioned by Plutarch

in his Fourth Book, De large in his fourth Bo found by Experience, cap. 20. discharging a Musket at

the entrance. For the Sound being shut in, and carried in those close and smooth passages, like as in so many Pipes or

Trunks, finding no iffue out, reflects upon it felf. and causes a confused Noise and Circulation of the Air, which by degrees wanishes, as the Motion of it ceases. This Gallery, or Corridore,

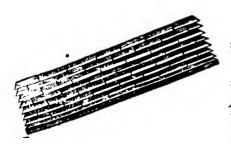

(or whatfoever else I may call it) is built of white and polished Marble, the which is very evenly cut in spacious Squares, or Tables. Of Such Materials as is the Pavement, such is the Roof, and fuch are the Side walls, that flank it: The coagmentation, or knitting of Joints, is so close, that they are scarce discernable to the Eye; and that which adds a Grace to the whole Structure, tho' it makes the puffage the more flippery and difficult, is the acclivity and rising of the Ascent. The height of this Gallery is 26 Feet, the breadth is 6 Feet, and 870 parts of the Foot divided into a 1000, of which three Feet, and 436 of 1000 parts of a Foot, are to be allowed for the way in the midft; which is fet and bounded on both fides with two Banks (I'ke Benches) of flock and polished Stone; each of these hath one Foot 717 of 1000 parts of a Foot in breadth, and as much in depth. Upon the top of these Benches near the Angle, where they close, and joyn with the Wall, are little Spaces cut in right angled parallel Figures, fer on each fide opposite to one another; intended, no question, for some other end than Ornament. In the casting and ranging of the Marbles in both the Sidewalls, there is one Piece of Archite-Cture, in my Judgment, very graceful; and that is, that all the Courses, or Ranges, which are but feven (fo great are those Stones) do set and flag over one another about three Inches; the bottom of the uppermost Course overfetting the higher part of the fecond, and the lower part of this overflagging the top of the third, and so in order the rest, as they descend. Which will better be conceived by the representation of it to the Eye in this Figure, than by any other Description.

Having passed this Gallery, we enter another square Hole, of the same Dimensions with the former, which brings us into two Aniscamerette, as the Italians would call them, or Anti-closets (give me leave in so unusual a Structure to trame some \* unusual a Structure and speckled kind of nova ponenda nomina. Gicero Thebasck Marble. The lib. 1. de Natura Deorum.

first of these hath the Dimensions almost equal to the second: The second is thus proportioned, the Area is level, the Figure of it is oblong, the one side containing seven Feet, the other three and an half, the height is ten Feet. On the East and West sides, within two Feet and an half of the top, which is somewhat larger than the bottom, are three Cavities, or little Seats, in this manner:

This inner Anti closer is separated from the former, by a Stone of red speckled Marble, which hangs in two Mortices (like the Leaf of a Sluce) between two Walls, more than three Feet above the Pavement, and wanting two of the Roof. Out of this Closet we enter another square Hole, over which are five Lines cut parallel, and perpendicular in this manner:

Besides these, I have not observed any other Sculptures, or Engravings, in the whole Pyramid: And therefore it may justly be wondred, whence the Arabians borrowed those Traditions I before related, that all Sciences are inscribed within in Hieroglyphicks: And as justly it may be questioned, upon what Authority Dio, or his Epitomizer Xiphilinus, reports that Cornelius Gallus (whom \* Strabo more truly names Strabo, Ælius Gallus, with whom he travelled into Ægypt, 2s a Friend and Companion)

namion) \* engraved in the Pyramids his Greaves. Victories, unless we understand some das evi-*[εα*√1.

\*Xiphil in other Pyramids not now existent. This Cast Aug. square Passage is of the same wideness Tabley and dimensions as the rest, and is in οσα έπε length near nine Feet, (being all of The-ποιήκε, ες baick Marble, most exquisitely cut) which lands us at the North-end, of a very fumptuous and well-proportioned Room. The distance from the end of the fecond Gallery to this Entry, running upon the fame Level, is twenty four Feet. This rich and spacious Chamber, in which Art may feem to have contended with Nature, the curious Work being not inferiour to the rich Materials, stands as it were in the Heart and Centre of the Pyramid, equi-diffant from all the Sides, and almost in the midst between the Basis and the top. The Floor, the Sides, the Roof of it, are all made of vast and exquisite Tables of Thebaick Marble, which if they were not veiled and obscured by the Steam of Tapors, would appear glistering and fhining. From the top of it descending to the bottom, there are but fix Ranges of Stone, all which being respectively fized to an equal height, very gracefully in one and the fame Altitude, run round The Stones which cover this the room. place, are of a strange and stupendious length, like so many huge Beams lying flat, and traverfing the Room, and withal supporting that infinite Massand Weight of the Pyramid above. Of these there are nine, which cover the Roof; two of them are less by half in breadth than the rest; the one at the East-end, the other at the West. The length of this \* Chamber on the South-fide, most acuons of the rately taken at the Joint, or Line, where

h Thefe Proporti-Chamber.

and those which follow, of the length and breadth of the hollow part of the Tomb, were taken by me with as much exactness as it was possible to do: Which I did so much the more diligently, as judging this to be the fittest place for the fixing of Measures for Posterity. A thing which hath been much defired by Ixarned Men, but the manner how it might be exactly done, hath been thought of by none. I am of Opinion, that as this Pyramid hath flood three thousand Years almost, and is no whit decayed within, so it may continue many thousand Years longer: And therefore that After times measuring these Places by me assigned, may hereby not only find our the just Dimensions of the English Foor, but also the Feet of feveral Nations in these Times, which in my Travels abroad I have taken from the Originals, and have compared them at home with the English Standard. Had some of the ancient Mathematicians thought of this way, these Times would not have been so much perplexed, in discovering the Measures of the Hebrews, Babylonians, Agoptians, Oreeks, and other Nations. Such Parts as the English Foot contains a 1000. The Roma, Foot, on Collision Monument (commonly called by Writers, Fes Colations) contains 967. The Parls Foot 1062. The Span fit Foot 1062. The Writerian Foot, of that of Smillion, 1033. The Bracio at Riverce 1913. The Bracio at Riverce 1913. The Bracio at Riverce 1913. Turkish Pike at Constantinople 2200.

the first and second Row of Stones meet. is thirty four English Feet, and 380 parts of the Foot divided into a thoufund (that is 34 Feet, and 380 of 1000 parts of a Foot.) The breadth of the West fide at the Joint, or Line, where the first and second Row of Stones meet, is seventeen Feet, and an hundred and ninety parts of the Foot divided into a thousand (that is 17 Feet, and 190 of 1000 parts of a Foot.) The height is nineteen Feet and an half.

Within this glorious Room (for fo I may justly call it) as within some confecrated Oratory, flands the Monument of Cheops, of Chemms, of one piece of Marble, hollow within, and uncovered at the top, and founding like a Bell. Which I mention not as any Rarity, either in Nature, or in Art (for I

have observed the like Sound, in other Tombs of \* Marble cut hollow like this) but because I find modern Authors to take notice of it as a wonder. Some write, that the Body hath been removed hence; whereas † Diodories hath left above fixteen hundred Years fince, a memora-

\* As appears by a fair an ancient Monument brough from Smirna, to my very wo thy Friend, Edward Rolt, Ele which stands in his Park Woolwich.

ble passage concerning Chemmis, the Builder of this Pyramid, and Cephren, the Founder of the next adjoyning. Altho ( faith he ) thefe Kings intended thefe for their Sepulchres, yet it hapned that neither of them were buried there : For the People being exasperated against them, by reason of the Toilsonness of these Works, and for their Cruelty and Oppression, threatned to tear in pieces their dead Bodies, and with Ignominy to throw them out of their Sepulchres: Wherefore both of them dying commanded their Friends privately to bury them, in an obscure place. This Monument, in respect of the nature and quality of the Stone, is the same with which the whole Room is lined; as by breaking a little fragment of it, I plainly discovered, being a speckled kind of Marble, with black, and white, and red Spots, as it were equally mix'd, which fome Writers call Thebaick Marble: Tho' I conceive it to be that fort of Porphyry which Pliny calls Leucostidos, and de-plin.lib. scribes thus: Rubet Porphyrites in ea- cap. 7. dem Ægypto, ex eo candidu interveni-entibus punda Leucostistos appellatur. Quantissibet melibus castendis sufficient lapidicina. Of this kind of Marble there

was, and still is, an infinite quantity of Columns in Ægypt. But a Venetian, a Man very curious, who accompanied me thither, imagined that this fort of Mar-

» Which may also be con-6 med by Bellonius's Observations; who deferring the Rock, out of which, upon Mojes finking it, there gushed out Waters, makes it to be fuch a speckled kind of Theback Marble : Est une grosse pierre massive droite de misme gum & de la conleur, qu' est L. pieric Thebaique.

" The Compass of the Scanot thi Column at Alexanina, near the Tons, is XXIV English Feet: The Compass of the Se piss of those at Rome, VV English Feet, and three leches. By these Proportions, and by those Rules which are · prefled in Fetruvius, and in mucr Eroks of Architecture, the ingenious Reader may compute the true Dimensions of theie before the Pantheon, and of this at Alexandi ia ; bein, in my Calculation, the me ft magnificent Column that ever was made, of one enure

> the Tradition of Ariftides, who reports, that in Atabia there is a Quarry of ex-cellent Porphyry. The Figure of this Tomb without, is like an Altar, or more nearly to express it, like two Cubes finely fet together, and hollowed within; it is cut smooth and plain, without any Sculpture and Engraving, or any Relevy and Emboffment. The exteriour Superficies of it contains in length feven

\* Pervenitur in elegans cubiculum quadrangulum fex pafim longum, or quatuor latum, quatuor vero vel VI orgyin altum, in quo marmor nigrum so-lidum in cista formam excisum invenimus XII pedes longum, Valtum, ser totidem latum, sine perculo. Bellon. Obser. Lib.2. Cap. 42. Les Voyages de Monsieur breadth.

Feet, and four hundred eight parts of the English Foot divided into a thou-6 Feet fand parts (that is 6 Feet, and 488 of 1000 parts of a Foot) in breadth, at the North-end, two Feet, and two hundred and eighteen parts of the Foot di-

ble camè from Mount <sup>b</sup> Sina, where he had lived among the Rocks; which he affirmed to be fpeckled with Partycolours of Black and White, and Red, like this: And to confirm his Affertion, he al-ledged, that he had icen a great Column, left imperfect amongst the Cliffs, almolt as big as that huge and admirable 'Corinthian Pillar. stanting to the South of Alexandria; which, by my Meafure, is near four times as big as any of those valt Corinthian Pillars, in the Porticus before the Pantbeon at Rome; all which are of the fame coloured Marble with this Monument, and so are all the Obelisks with Hieroglyphicks, both in Rome and Alexandria. Which

Opinion of his doth well correspond with

Feet, three Inches, and an half. Bellonius makes it twelve Feet, and Monfieur de Breves nine; but both of them have exceeded. In depth it is three Feet, three Inches, and three Quarters, and is the same in The hollow part within, is in length on the West-side, fix

parts (that d is 2 Feet. d 2 Feet 218 and 218 of 1000 parts of a Foot.) The depth In the Reiteration of the is 2 Feet, and 860 of 1000 parts of the English Foot. A narrow

vided into a thousand

Ipace, yet large enough

to contain a most po-

tent and dreadful Mo-

narch, being dead, to

whom living, all Ægypt

to exced the Proportions of our Times. It may be justly questioned how this Monument of Cheops could be brought hither, feeing it is an impossibility that by those narrow passages, before described, it should have entred. Wherefore we must imagine, that by some Machina it was raised and conveyed up without, before this Oratory or Chamber was finished, and the Roof closed. The

being as ancient as Solinus himfelf, no way

Sands's Travels.

Position of it is thus: It stands exactly Greaves. in the Meridian, North and South, and is, as it were, equidiffant from all fides of the Chamber, except the Eaft, from whence it is doubly remoter than from the West. Under it I found a little hollow ipace to have been dug away, and a large Stone in the Pavement removed, at the Angle next adjoyning to it: Which f Sands erroneously imagins to be a paffage into some other Compartiment: Dug away, no doubt, by the Avarice of fome, who might not improbably conjecture an hidden Treasure to be reposited there. An expenceful Prodigality, out of Superstition used by the Ancients, and with the fame blind Devotion taken up, and continued to this Day in the East Indies. And yet it feems by Josephus's Relation, that by the wifest King, in a time as clear and unclouded as any, it was put in pra-Etice, who thus describes the Funeral of

King David: \* His Son 5 Jos. Lib. 7. Ant. Judaic. Solomon buried him ma-CIP. 11. Eba-le d' wilder, à sais Sonquair et legerondpois d'ampendis, toit ànnois ois sei unidéau vouiLe.) Barinium amar, un 
pastru auto sonwi un ap-Cover ower'nd doer, &c.

gnificently in Hierusalem, who, besides the usual Solemnities at the Funerals of Kings, brought into his Monument very great Riches, the multitude of which we may easily collect by that which shall be spoken. For,

thirteen hundred Years after, Hyrcanus the High-Priest being besieged by Antiochus, surnamed Pius, the Son of Penctrius, and being willing to give Money to raise the Siege, and to lead away his Army, not knowing where to procure it, he opened one of the Vaults of the Sepulchre of David, and took thence three thousand Talents; part whereof being given to Antiuchus, be freed bimself from the danger of the Siege, as we have elsewhere declared. And again, after many Years, King Herod opening another Vault, took out a great quantity of Money; yet neither of them came to the Coffins of the Kings; for they were with much Art hid under Ground, that they might not be found by such as entred into the Sepulchre.

The ingenious Reader will excuse my Curiofity, if before I conclude my Description of this Pyramid, I pretermit not any thing within, of how light a confequence loever. This made me take Notice of two Inlets, or Spaces, in the South, and North-fides of this Chamber, just opposite to one another; that on the North was in breadth 700 of 1000 parts of the English Foot, indepth 400 of 1000 parts; evenly cut, and run-

ning in a flraightLine fix Feet, and farther, into the thickness of the Wall. That on the South is larger, and fomewhat round, not fo long as the former; by the blackness within, it feems to have been a Receptacle for the burning of Lamps. T. Livius Barretinus, would gladly have believed, that it had been an Hearth for one of those Etefnal Lamps, fuch as have been found in Tulhold's Tomb in It ily; and, if Camden Camden be not misinformed, in England, in the Err, ub Cryptoporticus of H. Valerius Constant agis de Er 11111, Father to Constantine the Great, dedicated to the Urns and Ashes of the Dead; but I imagine the Invention not to be fo ancient as this Pyramid. However, certainly a Noble Invention; and therefore pity it is it should have been fmothered by the negligence of Writers, as with a Damp. How much better might Pliny, if he knew the Composition of it, have described it, than he hath done the Linum Asheftinum, a fort of Linen spun out of the Veins, as fome suppose, of the Carystian, or Cyprian Stone > (Which in my Travels 1 have often feen :) Tho' Salmafius, with Salmafine more probability, contends the true Af- erent Phbestimum to be the Linum Vivum, or I.1- man. num Indicum; in the Folds and Wreaths of which, they inclosed the dead Body of the Prince; (for faith Plany, Regum Plan let 1 inde funebres tunica: And no wonder, cap. 1. feeing not long after he adds, Annat pretia excellentium margaritarum) committing it to the Fire and Flames till it were confumed to Ashes: While in the fame Flames this Shrowd of Linen, as if it had only been bathed and washed (to allude to his Expression) by the Fire, became more white and refined. Surely a rare and commendable Piece of Skill. which Pancirollus justly reckons amongst Pancirol the Dependita; but infinitely inferiour Titul-4-either in respect of Art, or Use, unto rum dep the former. And thus I have finished my Description of all the Inner Parts of this Pyramid: In which I could neither Ancients; nor, series any Manadaction from the unconstruction of modern Travellers; in their dark and the den, ash. We are now come in the last and the den, ash. We are now come in the last and the la borrow Light to conduct me from the

found no inconvenience) was much woodred at by Dr. Ha

his Majesty's learned Physician: For faid he, seeing we never breathe the same Air twice, but still new Air is requisite to a new Respiration, (the Succus Alibilis of it being spent in every Expiration) it could not be but by long Breathing we should have spent the Aliment of that small Stock of Air within, and have been stifled : Unless there were some secret Tunnels conv. n ig it to the top of the Pyramid, whereby it might pass out, nd make way for fresh Air to come in, at the entrance To which I returned him this Answer: That it night be doubted whether the fame numerical Air could not be breathed more than once; and whether the Succus, and Aliment of it, could be fpent in one fingle Refpiration: Secing these Urinatores, or Divers under Water, for Spunges in the Mediterranean Sea, and those for Pearls in the Sinus Ara-In a, and Perficus, continuing above half an Hour under Watit, must needs often breathe in and out the same Air. ave me an ingenious Answer, That they did it by help of the filled with Oil, which full corrected and fed this

Lie which O I being once evaporated, they were able to connue no longer, but must ascend up, or dic. An Expefunent most certain and true. Wherefore I gave him this Seand Answer: That the fullginous Air we breathed out in the Piramid, might pass thorough these Galleries we came up, and so thorough the streight Neck, or Entrance, leading into the Pyramid, and by the same tresh Air might enter in, and come up to us. Which I dlustrated with this Similitude: As at the Streights of Gibraltar, the Sea is reported by fome to enter in on Europe fide, and to pals out on Africe fide, to in this fireight passage, being not much above three Feet broad, on the one side Air might pass out, and at the other side fresh Air might enter in. And this might no more mix with the former Air, than the Rhodanus, as Pomponius Mela, and fome others report, pulling through the Lacus Lemanus, or Lake of Geneva, doth mix and incorporate with the Water of the Lake. For as for any Tubult, to let out the fuliginous Air at the top of the Pyramid, none could be discovered within, or without. He replied, They might be so small, as that they could not cally be discerned, and yet might be sufficient to make way for the Air, being a thin and fubrile Body. To which I answered, That the lefs they were, the fooner they would be obstructed with thost Tempests of Sands, to which these Desurs are frequently exposed: And therefore the narrow Entrance into the Pyramid, is often so chooked up with Drifts of Sand, that there is no entrance into it: Wherefore we hire

Morrs to remove them, and open the passure, before enter into the Pyramid: With which he refled fatisfied. could not so castly be satisfied with that received Opini That at the Streights of Gibraltai, the Sea enters in at the c fide, and at the same time passes out at the other. For fides that, in twice paffing those Strengths I could obser no fuch thing, but only an In-let, without any Out-let of I Sea: I enquired of a Captain of a Ship, being Captain of a of the fix that I was then in Company with, and an und flanding Man, who had often patied that way with the Pira of Algier, whether ever he observed any Out-let of the Sca Africa fide? He answered, No. Being asked, Why then t Pirates went out into the Attantich Secon Africe fide, it were not, as the Opinion is, to make use of the Current? aniwered, it was rather to fecure themselves from being si prifed by the Christians, who had near the Mouth of t Streights the Port of Gibraltar, on the other side, to harbe in. Wherefore, when I confider with my fell the great Draug of Waters that enter at this Streight, and the fwift Current Waters which pass out of the Pontus Euxinus, by the Bapha Thracius, into the Mediteriane in Sea, (both which I have fee befides the many Rivers that fall into it, and have no visit pattage out: I cannot conceive, but that the Mediterrane Sca, or Vimal (as the Aralians c.ll it, from its figure) mi long fince have been filled up, and twelling higher, but a dro via the Plans of Agnt; which it hath never d ne. V. hatel I imagine it to be no Abfordity in Philosophy, it is fas that the Earth is tubulous, and that there is a large pullage und Ground, from one Sea to another. Which being granted, v may eafily thence apprehend the Reaton why the Meditor nean Sea rifes no higher, notwithstanding the Fall into it is many Waters: And also know the Reaf in v liv the Ca pian Se tho' it hash not, in appearance, any Commerce with othe Seas, continues falt, (for for it is, whatforwer P. Incleuts, Strabo, fays to the contrary) and fivells not over its Banks, no withflanding the hall of the great River Volga, and of other into it. That which gave me occasion of entring into the Sp culation was this: In the Longitude of eleven Degrees, ar Latitude of forty one Degrees, having borrowed the Tacklit of fix Ships, and in a calm Day founded with a Plummet almost twenty Pounds weight, carefully steering the Boat, an keeping the Plummet in a just perpendicular, at a thousan forty five English Fathoms; that is, at above an English Mi and a quarter in depth, I could find no Land, or Bottom.

### A Description of the Second PYRAMID.

ROM the First Pyramid we went to the Second, being fearce di-Stant the Flight of an Arrow. By the way I observed, on the West side of the First, the Ruines of a Pile of Building, all of fquare and polithed Scone; fuch as Pliny calls Bulaites, and de pho. 1.30 feribes to be, Ferrei coloris, & dariux: esp. 7 Of an Iron colour and hardness merly, it may be, fome Habitation of the Priests, or some Monument of the Dead. To the Right Hand of this, tending to the South, stands this Second Pyramid; of which, besides the Miracle, the Ancient and Modern Writers have delivered little. Herodotus re-Horodot. lates, that Cephren, in imitation of his lib. 2. Brother Cheops, built this; but that he fell short in respect of the Magnitude. For (faith he) we have measured them. It were to be wished for fuller Sarisfa-Etion of the Reader, he had expressed the quantity, and also the manner how 8 S 2

he took his Measure. He adds, It bath Greaves. no subterraneous Structures, neither is whe Nilus by a Channel derived into it,

Diodor. Sic. lib. 1. Tr a. λό τεχνίω χειρετρία πα-εατλησίαν τη περειρημίνη, τω ή μεγάθι πολύ λειπο-μίνι ως αν τ ον τη βασι πλαράς εκάτης κόης τα-

as in the former. Diodorus somewhat more particularly describes it thus: That for the Architecture it is like unto the former, but much inferiour to it in respect of Magnitude; each side

of the Basis contains a Stadium in length. The same Measure, by Strabo, Lie See is affigned to the Altitude: Each of thefe, field to discoursing of the First and Second Pyramids us a Furlong in height. That is, Strabo, to comment on their words, of Grecian lib. 17. Feet fix hundred, of Roman fix hundred twenty five: So that by the Computation of Diodorus, each fide should want an hundred Grecian Feet of the former

Plin. 1. 36. cap. 12. Alterius mtervalla singula per quatuor angulos pares Iocc xxxv11 [pcdes] comprehendunt.

Pyramid. Pliny makes the difference to be greater, for affigning eight hundred eighty three Feet to the for-

of this, but seven hundred thirty seven. By my Observation, the Stones are of colour white, nothing so great and vast as those of the first and fairest Pyramid; the Sides rife not with degrees like that, but are all of them plain and fmooth; the whole Fabrick (except where it is opposed to the South) feeming very entire, free from any deformed Ruptures or Breaches. The height of it, taken by as deliberate a Conjecture as I could make (which it was easie to do by reafon of the nearness of this, and the former, being both upon the same Plain) is not inferiour to it; and therefore Strabo hath rightly judged them to be equal. The Sides also of the Basis of both are alike; as, besides the Autho-Strabo, 1.7. rity of Strabo, the Venetian Doctor affured me, who measured it with a Line. There is no Entry leading into it, and therefore what may be within, whether fuch Spaces and Compartiments, as I observed in the former, or whether different, or none, I must leave to the Corljecture of Travellers, and to the Difcovery of After times.

mer, he allows to the fide of the Basis

This Pyramid is bounded on the North and West sides, with two very stately and elaborate Pieces; which I do not to much admire, as that by all Writers they have been pretermitted. About thirty Feet in depth, and more than a thousand and four hundred in length, out of the haid Rock, thefe

Buildings have been cut in a perpendicular, and squared by the Chiffel, as I suppose, for Lodgings of the Priests. They run along at a convenient diffance, parallel to the two Sides we mentioned of this Pyramid, meeting in a right Angle, and making a very fair and graceful Prospect. The Entrance into them is by fquare Openings, hewn out of the Rock, much of the same bigness with those I described in the first Pyramid. Whether these were symbolical (as the Theology of the Ægyptians confifted much in mysterious Figures) and the depressure and lowness of these, were to teach the Priefts Humility; and the fquareness and evenness of them, an uniform and regular Deportment in their Actions, I leave to fuch as have written of their Hieroglyphicks to determine. The hollow space within, of them all, is somewhat like to a square and well-proportioned Chamber, covered, and arched above with the Natural Rock: In most of which (as I remember) there was a Passage opening into forme other Compartinent, which the Rubbiln and Darkoets hadred me from viewing. On the North-life without, I observed a Line, and only one engraven with Sacred and Apprior Character with Sacred and Character with Sacred a Etert, Juch as are mentioried by Herodotus,
and Diodorus, to have
been used by the Priests,
and were different from
the vulgar Characters in
Diod. 1. 1. Civil Affairs: In which former kind ' Fustin Martyr makes Mofes to have been skilful; as the Scripture shews him to have been \* learned in all the Wisdom of the

literis perversè utuntur. A manner practifed by the Hebrews, Chaldeans, and Syrians, to this Day: And not unlikely to have been borrowed by them from the Expyrians; to whom the Chaldeans also owed their first Skill in Astrology, as the Grecians did their Knowledge in Geometry; the former being attested by Diodorus, and the

latter confessed by Proclus, and other Grecians. And furely in imitation of Grecians these, or of the Jews, the Arabians 2 Lib neighbouring upon both, have taken up communities manner of writing, and continued Procli, it to our Times; communicating it Lib. I also by their Conquests, to the Persians and Turks.

Diodor.

#### A Description of the Third PYRAMID.

HE Third Pyramid Stands distant from the Second about a Furlong, upon an advantageous height, and rifing of the Rock, whereby a far off it seems equal to the former; tho' the whole Pile is much less. and lower. The time was fo much fpent with my other Observations, that I could not take fo exact a View as I defired, and the Work deferved; yet I took so much of both, as to be able to confute the Errors of others. But before I perform this, I shall relate what the Ancients, and some one or two of our best Writers, which have travelled \* thither, have delivered

Herodoc. Hb. 2. Hugguida I y car dwalingle wollde hame F welche, solves weder relies with y sides tratureles with y sides relighter, like y et of hugur historica.

his Father, wanting of all fides (for it is quadrangular) twenty Feet It is three hundred Feet on every fide, being to the

concerning this. Hero-

dotses discourfing of it.

tells us, That (Mycerinus) left a Pyramid much less than that of

middle of it built with Æthiopick Marble. Diodorus Siculus is somewhat larger Diodor and clearer. Every fide of the Basis Sic. 1.1 (Mycerimus) caused to be made three bundred Feet in length, he raised the Walls fifteen Stories, with black Stone, like Thebaick Marble; the rest of it he finished with such Materials as the other Pyramids are built. This Work, altho it is exceeded by the rest in Magnitude, yet for the Strutture, Art, and Magnificence of the Marble, it very far excels them. In the side towards the North, Mycerinus, the Name of the Founder is engraven. To Diodorus I shall adjoyn the Testimony of Strabo: Farther, upon Strabo, a higher rife of the Hill, is the Third Geog. (Pyramid) much less than the two former, but built with a greater Expence : For almost from the Foundation of it to the middle, it confists of black Stone, with which they make Mortars, brought from the remotest Mountains of Æthiopia, which being hard, and not easie to be wrought, hath made the Work the more costly. Pliny also, not as a Spectator, and

not as a Spectator, and Eye witness, as the former, but as an Historian writes thus: The ter angular.

Plin. 1. 36. c. 12. 70 minor pradictive, sed multo dation, Althopicis lapid affirest CCCLXIII pedibuter angular.

than the former we mentioned, but much more beautiful: It is creeted with Ethiopick Marble, and in three bundred fixty three Feet between the Angles. And this is all that hath been preserved of the Ancients concerning this Pyramid. Amongst modern Writers, none deserve to be placed before Bellonius, or rather P. Gillius: For \* Thuanus makes the \* Thus other to have been a Plagiarius, and to Hist. I have published in his own Name the Very curious and inquisitive after Truth, as appears by his Topography of Constantinople, and his Bosphorus Thracius, to

\* Bellon.Observ. 1.2. c. 44. ertia Pyramis duabus superiobus long minor, tertia est aum parte major, ea que apud eflaceum montem eft Rome, ad D. Pauli eundum It, it inere Oftienfi. Adbuc inegra eft, nec magis rimis corupta, quam si jam recens exrueta effet. Marmoris enim enere constat, quod Busaltes uncupatur, vel lapis Æthioicus, ipfo ferro duriore.

whom Bellonius served as an Amanuenfis. The third \* Pyramid is much less than the former two, but is a third part greater than that which is at Rome, near the Mons Testaceus, as you pass to St. Paul's in the Ostian way. It is fill perfect, and no more corrupted than as if it had been newly built : For it is

made of a kind of Marble, called Bafaltes, or Æthiopick Marble, harder than Iron it felf.

It will be in vain to repeat the Traditions and Descriptions of several others: All which, by a kind of Confederacy, agree in the same Tale for the Substance, only differing in some Circumstances. So that I shrewdly suspect, that Diodorus hath borrowed most of his Relation from Herodotus; and Strabo and Pliny from Diodorus, or from them

both; and the more learned Moderns from them all: For else how can it be imagined, they should so constantly

with an Fnglish Captain, who having been four times at Alexandria, and as often at the Pyramids, affures me that I im not missaken.

agree in that, which if \* I have fince conferred my Eyes, and \* Memory, extreamly fail me not, is most evidently false? And therefore I have a strong

Jealousie, that they never came near this Third Pyramid; but that they did, as I have observed all Travellers, in my time, in Ægypt to do, fill themselves so full, and as it were so furfeit with the fight of the greater and fairer Pyramid, that they had no Appetite to be Spectators of the rest; where they should only see the same Miracle (for the Pyramids are all of the fame Figure) the farther they went, decreafing and presented in a less Form: Or if they did view this, it was Quasi per transennam; very perfunctorily, and flightly; and that through a false and coloured Glass: For they have mistaken both in the Quality of the Stone, with Herodotus, who by a notable piece of Forgetfulness, if it be not a σφάλμα in the Copies, makes the Dimenfions of each of the fides, in the Basis of this, to be three nundred Feet, and yet to want but twenty of the first Pyramid, o which he affigned before eight hundred Feet, an impossibility in Arithmerick: And therefore it will be no prefumption to correct the place, and in-

stead of irinor wodw xaladisou, to Write werlexorian wooden xaladiroa. know not how to palliate or excuse his other Error, where he makes this Pyras mid to be built as far as to the middle of it, with Æthiopick Marble. If this fort of Marble be ferrei coloris, as it is described by Pliny, and granted by Dia-Plin, 1. dos us and Strabo, both of these express c. 7. latter bringing it from the remoteft Geog. Mountains of Æthiopia, where the Marble hath the fame Tineture and Colour with the Inhabitants; then can this Relation of *Herodotus* no way be admitted: For the whole Pyramid feems to be of clear and white Stone, somewhat choicer and brighter, than that in either of the two other Pyramids. And therefore I wonder that Diodorus, Sirabo, and Pliny; and amongst latter Authors, Bellonius, Gillius, and several others, should have all followed Herodotus; when with a little Pains and Crecumspection, they might have reformed his and their own Error. It may perhaps be alledged in their Defence, that they mean, the Buildings within are erected with Black and Æthiopic! Mathle: And yet if this be granted, fince there is no Entrance leading into this, no more than is into the Second Pyramid, what may be within, depends upon the Incertainty of Tradition or Conjecture, both which are very fallible. Tho it cannot be denied, but close by, on the East side of it, there are the Ruins of a Pile of Building, with a fad and dusky Colour, much like that we described in passing to the Second Pyramid, which might be the ground and occasion of this Error. I cannot excuse the Ancients, but Bellonius, or Gillius, (for it is no matter which of them owns the Relation, when both of them have erred) are far more inexcusable: Because it might have been expected from them, what Livy supposes, Novi Semper Scriptores, T.Liv.lib.i. aut in rebus certius aliquid allaturos fe, aut scribendi arte rudem vetustatem superaturos credunt. Whereas these on and Colour of the Pyramid. I begin the contrary, have depraved what hath been in this particular, with truth delivered by the Ancients. For whereas Herodotus, and Diodorus, equal the fide of the Basis to three hundred Feet, and Pliny extends it to three hundred fixty three, they only make it a third part greater than the Pyramid at Rome, of C. Cestius, near the Mons Testaceus: So that either they have much enlarged that at Rome, or thrunk and contracted this.

lib. 2.

For the Pyramid at Rome, exactly meafured on that fide which stands within the City, is compleatly feventy eight Feet English in breadth; to which if we add a third part of it, the result will be an hundred and four; which should be equal to this Ægyptian Pyramid, in the notion and acception of Bellenius. An unpardonable Overfight, no less than two hundred beet, in a very little more than three hundred. For fo much, befides the Authority of Herodotus, and Dioderus, before cited, I take the fide of this Pyramid to be, and the Altitude to have much the fame pro-

I would gladly have feen in this, the Name of Mycerinus, the Founder of it, engraven, as Diodorus mentions: Or that other Infeription in the first, whereof Heredaus procured the Interpretation: But both have been defaced by

#### Of the rest of the PYRAMIDS in the Libyan Defart.

Have done with these Three Pyramids, each of them being very remarkable, and the two first rec-koned amongst the Miracles of the World. The rest in the Libyan Desart lying feattered here and there, are (excepting one of them) but leffer Copies, and as it were Models of these: And therefore I shall neither much trouble my felf, nor the Reader, with the De-fcription of them. Tho' to fpeak the truth, did not the three first standing so near together, obscure the lustre of the rest, which lie far scattered, some of them were very confiderable. And therefore I cannot but tax the omission of the Ancients, and the inadvertency of all Modern Writers and Travelles, who with too much supineness have neglected the Description of one of them; which in

my Judgment is as worthy of Memory, and as near a Miracle, as any or those three which I have mentioned. And this flands from these South and by West, at twenty Miles distance, more within the Sandy Defart, upon a Rocky Level like thele, and not far from the Village whence we enter the Munmies. This, as the Venetian Doctor affured me, and as I could judge by Conjecture at a distance, hath the same Dimenfions that the first and fairest of these, hath Graduations, or Afcents without, and of the same Colour like that, (but more decayed, especially at the top) and an Entrance into it on the North-fide, which is barred up within; and therefore whatfoever is spoken of the first, in respect of the exteriour Figure, is appliable to this

Diodor.

Section. d Bellonius extreamly exceeds Greaves. in his Computation of the Number of Plusquam them, who thus writes: Above an bun-entum per dred others are scen dispersed up and am plani- down in that Plain. I could not discoiem bine ver twenty. And long fince, Ibn Almainde sparse toug, in his Book of the Miracles of conspicium-sur. Bellon. Ægypt, reckons them to be but XVIII. 1.2. c. 44. There are in the West-side no more samous Buildings than the Pyramids, the number of them is XVIII. Of these, there are three in that part which is opposite flat. to Foltat (or Cairo)

(or a usually term it, Cairo) are three distinct Names, as it v one and the same City, appears by the Geographia Nu and Abulfeda, in Arabick; tho' Abulfeda more particula feribes Alkabira to be on the North-fide of Fostar, and F be leated upon the River Nilus.

#### In what Manner the PYRAMIDS were built.

E had ended our Discourse of the Pyramids, but that I find one Scruple touch'd upon by Herodotus, Diodorus, and Pliny, which is worth the Discussion, as a Point of fome Concernment in Architecture: And that is, in what manner these Pyramids were built, and with what Art and Contrivance the Stones, especially those vast ones in the first, were con-"Huer veyed up. " Herodotus who first raised holive Al- the Doubt, gives this Solution: They bus unya-carried up the rest of the Stones with viet Ednar little Engines made of Wood, raising Beaxing them from the Ground upon the first หะสอเท-มูลย์ทธา.&c. Row: When the Stone was lodged upon Herod. 1. 2. this Row, it was put into another Engine, standing upon the first Step, from thence it was conveyed to the Second Row by another. For fo many Rows, and Orders of Steps as there were, fo many Engines were there: Or else they removed the Engine which was one, and easie to be carried to every particular Row as often as they moved a Stone. We will relate that which is spoken of either part. Therefore those in the Pyramid were sirst made, which were the highest, then by degrees the rest; last of all those which are nearest to the Ground, and are the lowest. The first part of this Solution of Herodotus is full of difficulty. How in erecting and placing of fo many, Machine, charged with such massy Stones, and those continually passing over the lower degrees, could it be avoided, but that they must either unfettle them, or endanger the breaking of some Portions of them; which Mutilations would have been like Scars, in the Face of so magnificent a Building? His second Answer is the founder; but I conceive the Text to

be imperfect. Diodorus hath another Fancy: The Stones (faith he) at a great distance off were prepared in Arabia: And they report, that by the help of Aggeres (Engines not being then invented) the Work was erected. And that which begets the greatest admiration is. that so vast a Structure was perfetted in that place, which is all about replenished with Sand. where there appears not any Relicks, either of the Aggeres, or of the hewing and polishing of the Stones. So that it feems not piece-meal, by the Industry of Men, but all together, and at once, the whole Pile, as it were, by some God, was erecied in the midst of the Sands. Some of the Ægyptians relate Wonders of it, and endeavour to obtrude I know not what Fables; namely, that these Aggeres consisting of Salt and Nitre, were dissolved by letting in the River, which wholly consumed them without the Labour of Hands, leaving this Struaure (entire.) But the truth of the Business is not so, but that those multicudes of Men, which were employed in raising the Aggeres, carried them away unto their

former

former places. For, as they report, three hundred and fixty thousand Men were employed in these Offices, and the whole Work was scarce finished in the space of twenty Years. Plany partly agrees with him, and partly gives another Answer. The Question is, by what means the Coment was conveyed up to such a beight, (he rather might have questioned, how those vast Stones were conveyed up) Some Say, that Banks of Natre and Salt were made up, as the Work rofe, which being finished, they were washed away by the River (Nilus.) Others imagine, that Bridges were made with Brick: Which, the Work being ended, were distributed into private Houses. For they concerve, that the Nilus being much lower, could not come to wish them (away.) If I may assume the Liberty of a Traveller, I imagine, that they were erected, neithers. ther as Herodotus describes, nor as Diodorus reports, nor as Pliny relates; but

\* Admitting this Supposition, we may easily apprehend, how those huge Stones might, by Engines, be raised in a perpendicular, as the Work rose, with less Difficulty and Expence, than either in a Slope or Traverse Line, upon Banks of Nitre, or Endess of Brick, according to the Traditions of Diodo us and Pliny: Both which must have been of a stupendious and almost incredible height. Suctions in Augusto. Sparttanus in the Source.

that first they made a large and spacious Tower in the midst, reaching to the top; to the fides of this Tower, I conceive, the rest of the Building to have been applied, piece after piece, like so many Buttresses, or Supporters, still lessening in height, till at last they came to the lower-most degree. A difficult Piece of Building,

taken in the best and easiest Projection: And therefore it is no wonder, if it were not often imitated by the Ancients, and no where expressed, or commended, by the Great Master of Archi-

tecture l'aruvius. Yet furely, if we judge of Things by the Events, and if we reflect upon the Intention of Monuments, which are raifed by the Living to perpetuate the Memory of the Dead, then is this as commendable a way as any. And therefore we fee at Rome, that the' by the Revolution of so many Ages, the Maufoleum of Augustus be almost decayed, and the Septizonium of Severus be utterly loft, both intended for lasting and stately Sepulchies; yet the Pyramid of C. Castius stands fair, and almost entire. Which is no more to be compared, either for the vaftness of the Stones, or the whole Bulk and Fabrick of it, with thefe, than are the Limbs and Body of a Dwart, to the Dimensions of a Giant, or some large Co-

I have done with the Work, but the Artizans deserve not to be pretermitted;

concerning whom, the Observation of \* Diodorus is as true, as it is boldly delivered by him. It is confelled, that thefe Works (speaking of the Pyramids) far excel the rest in steypt, not only in the Musliness of the Structures, and in the Expences, but also in the Industry (and Skill) of the Artisticers. The Regyptians think, the Architects are more to be admited than the ki

be admired than the Kings who were at the Expence: For they by their Abilities and Study, these by their Wealth received by Inheritance, and by the Lubburs of others credled them.

#### The CONCLUSION.

AND thus much of the Sciography, or of the Artificial and Archite-donical part: I shall shut up all with one Observation in Nature, for it the Recreation of the Reader, recited for its by Strabo, in these words: We ought in the interest of the strange things were in the strange things were in the strange than t

feen by us at the Pyramids. Some Heaps of Stone, being tragments bewn off, he before the Pyramids; amongst these are found little Stones, some in the simultude and bigness of Lentils, some as of Grains of Barly, which appear half in scaled: They report these are some Relicks of the Provisions which were given to the Workmen, and have been petristed; which seems probable enough.

These, if there were ever any such, are either consumed by Time, or scat-8 T tered

tered by the Winds, or buried with neaves, those Tempests of Sand, to which the Defarts are perpetually exposed: But Diederus, who not long preceded him, was not fo curious as to deliver this Relation. And were not Strabo a Writer of much Gravity and Judgment, I should fulpect that these petrified Grains (tho' I know fuch Petrefactions to be no impossibility in Nature: For I have seen, at Venice, the Bones and Flesh of a Man, and the whole Head, except the Teeth, entirely transmuted into Stone: And at Rome, clear Conduit-Water, by long standing in Aquaducts, hath been turned into perfect Alabatter) are like those Loaves of Bread, which are reported to be found by the Red Sea, converted into Stone, and by the Inhabitants supposed to be some of the Bread the Israelites left behind them, when they passed over for fear of Pharaoh. They are fold at Grand Cairo, handfomly made up, in the manner of the Bread of these Times; which is enough to discover the Imposture. For the Scripture makes them to have been unleavened Cakes: \* They baked unleavened Cakes of the Dough which they brought forth out of Ægypt. Or else Strabo's Rela-

and dried like that of the Mummies. He observed the cle to have been always behind him; once casually lo back, he discovered some Bones carried privately by an tian, under his Veff, whereby he understood the Myfle in Fgypt: A thing superstitiously belie-

ved by the Christians; and by the Priests, either out of Ignorance, or Policy, maintained, as an Argument of the Resurre-The possibility and truth of it, Metrophanes, the Patriarch of Alexandria, thought (but very illogically) might be proved out of the Prophet Efay, And they shall go forth, and look Efay &upon the carcases of the men that have 4-transgressed against me, for their worm shall not die, neither shall their Fire be quenched; and they shall be an abborring unto all Flesh.

But I have digreffed too far. Confutation of these, and the Description of the Mummies, or of the rest of the Ægyptian Sepulchres (for from thence comes the matter of this their supposed Resurrection) and that infinite Mass, and variety of Hieroglyphicks, which I have either feen there, or bought, or transcribed elsewhere, may be the \* Argument of another Di- \* An Argument is scourse.

me, and fo

which I made a Collection of several Antiquities in my Tr. yels abroad; but these (and would only these!) have ut fortunately perished at home, amidst the sad Distractions of the Time.

To

To his truly Noble and Learned FRIEND,

## $\mathcal{F}OHN$ SELDEN, Efq.

Burgels of the University of OXFORD, In the Honourable HOUSE of COMMONS.

SIR, HAT I should present you, who have so honourably de-served of Antiquity, and of your Country; and, if I may ald mine own Obligations, in particular of me, with so small a Retribution as a Roman Foot, and Denarius, may seem more proportionable to mine Abilities, than to the Eminency of your Place and Worth. But you, who, to the Honour of your Profession, have joined the Wisdom of the Ancients, and justly have merited this Elogy,

-Anglorum gloria gentis

Seldenus

An Elogy long since given you by a Man, who is describedly esteemed, working distinct the earned Hugo Grotius; you are best able to judge of what Importance these two are, in the Disco-very of the Weights and Measures used

by the Ancients.

And first, for Measures, the FIDE or Cubit of the Sanctuary, in the Scriptures, Josephus, and the Rabbins: The Ailuria G, and Baculowios waxes, in Herodotus (the former equal to that of Samos: The latter mis rendred by Pliny Schiller Peo Parkel view Trendred by Pliny and Solinus, Pes Babylonius): The Maca σώγ Γης Περσικός, in Herodotus, containing XXX. sadia in Straho, sometimes LX. Sometimes XL. and Sometimes XXX. (but in Hefychius, ὁ καθασαγίης έχει μίλια τέττιες ; and in Abulfeda, ibree Miles: With whom, and with the Perfians, to this Day it is called the Farfach) the တွင်းပြော Ai ပြော III Herodotus, Artemidorus, and Strabo: The wes Basi-Linds, if Diritale , in Hero: The Pes Pto emaicus, and Druffanus, in HythreeMiles. ginus: Besides infinite others depending upon the Proportions of some of these in I say, these count, after the Destruction of those ancient Monarchies and Republicks, any other way be restored, than from such Monuments, as, by Divine Providence, have escaped the Hands of Ruine, and continued to these later Ages. For were it not that the Pes Romanus, or Monetalis, as Hyginus terms it, were full extant in Rome, on the Monuments of Cossutius, and of Tit. Statilius Vol.

Aper (for those two Columns, the one with the Infeription HOD, O. mentioned by Marlianus, and Philander: The other with 1102. IB. feen by the fame Philander, are both loft) we might utterly defput of knowing the Measures of the Hebrews, Babylonians, Persians, Ægyptians, Grecians, Romans, and of all others described in Classical Authors; who could not transmit to Posterity the individual Measures themselves, but only the Proportions they respectively had to one another: Which Proportions being pure Habitudes, cannot, as Mathemati-cians observe, be reduced to the Mea-fures of these Times, unless either some of the moneyupa themselves were existent; or else exall Copies taken from the Original's were derived to us.

In like manner it is for Weights, the Hand the בכר the שקל of the Hebrews, or אים of the Chaldeans, which Aruck renders by four mil Zuzim; that is, 4 Denarii (from whence the Persian of I.G., in Xenophon, and Hesychius, may have received its denomination): The Taxar-Tov Basuldviev, containing 7000 Attick Drachms; the Takarlov Arywaiov 10000; the Tanavlov Luege 1500; the Tanav-Tov 'Arlinov 6000, all mentioned by Julius Pollux; the Talentum Ægyptium, in Varro, containing 80 Pondo, or Pounds; the Talentum Euboicum in Festus 4000 Denarii : Thefe, with infinite others, both Mensura and Pondera, whether confidered as Medica, or Georgica, or Veterinaria, cannot in our times be restored, but only by such Weights of the Ancients in are still extant; that is, either by the Denarius of the Romans, or Degxun of the Grecians, or by the Congrus of Vespatian, or by the Libra, and Uncia Romana, and the like, that have been preserved by Antiquaries.

Seeing therefore the Denarius is of the

Seeing therefore the Denarius is of as great moment for the discovery of Weights, as the Roman Foot for the knowledge of Measures, I have taken these two, as two irrefragable Principles, from whence the rest used by the Ancienta may be deduced. And decays the Denarius may be considered in a double respett, either as

Num-

fach, with ents and Moderns, conrains

The Far-

Nummus, or as Pondus: The first Acception conducing to the Valuation of Coins, the second to the Certainty of Weights: It was therefore necessary that both the Weight, and Valuation of the Denarius, should be exallly known. To which purpose, in Italy, I examined with a Balance (the Scale of which the eighti-eth part of a Grain would sensibly turn) many hundred fair Denarii, both Confulares and Cafarei, as also Quinarii, or Victoriati in Silver; feveral Aurei of the former and later Emperors; besides the Original Standard of the Congius, placed by Vespatian in the Capitol; and many Uncia, and Libra, in Brass. From whence I colletted the Weight of the Denarius Consularis, and Casareus; that to be the feventh part of the Roman Ounce, as Celfus, Scribonius Largus, and Pliny, rightly describe; and this to be sometimes the eighth part, and sometimes the seventh. but most frequently in a middle proportion betwint eight and feven, till Severus's and Gordianus's Times; under whom, and the fucceeding Emperors, it recovered the Weight of the Denarius Confularis; but · loft muched its finences by the mixture of

With these Denarii, for the greater certainty, I compared such Grecian Coins (especially Athenian) as I had either seen in choice Cabinets, or bought of mine own, and those were the xevoot, or salines, absolutely taken; which, as Julius Pollux, and Hesychius, out of Polemarchus testisse, weighed two Drachms: The resistency weighed two Drachms: The resistency contact of the conta

By which Comparison I first discover'd, that howsover the Romans, as Pliny, and A. Gellius expressy; Valerius, and Suetonius, by way of consequence, equal the Denarius to the Drachma: And tho the Greeks, as Strabo, Cleopatra, Plutarch, Galen, Dio, and many more, equal the Drachma to the Denarius, speaking in a popular estimation, and as they vulgarly passed in way of Commerce; yet is we shall put on the Resolution of him in the Comedy,

Oculatæ nostræ sunt manus, credunt quod vident:

We may evidently discern in the Scale, the Drachma Attica to be heavier than the Denarius: And therefore all such Writers of the Ancients, as equal them, if we speak strilly of Weight, and not of Estimation, have been decoyed, and confequently, all Modern Writers following their Traditions, in Procures de ponderibus, & de re nummand, have erred.

But because it is not probable, that the Ancients, both Greeks and Romans, should be deceived in their own Coins, and in their own Times; it occussed by observing the Practice abread of the workwissed in Exchanges, with whom the same specifical Coins, in different States, pass with different Estimations, to think of some means how I might reconcile the Traditions of the Greeks and Romans, concerning the Weight and Valuation of the Drachma Attica and Denatius; notwithstanding the difference in the Bailance, of such as are now found at Atthens, and at Rome.

And this drew from me that Defeourfe which I have inserted at the end of this Book. Of some Directions to be observed in comparing the Valuations of Coins: Which may serve, net only to reconcile the Greek and Roman Writers, but especially the Traditions of Philo, Josephus, Epiphanius, St. Hierom, and Hefychius; who make the Hebrew pui Shekel, equal to the Attick Tetradrachm; whereas in the Scale, which is the best Judge of this Controversie, I find them manifestly unequal; the Hebrew, or Samaritan Shekel, being much less than the Attick Tetradrachm.

But it may be questioned, Why after the Labours of Portius, Budæus, Alciatus, Agricola, Montanus, Mariana, Budelius, Alcafar, Villalpandus, Jo. Scaliger, Capellus, Snellius, and of many other emissions. nent Men who have writ, either dedita operâ, or en waeghw, de ponderibus & mensuris, I should undertake any thing of this nature? My Answer is, that obferving in them fo great a variety, and contradiction of Opinions, I was willing to use mine own Judgment, how mean foever, in giving my self private Satis-faction. And the I intended this Work, as a waterflow to other Employments; yet baving, by the advantage of travelling in Foreign Parts, perused in Italy, Greece, and Ægypt, more Antiquities than I think any of them above-named single, I thought it would not be unacceptable, if I did, as it is the manner of Travellers, publish at home, such Observations and Discoveries as I made abroad. The which I humbly Dedicate to you, as out of a Desire to express my Gratitude for many Noble Vavours: So out of an assurance, that if they receive your Approbation, I need not to fear the Censure of others.

Your most obliged Friend, and humble Servant,

### Of the Roman F O O T.

received and usual Measure amongst the Romans, as the Cubit amongst the Jews, is a thing not controverted by any: For \*Polyb.l.6. \* Polybins describing their Scutum, makes it in breadth over the bend, two [Roman] rect and an balf, and in length four reet: Or, if it be of a greater fort, a Palm more is to be added to this Meafure. And not long after, expressing the manner of their Caltrametation, or Encamping, he \* writes: That

\* Polyb. Ibid. Telleione 3 τ σημαίας, ε μελλεσι της της τους ταθτίω, λουμίζες το σημαίας τεί ζο ζων Θ τοπ ψ. ΄ Ως τε πάσας τάς שאשלבשל באשלסט פידיצאשי שםdas i onpalas, &c.

as often as a place is designed for the Camp, the Practorium (or General's Lodging) takes up that part, which is fittest for Prospett and Direction. Sciting there-

fore up the Standard, where they intend to fix the Pratorium, they so measure out a Square about the Standard, that each side may be distant from it an hundred Feet, and the whole Area contain Carl.Com. four Jugera. In like manner b Cafar, in the Description of his Bridge over the Rhine, makes the Binders, or Transverfary Beams, to be Bipedales. . Tully Ciccro, 1. 2. Act-dem.quaft. rent Diameter of the Sun to be Pedalis. And not to produce more Authorities,

d Suctonius in Augusto. Adolescentulum Lucium honelle natum exhibuit, tantum ut estenderet, quid erat bipedali miner, librarum XVII. ac vocus mmer/a.

4 Suctonins relates, That Augustus presented before the People of Rome, Lucius, a young Gentleman, well descended, only for to shew that he was less than two Feet

in height, seventeen Pounds in weight, and of an immense Voice. But concerning the precise quantity of this Foot, there is not any one thing after which learned Men have more enquired, or in which they do less agree: For Budaus equals it to the Paris Foot; Latinus Latinius, Muffaus, Urfinus, and others, deduce it from an ancient Monument. in the Vatican of T. Statilius Vol. Aper. Portius Vicentinus, Philander, Georgius Agricola, Ghetaldus, Donatus, and feveral others, contend the Foot on Collutius Monument in Rome, to be the true Roman Foot: Marlianus describes it out of a Porphyry Column, with this Inscription, ΠΟΔ. Θ: Lucas Patus defines it from some Brass Feet found amongst

HAT the Foot was the most the Rudera in Rome: Villalpandus derives it from the Measure of the Congius, placed by Vespatian in the Capitol (the Original Standard being still extant). Willebrordus Snellius equals it to the Pes Rhinlandicus; and several others have had feveral Fancies and Conjectures. In fuch a variety and incertainty of Opinions, we have no more folid Foundation of our Enquiry, than either to have recourse to the Writings of the Ancients; or elfe to fuch other Monuments of Antiquity, as having escaped the Injury and Calamity of Time, have continued entire to this pre-

fent Age.

And first for the Ancients: Vitru- Vitrusius. vius in his Third Book of Architecture, 1. 3. gives this Description of the Roman Foot: E cubito cùm dempti sunt palmi duo, relinquitur pes quatuor palmorum. Palmus autem habet quatuor digitos, ita efficitur uti pes habeat XVI digitos, & totidem asses areos denarius. Columel. Columella, la shews, that it was the Bafis and 1. 5. de R. Foundation to all their other Measures: Rust. Modus omnis areæ pedali mensura comprehenditur, qui digitorum est XVI. Pes multiplicatus in passus, & astus, & cli-mata, & jugera, & stadia, centuriasque, mox etiam in majora spatia procedit. Pasfus pedes habet V. Frontinus more Frontin. clearly and distinctly expresses the fe-de limitveral Parts and Divisions of it. Pesha-bus agrobet palmos IV. unciar XII. digitos XVI. rum. Palmus habet digitos IV. uncias III. Sextans, que eadem dodrans appellatur, ha-bet palmos III. uncias IX. digitos XII. From which Authority of Frontinus, and the place before cited of Vitruvius, we may collect fome analogy to have been observed in the Proportions of the Roman Foot, and of the Roman Coins: For as the Denarius contained XVI affes, fo the Foot contained XVI digitos: And as the affis was divided in XII uncias, fo likewise the Foot was divided in XII uncias; and therefore the dodrans is used by Frontinus, and the femuncia and ficilicus by Pliny, for proportionable parts of the Roman Foot; as the same are used by other Classical Authors for proportionable parts of the Roman alhs, and uncia. From which analogy, the Pes Romanus, I suppose, is termed by \* Hyginus, lim Pes Monetalia Likewise in the ancient flir Laws of the XII Tables (which Trady

the Seffertius Pes hath the fame proportion with the Seftertius in Coins . For as the Softerias, according to Gottfredi. semis, anciently two Pounds of Brass and an half; so the Sesterius Pes was + vol. Mar. two Feet and an half. \*Volusius Matide affis di- anus, " Sestertius duos osses & semissem, " quasi semis tertius; Graca sigura
" εεθομον ημιθάλανιον. Nam sex talenta & semitalentum eo verbo significantur. Lex etiam XII Tabularum argumento est, in qua duo pedes & semiss, sestertius pes vocatur. But to return to Frontinus, who farther discour-fing of the Roman Foot, gives a Distin-Etion of three forts of Feet: And those were first, pes porrectus; next, pes conAgricola stratus, or as Agricola reads it, contrailus; and lastly, pes quadratus. The first was the Measure of Longitudes, the intervalla other two of Superficies. There were, \*Frontinus Writes \* Frontinus, In pede porreclo sede limiti- mipedes duo, in pede constrato semipedes quatuor, in pede quadrato semipedes otto. Which words of his are to be thus explicated; the pes porreidus was the Roman Foot extended in length, and therefore there were in it semipedes duo: The pes constratus, was the square of the semipes, and therefore the perimeter of it contained semipedes quatuor; or, which is all one, two entire Roman Feet: The pes quadratus, was the square of the Roman Foot; wherefore of necesfity there must be four Feet in the perimeter, or in Frontinus's Expression, eight Frontinus semipedes. The same Author likewise de aquædu-in his Book de Aquæductibus, describing the Digit and uncia of this, (Est autem digitus, (says he) ut convenit, sexta decima pars pedus, uncia duodecima) useth a distinction of Digits, as he did of Feet before, not mentioned by any other Author, Quemadmodum auteminter un-ciam, & digitum diversitar, ita & ipsius digiti simplex observatio non est, nam alius vocatur quadratus, alius rotundus. Quadratus tribus quartis decimis suis rotundo major: Rotundus tribus undecimis fuis quadrato minor est. The proportions here assigned by him to the di-Archim fame which Archimedes long before

> the same proportion to the Square of the Diameter, that XI. hath to XIV. Hero also, discoursing of several forts of

Measures, informs us thus concerning the Foot: O H darlow phrey is σμικρότα ου, ή ή σοχμή દર્ δακθύλου ο

calls the Fountains of the Civil Law)

ι, το δι δοθεθωρον ι.έ, η ) ιστιλιμή ιβ΄, δ ) τως σεχμήθος, ήτοι ε ε ε διλων ις΄, ή ) το και διλων ις΄, ή ) το και διλων ις΄, δ το και διλων ε γ . The Digit is the least Measure, the Pain confiss of the Least Measure, the Pain confiss of the state and and the state of the s IV Digits, and is called Dattyledechme, and Palaiste, and Doron. The Lubas is ten ligits, the Orthodoron eleven, the Span XII. The Foot hath IV Palms, or XVI Digits, the Pygme XVIII Digits, the Pygon XX, the Cubit XXIV, or VI Palms, the Orgyia IV Cubits, or VI Feet. Most of which Measures the Romans borrowed from the Greeks; as on the contrary, the Greeks borrowed the isseegy, and pilisor, from the Roman Jugerum and Milliarc. The fame Hero defirihes another fort of Foot used in Italy. O j'Irai.ixos wss daxidhes ix τράς κ, ο εκά κ, τρίτον. The Italian Foot contains thirteen Digits, and one third. Whence " Salmafius concludes, that the " Salmai Romans used one fort of Foot in Rome, Exercit. confifting of XVI Digits; and in fome Plinianz. parts of Italy another, being but XIII p. 684. Digits, and one third. Which might be granted, did not " Hyginus, who is "Hyginu much ancienter, in his Tract, de Limiti. de limit. bus constituendis, contradict it. His constituents are these: Item dicitur in Germania in Tungris pes Drustanus, qui habet monetalem, & Jestunciam, ita ut ubicunque extra fines, legejque Romanorum, id est, ut Jolicitius proferam, ubicunque extra Italiam aliquid agitatur inquirendum; & de bat iffà conditione di ligenter pramonco, ne quid sit, quod praterisse videamur. Where speaking immediately before of the Pes Romanus, or as he also calls it, the Pes Menetalis, by which he measures and defines the Limites, he gives us this Caution That out of Italy (for in Italy he supposes one Measure to be generally received) we are to observe the Quantity of the Foot, or Measure of the Country. And for this Reason, to avoid ambiguity, he assigns the Proportions of the Pes Prussal enus, at Tongeren in Germany, to be a Sescuncia, more than the Pes Monetalis used at Rome, and in Italy. And so in another part about Cyrene, which Ptolemy gave to the Romans: " Pes corum " Hyginus qui Ptolemaicus appellatur habei mone-ibid. talem pedem, & jemunciam But to omit the Pes Ptolemaicus, (for our enquiry is only of the Roman Foot) I cannot but wonder at the miltake of \* Jo. \* Jos. Sea fepb Sealiger, concerning the Pes Dru-liger de renummaria

de circul-used: And those are, that a Circle hath

Greaves. Pes igitur ille Drusianus major est Romano sescunicà, suit enim XXII digito-rum, quantorum XVI est pes Romanus. If it were but a sescuncia, greater than the Roman Foot, as Hyginus, and he alfo make it, how can it possibly be XXII digitorum? Or how can he excuse his words, which immediately follow > Ex quo colligimus pedem Drusianum omnino esse cum, qui bodie in Gallià, & Belgio in usu est, qui prosesso major est VI di-gitis, quantorum XVI est pes, qui Rome in bortis Angeli Colotii sculptus in faxo visitui. Eum enim nos cum pede Gallicano comparantes, id verissimum esse deprebendimus. Neither is the Error of fome others much less, in making the Pes Monetalis, or Romanus, and Pes Regius Philetarius, to be equal. Because the Roman Foot consisted of XVI Digits, as Frontinus writes, and the Hero in Pes Phileterius of as many, as " Hero lagose. flews: 'Ο wis ο μ βασιλικός, κ φιλε-Hagoge. ταίρι Ο λε τόμβο Εχό σαλαικάς οδ, ο ακ-าร์กิษร เร'. Therefore both these are equal. The Error is in supposing all Digits to he alike; and therefore the fame number of Digits being in both, that both are equal. By the fame Argument we may conclude the Roman Foot, and Arabian Foot, and the Derah, or Cubit of these, to be equal to the Cubit, or Abulfeda Selquipes of the Romans; feeing abul-Geogr. A- feda, an Arabian Geographer, defines rab. MS. the Derah to confift of XXIV Digits. and so many also did the Roman Sefquipes contain. But the Observation of Rhemnius Fannius in this particular, is ' Rhemmu much better; which he applies to Fannu Fragmen-Weights, and we may by analogy affign

figures, and Romanus, who thus writes:

to Measures.

Nature, sed lege valent, hominumque

But to return to the Roman Foot: ' Isid Hi- Lastly, We may alledge, ' Isidorus Hispal. L-45 spalensis. Palmus autem, quatuor habet c-15-A digitos, pes XVI digitos, Passus pedes quinque, Pertica passus duos, id est de-

refertis.

cem pedes. And this is that which I find delivered by fuch of the Ancients as are extant. Gut of which bare and naked Descriptions, it is as impossible to recover the Roman Foot, as it is for Mathematicians, to take either the Distance, or Altitude of Places, by the Proportions of Triangles alone, or by Tables of Signs and Tangents, without having some certain and positive Meafure given, which must be the Foundation of their Enquiry. All that can be collected by these Descriptions, is this, that we may know into how many parts the Romans usually divided their Feet; and all these Divisions I have seen in fome ancient ones. But suppose there were no Roman Foot extant; how by XVI Digits, or by IV Palms, or by XII Uncia, (which is the most uncertain of all, feeing whatfoever hath Quantity, how great or fmall foever it is, may be divided in XII Unciqs) could it be precifely restored? For if

that of Protagoras be true, as well in Meafures, as in Intellectual Notions, that Man is τσάνθων χεπμάτων μέβον: Whence "Vitruoius obferves, that the Latines denominated most of their Measures, as their Digit, Palm, Foot, and Cubit, from the Parts

Protagoras apud Ariftot 1. 13. cap. 5. Metaphys. Ilav ärθωπον.

and Members of a Man: Who shall be that perfect and square Man from whom we may take a Pattern of these Measures? Or if there be any fuch, how shall we know him? Or how shall we be certain the Ancients ever made choice of any fuch > Unless, as fome fancy, that the Cubit of the Sanctuary was taken from the Cubit of Adam, he being created in an excellent State of Perfection: So we shall imagin these Digits, and Palms, to have been taken from some particular Man of completer Lineaments than others. On the other fide, if this Foot may be restored by the Digits, and Palms of any Man at pleasure, fince there is such a difference in the Proportions of Men, that it is as difficult to find two of the fame Dimensions, as two that have the same likeness of Faces; how will it be possible, out of fuch a diversity, to produce a certain and positive Measure, confifting in an indivisibility, not as a Point doth in respect of Parts, out in an indivisibility of application, as all Originals and Standards should do? The Arabians,

\* Muber med Ibn Melond's

to avoid this difficulty, shew us a more certain way, as they suppose, how to make this commensural Digit, and confequently the Foot: And that is by the breadth of fix Barly-corns laid one contiguous to another: For thus Muhammed Ibn Mcfoud, in his Book, entituled in Persian, Gehandanish, relates: That in the time of Almamon (the learned Calif of Babylon) by the Elevation of the Pole of the Aquator, they measured the Quantity of a Degree upon the Globe of the Earth, and found it to be fifty fix Miles, and two thirds of a Mile: Every Mile containing four thousand Cubits, and each Cubit twenty four Digits, and every Digit fix Barly-corns. The fame Proportions are affigued in the Geographia Nubiensis, printed in Arabick at Rome: The Cubit is twenty four Digits, and every Digit is fix Barly-corns. But , this is as uncertain as the former, and is built upon a supposition, that all such are of the fame Dimension: Whereas those of one Country differ much from those of another; and those of the same Country (as I have made trial in Ægypt, more out of Curiofity, than as hoping this way to give my felf Satisfaction) are not all of the fame bigness. And not only fo, but in the felf-fame Ear. there is a fensible difference, as Experience doth shew. And yet Snellius, a Man much to be commended for his Abilities in the Mathematicks, and to be blamed for his fupine Negligence, both in his Measure of the Magnitude of the Earth, and in his Dimensions of the Roman Foot, upon these slight and weak Principles, deduces the Arabian 'Snellius in Foot, This containing ninety fix Grains, fuch as his Roman Foot (for none be-Batav. l.2. fides himfelf will own it ) contains ninety. Wherefore fome other Arabians to mend the matter, limit the breadth of one of them,

\* Aly Kulbgy, who affifted Usug Beg in compiling his Astronomical Tables in Persian (Tables the most exact of any in the East ) Hmits their breadth by fix Hairs of an Horse. Every Digit is fix Barly-corns laid evenly together, and the breadhb of every Barlycorn is fix Hairs of an Horse's Tail. Instit. Astron. Aly Cush-Ry. MS.

Lratosth.

Cap. 2.

corn of fix Hairs of a Camel. So that in conclusion the Hair of a Camel shall be the Minimum in respect of Measures. But this Invention, however at the first it may feem formewhat fubtile (for we are come now

\* by fix Hairs of a Ca-

mel, evenly joyned one by another: By which

Invention their Derah

to the Roman Sefquipes,

or Cubit, shall confilt of

twenty four Digits, and

every Digit of fix Barly-

corns, and every Barly-

almost as low as Atomes) is least of all to be approved. For the' the fupposi Great tion were true, that all Hairs are of a like bigness in all Camels, whereas they are different in one and the fame, yet this Objection is unanswerable, that feeing Hairs are not perfectly round, tho' the Sense judges them so, but angular, and that with some inequality, as Magnitying glaffes plainly demonstrate, it will be very difficult so to fize them together, that they shall always take up the fame breadth: And if they do not. little Frrois committed in fuch small Bodies, tho'at the first insensible, will infinitely increase and multiply, in the measuring of great distances, to which these are supposed the Foundation. And

therefore I cannot but approve the Counfel of b Villalpandas, who ad viseth such as will examine Meafures and Weights, to begin with the greater, and not with the lesser. And that there is Reason for his Affertion, may be forum cumulum. made evident, especial-

b Villalpandus de appar Urbis ac Templi, par 2 1 C.25. Atque in uni . ... jum il unum monitos velim en or qui menturarum ac ponderum gnoscendorum desider to tenen ne à commis irespiant exa nate majora : Nam vel m mus quijque erroi jæpin, mu plicatus in magnum adducit

ly in Weights, to fuch as shall make an Experiment. For admit there were a Standard of ten thousand Grains, and another of one Grain, it will be eafic, by a continued fubdivision of the former, with a good Balance, to produce a Weight equal to the Standard of one Grain: Yea, tho' at the beginning some little Error had been committed, which after many divisions will vanish, and become imperceptible. Whereas on the contrary, the most curious Man alive, with the exactest Scale that the Induitry of the most skilful Artizan can invent, shall never be able out of the Standard of one Grain, to produce a Weight equal to the Weight of ten thousand Grains, but that there shall be a fenfible and apparent difference; yea, tho' he had that excellent Scale mentioned by 'Capellus at Sedan, which 'Capella being almost answerable would sensibly be turned with the four de Pond. hundredth part of a Grain. The like nummis difference as we find in Weights, we may conceive by analogy to be in Meafures, when they shall be made out of fuch little parts as Hairs, Barly corns, Digits, and the like. And therefore I cannot but disapprove the ordinary Course of most Geographers, whether Greeks, Latines, or Arabians, that from

fuch nice beginnings measure out a De-

gree upon Earth, and confequently the

gation.

 Magnitude of this Globe. On the con-Greaves, trary, the Enterprize of \* Snellius, in his Eratofibenes Batavus, and of our Eratofib. Country man \* M. Wright, hath been Eratofth. Country-man M. Wright, nath been Bat. lib. 2. more commendable: Who by the space · Wright of of a Degree on Earth, (or which were the Errors better of many Degrees) have endeavoured to fix Measures with more Exactness and Certainty for Posterity. But of this Argument I shall have occasion to speak hereafter. And therefore to teturn to the Bufiness in hand.

Since the Roman Foot cannot be recovered by Hairs, Grains, Digits, Palms, and fuch-like Phyfical Bodies, which being of a various and indeterminate Magnitude, cannot give, unless by accident, the Commensuration of that which ought to be precifely limited and determined; some relinquishing the former way as erroneous, have endeavoured, with much Ingeniousness, by Weights. to find out the Roman Foot: For there is the fame analogy between Measures and Weights, as between continued and discrete Quantities: And as Mathematicians by Numbers demonstrate, or rather illustrate the Affections of Lines. Superficies, and Geometrical Bodies: So by Weights, measuring some Physical Bodies, especially such as are liquid. in Cubical Veffels, (which are eafieft commensurable) we may render the exact Quantity of the Roman Foot, and by consequence of all their other Mea-Luc.Parus fures. And therefore Lucas Patus, 1.3.demen- and Villalpandus, have attempted with

fur. & probable Reasons to discover the Roman pond. Rom. Foot, the one by the Sextarius, the dus de ap other by the Roman Congius. For the par. Urbis Sextarius being the fixth part of the ac Templi. Congius, and the Congius containing X par. 2. 1. 3. Libra, or Pounds, as it is manifest by that exquisite Standard in Rome, with

Again, the Congius being the eighth part of the Amphora, or Quadrantal,

filled with Water or Wine, as by the Testimonies of Dioscorides, Sex. Port France peins, and of an ancient Anonymus and Greek Author, translated by Alciat, it doth appear: If therefore a Veffel be remark made of a Cubical Figure, which may divers receive VIII Congii, or XLVIII Sextarii, figure. or LXXXIV Pounds of Water or of Wine, out of the fides of this Cube, by \* Rhemnius Fannius his Description, \* Rhem or rather by Sextus Pompeius, who is Fann. 1-1 ancienter, will the Roman Foot be de ment. duced. For both these write (neither is it as yet contradicted by any Man) that the Longitude of one of the fides of the Amphora (being a Cube) is answerable to the Roman Foot. And here our Enquiry would be at an end (supposing the Authorities of Festus and Fannius to be unquestionable) were there not farther fome Objections, which cannot eafily be removed. And those are first, a suppofition that we have the true Roman Libra (for by this we are to find the Congius, admitting there were none extant, as by the Congius, the Amphora, or Quadrantal) a thing of as great difficulty as the Foot it felf. And befides, if this were obtained, yet we cannot have an absolute certainty, that Water, or Wine, shall in all places alike ponderate; by reason of the different Gravity which is observed in natural Bodies, tho' they be homogeneous, and of a like fubstance. Wherefore laying afide all fuch Speculations, as being far from that Accurateness which is required, there is no other possible means left for this discovery, but to have recourse to fuch Monuments of Antiquity, as have escaped the Injury and Calamity of Time; which is our next, and fecond

Enquiry. And here it will not be amiss to see what Learned Men, who not long preceded our Age, have observed out of ancient Monuments, concerning the Roman Foot: And then to relate what Course I took to give my self private Satisfaction; which, I hope, will be also satisfactory to others. Philander in his Commentaries upon Vitruvius, being one of the first that had seen, and diligently perused many ancient Meafures in Rome (whereas Portius, Agricola, Glareanus, and fome others, received them upon trust) gives us so much the more certain Information. His words are thefe: Venuntamen quo- Philande niam non flamm ex cujuscunque pollici- in lib 3.c. bus, aut dighis, quis fuerit apud anti- Vinuvii. quos Romanus pes sciri potest, facturum

me studiosis rem gratam putavi, si ad marginem libri semipedem apponerem, dimensum ex antiquo pede, in marmore, quod est in bortis Angeli Colotii Roma fculpto, cujus etiam, nisi me fallit memoria, meminit Leonardus Porcius lib. de Sestertio. Eum enim pedem, nos cateris qui circumferuntur, pratulimus, quod conveniret cum eo, quem sculptum invenimus in alio marmoreo epitabbio T. Statilii Vol. Apri mensorie adificiorum, quod opera Jacobi Meieghini summi Pont. Architetti ex Janiculo non ita pridem refossum, in Vaticanum hortum translatum est. Quantous jacentem in Basilicà Apostolorum columnam ex porphyrite, cum his Gracis in calce literis 110A. O. id est pedum novem, nos cum dimensi essemus, deprebenderimus non respondere nostro eum, quo usus sucrat ejus columne artifex, sed nostro esse majorem duobue forupulis & besse, id est uncia parte nonà. Ut argumentum aliquod esse possit pedis Graci fuisse modulo scapum columne factum; quod facilius conficere potuiffem, si integra effet alia ex eodem lavide columna, quam in via latà est conspicere jacentem, his in calce literis HOA. IB. insignitam. Verum quando studium Herodoto, 1. 2. Heroni, Suida, cateris Grecis sit sexcentorum pedum; Plinio, Columella, cateris Latinis sexcentorum viginti quinque nostrorum, necesse est Romanum à Græco semuncià superari. Thus far Philander. Not long after him, Lucas Patus, having examined the Foot on T. Statilius Tomb, and that other of Cossuitive, together with several ancient ones in Brais, found amongst the Rudera at Rome, concludes, that "Luc. Px- the " true Roman Foot, Dillis duobus us, l. i. de marmoreis comparatus, septima uncia parte, sive uncia scripulus tribus, & Grzc. in- duahus scripuli sextulus, & sextula semisse brevior est. Much about the same -enforis. time I find in Ciaconius, out of Latinus Latinius, another Experiment to have been made, by many eminent Men together at Rome. Superioribus autem Gamins annie (faith " he) Ant. Augustinus, qui clu. 14- postmodum fuit Archiepiscopus Tarracorationibus mensis, Jo. Baptista Sighicellus Episcopus Faventinus, P. Odavius, Pacatus, Achilles Moffeus, Achilles Statius, Benedictus Ægius, Fulvius Ursinus, Latinue Latinius, cum veram pedis Rom. quantitatem statuere vellent, plures ejust. pedis mensuras simul contulerunt, E cerum ollo sum antiquissima dicti pedie sorma, que in basi quadam in bostie Vaticanie autat, adamussim convenire videntes, ex hoc pede quadrato una confe-

cerunt, quod etiam nunc octoginta aqua, vel vini libras, quibus publice signatis Greave civitas utitur, omnino capere invenerunt. & cum octo congius antiquis ita congruere, ut neque minus quidquam, neque amplius inter utraque effet. Quo experimento evidentissime cognoverunt. G' libras nostri temporis cum antiquis Romanis effe eafdem, cum congri antiqui vas fub Vespasiano Imp. signatum decem librar contineret, quot etiam nofici temporis libras capit; & bunc effe justum pedem Romanum, cum ex ejus modulo persectum Quadrantal octoginta libras contineat, que cum congu antiqui libris ad momentum respondent. Notwithstanding these Observations, Villalpandus, knowing how necessary it was to have the true Demensions of the Roman Foot, to find out the Proportions of the Hebrew Cubit, made new Experiments: And after examination of the Measures and Weights at Rome, he thus concludes:

conquiescimus, ut arbitremur unum Far- tus Urbincsianum Congium posse omnes antiquas par. 2, 1. Romanorum, atque aliarum gentium men. c. 25. suras, omniaque pondera pristina integritati restituere. And in another place, Quapropter alus omnibus conjecturis, argumentationibus, ereis pedibus, marmoreis dimensionibus, aut sculpturis, quasi maris fluttibus prætermissis, in hac una pedis longitudine, quasi in portu conquiescere sam tandem decrevimus. Snellius in his Eratofthenes Batavus could not rest suisfied with this Foot of Villalpandis, how exquisite soever he imagines it: For he had a mind to discover it nearer home; making the Rhinland Foot equal to the Roman. The Proof of his Affertion is taken from an ancient Roman Armamentarium, or Fort, near the Sea, not far from Leiden, which by the Natives is called, Het buys te Briten: And is supposed by Ortelius to have been built by Claudius Cafar, in his intended Voyage for Britain, of which \* Suetonius, and Dio, \* Suetoni make mention : Sive in commodiorem le- in Claud

gionum, cohortiumque transvellionem. Dio Hist sive quo milites bibernarent (faith Orte-Rom. 1.6 lius). Arcis ipsius fundamenta, (according to Snellius) quadrata funt Snell. in forma, & quaquaverfum ducentis qua-Erasofth. draginta Rhinlandicie pedibus patent. Ug Bat.l.2. c. vel hinc Romana mensura vestigia guam planissime agnoscas. Nam ipsius podismus duorum Romanorum jugerum magnitudinem completitur. Jugeri enim men-

de pede

🔷 dinis pedes esse, non est ferè quisquam Greaves. qui ignoret, inquit Quintilianus, l. 1. cap. 10. Varro de re rustica libro 1. cap. 10. Jugerum quod quadratos duos actus habet. Actus quadratus, qui & latus est pedes 120 & longus totidem. Is modius, ac mina Latina appellatur, ut mihi plane dubium non videatur, eos hic Romana mensura modum secutos, hujus structuræ podismum ita comprehendisse secundum jugeri mensuram, ut duo jugera, vel actus quatuor contineret. Frontinus de limitibus. Hi duo fundi juntli jugerum definiunt, deinde bac duo jugera juncta in unum quadratum agrum efficiunt, quod sint omnes allus bini : Ut singula ideò latera ducentos & quadraginta pedes in longum patère necesse sit. Atqui totidem pedibus Rhinlandicus singula latera exporrigi Geodetarum experientia confirmat. Unde efficitur Romanum antiquum pedem nostro Rhinlandico planè

aguari. After these Experiments of so many able and learned Men, and those too taken from ancient Monuments, it may feem strange, that we should not be able as yet to define the true Quantity of the Roman Foot. For this I can alfign no other Reasons than these: First, That those which have described it. have either not exactly, and with fuch diligence as was requifite, performed it; or else, if they have been circumspect in this kind, they have omitted to compare it with the Standards for Measures On the contrary, of other Nations. those which have compared it with the present Standards, never took it from the ancient Monuments, and Originals, which are at Rome, but only from some Draughts, or Schemes, delineated in

Books. Now how uncertain a way this "Villalpan, is, doth appear by "Villalpandus, who de apparathus writes: Ego dum bec scriberem, tu Urbis ac bunc Colotianum pedem circino expendi, par. 2. 1. 3. & in annotationibus Guil. Philandri folertissimi viri, & apud Georgium Agricolam, & apud Lucam Patum, & Stanislaum Grsepsium, & nullum potui reperire alteri æqualem, imoverò neque ejuse dem pedis assignatas similes partes. The fame have I observed in those Roman Feet described by Portius, Agricola, Philander, Pætus, Ciaconius, and Villalpandus himself, that they differ one from another. And not only fo, but those of the same Author, in the same impression, are likewise different. Which last must likewise different. arise, either by the diverse extention of the Paper in the Press, when it is moist,

or by the inequal contraction of it, when

it grows dry, or by some other accident, in the beating and binding. So that tho' it were granted, that so many learned Men had found out what we enquire after, the Roman Foot; yet it is impoffible out of those Schemes and Draughts delivered in their Books, for the Reafons before specified,

to attain an absolute certainty. But Snel to formarum longitudini exci dy of this Difficulty, which, in my Opinion, in Eratoft. Batavo. 1. 2. c. 1 is as vain as his Roman

\* Pars sexagesima typos gentibus de peritis typograj sciscitando edoctus sum. Su

Foot, (seeing by his supposition all Paper must shrink alike, be it thick or thin) and that is to allow one part in fixty for the shrinking of the Paper. For so much (faith he) do Typographers observe, that Letters contract themselves, when they are taken off wet from the Types.

Wherefore having received images of the Ancients, and not much better from the imperfect Defignations of the Roman Foot, by modern Authors, I proposed to my felf in my Travels abroad, thefe ways, which no reasonable Man but must approve of. And those were, First, To examine as many ancient Measures and Monuments, in Italy, and other parts, as it was possible. And, Secondly, To compare these with as many And, Se-Standards, and Originals, as I could procure the fight of. And last of all, to transmit both these, and them, to Posterity, I exactly measured some of the most lasting Monuments of the Ancients. To this purpose, in the Year 1639, I went into Italy, to view, as the other Antiquities of the Romans, fo especially those of Weights and Meafures; and to take them with as much exactness as it was possible. I carried Instruments with me made by the best Artizans.

Where my first enquiry was after that Monument of T. Statilius Vol. Aper, in the Vatican Gardens, from whence Philander took the Dimensions of the Philan Roman Foot, as others have fince bor-in 1.3. rowed it from him. In the Copying out of this upon an English Foot in Brass, divided into 2000 parts, I spent at least two Hours, (which I mention, to shew with what diligence I proceeded in this, and the rest) so often comparing the se. . veral Divisions, and Digits of it, respe-Ctively one with another, that I think more Circumspection could not have been affed ; by which I plainly discovered the rudeness and insufficiency of

C. 25.

à Latino rinio.

that Foot. For besides that the length of it is somewhat too much, (what-"Cisconius soever " Latinius out of an Observation made by Ant. Augustinus, Sighicellus, Pacatus, Maffaus, Statius, Ægius, and Fulvius Ursinus, pretends to the contrary) there is never a Digit that is precifely answerable to one another. Howfoever it contains 1944 fuch parts, as the English Foot contains 2000.

My next fearch was for the Foot on the Monument of Cossulius, in bortis Colotianis, from whence it hath fince recelved its denomination, (tho'it be now removed) being termed by Writers, Pes This Foot I took with great care, as it did well deferve, being very fair and perfect: Afterwards collating it with that Roman Foot, which Lucas Patus caused to be engraven in the Capitol, in a white Marble Stone, Lound them exactly to agree; and therefore I did wonder, why he should condemn this with his Pen (for he makes

\*Luc.Parus some \* Objections against it) which not-4.1. de Ap withstanding he hath erected with his tiq. Rom. & Grzec Hands (as appears by the Inscription in the Capitol, CURANTE LU: PAETO). intervall. It may be, upon second Thoughts, he afterward privately retracted his Error, which he was not willing to publish to the World. Now this of Cossulus is

1934 fuch parts, as the English Foot contains 2000.

Next I fought after that Porphyry \*Marlianus Column mentioned by \* Marlianus, as de Antiq. also by Philander, and others, with Philander this Inscription,  $\Pi O \Delta$ .  $\Theta$ . For if the in lib.3.c.3. length of that Column were affigned according to the proportion of the Greek Foot, then would the Roman Foot be thence deduced: This (as I shall elsewhere shew) containing 24 such parts, as that contained 25: Or if it were made according to the Roman Foot, as the Grecians, after their Subjection

then had I my defire. But the Column being defaced, or loft, my Labour was "LucPross in vain: And it feems Patus about I. de An-LXX Years before, made the fame enuq.Rom.& quiry with as little fatisfaction. Grac. in-

to the Roman Empire, often used the

fame Measures that the Romans did,

I should be too tedious in describing the several Feet which I have perused in Brass, found amongst the Rudera at Rome, and carefully preserved by Antiquaries: Of most of which Peireskius hath given a good Character, in some Ex Epi. Letters of his, which I have feen in the holis Peire, hands of Buchardus, a learned Man, not

whiless, yet printed : . who thus writes: I can.

not Sufficiently wonder at the inequality which I have found in the divisions by Grea Digits, and Inches, of the ancient Roman Feet; which seem to me to have been made for Fashion-sake, & dicis causa (as Lamps that are found in Tombs incapable of Oil) more to express the Mystery and Profession of those that were to use them, than for to regulate the mea-Sure of any thing besides them. Belides these, I examined the ancient

Structures of the Romans, hoping by collating one with another, to deduce the Dimension of their Foot. For I prefumed, that those excellent Architects, before they began their Work, must necessarily propose some Models to themselves, according to the Proportions of which, they meant to raise their Fabricks: Which Proportions could not be affigned, but in the parts of some common and received Quantity; and this in probability was the Roman Foot;

being a Measure generally used, and by Publick Authority prescribed. Upon which grounds I measured the Stones in the Foundation of the Capitol, Domiti-an's, or rather Vespatian's Amphitheatre, the Triumphal Arks of Titus, and Severus, together with that of Constantine the Great, and above all that exquisite Temple of the Pantheon, built by Agrip-

pa, I know not whether with more Cost or Art : Concerning which b Sebastia- b Sebast nus Serlius is of Opinion, That if all Serl de Rules of Architecture were lost, they Antichi might be revived out of this Monument alone. And in truth, this place gave me more Satisfaction than any other: For most of the White Marble Stones on the Pavement, contained exactly three

phyry contained one and an half. But yet I thought this not sufficient, unless I went to Tarracina, which is the ancient Anxur, and LIII Miles distant from Rome: Having read in An. Andr. dreas Schottus, out of Pighius's Hercules Schot. It Prodicius, that near the Sea by the Via tinerar. • Appia, in the height of a White Rock

of those Roman Feet on Cossutius's Mo-

nument, and the leffer Stones in Por-

d Horat.L Serm\_Sat

Impositum saxie late candentibus Anxur,

whence that of 4 Horace,

There are described the Roman Decempeda. And indeed the place is very. memorable, for the whiteness, alitude, and hardness of the Rock, which notwithfranding is cut away perpendicularly, on the fide towards the Tyrrbene See shove an hundred and twenty Feet

of depth, to make passage for the Appear Greaves. way; and at the space of every Decempeda, these Characters X XX XXX &c. (being almost Cubitales) are fairly engraven, in a continued Order, defcending to CXX. Meafuring below the distance between CXX and CX, it amounted to IX English Feet, and 1:14

of a Foot, computing it

from the \* Line engra-

ven above CXX, to the

Line next under CX.

The reft I examined

See at the end of this Book the Figure of these Characters, as they are cut in the Rock at Anxur, with Lines encompassing them.

with my Eyes, by often comparing the distance between CXX and CX, whether it were equal to that between CX and C, and this again (ascending upwards) to that be-tween C and XC, which manner tho' it be uncertain, and conjectural, and far from that exactness I used in all others, vet it was the best means I could then put in practice; and I am confident, that who foever shall measure those Spaces, shall find a manifest inequality. To which Opinion I am rather induced because measuring there, in several places, the breadth of the Appian Way, cut out of the same Rock, I found a difference sometimes of one or two Inches, or more. It being in one place XIII English Feet, and the of a Foot; in another, XIII Feet and the in a third XIII and 1974. Whereby I concluded, that the Ancients in making that Way, had not respect to a Mathematical Point (as it was not necessary) but only that if any difference were, it should not be fenfible. And fuch Differences have I observed in the White Corintbian Pillars, in the Pantheon before-mentioned, of above an Inch or two, in the Circuit of the Scapus near the Torus: Which inequality, feeing no Eye could discover, the Mafters of that exquisite Work did justly contemn. Whereas the Porphyry Stones, and those of White Marble, on the Pavement, are fized to even, and so exactly to the Proportions of the Work required: For the Temple being round, (which hath occasioned the Italians vulgarly to call it the Rotundo) the Circle within could not fo exquititely have been filled up, if there had not been a special care taken in observing the true Dimensions in every particular Score. But to return to the Rock at Amen : The Spaces between those Characters, to an Eye that shall be intentively fix'd upon them, will be apparently different, So that I concur in Opinion with \* Schottus, That those \* scho Figures were placed there, to give No-Itinera tice to Posterity, bow much of the Rock had been removed, to make passage for the Appian Way; and not for any Memorial of the Roman Measures.

Having measured those Places in the Appean Way at Tarracina, I made trial of at least XX others between Tarracina and Naples, without any great satisfaction, and therefore partly the Incertainty that I found there, and partly the Danger of Thieves, discouraged me from measuring the Roman Milliare; a Work conceived to be of great use. for the discovery of the Roman Foot: for the discovery of the Roman root.

Seeing the Milliane containing Mille
Passas, as the very Name instantial
every Passas confiding of five Feet, as

\*Columella, and \*Status before feet, as

us; here therefore would be four form.

\*Indoorus
out a perfect Roman Mile. And this I 114.0.15. imagined might probably be discovered Origin. amongst those many Vestigia of Roman Ways, which to this Day are frequently feen in Italy. Wherefore conferring with Gasparo Berti, a Man Curious and Judicious, (as appears by his Ichnography of Roma Subterranea in Bosius) as also with Lucas Holstenius, a learned Companion of Cluverius, in those honourable Travels of his, for the Restauration of the ancient Geography: They both informed me, that there are still in the Appian Way, where it passes over the Pomptine Paludes, several Columna or Lapides Milliarii, standing; whereby the Romans divided and diffinguished their Miles; and which occasioned those Phrases, ad primum, ad quartum, ad centesimum lapidem, and the like. And these, it may be, at the first were ordinary Stones, till C. Gracchus caused Columns to be erected in their places: Διαμεβήσας κζ μίλιον όσον ασαξ (το ή μίλιον όπος κίου κασίων ολίσο κοποσεί) κίουας Roman Foot, that nothing can be more histories on weak # wife a alisnow. He hear accurate. And this the Nature of the fured out, faith Plutarch, by Miles all increase hibives onuea fuife nalisnow. He meathe Ways, the Mile containing little less inGraces than eight Stadia, and placed Columns of Stone to design the Measure. The thing was of that Ornament and Use, as that it was afterwards taken up, and continued by the Roman Emperors; as appears by these Inscriptions, which are fairly engraven on the first Column; found amongst the Ruines in the Appian Way, and from thence

des, or else because it was in the Mid-way almost betw Tarracina, and Appii Foum: For it was X Miles from Tai cina, and IX from Appii Foum; as appears by the Itmeran Hierosolymitanum in Bertius.

> Appii Forum Ad Medias IX. Tarracina X.

The Figure LIII below, fignifies the distance of Tarac from Rome: Which distance may be further proved our Appian, in his Third Book of the Civil Wars, speaking Augustus: "Officiation of the Tageautivas and reflection adjusted Co Stadia from Rome. These Stadia reduced to Miles, if we low VII Greek Stadia and an hist, to a Roman Mile, as S das doch, will make up LIII Miles, and one third part of Mile; that is, two Stadia and a half over and above. Whi Fraction Appian neglects, and therefore uses the round Nu ber CCCC Stadia, for LIII Miles.

The Figure XVIIII fignifies the Decemborium, or Way p fing over the Fens, between Appu Forum, and Terracina: denominated, because it contained mineteen Miles in length Which may also be proved out of Procopius, where he spec of the Δεκαννδείον. This Way was paved by Traum, as t Inscription shows, and I think first of all by him. Long as it was repaired by Theodoricus, according to another insection that I have seen at Titracina, of which Gruterus, at Cleverius, also make mention, where, omitting the Titles Theodoricus, in the Marble we find these words engraven.

DECENNOVII. VIAE. APPIAE. ID. EST. A. TRIP USQVE. TERRACENAM. ITER. ET. IOCA. QVAE CONFLVENTIBVS. AE. VTRAQUE. PARTE. FALVDYN PER. OMNES. RETRO. PRINCIPVM INVNDAVERAN VSVI. PVELICO. ET. SECVRITATI. VIANTIYM

By this Number XVIIII fignifying the Decennovium, and the Itinevarium Hierofolymitanum, we may fafely correct th Itinevarium Antonium, in which Tarracina is placed but XVII Miles distant from Appii Forum. And from hence likewise way certainly know, how far the Christians went to mee St. Paul, and that was XXXIV Miles. For so much we Appii Forum distant from Rome, if we subduct XVIIII out a LIII; whereas the Itineraries of Bertius Edition makes more.

If therefore two fuch Columns were found entire, (as I am informed there

odepth, to make passage for the Appear Greaves. way; and at the space of every Decempeda, these Characters X XX XXX Uc. (being almost Cubitales) are fairly engraven, in a continued Order, defeending to CXX. Meafuring below the distance between CXX and CX, it amounted to IX English Feet, and ::::

of a Foot, computing it

ven above CXX, to the

Line next under CX.

The rest I examined

See at the end of this from the \* Line engra-Eook the Figure of these Characters, as they are cut in the Rock at Anxur, with Lines encompassing them.

with my Eyes, by often comparing the distance between CXX and CX, whether it were equal to that between CX and C, and this again (ascending upwards) to that be-tween C and XC, which manner tho it be uncertain, and conjectural, and far from that exactness I used in all others, yet it was the best means I could then put in practice; and I am confident, that who oever shall measure those Spaces, shall find a manifest inequality. To which Opinion I am rather induced, because measuring there, in several places, the breadth of the Appian Way, cut out of the same Rock, I found a difference fometimes of one or two Inches, or more. It being in one place XIII English Feet, and 1000 of a Foot; in another, XIII Feet and 1000 in a third XIII and 1975. Whereby I concluded, that the Ancients in making that Way, had not respect to a Mathematical Point (as it was not necessary) but only that it any difference were, it should not be fenfible. And fuch Differences have I observed in the White Corintbian Pillars, in the Pantheon before-mentioned, of above an Inch or two, in the Circuit of the Scapus near the Torus: Which inequality, feeing no Eye could difcover, the Masters of that exquisite Work did justly contemn. Whereas the Porphyry Stones, and those of White Marble, on the Pavement, are fized so even, and so exactly to the Proportions of the Work required: For the Temple being round, (which hath occasioned the Italians vulgarly to call it the Rotundo) the Circle within could not fo exquisitely have been filled up, if there had not been a special care taken in observing the true Dimensions in every particular Scone. But to return to the Rock at Anxwr: The Spaces between those Characters, to an Eye that shall be intentively fix'd upon them, will be apparently different, So that I concur in Opinion with \* Schottus, That those \* Schot Figures were placed there, to give No- Itiner. tice to Posterity, bow much of the Rock had been removed, to make passage for the Appian Way; and not for any Memorial of the Roman Measures.

Having measured those Places in the Appian Way at Tarracina, I made trial of at least XX others between Tarracina and Naples, without any great satisfaction; and therefore partly the Incertainty that I tound there, and partly the Danger of Thieves, discouraged me from measuring the Roman Milliare; a Work conceived to be of great use. for the discovery of the Roman Foot-Seeing the Milliare containing Mille Passus, as the very Name importational every Passus confissing of five Feet, as Columella, and Indowns exercily the sus, here therefore would be socreted to be seening. help us to one, could effece be but found i fidoru: out a perfect Roman Mile. And this I L15.C15. imagined might probably be discovered Origin. amongst those many Vestigia of Roman Ways, which to this Day are frequently feen in Italy. Wherefore conferring with Gasparo Berti, a Man Curious and Judicious, (as appears by his Ichnography of Roma Subterranea in Bosius) as also with Lucas Holstenius, a learned Companion of Cluverius, in those honourable Travels of his, for the Restauration of the ancient Geography: They both informed me, that there are still in the Appian Way, where it passes over the Pomptine Paludes, several Columna or Lapides Milliarii, standing; whereby the Romans divided and diffinguished their Miles; and which occasioned those Phrases, ad primum, ad quartum, ad centesimum lapidem, and the like. And thefe, it may be, at the first were ordinary Stones, till C. Gracchus caused Columns to be crected in their places: Διαμεβήσας κζ μίλιον όσθον παξ (τό ή μίλιον όπθω ςαθίων όλίδον λποθεί) πίονας Roman Foot, that nothing can be more λιθίνες σημεία τ μέβε καθίς ησεν. He mea-accurate. And this the Nature of the Jured out, faith Plutarch, by Miles all Plutarch in Grace hibives onuña fuise xalisnou. He meathe Ways, the Mile containing little lefs inGracet than eight Stadia, and placed Columns of Stone to design the Measure. The thing was of that Ornament and Use, as that it was afterwards taken up, and continued by the Roman Emperors; as appears by these Inscriptions, which are fairly engraven on the first Column; found amongst the Ruines in the Appian Way, and from

dess, or else because it was in the Mid-way almost between and Appli Forum: For it was X Miles from Laterina, and IX stom Appli Forum; as appears by the Itineran Hierofolymianum in Bertins.

Appii Forum Ad Medias IX. Tarracina X.

The Figure LIII below, fignifies the distance of Tartac from Rome: Which distance may be further proved out Appian, in his Third Book of the Civil Wars, speaking Augustus: "Oist out of the Civil Wars, speaking Poisson sassion" Being about Tartacina, which is distant CC Stadia from Rome. These Stadia reduced to Miles, if we low VII Greek Stadia and an half, to a Roman Mile, as 3 das doth, will make up LIII Miles, and one third part of Mile, that is, two Stadia and a half over and above. Whi Fraction Appian neglects, and therefore uses the round Nu ber CCCC Stadia, for LIII Miles.

The Figure XVIIII figuries the Decembraium, or Way p fing over the Fens, between Appu Forum, and Terractual denominated, because it contained numetical Miles in length Which may also be proved out of Procepus, where he type of the Aerarysesor. This Way was paved by Train, as t Infeription shews, and I think first of all by him. I now as it was repaired by Theodorieus, according to another Inseption that I have seen at Intractual, of which Gruteius, a Cluverius, also make mention, where, omitting the Titles Theodorieus, in the Marble we find their words engraven.

By this Number XVIIII fignifying the Decemovium, and I the Itinevarium Interfolymitanum, we may tafely correct th Itinevarium Antonini, in which Tatractian is placed but XVIII Miles diffant from Appu Powim. And from hence likewife with may certainly know, how far the Christians went to mee St. Paul, and that was XXXIV Miles. For so much wappit forum distant from Rome, if we subduct XVIIII out a LIII; whereas the luneraries of Bestus Edition make more.

If therefore two fuch Columns were found entire, (as I am informed there

flanding in a continued Order) the di-Greaves. stance between two such being exactly measured, would much conduce to the discovery of the Roman Foot. Upon which supposition I had almost resolved to have gone thither, as I did to other places, with no other intention, but only to have been a Spectator of those Columns, and to have trufted to mine own hands, in taking their Distances. But upon a more deliberate Examination of the Business, I perceived that this Enquiry did depend upon a very nice Supposition: For if the Decempedatores, or or Curatores l'iarum, proceeded not with extreme Caution, and aimed almost at a Mathematical Point, in defigning the just Space of each particular Mile (which in a Work of that length is not probable; where the inequality of many Feet could not be discerned by the Lye, and might be admitted without any ble vario de mish. For in \* Varro's Judgment, Sen-L. L. lib. 5. fus nullus quod abest mille passus sentire

potch) it could not be, but the same Differences, or somewhat like, must have crept in with them, which have been observed amongst us, in our Meafured and Statute Miles; out of which it would be a vain Attempt exactly to demonstrate the English Foot. neglect of which Circumspection, amongit fome other Reasons, that may be affigned. I take to be one, of the diversity which Astronomers found in that memorable Observation, made in the Plains of Singiar, or Sinar, by the Command of Almamon, the Renowned Calif of Babylon, about eight hundred Years fince, in proportioning the Magnitude of a Degree upon Earth. For having taken the Altitude of the Pole at two feveral Stations, differing a Degree in the Heavens, they measured the distance between these Stations on Earth, going on in the same Meridian; where fone of them, says Abulfeda, found it to be fifty fix Miles, and two thirds, others fifty fix, without any Fraction. If therefore the Roman Decempedatores, or Geodata, Babylonian Aftronomers (which is not likely) there can be no trust given to

Wherefore to come to a Conclusion: Having made Enquiry more ways than it may be any Man hath done, and I think with as much Caution and Exactness as any, it will be necessary after all, to thew amongst so many Feet, as are ra-

their Miles, and less trust to the Foot

that (hall be deduced from thence.

be the most genuine and true. tho' in fuch an incertainty and fcarcity of ancient Monuments, and in fuch a diverfity of Opinions, amongst Modern Writers, it may feem too great prefumption, politively to define the Magnitude of the Roman Foot; yet having. had the opportunity to have perus'd in this kind, more Antiquities than any that have preceded. I may with the more Confidence conclude, that the Pes Colotianis, in my Judgment, is the true Roman Foot; and that for these Rea-

For first, It most exactly agrees with fome very ancient and perfect Roman Feet in Brass, found long fince amongst the Rudera at Rome; especially with that excellent one (as I remember) of F. Urfinus, a learned Antiquary. Tho' I cannot deny but that I have feen two ancient Feet in Brass different from tins; the one of Gualdus, a very tair one, wanting two parts and an half, of fuch as this contains a 1000, a fmall and in-confiderable difference. The fecond of Gottifridus, a Gentleman of honourable Quality, (to whom I stand obliged for the free Donation of several Antiquities) which exceeds it by eight parts; but this last hath been made by a very rude and unskilful Hand.

Next, the Proportions of almost all the White Marble Stones, as also of those lesser in Porphyry, in the Pavement of that admirable Temple of the Pantheon, are either compleatly three of these Feet, or one and an half; which, it is not probable, in a Structure of fo much Art, should have been the Work of Chance. Add to this the Dimenfions of feveral Stones in the Foundation of the Capitol, in Titus and Severus, Triumphal Archs, corresponding either to the whole Foot, or conjointly to the whole, and fome Uncia, or Digits

Thirdly, The Inscription on the same Monument where this Foot is found, of the Circinus, the Libella, the Norma, used not more Circumspection than the and the like, plainly shew, that these were intended to express Coffutius's Profession, (whom ' Patus imagines to have Luc.Pa been a Sculptor) and this being intend-lib. 1. ( ed, I fee no Reason why the Roman Antiq. 8 Foot should have been cut in fo fair a Gree. it Relevy, either too short, or too long; terval.m when the same Hand, and the same sures. Pains, might have made it exact. It is true, that the Foot upon Statilius's Tomb, is 1944 fuch parts, as this is

h Abulf. G cogr. Arab. MS.

taken by me from the Iron Yard, or Standard of three Feet, in Guild-Hall in London, contains 2000: But how rudely, in respect of Digits, that Foot of Statilius is described, I have before difcovered. And therefore I wonder that illander k Philander in his Commentaries upon 3. C. 3. Vitruvius, should in a matter of such high concernment in Architecture, proceed with so much Inadvertency, affirming that between this of Statilius, and that of Cossums, there is no difference. And if he a Mathematician hath thus erred, (tho' commonly Men versed in those Sciences take not up things at too cheap a rate, without due examination) what Opinion may we conceive of another Observation, made at the same Mo-Cuconius nument, by Ant. Augustinus, Jo. Bap-Luni La-tista Sighicellus, P. Octavius Pacatus, m ob-rv. de pe- Achilles Maffaus, Achilles Statius, Bene-distus Frius, Fuloius Ursinus, Latinus

with as many ancient Feet as there were Men present? I shrewdly fuspect they flubbered over their Observation, as not regarding in nineteen hundred parts, and better, the small excess or defect of ten parts; or not rightly apprehending what might be the Confequences of fuch an Error, how little foever, in meafuring the valt Magnitude of the Terreftrial Globe, or of the Celestial Bodies.

Lastly, Besides the Authorities of Portius Vicentinus, Georgius Agricola, Glareanus, Gheraldus, Donatus, and of many other Learned and Judicious Men, who approve of this Pes Colotianus, (tho' bare Authority is the worst, because the weakest kind of Argument) that excellent Congius of Vespusian, now extant in Rome, to highly and to justly "Villalpan magnified by " Villalpandus, may like dus, 1. 2. wife ferve to confirm, if not totally my difficacin Affertion, yer thus far, that I have not de apparae exceeded in affigning the true Longituthis ac tude: For by the clear Evidences of "hagmen-" Diofcorides, and of an Anonymous Auu Dioscori-thor before cited, eight Congii are the just Measure of the Roman Amphora,

or Quadrantal, and again by as many Telvimonies of Sextus Pompeius, and flus de Rhemnius Fannius, each of the fides of the Verb.fignif the Amphora is equal in Longitude to Rhemn. the Roman Foot. Wherefore having pro-Fam. carm. cured by special Favour the Congius of

Vejpafan, I took the Measure of it with ki had \* Milium (being next to Water, very been better proper for such a Work) carefully pre-

pared and cleanfed, which being done with much diligence I confid a Cube Greaves. to be made answerable to the time Di menfion of the Perschottanae, filling up the Capacity of which, and often reiterating the fame Experiment, I found continually the Excess it at our full a Congress to remain, and that an Arylina made by the Pes Colutianus, would contain but VII Congii, and about an half. And therefore I cannot sufficiently wonder at the Observation

of Ant. Augustinus, observationibus de pede Rom. Pacatus, Maffeus, Sta- Cum veram peds Ron . quantitius, L'efinus, and others, tatem flatuere vellent ejujd. with a Cule of that feds menjuras fimul contule. Foot which is described on Statilities Monument: Who affirm the came explat, adaming to the came explat, adaming the came explain the ca Quadrantal of this ex- nire ridentes, er how poto quaactly to contain eight of drato was confecurut, &c. Vide these Congu of Velpafian . Whereas upon due Examination I

runt, fre ium illie in antfupra.

confidently affirm, that they have erred. And therefore 'l'ill'opin l'18, in this pit 'Vilaip. de ticular, with more Judgment and the representation nuity hath published his Observation Temph concerning the Measure, and precise part 2, 1, 3 Weight of Vespalan's Congues, thousany c. 25. other whatfoever. Altho' I cannot be induced to affent to that deduction. which he infers of the Roman Foot. (from the fide of a Quadrantal containing eight of these Congu) relying upon the Authorities of Festus and Finnius, against fo many Evidences produced to the contrary. Wherefore as he is fingular in his Opinion (for there is not one Author of Credit which follows his Affertion) fo is his Foot as fingular, there being not one of at least ten ancient ones, in the hands of feveral Antiquaries (befides those inscribed on two Monuments in Rone) which arrive to the Proportions of his, by XXVII parts in 2000. As for those other Fancies of his (for they are no better) of describing also the Roman Foot, by the Altitude of Vespasian's Congrus, and affigning the ' Latus Cubicum, of the Modius, 'Vides the Semicongius, the Sextarius, and He- am lata mina, from certain parallel Circles cire cubecum cumscribed about it, (which certainly, con, u, h as the Scheme of the Congrus it sell, two, he drawn by me to the full proportion, ns, &c. shews, were delineated without any villalp. farther Intention than for Ornament) I do not think them worth the Confu-

tation.

. Fannius, alledged by him. For the Ob-Greaves. jection which may be raised thence is very material: How the Pes Colotianus can be the true Roman Foot, fince it is confessed by me, that it doth not precifely answer to the fides of a Quadrantal, or Cube, containing eight of those Congii of Vespasian, or XLVIII Sextarii? Whereas on the contrary, Festus expresly writes, that the Quadrantal was the Square (he means the Cube) of the Roman Foot. " Quadrantal vocabant Antiqui, quam ex Graco amphoram dicunt, quod vas pedu quadrati, otto & quadraginta capit sexturios. And \* Fannus confirms the fame.

Pomp. Fe-Verb. fignif. \* Rhemn. Fannii carmina de pond. & menfuris.

Amphora fit cubus: Quam ne violare heeret,

Sacravère Jovi Tarpew in monte Qui-

We might clevate their Authorities by faying, these are only the Testimonies of two Grammarians, better versed in Disputes of Words, than Critical in Measures, which more properly are the Speculation of Mathematicians: And therefore if Vitruvius had affirmed it, much more Credit might have been given. But we shall rather say, they wrote what was vulgarly, and commonly, upon Tradition, believed, that the length of one of the fides of the Amphora was equal to the Roman Foot: Not that it was precifely and exactly equal, but that of any known Measure whatfoever then extant, this came the nearest to it, as indeed it doth; yea, fo near, that if at this Day the Amphora, and Roman Foot, were in use amongst us, many a Writer that had never been fo curious as diligently to compare them, would not be scrupulous to affirm as much. Which may appear by the Practice of Ant. Augustinus, Pacatus, Maffeus, Statius, Ursinus, and of feveral other Learned Men, not long before our Times: Who tho' they purposely made it their enquiry to discover

the true Roman Weights and Measures, and therefore made special use of this Congius of Vespasian, yet have no less erred, as we shewed before, in the Dimenfion of the Amphora, than both Feflus and Fannius have done. Neither will this Answer seem improbable concerning Measures, it we shall examine a place or two concerning Coins, in which the Ancients, and those too of the better fort of Authors, have in the very fame manner erred. For v Livy Livin writing that Marcellus gave to L. Ban-1.23. tius, (or Bandius) ID Bigati, that is Denarii fo called, because the Biga was ordinarily flamped upon the Reverse of the Denarius). Plutarch describing Plutarch fame Gitt, renders it by so many chis in Marce Drachma, the Grecian manner of Computation; not that the Drachma, in the exact and intrinfical Valuation, was equal then to the Denarius, on the De-narius to the Drachma (as we mali shew in the ensuing Discourse) but that in the vulgar and popular estimation, the one passed for the other, being both not much different in their weight, as well as valuation. \* Likewife Die in \* Die; forms us, that Ollavius promited the l'e- in Ca teran Soldiers 19 Drachme a Man: Ottav Whereas b Cicero expressing the same b Cice thing to Atticus, terms them 10 Dena 1.10 rn. And Suetonius writes, that Cefar, adAm by Testament, gave to each of the common People, Seffertia treventa, that is, LXXV Denarios; which Plutarch, Eruto, both in the Life of Brutus, and of Andem tonius, renders Deaxual icocuminal Antor wille, Seventy five Drachms. In like manner we may fay, that Festus and Fannius have described the Amphora by the Roman Foot; not as if this were the exact Measure of it, but as being the most known and nearest proportion, in which, without falling into Fractions, it might evenly and roundly be expreffed.

And thus have we finished our Enquiry after the Roman Foot: Our next Labour should be to compare it with the prefent Standards, and Originals, for Measures of divers Nations: For which I must refer the Reader to this enfuing Table.

# SEMIPES ROM.

# The Roman F O O T compared with the Measures of divers Nations.

| SUCH Parts as the Roman Foot, or that on the Monument 31000 of Cossulus in Rome, contains                                                                                                                                                                               |

### Of the DENARIUS.

S I have made for Measures, the Roman Foot the Foundation of my Enquiry, and therefore have handled it in the precedent Treatife: So for finding out of Weights, I shall take the Denarius as an undeniable Principle, from whence those of the Ancients, by a ne-ceffary Consequence may be inferred. For as the Unity is in respect of Numbers, or the Seftertius in Discourses de re nummaria; so is the Penarius for Weights, a fit rife, or beginning, from whence the rest may be deduced. Not but that it were better (as I gave the Caution before) it we absolutely confider the exacteft ways of discovering Weights, to begin with the greater, and by them to find out the less, than by the less to ploduce the greater; but if we look upon the Condition of Times, and confider the means that are left after fo many Revolutions and Changes of the Roman Empire, it will be faler to alter our Method. For to this Day there are many thousand Denaru left, and amongst these some so perfect and entire, as it they had been but newly brought from the Mint; whereas of the Roman Libra, and Ounces, there are but tew extant, if compared with these. Lapsius, and Gruterus, in their Inscri ptions mention fome, and Pietus fome others, befides fuch as I have feen in the hands of Antiquaries, and many of mine own: Most of which differ from one another, either as having been confumed by Rust and Time, or it may be also by the Men that then lived, for their advantage lessened: A thing too often practifed amongst us. Wherefore I think it more convenient by the Denarius to deduce the proof and evidence of these, than by the diversity and uncertainty of these to conclude the Denarius: And yet if some of the best and tairest of them shall agree with this, I. fliall think my felf fo much the more affured.

Now seeing the *Denarius* may be considered in a double respect, either as *Vammus*, or as *Pondus*: In the first acception, the valuation of it in Civil Affairs is remarkable, in the latter, the gravity and ponderousness: I shall speak no farther of the former, than as it may conduce in some fort to illustrate the

latter. The Denarius was a Silver Coin in use amongst the Romans, passing at the first Institution for Dena Are, or. ten Affes. And fo "Vitruvius exprefly " writes, Nostri autem primo decem fece- 1. 3. c runt antiquum numerum, & in denario denos areos alles conflituerunt. The fame thing is attefted by Volubus Me- Vol tianus. Denarius primo affes decem va- tianus lebat, unde & nomen traxit. Pliny, affis d besides a Confirmation of the same Va- Plini luation, affigns also the time in which 1. 33.6 it was first stamped. Argentum fignatum oft anno Urbis \* quingentesimo octo- \* Bud. gesimo quinte, Q. Fabio confule, quinque l. s.d. annis ante primum bellum Punicum, & correct placent denarius pro decem la ils aris bers bi That is, for ten Alles. For the Alles of L. both then, and under the first Consuls, and re were Librales. Pronyfius Halicainal-them 4 scus. Ην ή ἀστάριοι, χάλκεον νέμισμα, βάρος λιβαιον. The Asses was a Brass Coin, weighing a Pound. Where by the way, it is worth the observation, the strange, and in mine Opinion, the unadvised proportion, betwixt the Brass and Silver Moneys of those Times: That X Pounds of Brass should be but answerable to the 84th part (for so much, or near it, was the Denarius) of a Pound of Silver; or to speak more clearly, that one Pound in Silver should be equal in valuation to 840 Pounds in Brass. Neither can there be any excuse of that Error, unless this, that there then was an infinite plenty of the one, and as great a fearcity of the other. However it were, the same proportion is tellified by Varre, who farther adds; that the Romans took the first use and invention of the Denarius, from the Sicilians: In argento nummi, id à Sicu- Varre les, denarii quod denos ares valebant. de lin And according to this Valuation the De-Lat. natus had an Impress upon it of the Figure X, denoting the Decustis, or Number of the Asses, as Valerius Probus witnesses, and sometimes this Character X; both which I have feen, and can shew, in several ancient ones. This latter by the Ignorance of Scribes formerly in MSS, and of our Printers of late, in the Edition of Celsus, and of Scribonius Largus, is represented by an Afterisk \*; and by a worse Error in the fame Authors, the Figure X expressing the Drnarius, as a Pondus, is confounded

with the Figure X expressing a Num ber. From this Figure on the Denarus, or Decuffis, . Vitravius calls the Inter-10. fections of Lines, Decujjes, and Decujfationes. And & Columella ufeth the Phrase in stellam decussuri, when Lines meet Diamond wise, or Lozenge-like, as these in the Character X or X. Neither did the Denarius long pass at the valuation of X Affes, nor the Affes which before, and then were Labrales, continue at one stay; but with the Exigencies of the Roman State, the rate of the Denarius rofe, and the weight of the Affes fell; that is in effect, both the Silver and the Brafs Monies came to be augmented in their estimation. For by a Publick Edict of Fabrus Maximus the Dictator, the Common wealth being hardly pressed upon by Hannibal, the Denarius came to be priced at XVI Alles which the Alles which were then Sexiantarii, or the fixth part of the Roman Pound, (for in the first Punick War, by reason of the excessive Expences of the State, they first tell from being Librales, to be Sextantarii) came now in the Second Punick War to be Unciales. The whole progress and manner of this alteration, is by none to well

Argentum signatum est Anno Urbu 131xxxv. Q. Fabio bellum Punicum. Et placuit denarius pro X libris æris, quinarius pro quinque, jestertium pro dupondio, ac jemisse. Libra antem pondus aris imminutum bello Punico primo, cum impensis Resp. non sufficeret, constitumque ut affes jextantario pondere ferirentur. Plin. lib. 33.

and fully express'd as by Pliny, and there-tore I shall a little insist upon his words: Silver, fays he, came to be coined in the 585th Year of this City, Q. Fabius being Conful, five Years before the first Punick War, and then the Denarius palfed for X Pounds of Brajs, the Quinarius for V, the

Sestertius for II Pounds and an half. The weight of the Assis in Brass was diminished in the first Punick War, the Common-wealth not being able to support the Expences, and then it was decreed, that the Asses should be coined Sextantario Pondere: That is, with the weight of the fixth part of a Pound, or two Ounces, whereas before they were Li-Tho' Alciatus here, upon a very groß mistake, contends, that they were then coined Dextantario Pondere, and not Sextantario; but yet that they were called Affes Sextantarii, because the Sextans, or fixth part of an Ounce was wanting: Whereas h Festus expresly Pompeius writes: Grave as diclum à pondere, quia verbignif. deni usses singuli pondo libra efficiebant denarium ab boc ipso numero dictum:

Sed beilo Panice pipulus Romanus praje! Jus are alieno, ex Jingulis apibus libra- Greavi libus jenos fecit, que tantar les voulerent. And these words of Pliny, which immediately follow these before recited, but it out of controversic 'Where 1 Plan. 1.3 by, fays he, five parts were gained, and c.a. Ita the Debts (of the Common-wealth) d j- quinque charged. I would gladly fee by what eta men Arithmetick Alemius can demonstrate diffolurun that the Common-we did fhall gain five one as also parts, making the Apes Sextantarii, in num. his fenfe; whereas on the contrary, taking them in this Interpretation (as both \* signicela, and Vill Ilpandus do 1 \* Agricol it is a thing most evident. For the lib. 2. de whole Pound, or Ailes, before confitt pondere! ing of XII Ounces, being now reduced monetato two Ounces, and thefe two pathing rum. at as high a rate in the valuation of Villalpa things vendible, as the whole Libra did, appararb it is plain, that the Common-wealth ac temple by this diminution of weight, keeping disp.cap. the same constant tenure of the estimation of the Affes, gained ten parts in twelve, that is, five in fix; and not one in fix, as Alciatus would have it. But to omit this digrei-

Mix lege 1 porte jemunciales fles fa Common-wealth gained his office in partem aris ball, yet in the Pay of gento micut. Plin. lib. the Militia, the Denatius was always account-

ed for X Affes. The Impress of the Silver [that is, of the Denarius] were the Biga, and Quadriga; from when ethey are called Bigati, and Quadrigati. Not long after, by the Lex Papiria, the Asses came to be Semunciales. Livius Drufus, Tribune of the People, mixed an eighth part of Brass with the Silver. Thus far Pliny. Out of which words it is most evident (omitting many patfages of his worth our confideration) that as the Denarius at the first Institution passed for X Asses, so afterwards it was valued at XVI. And Vitruvius gives a Reason, why next to X, they made choice of XVI, rather than of XII, or any other proportion: A Quoni- " Vittus am animadverterunt utrosque numeros! 3. c. esse perfectos, & Jex, & decem, utrosque

Sext.

Budæus.

n unum conjecerunt, & fecerunt perfe-Greaves the shaum decussifiers, where Budaus reads decussifisexis: But P Villalpandus 1. s. deaffe. decuffi fex, that it may the better, as he r Villalp, de Imagines, answer to the Greek, dixa : 5. · Hujus autem rei, saith Vitruvius, au-

torem invenerunt pedem. E cubito enim cum dempti sint palmi duo, relinguitur pes quatuor palmorum, palmus autem habet quatuor digitos, ita efficitur uti pes habeat sexdecim digitos, & totidem asses Vol. Me- ercos denarius. Metianus alfo pur-

posely treating of this Argument, after tianus de affis dithat he had related that the Denarius, firib. at the first Institution, was valued at X Affes, adds, now it is worth XVI. And not to cite more Authorities, the Impress

or Stamp of XVI, as well as of X, found upon feveral Denarii, and feen both by Antonius Augustinus, (a Man . Anton. August. very accurate in Coins, as appears by his Dialogo 1. Dialogues) and by Villalpandus, besides

one with the Inscription of C. Titimius, with the fame Character, mentioned by Fulvius Urfinus, and Dalechampius puts it out of Controversie. And this valuation of the Denarius, as it is more than probable, continued from the first Insti-tution of it in the second Punick War, without any interruption, to Justinian's time, and it is likely longer; fince there is no proof out of any ancient Author, nor any Character on any ancient Denarius found to the contrary. As for those Authorities which are alledged, and pressed by Budaus, and Alciatus, of Varro, Apuleius, Arruntius, and Pomperus, affirming, that after the fecond

Punick War, the Denarius contained X. Asses, the Quinarius, or Victoriatus V, the Seffertius II and an half: We may give a true and easie Solution, that these Writers expressed the valuation of them, as they were in their first original and beginning, with reflection to their primitive denomination: In which respect the Treviri Monetales, or Officers of the Mint, usually imprinted on

the Penarius the Character X, rather than XVI; the former being the Impress of its first Institution, and the latter of its after Valuation. And so in like mander may those Citations be answered of Plutarch, Dionysius, and others, pro-

duced by some Learned Men to strengthen their Assertion, that the Denarius after the fecond Punick War returned to its first estimation. Which thing

could not have been effected, without extream loss and prejudice to particular Men, in their private Fortunes and Estates; which the Justice and Wisdom

of the Roman Senate, under the Confuls, was not likely to have introduced, or the People to have admitted.

To conclude, the Denarius, as it is evident by many irrefragable Authorities before alledged, in the highest valuation passed for XVI Asset; and according to that proportion, the Quiharius, or Victoriatus for VIII, the Sesterius for IV: But in the lowest valuation, or first institution, it passed for X Asses: And then the proportion of the Quinarius was V, of the Sestertius II Alles and an half, and therefore was thus marked IIS, or thus HS, as the Quinarius had this Character, V, and also this X, as it is to be seen in a Vithoriatus of mine own (befides feveral others) with the Face and Inscription of M. Cato. By which Coin that place may not unfitly be explained, which troubled \* Budeus, why the Ordor seculfatus, and Ordo quincuncialis, fignifie in 1.1: the ranking of Trees the fame thing, altho' the Quinarius, or Quincunx, give the denomination to the one, and the Denarius, or Decussifis, to the other. The Reuson is, because the Quinarius had the Character X imprinted on it, as well as the Denarius, or Decufis. Besides in Temporarius, we find the Quin Tempocunx to be thus — represented, as rarii. the Unca thus — so that five of these Uncia making the Quincunx, and these five being ranged like the Figure X (the Character of the Decusies) it is no wonder if the Ordo Decussatus, and Quin-

That the Denarius should have pasfed at any other rate between XVI and X Asses, as there is no Coin extant to prove it, fo there is no express Authority to conclude it. Tho fome infer out of Polybius, that it was valued al- Polybil. fo at XII Asses: Because he defines the ημιαστάριον, or Semissis, to be τέταρου uiegs ocons, the fourth part of the Attick Obolus; and VI Oboli being in the Jezzun, to which Drachma they suppole the Denarius equal, therefore there must be XXIV Semisses, or XII Asses in the Denarius. But with much better reason we may hence infer, that the Drachma was formewhat bigger than the Denarius, as we shall prove in this enfuing Discourse; and therefore Polybius allows XII Affes to it: Whereas, if it had been precisely equal to the Denarius, he would have valued it at X, or

else XVI of the lesser fort of Asses. So

that Sir H. Savile, a Man of exquisite

Judgment and Learning, in his Discourse

cuncialis, were taken for the fame.

· Lypfi**us** Elector-

de Ling.

at the end of Tacitus, justly blames Hottoman for altering the Text of Polybius, and is himself to be censured, as also Lypsius, in inferting thence that the Denarius contained XII Asses.

The feveral parts of the Denarius, excepting the Quinarius and Sestertius. of both which I have spoken before, are all comprized in this Description of Varro, with which I shall conclude: Nummi denarii decima libella, quòd libram pondo as valebat, & crat ex argento parva; sembella quod sit libella dimidium quod semis assis. Teruncius à tribus uncin sembelle quod valet dimidium, & est quarta pars sicut quadrans affir. By which proportions it appears, that the Libella was the Xth part of the Denarius, when it was current at X Asses, the Sembella the XXth, the Teruncius the XLth. And thus much of

The fecond, and our principal Confideration of the Denarius, is, as it is Pondus. In which acception it will be \*The conon; that the Denarius was either \* Conon;

the Downius as it is Nummus.

Iularis again may fuluris, or Cafareus. The Confularis be confi-was that which was made under the Godered, erther in the the Cafareus under the Cafars: The
time of the Cafareus under the Cafars: former, or Confularis, (I mean the Confularis after of the la-the second Punick War, and under the terConfuls: later Confuls) contained precisely the That of the feventh part of the Roman Ounce, as the Confuls, at other did the eighth part, or formewhat

the first In- near it.

flitution of it by Q. Fabins, five Years before the first Punick War, Peireskius not improbably imagines to have been the fixth part of the Roman Ounce: And Agricola by comparing it with the Telentum Articum, which Varro values at 15000 Seflertii, and with the Tetradrachme, which Livy (lib. 34.) estimates, Trium fee Denariorum; as also upon the Authority of the Scholiaft of Nicander, who equals the Denarius to a Drachme and an half, as Priscian doth to a Drachme and a third part; I say, Agricola affigns it to almost the same proportion with Peireskius. But herause I have seen no Denarii Consulares of so great Antiquity, and these Authorities may perchance admit of other Con-lindions, I shall leave this Opinion as only probable, and follow what is more certain and demonstrative, of the later Confuls.

> First. That the Denarius Consularis of the later Confuls, was the feventh part of the Roman Ounce: This shall be our principal enquiry, because it is more evident of the two, and will give us the best light to discover the true weight of the Denarius, in the notion and acception of the Ancients, both Greeks and Latins. It is most apparent, both by several fair Coins which I have perused of the later Consuls, as also by Cornelius Celsus, who lived in

the beginning of the Roman Emperors, before there happened a general diminution of the Denarius, that it was then the feventh part of the Ounce, who thus writes, " Sed & antea ferri volo in un- celfus, cià pondus denariorum elle septem. The 1.5.c.17 fame proportion is also expressed by d Scribonius Largus, who lived not long Scrib,L. after Ccl/us, as some imagine, his words gus in are these: Erit autem nota denarii uni- præfatioi us pro Graca drachma; acque enim in libra denarii olloginta quatuor apud nos, quot drachma apud Gracos incurrunt. Pliny also confirms the same. Mif- Plinius cuit denario triumvir Antonius ferrum, 1.33. c. alu (he means under the Emperors) è pondere subtrabunt, cum sit justum otto ginta quatuor e libris signari. Out of which words of his, and of Scribonius Largus, it will by a necessary consequence be inferred, that the true weight of the Denarius Confularis is the seventh part of an Ounce. For if we multiply twelve, the Number of the Ounces in the Roman Libra (as by all it is confest) by teven the Number of the Denarii, of which the Onnce then confifted, the Sum will be LXXXIV Denarit; and fo many, fay Scribonius and Pliny, ought justly to be in the Roman Pound. And these are the only clear and positive Authorities that are to be found in Claffical Authors, most of the Writings of the Ancients, de ponderibus & mensuris, having long fince been loft; or elfe those lew Fragments that are left, of Cleopatra, Diofeorides, and of others, are to corrupted, that little Truth with any certainty can be collected. From whence it will by way of Corollary follow, that if either the Denarius Confularis he given, the Roman Ounce, and Libra, in the fame proportion will neceffarily be thence deduced; or it the Roman Ounce, and Labra be given, the Denarius will as necessarily be concluded.

But before we farther treat of this Argument, we shall endeavour also to demonstrate the *Penarius*, by the Drachma Attica. For Scribonius feems. and so do other Ancients, to make them And therefore Pliny writes: equal. Drachma Attica denarn argenter habet ! Plinius, pondus: Whereas the Drachma Æginea 121. c.34 was much larger, this containing X fuch Oboli as the Attick contained VI, and therefore the Athemans in hatred of the Æginaons, called it waxeau deuxunv, as Pollux testifies. And here as I Jul. Po. we confidered the Denarius, as Nummus, 1. 9. c. 6 and as Pondus; so likewise must we

take the Drachma Attica, as Nummus, Greaves. and as Pondus: In the profecution of both which, relatively to the Denarius, I shall insist so much the longer, because it is an Argument that hath scarce at all, or very pertunctorily been handled. The Drachma, as Nummus, was a Silver Coin in use amongst the Athenians, (for 1 intend only to speak of the Drachma Attica, for the same reason b Plinius, that b Pliny doth. Fere enim Attica 1.21. c. 34. observatione utuntur medici) and so it was the Measure of things vendible, as all Coins are: And as Pondus, fo was it the Measure of their Gravity and Weight. Now the Drachma, as Nummus, passed in the estimation of the best Authors, both Greek and Latine, at the same Rate and Valuation as the Denarius did. And therefore, as often as the Latines are to express the Greek Drachma, they render it by the Denari us; and on the contrary, the Greeks the Denarius by the Drachma. Thus 'Cicer. 16. what ' Tully renders by the Denarius, 1.5. Ep. ad Dio in his 45th Book expresseth by the Attic. Drachma. Their words, both speaking of Augustus, are these, Veteranos quique Casilini, & Calatia funt (as Tully re-lates) perduxit ad suam semientiam, nec mirum, quingenos denarios dat. Καὶ ἐδω
† Dio, 1.45. κεν ἐὐθυς τότε, faith † Dio, κτ' ωενδιακοσίας

Plinius, δραχάς. In like manner † Pliny writes, 1. 8. c. 57. Venille murem ducentis nummis, (that is, Denaries; for Nummus absolutely put is often, tho' not always, taken for the Denarius, as on the contrary the Denarius is taken for Nummus in Hesychius, \*Hefychius \* σηνάριον το νόμισμα, η είσ 🚱 άς Γυρίε.) Casilinum obsidente Annibale, cumque Suvaecor. qui vendiderat fame interisse, emptorem vixisse annules tradunt. The same thing " Valerius Maximus reports in his m Valer. Max.1.7.c.6.7th Book, and 6th Chapter, and "Strabo 1.5. Geogr. in his fith Book; the former writing that it was fold for 200 Denarii, and the latter that it was bought for 200 Drachma. To these Authorities I shall ° Fragmen-adjoin ° Cleopatra, Το Ίταλικον ο Νωάριον τα Cleopa- και σ'ραχμίω ά. The Italian Denarius \*A.Gellius containeth one Drachma: And \* A. Gel-1. 1. c.8. lius, Lais μυρίας δραχμάς ή τάλανδον Noch. Att. poposcit, boc facit nummi nostratis, de-

narium decem millia.

These two thus passing the one for the other, being also at the first institution much of the same sineress in respect of Silver, it must necessarily be admitted, either that they were exactly the same for weight, which is our next Enquiry, or essentially the same for message that they were not much different. For in comparing of Foreign

Coins, the xolly of Nummularii, in ancient Times, must have taken the fame Course, which our most knowing Bankers do practife now. First, to respect the pureness and fineness of the Coins, whether they be alike for the intrinsick; and next, whether they have the same weight; and if they differ in . either, or both of these, according to those differences to proportion their Those other accidental exchanges. Causes of the rising and falling of Exchanges of Moneys, fince they are meerly contingent, depending upon the Ne-cessities either of Times, or Places, or Perfons, I purpofely pretermit, as not fo proper and effential to our Enquiry. As for the extrinsick of Coins, by which I mean the outward Form, or Character, and Inscription of the Prince, or State, tho' this may raise the Valuation of them in those Countries, which are subject to the Prince, or State, and letter them in those which are out of their Dominions; yet this can produce no remarkable difference, more than what is usually assigned by the Masters of the Mint, for the Waste in Coining, and for the Labour of the Work.

With these Cautions, if we shall examine the Attick Drachma, and by such Writings of the Ancients, or by such Coins as are extant, enquire their true Weight, we shall come to such a preciseness as may be hoped for in a Work of this nature. \* Suidas tells us in the \* Sui

In scrupulis ternis drachmam, quo pondere dollis
Argenti facilis signatur pondus Athenis.

To which we may add Cleopatra, "H Frag Ocaxun ixd γεάμμα ν. δεολάς ς'. Geop Scopus; δ'. κερτια νή. χοθμάς μπ. The Drachme bath three Scruples, fix Oboli, nine Lupini, eighteen Siliqua, forty eight Æreola. The Scholiaft of Nican. Scho der also makes the δίδομχμον το be το Nican τίτας οι ν είγιας, The fourth part of the [Attick] Ounce. In the same proportion are we to take those other Silver Athenian Coins mentioned by "Jadius" Jul. Pollux, namely, the τοίδομχων, which 1.9confished of three Drachmes, the τοίξομ1ε4χμα. 2 Ammo-בא ששופעום Jiapógeny Mat.c.17.

And afterwards, in the Times of Christianity, they were kept in Churches, 'Authen- as it is to be feen in the Authenticks tic. collator of Justinian; where he commands, that de collatoribustic, i. the Weights and Measures should be novel. 128. kept, in Sacratissimà cujusvis civitatis ecclesià C. 15. As for those Allegations taken out of the Interpretation of the LXX, whereby Grsepsius, and others, go about to prove a double Shekel, they are all well, and folidly, in my Judgment, an-· Villalpde swered by · Villalpandus, and others, to appararbis whom I shall refer the Judicious Rea-difp.4.c.28. the Hebrew Shekel, or Attick Drachme,

Item par.2. more than what may ferve to illustrate

1.2. disp.4. the Denarius.

Seeing therefore, as we have proved, that the Attick Drachma was equal in the notion and acception of the Ancionts, to the Denarius: If therefore an · sither Attick Deaxun, or Di-1, or Τε ράσ ραχμον, were found, it thence conclude the Denarius.

Again, fince the Hebrew Shekel hath likewise been demonstrated to be equal to the Attick Telegidegxμον, and this Attick Telegistraxuov to four Denarii, by the common and received \* Axiome \* of Geometricians, we may conclude de that the Hebrew Shekel was also equal in to four Denarii; that is, that four Ro to man Denarii, the Attick Telegideg X 1101, ax and the Hebrew שקל were all respe-Etively equal to one another. If therefore an Hebrew Shekel, fair and entire, were found, we might as necessarily thence infer the Denarius, as by the Τε ράδοαχμον.

We shall endeavour by both these to enquire out the truth, and first by the Attick Tetradrachmes in Silver: Because of these I have seen and weighed many fome of them very fair and perfect, and found at many feveral places, as Athens, Constantinople, Tenedos, and other parts; where the Art of Counterfeiting Coins is not as yet crept in, and where it is to little purpose to practise it : Seeing in those places there are few so curious as to buy them, or that will give a greater valuation than what they are worth in the intrinsick. Wherefore having in Italy, and elsewhere, perused many hundred Denaru Confulares, I find by a frequent and exact trial, the best of them to amount to LXII Grains English, such as I have carefully taken from the Standards of the Troy, or Silver Weights, kept in the Tower in London, and in Goldimiths Hall, and in the University of Oxford: On the other fide weighing many Attick Tetradrachmes, with the Image of Pallas on the forepart, and of the Nollua on the Reverse: I find the best of these to be CCLXVIII Grains; that is, each particular Drachme LXVII Grains. And that no Man may doubt whether

these were true Athenian Tetradrachmes, we are to observe, that the Ancients used several Impresses on their Coins, by which they might be known and di-Itinguished. And therefore Argentum fignatum, in the Description of Quiztius his Triumph over Philip, is by Livy Liviu opposed to Argentum infedium, which 1. 34 " Pollux terms aonuov, as " Tully calls " Jul. 1 and the Greeks, of florappion. Thus Cicer the Denaries had the Impress of the Vert. Biga, or Quadriga, as Pliny informs us: 1.9. c.c. And therefore Livy uses the word Bi- Liv. gati for Denarii, and Pliny both Bigati Pliniv and Quadrigati. The Brass Coins of the 1.33. c Romans were thus marked : \* Nota aris \* Plin.

fuit

fuit ex alterà parte Janus geminus, ex alterà rostrum navis, in triente vero & quadrante rates. The Persians stamped on the Reverse an Mrcher: Which chus in Ar- occasioned that Conceit of Agesilaus. mentioned by \* Plutarch, That the King To 3 neg- of Perfia had beaten him back with ten sindy vothousand Archers; when with so much μσμα Money he had corrupted the Grecians. τοξότιω chionper The Carthuginians on the one fide figned àχεν. • Pluc. the Face of a Women, (I suppose in Memory of Queen Dido) on the Re-Agenil. verse the Head of an Horse, or in Vir-\* Virg. 1. gil's Expression, \* Caput acris aqui, both Eneid. which I have seen. The Peloponnessans had the Impress of a Tortoife on their Money, whence that witty Greek Pro-Jul. Poll. verb took its Original : " Tav dellav, k Lo. c.6. ταν (οφίου νικαν Ιι χελώναι. The Money at Tenedos had on the one fide a double Hatchet, and on the other fide two Heads, one of a Man, and another of a Woman, arising from the same Stem, or Neck, in Memory of a Law made by the King of that Island (whom \* He-\* Herachides, achides names Tivons, placing him ancienter than the Trojan War), That a Man and a Woman, taken in Adultery, should have their Heads struck off with an Hatchet. In which kind I met with two very rare and ancient Coins in Silver, at Constantinople, both made with a very fair Relevy, and both agreeing in the same Image and Inscription; the one weighed less than the Attick Tetradrachme, the other wanted somewhat of the Prachme. And because the Coin hath not, I think, been feen by any Antiquary, and the History is remarkable, I shall here express the Figure of the tairest of these.

And the History I shall relate out of smalless Heraclides: Νόμον ο'έ τινα φασι τ βασία τολι σιλία Τέννην ο βαδίαδη, άττις λάδοι μοιχόν επικε και και το χει ποιείν, επικε μοικοί ο βασία και τι χει ποιείν, επικε μοικοί το και και το χει ποιείν, επικε μοικοί το και χει το το νομίσμαδη το νόμω χειλος το δάτερα πέλεκυς κεχάρακ), όπι δάτερα πέλεκυς κεχάρακ), όπι δάτερα το δάτερα πέλεκυς κεχάρακ), όπι δάτερα το δάτερα πέλεκυς περόσωπον ανογούς κου γυμομικός κός το πέλεκ λέι ε) όπι τ επικείνων, το βπικεκόφθου Τενιοδίφ ποιλίκο. Τον βαγ Κιπς Tennes made a Law, That if one Vol. M.

took another in Adultery, he should kill him with an Hatchet. His Son being found Green so, and he that took him, asking the King, What he should do? He answered, Execute the Law: And for this Reason on one side of his Money there was an Hatchet imprinted; on the other, the Face of a Man and of a Woman, arising out of one Neck. From hence it is said of severe Advions, to be cut with a Tenedian Hatchet. From which exemplary Justice those of Tenedos, as it is probable, Deisied King Tenes. Tully writes, Tenedu Tenem Cicerl [Deum appellant]: And again, Tenem de Natur apud Tenedus putant esse sandissimum decorum. Deum, ac corum urbem condidisse. Where his Name is truer witt than in Heraclides: For the Coin hath only a single N. and so hath Eussathur.

The Money of Chios, as Julius Pollux TopenGo witnesses, had the Essigner, or Resem- a' pale blance of Homer; no doubt in Honour Iliad. of his Memory; tho' " Herodotus re- "Herodo lates, that whilft he was living he found in Vita at first but cold Entertainment in that Homeri. Island. Thefeus the tenth King of the Athenians, figned his Money with the Impress of an Ox: Hence that Proverb, Bis and yhwarn Beenney. This as & Julius & Jul. Po Pollux testifies, was the Δίσθος χμον: 1.9. c. 6. Who farther adds, Το ή παλαίον τύτο τιν Αθηναίοις νόμισμα, κ' δπαλατο βες ότι βεν άχεν όλιξιυπωμήρον. άσθυαι 3 αὐτό κ' Ομηρον νομίζεσιν επόνλα, έκαλόμβοι έννεα-Colwv. κ με καν τοῖς Δράκολ 🚱 νόμοις ές εν δηθεινειν σεκάθοιον, η ου τή ποδο Δηλίας θεωρία τ κήρυκα κηρύτιων φασίν όπότε σωρεάν τινι έσ ίσδιο, ότι σοθήσον) αὐτώς τοσέτοι βόες. κ, ο ίσοολς καθ έκαςον βεν ούο δραχμάς άτλικάς. This was an ancient Coin amongst the Athenians, and was called Bes, because it had the Figure of an Ox instamped. They imagine that Homer knew this, when he Jaid, nine Hecatombs of Oxen; and also in the Laws of Draco, it is to pay the Multi of ten Oxen. And they fay, that at the Solemn Shew at Delos, the Crier, when any Gift is to be given, cries fo many Oxen Shall be given, and for every Ox fo many Attick Didrachmes are given. The fame Author writes, that the At I Jul Poli tick Tetradrachme was stamped with ibid. the Face of Minerva; and he might have added, with the Nollua on the Reverse. This \* Eubûlus pleasantly calls \* In An-Παλλάδ Φ ωώλον, Minervæ pullum. chife. The Διώδολον had the Face of Jupiter, it may be it is an Error in Pollux for Pallies, and on the other fide the No-tlua. The Tileofolosov had on the one \* Jul. Poll fide Jupiter, according to \* Pollux, (I 1:9. c. 6.

conceive it to be a Mistake for Pallar, Greaves. or Minerva) on the other fide two No-¿du.c., because it was the double to the \* Plautus in Διωζολον. From the Diobolum, \* Plau-

tus vies the Term Diobolaris Servorum Sordidulorum, Scorta Diobolaria, which Festus interprets thus, Meretrices dio-Pompeius bolares appellutas, ex co quod duobus refus de Verb.fignit. join, out of luch ancient Coins as I have feen, that the Triobolum (whence

"Plautus in that Phrase of " Plautus, Homo Trioboli, Pœnulo. and of the Greeks, αξιών τερωθόλυ)

"Jul. Poll. which by " Pollux is called the ήμί-1.9. c.6.

c'ραχμον, had the Face of Pallas on the one fide, and the Notiua on the other; and so likewise had the Obolus, and Druchma of fuch as I perused; and all of them on the Reverse the Inscription AOE. And I think I may fafely add, that on fuch Coins as we find the No-Elua, with a deep Relevy, we may conclude them to be Athenian Coins. Plutarch is of the fame Opinion in the Life of Lyfander, where he discourses of Gylippus, a Commander, as famous for defeating the Athenians in Sicily, as

infamous for stealing the Silver configned to him by Lyfander, for the City Sparta. When he arrived, saith Plutarch, at Sparta, he hid the Silver that he had stoln, under the Tiles of his House, and delivered into the Hands of the Ephori the Bags, shewing them the Seals [entire]: Which being opened, and the Money told, they found the Sums to disagree from the Labels: Wherewith being troubled, a Servant of Gylippus, in obscure Terms, intimated to them, That under the Tiles of his Master's

House, there were hid many Noctux, οι Ówls; ην ηδ (ως εσικε) το χάρα μα τως Αθηvaiss yhaunes. For the greatest part (as it feems ) of the Money then had the Stamp of the Noctua, by Reason of the Athenians: Who not long before, as

Thucydides, and the best Historians of those Times shew, were the richest and most flourishing State amongst the Gre-

nity to have bought, or elfe the Favour to have weighed many fair and perfect Tetradrachmes, found at remote places, with the Pallas Galeata on the one fide, and the Nollua, with the Inscriprion AOE on the Reverse, where E be-

Having therefore had the Opportu-

ing placed for H, proves the Antiquity of them. (For the Atticks at the first used not H, but only E, for both E and

H) I find by the best of these (to re-

assume what I said before) that the Artick Tetradrachme is 268 Grains, and the Drachme 67 of our Troy, or English Standard. Which may farther be confirmed by an Attick Drachme of mine own, found in the Black Sea, with this Inscription, AΘΕ TINAPNIKA APXE, and by a \* Τομώθελου,

or Semidrachme, bought by me at Alexandria; that weighing near 66 Grains, and this 30 and better: The Face of Minerva, either by use, or time, being a little diminished in both; but

\* I have fince p fair Athenian Tecoloxov, my very worthy and lear Friend, John Marsham, E weighing compleatly the three Grains English. another of Sir Tho. Roe's. gether with an 'OCoho, his, weighing eleven Grain

yet so little, that they cannot have loft above two or three Grains of their primitive weight. And as this fingle Attick Drachme of mine, is much to be valued by Antiquaries for the weight, and therefore was defired by the learned Peireskius: So is the Inscription, The NAPNIKA APXE, no less worth Confideration, for the Explication of a place in Livy; who describing the Na-! Liviu val Triumph of L. Æmilius, writes 1.37. thus: Pecunia translata nequaquam tan-ta pro specie regni triumphi. Tetracina Attica CCXXXIII Millia, Cistophori CCCXXII. Mil. Where Budaus, and Bud. Rhodiginus, instead of Tetracina, read de asse. Tetradrachma. Tetracinum enim quid Rhodig fit, nemo ut arbitror novit, faith Bu-lett. An deus. I would rather read it, as the Coin doth, Tinarnika; this having almost the same Letters with Tetracina, which by the Scribes, I suppose, have been inverted. Neither is there any Reason, why Livy might not as well mention in this Triumph, Attica Tinarnica, as Tetradrachma, these being the fourth part of the Tetradrachme. and therefore better agreeing with his Description: Pecunia translata nequaquam tanta pro specie regii triumphi :

denariorum. And as these Testimonies above alledged are beyond all Exceptions, so the Gold Coins of the Grecians, which I have examined, do most evidently

And also better agreeing with the Cifto-

phori he here mentions: A fort of Coin

about half of these Attica Tinarnica, whereas the Tetradrachma were eight

times as great. For Festus expressing sex the Talentum Euboicum, renders it by Pomj 7500 Cistophori, and by 4000 Denarii, or Festi Attick Drachmes, that is CIO Tetra- Verb. drachmes. Euboicum talentum nummo

cistoporum est: Nostro quatuor millium

Graco septem millium & quingentorum

prove this proportion affigned to the Attick Drachme. Which that we may the better understand, we are to observe what proportion the Valuation of the Gold of those Times had to the Silver; and next, what proportion it had in respect of weight.

· Jul. Poll. 1. g. c. 3.

For the first, 'Julius Pollux, in very peripicuous Terms, puts it down: Τό Β΄ χευσίον ότι τ άς Γυρία δ'εκαπλάσιον ην σαφώς άν τις όμ τ Μενάνο εκ πρακαλαθήκης μάθη. That the Gold was in a tenfold proportion to the Silver, one may evidently learn out of Menander's Paracataοι Δαρεικοί. ἐθύναθο ή ἐκας Εν αὐτίμι ὅπερ

1.9. c. z.

Scholia- thece. ' The Scholiast of Aristophanes ftes Aristo- implies as much : Eloi & xevooi salinees ό πωλά. τοῖς Ατίικοῖς ὀνεμαζομήν. χευσες, ἐκ ἐπὸ Δαρκε ΤΕίρξε τα κίος, ἀλλ. αφ' έτέρε τινός σαλαιδίρε βασιλίως ώνομάσθις. Λέι Βσε οι τινες σύναος τ Δαρεικον σραχμάς άριυρίε κικοσιν. ως τες πείνιε Aageluss duvady juvav actueis. The Da. ricks are Golden Staters, each of them is worth as much as that which is named by the Atticks the Xeurs. They are called fo not from Darius the Father of Xerxes, but from another King more ancient than he. Some fay that the Darick is valued at XX Drachmes of Silver, fo that V Daricks are worth a Mina of Silver. For the Attick Mva, or Mina, containing an hundred Drachmes in " Plinius, weight, as it is very clear out of " Ph-1.21. c. 34. ny, × Pollux, and others. Mna (faith Pliny) quam nostri minam vocant, pendet drachmas Atticas centum. And Pollux, Η μνα ή τσας Αθηναίοις εκατόν είχεν σραχμάς 'Arlixas: The Mina with the

Athenians containeth an hundred Attick Drachmes, and the Xeurs's Daganos, or Erarne Xevous of Darius, confilting of two Drachmes in weight, as we shall prefently prove, it will necessarily follow, that the proportion of the Acakun Xevσίε, was to the δραχμή ἀρίνριε, in deculpà ratione: And therefore that five

Daricks, or ten Drachmes of Gold, were equal in Valuation to an hundred ' Polybii Drachmes in Silver, that is, to the Mva. com, c. 28 out of Polybius, when the Romans oth Fulvii upon a Sum of Money to be received. concluded a Peace with the Ætolians,

Αυτν.1582. Αντί τρίτε μέρες τ άρινρίε χευσίε, χευ-Livius σίον καν βείλων) διοδοθίες τ δέκα μνών αξο τοις Ελ. Γισέκ, χευσίε μνών. Which words Livy λότιν κ. renders thus : Pro argento fi aurum dare

Perxum mallent, dare convenit, dum pro argen-\*\* Xtuour teis decem naureus unus valeret. This \*\* This being granted, as certainly of necessity Ma.Zonaras

it malt, I would correct that place of · Hesychius concerning the Deaxun Grea χουσία, and read it thus: Δραχμή ; Hel χουσία όλαι νομίσμα ! Θ είς αρ τορία λόιον us in v σε εχρίβι i, and not Δισε εχρίβι i. as it σε εχρ is in the Printed Copies. And by this of Helychius I would supply the defect of b Suid.13; who write: Δραχμή ) b Suid ολλή νομίσμα Θ είς άρινος ε δραχμάς ι' in νος and make it thus Apaxim I xevels deaxi όλκη νομίσμα Θ ας αξιυρίε λόρον δραχ. uas i. For without the addition of χουσίε, and λόιον, there is no fense: And I believe Suidas took these very

words out of Hefychius.

Having thus found the proportion that the deaxun yeuris had to the Silver, our next Enquiry is, How many of these Drachmes in weight the yeurgs, of xeuose saline, or Aureus contained. Julius Pollux gives us in this parti cular the best, and most positive infor 1.4.c. mation of any, 6 3 χευσες και η ε ο νο έχε δεαχμάς Ατιικάς. The Golden Stater or Aureus, contains two Attick Drachmes. The fame is confirmed by Hesychius: Πολέμρχ Φ φησι ενωία δ dHesyc τ χρυσέν τος 'Ατικοίς εραχμάς in νοα ουό τ ) τ χευσε σε τραχμιω νομίσμαι . Χευσε άρινρίε, δραχμάς δέκα. Polemarchus Juys, that the Aureus amongst the Athenians contains two Drachmes, and that the Drachme of Gold is worth ten Drachmes of Silver. And to this of Pollux and Hesychius, all the Aurei of the ancient Grecians, which have pasfed through my Hands, do very well correspond. Now these Aurer as they had feveral Impresses upon them, so had they feveral Names, by which they are diffinguished. For they were either 'Ατλικοί, οτ Δαρακοί, οτ Φιλίππαοι, οτ Alegardenoi, or the like; all which

we may prove by Xeno-phon, \* Harpocratio, the Scholiast of Aristophanes, and others, to have been equal unto two Attick Drachmes, and therefore respectively equal to one another. Neither is this much to be wondred at, that the Grecians, and Perfrans, tho' at Enmity amongit

autem 600 Drachma. Δαςεικός funt 20. Drich Scal. de re num. themselves, yet should agree in the

Aurer; feeing that in our Times, the Venetian Chequeen, the Barbary Ducat, the Ægyptian and Turkish Sherif, are almost all of the same pureness in respect of the Gold, and not differing above a

Sixa Taxavla.

Grain in the weight. Which difference we Greaves. may alto allow to those of the Ancients, without any prejudice to our Enquiry.

Concerning these Aures, or Golden Sta-\* Jul. Poll. ters, the Observation of \* Julius Pollus 1.9. c.6. is worth our Confideration: Kai ci ju Δαρτικοί έχολ ενδο ςαδήρες, οί ή Φιλίππαοι οί ή Αλεξάνη εκιοι, χρυσοί σαίν ες όν ες, κ ต่ นิ มุยบรรีร ผู้พอเร พองุธลมชะ ) 6 รณ์ท่อ, ผู้ ว รณ์ทอ ผู้พอเร ช เซล่งโพร 6 มุยบรรีร. Uf the Staters some were denominated from Darius, some from Philip, some from Alexander, and were all of Gold. And when you fay the Aureus, the Stater is underflood; but if you fay the Stater, the Aureus is not always meant. And this is most true; for the xevose, or Aureus, (I speak not here of the Aureus Romanus, this being formewhat lefs than thefe mentioned by Pollux) did always imply the saine, but the saine did not always infer the Aureus: The States being more general, fignifying as well the Argenteus, as the Aureus, and that was double to this; the Stater Argenteus being four Drachmes, as we proved before, and therefore the same with the Tetradrachme, and the Aureus two Drachmes, and therefore equal in weight to the *Didrachme*. Wherefore every Aureus was rightly called a Stater, but every Stater could not rightly be called an Aureus.

From these Aurei then, or yeursi sallinger, we may deduce the Silver Attick Drachme, if we either had the Aagenal, fome of which to this Day are found in Persia; or if we had the Φιλίππαιοι, or the 'Αλεξάνε εκισι. Το pass by the Δαerixol, because I have not perused any of them, and to speak only of the Dininπαοι and 'Aλεξάνο eaos, of which there

are many extant.

\* Snellius maria.

Concerning the Φιλίππαοι \* Snellius de re num- writes thus: Philippi nummum unicum, & Alexandri Macedonum, solcitissimus veterum nummorum astimator Nicolaus Rockoxius possidet, utrumque codem ponere granorum 179. Now CLXXIX Grains of Gold in Holland, fuch as Snellius used, are answerable to an hundred thirty four Grains English and an halt. Near which proportion I have obferved two others, with the Inscription ΦΙΛΙΠΠΟΥ, excepting only a Grain or

> As for the Alegourgesol, I find the weight of one of the fairest for Impresfion, and Character, I think, in the World, which I bought at Alexandria, with the Image and Inscription AAEE-

AND SOT, to be exactly of English Grains 133 , and another at Constantinople 133, and in the fame proportion feveral others. With which comparing one of mine Honoured and Learned Friend, John Marsham, Esq. I find his a Grain defective: And weighing fince fome others, out of that choice and rare Κειμήλιον of ancient Coins, collected by the Noble Sir Simond's D'Ewes, Knight Baronet, I observed two of his to exceed 133 by ; a Grain.

Wherefore I may conclude (allowing

only half a Grain for fo much wanting by time, or by the Mint) from the Aureus being double to the Attick Drachme. that it hath been rightly affigned by me to be LXVII Grains: And from this with those Limitations above mention'd. I may conclude the Denarius Confularis, (which is our principal Enquiry) feeing Galen, 18. c. 3. de Compositione Medi-Galen, 1 8. c. 3. de Compositione svieui-cam. According to the Latine manner Galenus, 1. 8. de of division, speaking of an Antidote composit prescribed by Asclepiades, whereof the medican Dosis was to be one Drachme, or Denarius, writes thus: Ἡ[εμαι ή λί[ειν αὐτον σεχμιω άειυε , κ ηδ έτω χεθον άπασι τοις νεωι έροις ια ερις έι Θο ονομάζειν, άλλο ο νοαν ήμας έδεν ή τορά μαί Θο φίσις ἀναίκάζα. Τρόσηλον οδ ότι δραχμίω λέγομβυ νω όκ τοις τοιέτοις άπανίες, όπες Ψωμαΐοι σηνάριον ονομά (εσιν. Ι suppose. that he means the Silver Drachme, for so all the later Physicians are wont to call it; neither will the nature of the thing Suffer us to understand any other. And it is manifest, that in such things as we all now name the Drachme, the Romans name the Denarius.

The Denarius also, as we proved before out of Philo, Fosephus, St. Hierom, and Hespehius, may be interred by the Hebrew or Samuritan Shekel: The Shekel, by the joint Testimony of all of them, being equal in Valuation to the Attick Stater Argenteus, or Tetradrachme, and the Attick Tetradrachme, as we have shewed, to four Denarii Confulares: If therefore an Hebrew or Samaritan Shekel in Silver, fair, and not impaired, were found, we might by this as well discover the Denarius, as by the Tetradrachme, or the Aureus. And here I must confess I have not seen fo many perfect and entire, with the Samaritan Characters, which certainly are the best and truest, (for those with the later Characters, invented, as some suppose, by Esdras, are most of them counterfeit) as to give my felf fatife faction.

 Arias Kain, five de mensu-

faction. For tho' I have perused that of Arias Montanus, now in the University of Oxford, which he describes in his Tract De Siclo, and from whence he deduces the proportion of the Hebrew Shekel; yet to speak the truth, there is no trust to be given to it: Nor but that the Coin is very ancient, and the Inscription upon it in Samaritan Characters well made; but the fides of it have been fo filed away, that it hath very much lost of the true weight: For I find it to be scarce the weight of Twenty-pence of our English Standard. Whereas Montanus, if he made his Obfervation exactly, equals it to almost four Spanish Rials, or to four Roman Julio's; both which exceed two of our English Shillings. So that till such time as I may procure out of the East. (whither I have often fent) fome perfect Shekels. I must be content to take up the Relations of others. And here I shall begin with Moses Nehemani Gerundensis, a Jew, a Learned Expositor of the Pentateuch; who, as Array Montanus tells us, flourished in Catalonia above 400 Years fince. His words, as Montanus hath delivered them in his Tract De Siclo, are thefe: In Comment. Exod. 39. Multis verbis disserens significabat se non facile ad Salomonis Farrhai, inscribitur qui ante illum in Gallia scripserat, sententiam de siclo accedere; cum Salomon assirmasset, Siclum esse dimidiam argenti unciam. Postea jam absoluto in omnem Legem Commentariorum opere, idem Moles Gerundensis capite ad eam rem proprie addito, sicli astimationem à Salomone illo indicatam, re ipsa doctus, ingenue, & aperte, ut viros doctos, & veri inveniendi, aique docendi cupidos decet, comprobavit. Narrat autem se co anno, quo illa scriberct, in Palasti-nam ex Hispania Jacrorum locorum visendi causa navi delatum Acconam, quam nunc fachan vocant, devenisse; ibidemque sibi ab incolis ostensum fuisse nummum argenteum antiquishmum, expressis tamen signu & literis conspicuum; in cujus altero latere forma esset vasculi illius, quod manna plenum in sacra arca ad saculorum monumentum, Dei jusu, & Mosis procuratione fuerat repositum: Et in altero ramus ille admirabilis, quem in fasciculum virgularum plurimarum Aaronus nomine illatum (cum illius facerdotali dignitati ab amulu quibusdam obtrellaretur) postera die populus omnis florentem, amygdalaque explicantem vidir, inscriptiones etiam fuisse in eodem nummo Samaritanus characteribus, que

olim communes totius Ifracles litera fue rant, ante discessionem decem tribuum à Grea duabus, lingua plane Hebraica, quarum vexemplum ex altera parte crat SEKEL ISRAEL, quod Latine Sonat Siclus Israelis: Ex altera verò FERUSALEM KEDESSAH, hoc est Jerusalem santla: Qui nummus antiquitatem cum primis magnam probabat, utpote cusus nomine Ifraelis, co tempore quo omnes XII. tribus communi concordia Ifraelis nomen obtinebant; quoque Hierosolyma ipsis omnibus regia urbs, sanctaque erat; eademque communis omnibus & religionis. & publica rei, & moneta, atque literarum ratio, que postea discessione falla, alia atque alia utrique parti fuit. Namque Judæi, ut omnes ferè scriptores asferunt, ne cum Schismaticis Ifraelitis ullo Sacrorum usu communicarent, eam Literarum formam, que nunc etiam in usu est, hoc est quadratam. mutatis valde alterius prioris figuris, adinvenère. Affirmat præterea idem Gerundensis, nummum illum, qui Siclus inscribebitur, sibi in flatera pensum dimidia argenti uncia pondus reddidiffe, oftenjam quoque aiterammonetam dimidiato pondere minorem, issdem omnino vasis & rami siguris qua tamen non SEKEL, sed HASZI SE-KEL, hoc est dimidius Siclus diceretur. probare staque sibi vel maxime Salomonis Jarrhai, de sicli pondere, & valore, sententiam. Thus far Gerundensis: Who if he had expressed with what half Ounce he had compared his Shekel, or if Montanus had done it for him, they had given the Judicious Reader better satisfaction. But this, I suppose, by a probable Conjecture, may be supplied in faying, that he living in Catalonia, weighed it with the Catalonia. lonian, or Spanish half

Ounce; which " Villalpandus, and Ciaconius, quibus olim Romani, Hijan both of them Spaniards que utuniur, &c. Villalp. c both of them Spaniards, make equal to the half Ounce now used atRome; that is, to Two Shil- Pag. 45. lings Three Pence Far-

h Exdem omnino sunt unci. appar Urb. ac Templi, par : L 3. 0-20.
Ciaconius de ponderibu

thing, q. of our Money. This Conje-Cture of mine will exceeding well confirm those many Observations of Villalpandus, a Man in this kind very curious, which he made of feveral ancient Shekels in Silver, who thus writes:

Igitur ante aliquot annos appendimus k Villalpan Siclum unum apud F. Ursinum & post de app. Ur modum eos omnes, quos pracedenti ca bis ac pite percensumus, atque comperimus sin par. 2.1.2 gulos argenti siclos ex aquo semunitad fp.4.c.28 Romana antiqua respondere, na ut ne

🔿 minimum quidem hordei aut frumenti Greaves, granulum, huic, vel illi lanci addi po-

uerit, quin in eam examen propenderet. Nec mirum cuiquam v. deri debet, antiquissimos nummos suo pristino ponderi nunc respondere, neque ullam argenti partem vetustate consumptam tot seculis fuisse. Nam singulari Dei beneficio nobis contigit, tot integros appendere potuisse siclos. Il quod nummi ipsi integri vetustatem maxime præ se ferentes, literæ expressa, extantésque, argenticolor, atque alia id genus multa facile probant. With these Observations of Villalpandus, I find the Weight of a very fair Samaritan Shekel, of the truly Noble and Learned Mr. Selden, to agree: To whom I stand obliged for this Favour, as he doth for the Coin, to the honourable Antiquary, Sir Robert Cotton. To these Testimonies, tho (it may be) suf-

ficient of themselves. I

shall add \* one more,

for farther illustration

of the Weight of the

Hebrew, or Samaritan

Shekel, and that is of

an ancient, and fair one,

\* We may also insert the Observation of Anton. August. Dialogo 2. Ne ho uno [ siclo ] che c d' argent, de l'i pels di quattro dramme conjume d quello che dice San Girolamo fopra Ezechielle : Wnere by four Drams he means half the Roman Ounce.

in Silver, amongst his Majesty's Coins, perufed by the most Reverend Primate of Ireland, a Man of exquisite Learning and fudgment, who hath often affured me, that it weighs Two Shillings Five Pence of the English Standard; which proportion, excepting fome few Grains, in which it doth exceed, does well correspond with those of Villalpandus. And this may farther be confirmed out of the ' Kiddushf. Talmud, ' נל כסק האסורה בחורה בסק אורי ושל דברו הכם כסק סרינה Argentum omne cujus in Lege fit mentio, intelligi-

tur argentum Tyrium (ponderis & boni-" Schindle-tatis ut in urbe Tyri: As " Schlinder

rus in Pen- interprets it) sed Rabbinorum argentum intelligitur argentum commune provin-Taking therefore the Silver Money of Judea, as the Talmud doth, to be equal to the Tyrian, and that of Carthage to be equal to that of Tyre: As it is very probable, that the Carthaginians, being a Plantation of the Tyrians, might observe their Proportions in Coins, as well as their Customs in Religion, we may by these discover the Shekel to be much about the same Weight that hath been affigned: For

"Ant. Au- " Ant. Augustinus, describing in his Dialogues the Weight of two fair Carlog. 6. thaginian Coins in Silver, writes, that they are each of them somewhat more

than four Drachms: That is, as he elsewhere explains himself, a little more than half the Roman Ounce. If therefore we shall adhere to the Observation of Gerundensis, made four hundred Years fince, or to these later of Villalpandus, and others; or to this Conjecture of mine, the Hebrew Shekele and half the present Roman Ounce. are either both the same, or else very near in proportion.

And this may eafily be granted; but if it be, how will four Denarii Confulares, four Attick Drachmes, and the Hebrew Shekel, be reciprocally equal one to another, as they should be by those several Testimonies before alledged? Whereas, by many hundred Denarii Consulares, tried by an exact Balance, I find the best of these to contain LXII Grains English, and the Attick Drachme LXVII. And the fourth part of the Sheke! to be but LIV Grains 4, if we admit of Gerundensis, and Villalpandus's Observations. Which notwithstanding, according to Philo, Fofephus, St. Hierom, Epiphanius, and Hesychius, should be equal to the Attick Drachme; and the Attick Drachme, by the Testimonies of the Ancients, should be likewise equal to the Denarius. For the Solution of this Obje-Etion I answer: First, That the Denarius, and Attick Drachme, being distinct Coins of different States, and not much unequal in the true Weight, it is no wonder, especially in Italy, and in the Roman Dominions, that they should pass one for another: No more than that the Spanish Rials, in our Sea-Towns in England, should pass for Testars, or the Quarters of the Dolar be exchanged for our Shillings: Whereas the Rial in the intrinfical Valuation, is better than our Testar by four Grains, and somewhat more; and the Quarter of the Dolar is better than our Shilling by more than eight Grains, or a Penny; but because they want the Valuation, Character, and Impression of our Princes, which I call the extrinsick of Coins therefore doth the Spanish Money fall from its true Value with us, and fo would ours do in Spain. By the same analogy must we conceive the Attick Drachnes, tho' in the intrinfick they were somewhat better worth than the Denarius, yet for want of the extrinfick, to have loft in Italy, and thereby to have become equal in Valuation to the Denarius. And this feems to be

implied

11.

Vol. Metianus de assis diibatione. These words of rianus I find in a MS. of morarius, thus corrected: foriatus enim nune tantunn walet, quantum quinarius. im at peregrinus nummus loco reis, at nune tetradrachmum, drachma habebatur. Wherit be by conjecture, or ut he found it in some annt MS. I know not, but the nendation I cannot but apove. implied by "Volusius Metianus: Victoriatus enim nunc tantundem valet, quantum quinarius olim. At peregrinus nummus loco mercis, ut nunc tetradrachmum, & drachma babebatur. Which words of his loco mercis, plainly shew they made some Gain of the Tetradrachmum, As our Merchants, and of the Spanish Reals.

and Drachma: As our Merchants, and Goldsmiths do of the Spanish Rials, and Quarters of a Dolar: Which they could not do, if they were precisely equal, but must rather be Losers in the melting or new coining of them. And

Bud aus drachmam putat som ponderis esse cum dena-, Onuphrius vero inter utrum. Statuit rationem sesquiterm, Agricolo sesquiterm, Agricolo senarii qua denarii olio drachmas utant. Capel. de pond. by mmis, l. 1. LXXIV dena-squa esse cum sumana, sum uales XCVI Drachmis, qua libra Italica, dy medica al, de re nummaria.

therefore all "modern Writers that have treated of this Argument, fome of them making the *Drachma* lefs than the *Denarius*, others equal, but none greater, have been deceived by a double Paralogifm, in flanding too nicely upon the bare Words of the Ancients, without carefully examining the

First, In making Things themselves. the Denarius, and Attick Drachme precifely equal, because all ancient Authors generally express the Attick Drachme by the Denarius, or the Denarius by the Drachme; either because in ordinary Commerce, and in vulgar Estimation, they paffed one for another, in the Roman State; or else if any were so curious to observe their difference, as furely the Kodducisal were, yet by reafon of their nearness, and to avoid fra-Stions, and having no other Names of Coins that were precisely equal, whereby to render them, therefore all Greek and Latine Authors, mutually used one for the other. And, Secondly, Because fome Writers, (as Dioscorides and Cleopatra) affirm, that the Roman Ounce contained eight Drachmes, therefore modern Authors infer, that the Denarius • being equal to the Drachme, and eight Drachnes being in the Roman Ounce (as fo many were in the Attick) that therefore there are eight Denarii in the Roman, and consequently that the Roman and Attick Ounces are equal. Whereas Celfus, Scribonius Largus, and Pliny, as we showed before, expresly write, that the Roman Ounce contained in their time, which was after Dioscorides. Wall III

feven Denarii. And being natural Romans, and purposely mentioning the Greave proportion of the Denarius to the Ounce. thereby the better to regulate their Dofes in Physick, it is not probable but they must better have known it than the Grecians. Befides, who with any certainty can collect out of these imperfect Fragments of Dioscorides and Cleopatra (for those Tracts of theirs, de ponderibus, are no better) whether at the first they wrote in that manner, as they are now printed? Or if they did, why might not they endeavour to introduce into the Roman Ounce, in imitation of the Attack, that manner of division, which is now generally received in our Times, of making the Ounce, of what kind fo ever it be, to contain eight Drachmes. And furely this of eight being a compound Number, as Arithmeticians use to speak, was much fitter than feven, used by the Romans, which being a prime Number, is therefore incapable of any other division. And then for to conclude, that because the Attick Ounce had eight Drachmes, and the Roman as many, that therefore their Ounces are equal; is all one as to conclude, that the Paris and English Ounces are equal, because the French as well as we (and fo do all Physicians of all Countries that I know) divide their Ounce by eight Dracbmes. And thus, I suppose, I have fufficiently answered the first part of the Objection, concerning the Denarius, and the Attick Drachme: That if we respect the vulgar and popular Estimation, in which sense Classical Authors understood them, (for they could not well otherwise render them, than as they were currant) fo were they equal; but if we respect the intrinsical Valuation, which depends upon the weight, especially when Coins are of a like fineness, fo were they unequal: The Attick Drachme being, of our Money, Eight + These

thing; allowing for the Standard \* VIII thole be English Grains to the Silver Penny.

low, are taken from the English Standard at Five Shillin the Ounce (as it was formerly coined) to avoid Fraction That is, eight Grains to the Silver Penny: Whereas these times it is Five Shillings Two-pence. Not that to Ounce is increased, for this is always constant and fix'd, be that for Reasons of State, our Silver Coins are diminishe and consequently contain fewer Grains. And this diminishe and consequently be, as often as other Nation with whom we have Commerce, rebase in the Propertions of their Coins; or else we must be content to

Pence Farthing q, and the Denarius Proportion Confularis Seven Pence Half-penny Far. ons, with

Lofers.

Neither do I know any Authority, Greaves, that either expresly, or by a true and logical confequence, can be produced out of Classical Authors, to infringe this Affertion of mine, unless it be one in Fannius, which being a Fragment is the less to be valued: And another in Livy, who thus writes, lib. 34. in his Description of the Triumph of Quintlius: Signati argenti offoginta quatuor millia

fuere Atticorum, Tetradrachmum vo-

G. Agricola resporsio ad Al-ciatum de pond. Er mensuris. Argentei Romanorum denarii triplices sunt : Graves, qui pendunt drachmam Atticam cum dimidia: Mediocres, qui drachmam & septimam ejus partem : Leves, qui plerunque drachmam.

cant; trium ferè denariorum in singulis argenti est pondus. Which words of his occaffoned P Georgius Agricola, not knowing how to answer them, to bring in a distinction of three forts of Denarii: The Gravis weighing an Attick Drachme

and an half, the Mediocris one and a feventh part, the Levis molt commonly one; without any clear Proof or Evidence in any ancient Author, and directly contrary to all ancient Coins of the Atticks and Romans which I have feen: Of which Error he would not have been guilty, (for there is no Man - that hath writ either de ponderibus & mensuris, or de re metallica, more so lidly and judiciously than he) if he had been so happy as to have perused many entire Grecian Aurei, and Tetradrachmes, or else to have examined a greater and more select quantity of Roman Coins. To fatisfie my felf concerning that place of Livy, I had recourse to our MSS. here, (and I could wish I had done the like in Italy) and these I find to agree with the Printed Copies; tho' the Coins, which are much ancienter than any MSS. constantly disagree. Wherefore if it be not a mistake in Livy himself, which I am not apt to believe in so grave an Author, I would correct the Copies by the Coins, and instead of III fere denariorum, make it thus, IV ferè denario-rum. Where the Figure V being resolved into two Lines, and left a little open at the bottom, might eafily be taken by the Scribe for the Figure II.

Answer be And this I do certainly \* believe is the not fatif- true Ground of that Error, wherewith factory, we so many of late hath been perplex'd. may say, as However it were, it is as ancient as Pri-

done, that
Livy, Fannius, and the Scholiast of Nicander, speak of the Denation of the farmer Confuls immediately succeeding Q. Fabius. For there being but six of those in the Ounce, (as they suppose) the Denatius will be greater than the Drachma, as it will be less when seven were coined, under the later Consuls, which is our Affertion.

scian, or Pseudo Priscian ( as Capellus stiles him ) who, in his Truct De ponderibus, reads those words of Livy in the same manner, Trium fere Denariorum.

As for the Denarius Aureus, a Name I think not known to the Ancients, which Salmafius and others collect ourof a Livy, De fædere Ætolico. Pro ar- a Livius gento si aurum dure mallent, dare con-L 38. venit, dum pro argenteis decem aureus unus valerer. I fee no folid Foundation for that Opinion; all that can be collected thence is, that the Gold then was in decupla ratione to the Silver, which I have proved before. And whereas ' Plautus hath his Denaria Philippea. 'Plautu

Rudent

Nummi octingenti aurei in marsupio infuerunt.

Praterea centum denaria Philippea.

This is a Metaphorical or Comical Expression of him, and no certain fort of Coin; which he pleasantly calls Denarii, because half the Χευσοί Φιλίππειοι were equal in weight to the Drachma, and to also was the Roman Denarius sup-

posed to be. Nor are we to take the Kluor. which is thrice mentioned by St. Matthew, and once by St. Mark, for the Denarius, as fome have done: No, nor for any other fort of Coin: For it is precisely the Latine word Census; that is, ὁ φόρος, tributum, and so it is rendred by St. Luke, "Εξιςι Κωίσαρ, φόρος οδύναι, η ε΄; where St. Matthew, and St. Mark have it. "Εξιςι οδύναι κλώσου Kaisae, n's; Tho' Hesychius, and Moscopulus, both upon an Error, interpret it a fort of Coin. Hesychius, Kivo Gείσ 🕒 νομίσμα Ι 🕒 όνπκιφάλαιου, Ο Γ νομίσμα ι οπκιφαλαίε, as M. Cafaubone corrects it : And Moscopulus, Kluio Voμισμα δραχμής Ισοςάσιον, The Cenfus is a Coin equal in weight to the Drachme: That is, in the Notion of the Greeks, equal to the Denarius. The Error of thele two Greek Grammarians, is a mifunderstanding the propriety of the Lavine word Census: And that occasioned them to take xluoo, and vousqua ? xluos, for the same. But the Evangelist Matthew puts a manifest difference between κίωσ . tributum, and νόμισμα, the Money that was paid for Tribute. Επιδάξαθέ μοι το νόμισμα τ xluiσε, writes St. Matthew, Shew me the Money of the Tribute: Or as our new Translation rem ders it, Shew me the Tribute-Money. And the three Evangelists, Marthew,

Mark, and Luke, immediately after exprefly term this Money the Almapier. Οί ή προσήνε Γκολυ αὐτώ ε θυνάριον . And they brought unto him a Penny. Which being a Roman Coin, and current amongst the Fews, being then in Subjeation to the Romans, it is more than probable that they paid their Tribute to Cefar, in the same Species of Money that was used by Casar; and not with any new or peculiar fort of Coin, according to Baronius, (which M. Cafaubone hath justly confuted) but with the ordinary current Money of Rome, and that was the Denarius.

Our next Solution (hould be of the Shekel, how it could be equal to the Tetradrachme, and confequently to four Denarii, when by the constant weight of the best Hebrew, or Samaritan Shekels extant, we find them to be much lefs. And here I am a little unfatisfied. how to reconcile the Coins to Philo. Fosephus, Epiphanius, St. Hierom, and Helychius: Or elsc, if we admit of the Coins (as I know no just Exceptions against them) how to excuse these Authors of too supine Negligence in comparing them, if fo be they ever were fo curious as to collate them with the Attick Tetradrachmes. For if we shall fay, that the Silver Stater, or Attick Tetradrachme, was a Foreign Coin, in respect of the Rep. of the Jews, and therefore that in Judea it might somewhat fall from its true Valuation, we shall say no more than what Reason and Experience confirm. But then that the Tetradrachme should fink so low as to lofe Four-pence-half-penny if we take the Reverend Primate's Observation before mentioned; or which is more Six-pence q. if we follow that of Gerundensis, and Villalpandus, or these of mine, upon Two Shillings Nine Pence Half-penny, for fo much was the Tetradrachme of our Money, it may feem too great a diminution; especially the Attick Money being as pure, and fine, as that of the Shekel; and therefore no Goldsmith amongst the Jews, but would

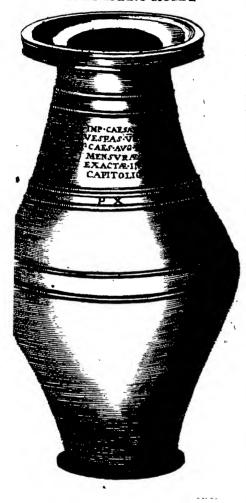

have given a greater Rate only to melt ~ it, and turn it into Bullion. Yet on the Grea other fide, when I confider the Practice of the Money-changers amongst the Fews at this Day, which it may be was as bad in Philo's and Foscphus's time, and might occasion our Saviour not long before to whip them out of the Temple, which they by their Extorsions had made a Den of Thieves; who now make it a Trade at Alexandria, and elfewhere, in

changing Spanish Dolars into \* Madines, (or the finall Silver Money cur-thirty five Madines paffed rent in Egypt) to gain writes forty. one or two Madines

\* At my being in Æ a Dolar : Sands in his Tri

upon every Dolar, notwithstanding the Spanish Money is as frequent, and as well known in Turky, as their own. I can the better imagine they might make the fame advantage, or a little more, upon the Attick Tetradrachmes: Which it may be also were not permitted, being contrary to their Law, to pass so generally with them, as the Spanish Money now doth (by reason of the Image of Pallar, and the Nollua instamped:) Or if they were permitted vet they might not be fo common, and fo well known: And therefore upon Stran-, gers in Judea, in giving them current Money for that which was foreign, they would gain fo much the more. So that Philo, and Josephus, when they equal the Shekel to the Tetradrachme. may have taken it upon the Relation and Practice of these Money-changers. and not upon any Experiment of their own. The same Answer may serve for Epiphanius, St. Hierom, and Hesychius: Tho' it may be these borrowed their Descriptions from Philo or Fosephus. who long preceded them: And being Tews, and living in the time when the State of the Jews was in being; whereas these did not, their Authority is the more to be credited. And thus have we finished our Enquiry of the Denurius Consularis, by comparing it with the Attick Drachmes, and the Hebrew Shekels.

CONGR VESPASIANI IN PALATIO FARNESIANO ROMÆ

The last and best way to discover the true weight of it, is by the Congius Ro-Parus, l.3. manus, whereof by a special Providence, deantiq, li- as Patus, and Villalpandus, have well quid. arid. observed, the Original Standard of Veque ment. spasian is still extant in Rome. This, villalp. de as the Superscription upon it, XP deappar, Urbis as Tennenstrates, contains the weight of ten Barras Pounds and is sound (by the bis a rem. Roman Pounds, and is equal (by the pli, park. Roman Pounds, and is equal (by the large pli, park. Roman Pounds, and is equal (by the large pli, park. Roman Pounds, and is equal (by the large pli, park. Roman Pounds, and is equal (by the fame is confirmed by Diosco-rides, who for farther certainty, mende composite this Argument) to fix Sextarin. Again, tions with what fort of Water we should measure it: And that is with

μίου λίβου κ πμίσαου κ εκλον, ως il) τας wasas sylias x'. Contains one Pound and an half, and a fixth part, so that it hath in all twenty Ounces. Or as Oribasius, Do Physician to Julian the Apostate, in-La. forms us, is equal to the Roman Pound, flatt and eight Ounces. Ἰταλικον κιράμιον žχd ξέςας μή. ξέςης λίβου μίου, κ' έγ-Ilas n. The Italian Amphora contains forty eight Sextarii, and the Sextarius one Pound and eight Ounces. The Capacity therefore of this Congius being filled up with fix Sextarii, of some certain fort of Liquors, (for it is Liquorum mensura) will give us ten Roman Pounds, and confequently their Ounces and Denarii. The only difficulty is, with what fort of Liquor we must measure it: For all Liquors are not of the fame Gravity. And this is well cleared by Rhemnius Fannus, and Fann. car others.

mina de pond. &

רובע בין ד בשלעיטי, מוצאי ל 67. xel: Vx 7 xev. The Chus, ( that is, the Congius) contains ten Pounds, the Semicongius five, the Sextarius one Pound and eight Ounces, &c. The weight of Water, and of Vinegar is the same. They say, that if it be filled up with

\* This Authority of Dioscorides, with that other Citation following out of an Anonymus Greek Author, for ngly proves my Affortion, that the Drachma Attua was more ponderous than the Lenarus Confularu. For there being eighty four of these Denati in the Roman Pound, as we have elsewhere proved, and ten , Roman Pounds in the Congius, it is most evident there are focces! Denie ii in the whole Congrus. Again, 10. cxx Drachms by the Testimonics of Dioicorides, and this Anonymus Writer, being equal to the Conequal to loccest Den vii, therefore Lucxx Drachmes are cqual to Loccoal Denarii, and therefore of necessity every particular Drachme of these, must be greater than each par-ticular Denavius. And tho, according to my Affertion, the Congins containeth fome tew Diachmes more than are by them affigned; yet that difference, feeing it might many ways happen, as I afterwards thew in the like Experiments of Villalpandin, and Gaffendus, it cannot any way overthrow my Conclusion: for the Draibmes are full fewer than the Denati Confulares, and therefore preater : Which was the thing intended to be proved. And this may . tarther be confirmed, in that both Cleoparra, and this Annnymus Author, make also the street, or Sextarius (being the fath part of the Congius) to contain an hundred twenty

Untain an hundred twenty Drachmes of Fountain-water. Whereby it appears there is no Error c immuted in the former Numbers: "Ο ξέσιε μέξης Εξενιε κοτυλείς ε" επθημέ ο χές κ. Τhe Sextatus, latch feepatri, contains in Medigic two Cotyls, but in weight an hundred and twenty Drachmes. And the Anonymus Writer, "Εχί δίξισες επθημέ δραγχρώς εκ. Τhe Sextatus contains in weight an lundred and twenty Drachmes.

Anonymus Gree. \*\* Framenta Diolectidis.\*\*

former Affertion

here he speaks of the

Congius filled with Oil, and before of the fame

For

makes to be the most intallible of all : 'O yes דצוניו זם אסיונטי באל זנו. ו. דל העואסעונט באל ווו ב. ס roinegollura afdoresa-Kain water, the weight will be most certain \*The Congius weighs seven hundred and twenty Prachmes. An Anonymus Greek Author, talfly reputed to be Galen, in the Edition at Venice, confirms the fame, ' Hapa' 3 rois 'Irahois diplone' 6 xis μέβο με έχωι ξε, κοθύλας cab! ) υσαίο ομ-Cejs, Ente Bor atdorsalor, σ'eaxuas ψx: Amongst the Romans is found the Congius, containing in Measure six Sextarii (that is) XII Coryla: But in Weight of Rain-water, which is most infallible Ioccxx Druchmes. And whereas \* Dioscorides elsewhere writes: To xoy-Tiev Exa hipas 8. To The ney Trov N. of S. o Eisns έχα λ'. ά S. The Congius hath nine Pounds, the Semicongius four and an bulf, the Sextarius one and an half; there is no repugnancy between this, and his

Rain\*-water, which he

not observing this difference of Weight. arifing from the different Gravity of feveral Liquors, in Vellels of one and the fame Capacity, is that which hath oc-cafioned much Incertainty and Confu-fion, in Modern Writers. And therefore we shall for farther perspicuity infert that distinction, which is often in culcated by Galen, that the Roman's Gales used two forts of Ounces and Pounds: L. & And those were either satural, of us medic Fixed, ponderal or mensural; the one second had respect solely to the Gravity, the general other to the Moles, and Gravity conjointly; the former were always certain and fix'd, confisting of solid Matters the latter were Vasa (frequently, ch xi east) being Receptacles and Measures. of liquid Substances: And therefore the Libra, and Uncia Mensurales, in these were greater or less, according as the Liquor to be measured was heavier or lighter. Whence \* Galen blames Phy. Liba ficians for not expressing this difference: compo Διο γράφων έχεπν οπημελέσερον ον Τ φαρ. 100 μο μαχίτισι βίθλοις τες ίαβες όποῖας τινάς κελάσοι βάλλως τας εγίας ή τας λίβας ? ύΓρον φαρμάκου, το δίτρου τας μεθρικάς, ή ras saburas. Weight, with which I

have faithfully collated it, is 5256 Grains En-

This Roman

To begin with

glish, fuch as the Troy Pound is 5760; the whole Congins therefore confifting of ten Pounds, will be 52560 English Grains. The other Observation is related by Gassendus, in his excellent Di. Gass scourse De Vita Peireskii: Ut paucis in vi ergo res dicatur, cautiones adhibuimus Peire easdem, quas Lucas Patus, & Villal-pandus, dum vas ipsum, ad summum collum puteali aqua opplevimus, expendimus, vasis pondus subduximus. Peprebendimus autem aquam, que Romano pon-dere esse debuit decem librarum, seu unciarum centum viginti, esse pondere Parisiensi (quale nempe Parisiis exploratum, missumque est) librarum septem, minus uncia quadrante : Seu unciarum centum undecim, & quadrantum uncia trium. Deinde ex hac proportione colle. gimus unciam Romanam continere grana

Villalpandus trying it long after Patus, with more Care, and with a Balance made of purpose, found it to be ex-actly ten such Pounds as are now used in Rome. All that I could do was to fill the Capacity of it with Milium well cleansed, and to compare it with the English Measures taken from the Standards. It ken from the Scandards. I recontained of our Measures for Wine three Quarts, one Pint, and one eighth part of a Pint. of our Corn, or dry Measures, three Quarts and about one fixth part of a Pint. At my hairs in Italy. being in Italy, there was found amongst the Ruines at Rome a Semicongius in Brafs, of the same Figure with this of Vespasian's, the sides much confumed by Ruft. This I also measured, and found it to be the half of Vespasian's Congius. From this Measure of the Congius we may rightly apprehend how vaft that Draught was of Novellus Torquatus, who drank three of these Congil at once : From whence he was called Not "llus Tricongius. The Story is recited by Pliny [1.14. c. 22.]
Apud nos cognomen etiam Novellus Torquatus Mediolanensis ad Proconsulatum usque è praturà bonosibus gestis, tribus congiis (unde de nomen illi fut ) epotis uno impetu, spe-Etante miraculi gratià Tiberio Principe in senesta jam severo, atque etiam aliàs sevo, sed ipsa

irventa ad merum pronior fuerat. In the same Chapter Fliny likewise discourses thus of Circro, Son to that famous Orator: Tergila Ciceronem Marci filium binos congios fimul haurire folitum' in alijeit, Marcoque Agrippa à temulento jeyphum impa-

indus, l. 2. disp. 2. c. 11. de apparatu Urbis ac

durasse.

genia jepiunginia jex in 1 arijienji continentur: Unde & illis in drachmes collectis, obvenere cuilibet drachme grana sexaginta septem : Idque proinde censuimus pondus denaru Cesarei, quem diclum cst fuisse \* drachmalem.

Now the Paris Ounce fent to me by Monfieur Hardy, containing four hundred feventy two Grains English, and an half; and the Congius, according to Gaffendus, of the Paris Ounces 111 1, the compleat Weight of the Congius, in Grains, will be 52801 ?. Which Sum exceeds that of Villalpandus by 241 7; that is, by more than half a Roman Ounce. This difference (tho' it is not between these great ) two Observations of theirs, might arise, either from the unequal fwelling of the Water in the Congius; or from the different Gravity of Countain-water at Rome, and at Aix; or from

fome inequality of the Model and Original, or from some defect in the Jugum, or Beam of the Balance, which if it were not made by a very skilful Hand, by the preffure of fo great a Weight, would suffer some alteration. Which way foever it was, either by fome, or all of these, the difference cannot prejudice my Conclusion a com-

\* The Inference of Gaffer dus, I eafily grant, that the Denarius, under some of the Cafars, was Drachmalis; tha is, the eighth part of the Reman Ounce. But neither wa it always fo under the Cafar nor if it had been fo, will therefore follow that it wi Drachmalis, or the eighth pa in respect of the Attick Ounc Seeing the Athenian Ounc was greater than the Roma as we have before proved and therefore the Denarii Consularis, which was the fe venth part of the Rom.
Ounce, was fearce the eight
part of the Attick. Wher
fore he must fee how he ca make it good, where he brin Peireskius, in the Second Bot of his Life, thus discouring Denarium, cum tempo Regum pependisset trientem u cia, sub antiqua tamen Ri pependisse solum sextantem, s recentiore partem septimam, s primis Casaribus oltavam, s drachmam (Attica nem drachme equalem.)

pleat

pleat Grain; which no reasonable Man but will allow, either for Coining, or for Waste: For if I divide 52560, the number of the Grains in the Congius, according to Villalpandis, by IOCCCXL the number of the Denarii in ten Pounds. the Sum will be LXII . Or if we shall follow Gassendus, tho' I should rather prefer Villalpandus, because he took his immediately from the Original, then will the weight of the Denarise Consularis be LXII :.. The Fra-Etion in both without any inconvenience may be omitted. And this proportion of the weight of the Denarius Consularis, if it were necessary, I could farther prove by some of the Aurei Confulures, which often were double in weight to the Denarii, as the Xeusoi 'Aτ lixe were double to the Δραχμαί 'Ae vejs; as also by several Quinarii in S' ver (which are the half of the De-

narii) by a very ancient \* Of t1 & Roman Semonand perfect \* Semuncia, cia, I h' : bought, and seen several Brass. Besides one, by a Quadrans and Triens, all of them in Brass which I owe to my very worof mine own, and by feveral other Weights thy and learned Friend, Dollor

examined abroad. One of them I cannot pretermit, being near five Roman Pounds, and very remarkable for this Inscription: EX. AUCTO-RITATE. Q. JUNI. RUSTICI. PR. VR. but the weight of it is a little defective; part of the Silex (as many of the ancient Roman Weights that I have

\* Petus, l. 1. de antiq. Rom. & Grec.interv. menfuru, makes nention of a Libra Romana in Brafs, procured by Fulvius Urfam, of fingular rarity: In cijus suprema planitie argenteis literis bac wat nota I, d'in circumferentià ba alia EX.A/C. D. CAES. but this I had not the happiness to see in Italy.

feen, were \* ex silice. which is as hard, or harder than Marble) being broken away, elfe the rest is very entire and well polished. But I conceive, that by those former ways I have fo irrefragably demonstrated the true ponderouf-

ness of the Denarius Consularis, that it would be thought superfluous, or a vain oftentation, to endeavour any farther to prove it. Wherefore instead of that I shall handle the Denarius Cafareus, the proportion. For this, as we obserwhich is our fecond Enquiry.

The Denarius Cafareus, was that which was made under the Government of the Casars. And this instead of the Face and Inscription ROMA, with the Character X or X on the Fore-part, and the Impress of the Biga, or Quadriga, on the Reverse, (in which kind most of the Denarii Consulares were stamped) had on the Reverse several Impresses, and on the other fide the Image or Re-

femblance of the Emperor: Which oc. casioned our Saviour to ask the Question, Great when a Alwaejov, or Roman Penny was fhewed to him, Whose is this Image Mat. 22 and Superscription? They say unto him, Cafar's. This Denarius Cafareus, if we respect some definitive quantity and weight, was as various and uncertain as the Denarius Consularis of the later Confuls was conftant and fixt; being under the first Emperors, fometimes more, fometimes less, as the Reasons and Exigencies of the State did require, or the Profuseness and Prodigality of those Times. Yet this uncertainty (as far as I have observed) was limited within fome certain and determinate bounds: The Denarius Cafareus never exceeding the seventh part of the Roman Ounce, and never being less than the eighth part, but often in a middle proportion between both, and that with much inequality. And this made Vil- Villalp lalpandus, after many Experiments at appar.ur Rome, to conclude, that out of the De- ac templ

narii nothing concerning the Roman difp.2.c.:
Weights could be determined. Tho Portius, Agricola, Ciaconius, Snellius, and several others, before and after him, are of a contrary Opinion. And it may be, if Villalpandus had diftinguished between the difference of Times, and in them of the different Coins, and con-fidered those of the Consuls, distinctly from those of the Cafars, and those of the former Casars from those of the later, he would have reformed his Judgment: For it plainly appears, upon examination, that the diminution of their Weight was an Invention introduced after Antonius the Triumvir's time, whereas before the Denarius was fix'd. Miscuit, faith Pliny, Denario Plin. 1.3 Triumvir Antonius ferrum, alii è pon. c. 9. dere subtrahunt (his meaning is under the Emperors, to Vespasian's, or his own time) cum sit justum olloginta quatuor è libris signari. Where he says very well in speaking so generally, alii è pondere fubtrabunt, without precisely limiting ved, was very various and undeterminate: So that whereas the just number of the Denarii, according to the Pra-Etice of the later Confuls, should be eighty four in the Roman Pound, we find by the Weight of the best of them under the former Cafars, that they coined fometimes eighty fix, eighty eight, &c. till at last there came to be

ninety fix Denarii in the Roman Pound,

that is, eight in the Ounce. And this,

Thubal Cain, sive

c. 5. Ibid.

Greaves. inferred out of another place of Pliny, if we take for granted what some learned Moderns confess, and the Gold and Silver Coins found to this Day, of the later Confuls, and first Emperors, strongly prove, that as the Atticks made their Xeurs, or Aureus, double in weight to the Δeaχμη 'Aeluejs: So did the Romans make their Aureus double in weight to the Denarius. Which proportion they might borrow from the Athenians, and other Grecians, who, darias Mon- as d Areas Montanus imagines, first rebrews: Or rather, as I suppose, from de mensuris, the Phenicians, and these from the Hebrews. From whencefoever it came, it is not much material in our Enquiry: That which we may fafely conclude from thence is this; that the Gold being in respect of weight, double to the Silver, the Aureus Romanus falling in its weight, the Denarius likewise of necessity must fall: Else could they not have continued in dupla ratione. Now in what manner the Aureus was first coined, and how afterwards it lost of Plinius, its primitive weight, Pliny informs us: 1.3. c. 33. Aureus nummus, post annum LXII percussus est, quam argenteus, ita ut scrupulum valeret sestertiis vicenis, quod efficit in libras ratione festertiorum, qui tunc eram, festertios IOCCC. Post bac placuit XL. M. signari ex auri libris: Paulatimque principes imminuere pondus, imminuisse vero ad XLV.M. For this Testimony, and the former, we are to thank Plany, seeing there is neither Greek nor Latine Author extant, from his time to Theodofius, that gives us any certainty, what to con-clude concerning the ancient Coins. And therefore fince this later is of great consequence, but somewhat corrupted, I compared it with the MSS. in the Vatican and Elorentine Libraries, and with a tair one in Baltol-College, which renders the later part of it thus: Postea piacuit X. XL. signari ex auri libris, paulatimque principes imminuere pondus, imminuife verò al XLVIII. Where for villalpan. XLVIII, Villalpandus corrects, or radcapp. Ur ther corrupts the Text, in writing XLV.
bis ac
Templi.
But Agricola, and Snellius read it by par. 2. 1, 2. conjecture thus: Post bac placuit XLII disp.2.c.12. signari ex auri libris, paulatimque prin-Stell, in cipes imminuere pondus, minutissimè verd Estatosth. ad XLVIII. And b Snellius gives a Rea-Batav. l. 2. fon of it in his Eratosthenes Batavus.

Marita argentei denarii, & aurei

nummi cadem manet analogia, pondere

by a very necessary consequence, may be

subduplo, ut quamdiu ocloginta quatuor argentei è libra, & è singulus uncius septem cudebantur; tam diu quoque aurei duo & quadraginta libram implerent. Postquam vero argentei nummi pondus imminutum est : Ut sex & nonaginta in libram constituerentur, tum quoque duo de quinquaginta aurei, pondere tanto leviore, in singulis libris cudi caperunt. Which Conjecture feems not altogether improbable, if we respect the later Confuls, and first Casars, in whose Times we find the Aurei to have been double to the Denarii Cafarer; but furely long. before Justinian, the Aurei, or as they were then also called the Solidi, loft that proportion to the Silver, and kept it only to the Semisses Aures, to which they were double, as they were in a treble proportion to the Tremisses.

Wherefore instead of these Conje-Stures (which have been the bane of many a good Author) of Agricola, Villalpandus, and Snellius, I would read the later part of those words of Pliny, as the MSS. do, till I can see some concluding Reason, or good Authority of ancient Authors to the contrary: For I do not fee why the Romans at the first might not coin forty Aurei out of the Libra, as well as forty Silver Teruncii out of the Denarius: Which Varro 1 vare affures us they did. And who knows de L.I whether at the first making of their Gold Coins, which was fixty two Years, according to Pliny, after the first Coining of Silver, they endeavoured to keep them in duplà ratione, in respect of weight: Which graceful manner they might afterwards introduce by Commerce with the Grecians.

And here, e'er I proceed any farther in my Enquiry after the Denarius Cafareus, I cannot but complain, either of the Negligence of former Times, or Unhappiness of ours; in that not one Author extant mentions the true Weight of the Denarii, under the Cafars. \* Xi- \* Xip philinus relates in his Epitome of Dio, music how Antoninus Caracalla corrupted, and ton. abased the Coins; but makes no mention of the Weight. To sv Aylanlin, τάτε άλλα κ' το νόμισμα χίβο ηλον ήν, τόσ ε αξιύριον κ, το χευσίον, ο τσαρείχεν ήμίν, το με οκ μολίθου καθαείνε μύνον, το 3 κ οκ χουνε καθαχευσέμυνου τοκοιάζου. Το Antoninus, as other things, so also his Money was adulterated: For the Silver and Gold, which he gave us, the one was prepared of Lead silvered over, and Sui the other of Bross gilt. | Suidas also voce speaking of the Monetarii writes thus: rden

Μονθάρμοι οί τορί το νόμισμα τεχνί), δι όπι Αύγηλιανέ ενίφθειραν το νόμισμα, κ τ ίδιον ἄρχονία Φιλικήσιμον ανειών les έμφύλιον έΓείρυσι πόλεμον, ες μόλις Αυρηλιανός ιπροσαμβυ© τουβιοθημέση κοι αστιών ώμο-η δι καθαετάσαλο. Τhe Monetarii are Vizans employed in the making of Money. These, in Aurelian's time, corupted the Money; and, having slain beir Governour Felicissimus, raised a Ivil War; whom Aurelianus with much lifficulty conquering, put to Death with exquisite Torments. And many good Laws were made by feveral Emperors. against adulterating and corrupting of Coins: And those executed with much feverity, even in the time of Christianity: For we find under the Emperor

vine, that fuch as offended in nd, were not only put to Death. a cruel and bitter Death by Fire. MNES SOLIDI. C. THEOD. SI-SOLIDI CIRCULUM EXTERIO-INCIDERIT, VEL ADVLTE-.... /M IN VENDENDO SVBJECE-

RIT. Omnes folidi, in quibus nostri vultus, ac veneratio una est, uno pretio astimandi sunt, atque vendendi, quanquam diversa forme mensura sit : Quod siguis aliter fecerit, aut capite puniri debet, aut flammis tradi, vel alia pæna mortiserà. Quod ille etiam patietur, qui mensuram circuli exterioris adraserit, ut ponderis minuat quantitatem, vel figuratum folidum, adulterà imitatione, in vendendo subjecerit. In Constantius's time the same Punishment was inflicted. L. PRÆMIO. C. THEOD. DE FALSA MONETA. Pramio accufatoribus proposito, quicunque solidorum adulter potuerit reperiri, vel à quoquam fuerit publicatus, illico omni dilatione submota flammarum exustionibus mancipetur. And afterwards under Valentinianus, Theodofius, and Arcadius, they were accounted, and suffered as Rei lasa Majestatis. L. FALSÆ MONETÆ. ĆOD.EÓĎEM. Falsa moneta rei, quos vulgo parachara-Nas vocant, Majestatus crimine tenentur obnoxii. But no where is it mentioned concerning the Denarii, and Quinarii, which were the Silver Coins in common use, how much should be their ancient Authors, we have no more folid and fure Foundation of our Enquiry, than either by our felves to examine the weight of the fairest Coins under the Emperors, or elfe to relate what others long before our time have observed. Antonius Augustinus in general informs fuerint, ex amussim oftendere, non magic

perfection, and how they began to decline with the Roman Empire: As com. Greave monly when Money comes to be abased. and that the Mint, like the Pulse, beats too flowly and irregularly, it is an evident Symptome of some Distempers

in the Bowels of a State. · The Medals of all times (faith he) are morthy to be observed by Artizans ] beginning from Alexander the Great, in whose time they principally flourishedstill the Emperor Gallienus, when they chiefly fell together with the Empire. From thence to fettione antica. Quelpoi the end of Justinian, there are found good Medals of all the Emperors, but with a notable diminution of their politeness and ancient perfection. Those which we have after lustinian

[ sono degne da esser ossera degli Artifeci] comminciana Alessandro magno, nell' età quale principalmente siorn per fin al tempo dell' Imper Gallieno, nel quale cadderi fatto infieme con l'imperio. indi poi in find Giustinia trovano bon medaglie di gli Imperadori ma con no perdita della pulitezza, &

° Le medaglie di tutti i te

are unsufferably bad. The fault by all Men is assigned to the Huns, and Vandals, and Alanes, and Goths, and Longobards, and to other barbarous and favage Nations, who conquered the greatest part of Europe. Erizzo, who lived almost an hundred Years fince, a very diligent Man in the Roman Coins, but it is to be wished that he had used more Judgment in the explication of them,

more particularly in-P Having forms us. compared the weight of quali sono del peso di un those forts of Money, daglie di argento, che which are equal in solpite le teste de i weight to the Roman Romani, le ho ritrovat Denarius, with the Medals of Silver, which have the Heads of the bevendo ancira pefate Koman Emperors im medaglie che hanno jet printed, I have found Tigie de l Cafari, le l them not a little different, so that as it were

Havendo io tali m renti non poco del peso, quelle medaglie pesan tutte meno del Denar ritrovate differenti fra pefo. Erizzo.

all those Medals weigh less than the Denarius. And having also weighed those Medals which have the Effigies of the Casars, I have continually found Wherefore in such a silence of them different amongst themselves in weight. This uncertainty fo troubled Villalpandus, after many Experiments made at Rome, that he knew not what to determine. And it feems Blondus I long before conceived it impossible : de Hec omnia qualia per singulas etates ti Listinila and p unposhbile fuerit, non fo-

lum quia of scuris & nostra etate ignotis verbie funt à majoribus tradita, sed quia emnis ferè atar suam habuit cudendi varictatem, & formam. Wherefore, for farther fatisfaction of the Reader, I shall relate some Observations of mine own: Especially those of the twelve full Cafars, which I took, with many others, by an accurate Balance, from fome choice Cabinets in Italy. And full, I shall begin with the Gold Coins: bo: feeing the Aurei under the former Cafars were in dupli ratione to the Denarii, therefore the weight of those being known, we cannot be ignorant of the weight of the Denarii Cafarei. Befides, they are not subject to be consumed by Time and Ruft, but only ex intertrimento, and therefore we may the fafelier give Credit to them. And laftly, because the difference, tho' but of a Grain, is of some confideration in Gold, the Masters of the Mint use to be the more circumspect about them: Whereas in Silver Coins, fince it is hardly worth the pains to stand precisely upon the excess or defect of every Grain, therefore there are few of these so exact, but either exceed or want in the very Mint, one or two Grains, and fometimes more.

### The Weight of some AUREI, under the first Twelve C.E.S.A.R.S.

These Aurei were selected by me out of feveral others, as the fairest and entirelt; and amongst these to such as I have prefixed an Afterisk, they are such as feemed to perfect, that I could make no just Objections against them. By these it appears that 'Pliny speaking of Plin. 1.3 the Gold Coins, rightly informs us : c. 3. Paulatinque Principes imminuere pon-dus, imminuisse vero ad XLVIII. That y degrees the Emperors lessened the Weight [of the Aurei] to the forty eighth part of the Roman Pound; that is, to the fourth part of the Ounce. For this is the lowest Weight, that I find, till Heliogabalus's time, who coined new forts of Aurei, different from what had been the constant Practice of the Roman State: Some of which were the fiftieth part of the Libra Romana, and others again so massy, that they were Centeni, or Buisbres; which not long after were altered and abolished by Alexander Severus. The manner is expressed by " Ælius Lampri-Lampridius, in the Life of Alex Severus : dies in Alex Se-Formas binarias, ternarias, & quaterna-vero. rias. Es denarias etiam atque amolius.

quar Heliogabalus invenerat, reselvi precepit, nec in usu cususquam versari. Atque ex eo bis materie nomen inditum est, cùm diceret plus largiendi bani esse Imperatori caufam, si cum multos solidos minores dare posset, dans decem vel ampllus una forma, triginta, & quinqua-ginta, & centum dare cogerctur. Under the same Alex. Severus began the Semisses Aureorum, and Tremisses to be coined, which had not formerly been in use. The Semisses were answerable in weight to the Denarii Cafarei, when they were least, that is, ninety fix in the Roman Pound; tho Agricola, Villalpandus, and others, upon a militake, equal them then to the Drachma Attica. · Ælius Lampridius writing of Alex. 'Lampridusin A- Severus, plainly expresses, that in his lex. Severo time they began. Tunque primum semyles aureorum formati funt, tunc ctiam, cum ad tertiam partemaurei velligal decidiffet, tremiffes, dicente Alexandro etiam quartarios futuros, quod minus non posset. Afterwards Constantine, Constantine tius, Julian, and other fucceeding Emperors, lestened the weight of the Aurei, whereby there came to be feventy two in the Roman Pound, fo that each of them weighed the Sextula, or four Seru-pula. That the Aurei of Constantine's time were fixty two in the Roman Pound. is most evident out of the Codex Theodofianus, where they are also absolutely called Solids, without the addition of Aures. "L. SIQVIS. C. THEOD. DE Theodof. PONDERATORIBVS, ET AVRI IN-L.I. de pon-LATIONE. Siguis folidos appendere deratoribus deratoribus volucrit auri colli, septem solidos qua-ternorum scripulorum, nostris vultibus figuratos, adpendat pro singules uncies. XIV. verò pro duabus, juxta banc for-mam omnem summam debeti inlaturus, eadem ratione servanda, etsi materiam quis inferat, ut solidos dedisse videatur.
Gui. Pan- Pancirollus, in his Thesaurus variaciroli the rum lettionum utriusque juris, reads VI fair. var. Solidos, instead of VII, and XII instead of XIV. And that it must necessarily be so, besides that the Solidi of Constant tine now extant prove as much, may be collected out of the proportion of weight which is here assigned by Constantine himself to the Solidi, and that is four Scruples, or the Sextula. For the Soli-

Aurei by Juliman, in like manner, are termed Solidi. L. QVOTIESCVN QVE, Greater C. DE SYSCEPTORIBUS, PR EPOSI. TIS, Et AKCARIIS. Where he also defines the fame weight.

+ Quotief.unque certa Summa folidorum pro 11-Tuli qualitate debetur & auri malfa transmittitur, † in LXXII. folidos libra feratur accepta. The fame thing is implicitly confirmed by Isidorus, (1. 16. Orig. c. 24) Solidus alin nomine featula dicitur, quod its Jex unita com-pleatur. Hune ut diximus, valgus aureum folidum e cat, cujus tertiam partem ideo dixerunt iremission, quod solidum facial ter millus. Where Agricula, 1 imagine, truly finds fault with him for calling the Solidus, Sextula; tho the proportion he affigns is right; that is,

that the Solidus was the

fixth part of the Roman Ounce, and contained

¿ξαΓίε sabudy, the weight

of the Sextula, as it is

attested by \* Zonaras:

\* Zonar. I. 3.

Or, which is all one, that feventy two Solidiw ere made our of a Roman Pound, as Justimian before expresly affigned: And as infinite store of the Solidi, or Aurei, from Constantine to Focas, which I have weighted, manifeftly prove.

In the time place of "Isidorus we Isidor may collect the Reason why the Au l. 16. 0 reus was called Solidus. After that, the c. 24. Semifics, and Tremifics Aurei were coined, the Aureus was called Solidus, because nothing was wanting to it. Solidum enim Antiqui integrum dicebant, & totum: In which sense the Solidus was also taken for the Libra, or Affis; that is, as the Affir is taken for the whole, according to that usual Phrase of-Civilians, Ex affe bares, when one is Heir to the whole Inheritance: So b Vol. 1 the Solidis was taken for the whole trans of

twelve Ounces, and the Ounce of fix Solidi, the whole Pound therefore will

rum.

alled that the Sol dus Aureus, when it Greaves had the same weight in Gold, which the Solidus, that is, the Affis had in respect of Bross, that is, two Drachmes. Tho' I rather suppose that the Aureus was called Solidies, first of all in Severis's time, not for containing two Denarii in weight, (which Salm.sfius calls Drachmes) for so it always did under the later Confuls, and first Emperors, but because the Aureus was then first divided into two parts; that is, into the Semisses, and Tremisses, and so relatively to these the whole Aureus was rightly called Solidus. Of the same Agnecia, Opinion is & Agricola : Ques aureos, 1.2.de pend. cum respectum ad semisses & tremisses baberent, tane primo dixerunt folidos, qued semisses ex dimidia corum parte, iremilles ex tertia conflarent.

The Semilles, and Tremisses, of the other Emperors, at some distance after Severus, came to be less in the same proportion, as the Aurei were leffened. For the Aurer of Severus were double to the Denari Cefarei, and therefore but forty eight in the Pound, and not fifty, as Heliogabalus made, whose Erfor Severus corrected. But when the later Emperors made feventy two Aurei out of the Roman Pound, the Semisses came also to be diminished, and were half of these new Aurer, and not of the former, and the Tremisses the third part. And here the Aurei lost that proportion which they kept before, of being double to the Denarii. Of these Tremisses

AVG.

is Justinian to be understood, L. FOR-TISS. MILITIBYS. COD. DE MILI-TARI VESTE Fortissimis militibus nostris per Illyricum non binos tremisses pro singulis clamydibus, sed singulos folidos dare pracipimus. And this may be farther proved by a fair

\* Tremissis in Gold of mine own of Justinian, with the Inscription D. N. JUSTINIANUS, weighing twenty one Grains English, and therefore wanting only three Grains!, which it may have loft by Time: Otherwise it would be exactly the 216th part of the Roman Pound; that is, the ing twenty three. third part of the Aure-

\* I have fince perused. ther Tremissis in Gold, a v fair one, with this Inscript D. N. JUSTINUS. P.F. Al weighing twenty two Gr. and better; which form belonged to the learned ( grapher, Ortelius. Eefic third, of Majorianus, v CONOB superscribed (wi fignifies, Constantinopolita Obrizum, or Constantinopoli fignatum) weighing like twenty two Grains. Al fourth, of Jultinian, we

us, or Solidus of those Times: Whereas if it had been coined to the proportion of the Aureus, when there were forty eight in the Pound, it should have weighed 36 Grains 4, so that it must have lost 15 \frac{1}{3}, a difference so great in a piece of Gold so fair, and with al of fo fmall a quantity, altogether improbable. And therefore this Coin alone, if no more were extant, would confute b Cova their Opinion, who maintain that the ruvias, Tremiss of Justinian differed not from Tom. 1. the Tremiss of Severus, and conse-paragr. quently the Aurei of them both, better 2- de v than the Reasons produced by b Covar-aureis, argente ruvias to the contrary have done.

And thus much of the Aurei under Greaves, the former and later Emperors, as they ferve to illustrate and prove the Weight of the Denam Cafarei, which is our

next and principal Enquiry.

The Penarii under the Cafars were almost as various and unconstant as the Aurei, fometimes more, fometimes less; and if they had not been for they could not have kept that proportion to the Aurer of the former Emperors, which we affigned. From Augustus's time to Vespasian, as I find by examining many of them, they continually almost decreased, till from being the seventh part of the Roman Ounce, they came now to be the eighth part: And therefore ninery fix were coined out of the Roman Libra, whereas before under the Confuls eighty four. From Vespasian to Alex. Severus, as far as I have obferved, the Silver continued at a kind of stay in respect of weight, excepting only fuch Coins, as upon fome extra-ordinary occasion, both then, and in the first Emperor's time, were stamped, cither in Honour of the Prince, or of the Empress, and Augusta Familia, or else in Memory of some eminent Action. These last, most usually, were equal to the Denain Confulares, and many of them had these Characters, E. X. S. C. or else S. P. Q. R. Under Severus and Gordianus, the Denarii began to recover their primitive Weight, and came to be equal to the Denarii Consulares, the halt of which also were exactly the Quinarii; and fo continued during the fucceeding Emperors, till Justimun, with little diminution, but most commonly with a notable abasement and mixture of allay. After Justinian there happened fuch a Deluge of barbarous Nations, which overflowed the greatest part of Europe, that not only the Coins, but even the Liberal Arts and Sciences. began with the Majesty of the Empire to decline from their first Lustre and Pertection.

Wherefore I shall not speak of the Missaghosev, or Midsagiosov, a fort of Silver Coin in use before, and after Jufinian, which some collect out of Cedrenus to have been the eighth part of the Ounce, and therefore equal to the Denarius in the lowest valuation; tho' \* Suidas \* Suidas renders, Mihagnoiov to Fvouisμαι & d'ixalor, and the Scholiaftes Bafi. lic. Edlog. 23. Dwolinalov, and to contain reventy four Φόλλας. But I shall

, not politively determine either the

in hiftor. compend.

in voce MIXMENT- Siliqua in Silver, both coined when the Imperial Seat was translated to Byzantrum, unless I had examined some of the fairest of them. And for the same Reafon I shall not define the Hebrew Densities, mentioned by Elias in Thisbite, in the word rich and by \* Moles \* Gerundensis upon Exodus, and by the Col., Chaldee Paraphrase, 2 Reg. 5. 5. which I imagine to have been no other than the Roman Denarius, used by the Fews: Nither shall I determine the Arabian Dinar, and Derbam; the former of which the Rabbins call רינרא ערבאי used by Rhasis, Avicen, Mesue, and by feveral other Arabians, both Physicians and Historians. All that can certainly be concluded is this, that by the Dinar, when we speak of a Coin, is meant sometime the Penarius, and sometime the Aureus: But when we speak of a Weight, always the Aureus is underflood; as by the Perham, the Deaxun, or Silver Drachme. But furely the quality of the thing is different from the name: The Silver Drachme of the Arabians, as it is generally now used in the Mahometan Dominions in the Last, confilling of XLVII . Grains Engl. (as I have found by weighing many of them) which is much less than either the Drachma Attica, or the Penarius Consularis; and fomewhat less than the Denarius Cafarcus. And yet it is not improbable but that this may have continued with them without any diminution, for fix or feven hundred Years to our Times, as well as the Roman Pound and Ounce have continued entire fixteen hundred Years and better. But to omit any farther profecution of the Dinar and Derham of the Arabians, which may hereafter more fully be discussed, when we shall handle their Measures and Weights, and to go on with our Discourse of the Roman Denarius. After the breaking in of so many barbarous Nations, as of a Torrent, into the Roman Empire, the Denarius began generally to be disused; every one almost of these, as an Argument of their Sovereignty and Conquelts, making new Coins of their own: Or elfe fuch as continued the former, either by Allays so abased the Fineness, and Valuation of the Coins, or by feveral Diminutions fo impaired the Weight, that the Denarius totally fell, and at last almost vanished into nothing. Neither will this feem strange, if we shall confider, that the like alteration, in re-spect of Weight, hath happened by the

Coins. I shall instance in our Denarius or Penny, which in Bubelred's time, that is, a little more than IOC Years fince, was the twentieth part of the Troy, or Silver Ounce:

SaxonGloffary observes.

and as by Experience I

have found (and the

fame proportion was

Stat. Eliz.

tion continued fuccessively to Edward the First, in whose time we find the \* Stat. 31 Weight of the Denarius by \* Statute Edov. 1: to be thus defined: Per ordinationes t. tius regni Anglia denarius Anglia, qui vocatur Sterlingus, rotundus, sine ton-sura, ponderabit XXXII Grana frumenti in medio spice, & XX denarii faciunt unciam, & XII uncie saciunt libram. Under \* Edward the third it came first 9 Edov. 3. to be diminished to the twenty fixth part of the Troy Ounce; and under "Henry the Sixth it fell to the two and 4 Hen. 6. thirtieth; in \* Edward the Fourth's time it came to be the fortieth; under : Henry the Eighth at first it was the fortieth, 16 Hen. 8. then the forty fifth. Afterward fixty Pence were coined out of the Ounce in the second Year of • Queen Elizabeth; and during her Reign fixty two: Which proportion is observed in these times. So that it is evident that Ethelred's Penny was bigger than three of ours. And after times may fee this of ours, as well as the Roman Denarius, to be quite diminished, and brought to nothing. For if either our own Exigencies, or the Exigencies of Foreign States with whom we have Commerce, cause us or them (as Occasions will never be wanting) to alter the Proportions of the Gold and Silver Coins, either in respect of Weight, or in respect of Purity, or lastly, in respect of the Valuation the Gold bears to Silver; by all, or fome of these Causes, there will inevitably happen fuch a diminution of the Penny (and proportionably of our other Coins) that at length it will not be worth the Coining. But I leave this Speculation to fuch, whom it doth more nearly con-

cern. And certainly it is a Confidera-

tion not of the least importance; Mo-

ney being as the Sinews and Strength

of a State, so the Life and Soul of Com-

merce: And if those Advantages which

one Country

at the Helm of the State, it may fare with them after much Commerce, as Greave with fome Bodies after much Food, that instead of growing full, and fat, they may pine away, and fall into an irrecoverable Confumption. But I return to the Roman Denarius, which we have brought fo low, that there is nothing now left of it, but only the name; and that also suffered an \* alteration: For the later Greeks instead of Solidus, or Aureus, as it le the Δηνάριον, called it the Δηνέρμον: And both Greeks and Latines, and fometimes the Arabians, took it not in the fame fense, as it pasfed for in the first institution; that is, for a Silver Coin, worth in

\* In the same manner t' its Valuation, to fuffered Alteration in the Greek Nam For instead of xgunes, v χεύσιν . Gloffe. χεύσιν ( Solidus : And in the fir Gloffes we read Aludera i terpreted Biniones, and New elov Sestertium, and Studes Adkov Ajprum.

Valuation ten or fixteen Affes, but for any fort of Coin whatfoever. And therefore' Meursius's Observation, in his Meursi Gloffarium Graco-Barbarum, is worth Graco.B. our confideration. Δίωέρια έχεθε ωολλά, δώτε πό τα-Esevzen, Επάρφει τολιώ κρασί κ' τείνειε μετ'

Whence the learned & Fof Scaliger right & Scalig. ly observes, that, Ultimis temporibus re numm denarii pro exigua stipe usurpati sunt, ut hodie in Gallia. Imperator Aurelianus: Philippeos minutulos quinquagenos, aris denarios centum. Eos Vopiscus in Bonoso sestertios aris vocat. Macrobius de nummo ratito loquens, qui erat æreus: Ita fuisse signatum hodieque intelligitur in alex lufu, cum pueri denarios in fublime justantes, capita, aut navia lufu teste vetustaris exclamant. In Evangelio secundum Marcum 12. Airla dus 8'SSI nod pavins. Hilarius, duos denarios vidua inopis Deo acceptiores. Luc. 10. era. Vetustissimus est igitur denarii usus avri & xahxious, vel stipe. Thus far Scaliger.

Such an uncertainty being then, as we have mentioned, both of the Aurei and Denarii, under the first Casars, in whose Times the purest Coins, and the

9 B

and

cient Grammanans, Poets, Orators, Hi-Greaves. storians, or especially Physicians, whom it did most concern to be precise, and most of which lived under the former Emperors, Ad ever allude to the Weight of the Den ius Cafareus, but rather to the Conful ". And to this only and to no other, did the Attick Drachme mentioned by Dioscorides, Cleopatra, Galen, Juius Pollux, Oribafius, and the rest of the ireck Authors correspond. And thus have we finished our Discourse

concerning the Denarius, in the notion and acception of the Ancients, both Greeks and Latines.

Our next Labour should be to compare it with the Standards for Weights of divers Nations used in these Times: For which I had recourse to the publick Zygostate, and Panderatores, in my Travels abroad; and for my Observations I must refer the Reader to this enfuing Table.

Eng Castan

\* These Weights (excepting the Rotulo of Damafcus) were

A TABLE of the Gold and Silver \* Weights of Several Nations: Taken from their Standards, and compared with the Denarius.

duligently compared with the Originals and Standards; in like manner as I examined the Meaner as I examined the Mea-fures above described. In both which, if any shall find four fielde difference from four Originals, as two or fix Grains in the English Pound, and it may be one or two likes of a thousand in the En-klyshere, different from the "Strudgeds in the Enchange, or the Times or at Windsher or the Timer, or at Winchester, or tome other place, it is not much to be wandred : For I have found as great differences in collaring the English Standards themselves. And have heard Gaspino Berti (one of the exactest Men in this kind that I have known) to complain of the same diversity at Rome. And tho' it be a shame, that in any well governed Kingdom, or Common-wealth, the Standards, which are the Rules of Commutative Justice, should be unequal, and therefore unjust; yet unless more Arr and Circumspection be used, than hitherto hath been out in practice, it is imposfible but such Inequalities will creep in.

But this Observation of mine, by some, may be thought too mee and curious. That which follows, I am certain, is as necessary, as the preservation of the Life of many a Man. And that is, that some Physicians erroneoully imagine the Granum Auri to be alike in all Nations And therefore Fernelius,

The Turkish Sultani, or Ægyptian Sheris, being a Gold Coin, with which the Barbary and Venetian Chequeen, and Norumberg Ducat, within a Grain more or less, agree The Ratel, or Rotulo, for Gold and Silver of 144 Drams at Cairo

The Ratel, or Rotulo, for Silk of 720 Drams at Damascus (with which I suppose they there formerly weighed their Gold and Silver; because most Countries use the same Weights for Silks, Gold, and Silver)

que tritici, neque ciceru que frugu ullius, aut les mu, quod nullius par sit u gentium pondus. Ai vero mai um minutum, quod fabri granum appellant, de tinè momentum dici potesi, nibus mundi nationibus i demque est, de sibanic, auri sacra fames, de opuriola libido, muolate de i rupte servat, idque sigmi exemplaribus undique sa den usetus fance oi la indiced un an usetus fance oi hotelus fance oi la indiced un an usetus fance oi la indice un usetus fance oi la indice usetus fance oi la indice un usetus fance oi la

think of some common Measure, in which all Nations might concur; tho it is more to be wifter, than ever to be expected. But that Assertion of his, Involatic, for incorrapte serval, idque sign exemplaribus undique identition collatus, from a Man of such rare Abilities, I cannot but extreamly wonder at if we shall go no farther to confute his Assertion, than to compare our Grana Awir with those of Paris, which nelius used, we shall find ours much bigger, XXIX English Grains almost equalling XXXVI of Paris. Or shall compare the Spanish Grana Awiri, with his, we shall find those much lets; XXXVI Spanish Grauss weigh but XXVIII and a half of his at Paris. The like could I demonstrate in those of other Countries. By we dangerous and notable Error, for want either of due Care, or an exact Balance, we may conceive that whatstallo is delivered by the Ancients, in the like nature, is not presently without due Examination to be credited.

In this Table I judged it much fitter to compare the Denarius with the Standards for Gold and Stoff feveral Nations, than with their Gold and Silver Coins now current. Because the Pounds Ounces of the Standard, continue alway the fame; whereas the Gold and Silver Coins being of feveral Proportions, according to the Exigencies of the State, admit of feveral Alterations and minusports.

#### The CONCLUSION.

IT was my Intention from the Pes Rom. and Denarius, together with the Congins of Velpalian, to have deduced the other Weights and Measures, used by the Romans; and from those of the Romans, by such Teltimonies as are upon Record in the Writings of the Ancients, to have inferred those of the Hebrews, Babylonians, Ægyptians, Grecians, and of other Nations. A Work, I confess, intricate and full of Difficulties; wherein I could expect neither to give my felf, nor others Satisfaction, without first laying some sure and solid Principles for the Basis and Foundation. Therefore that occasioned me to infift the more largely in the profecution of the Pes Rom. and Denarius, and to examine all the ways I could possibly imagine, for the evident Proof and Confirmation of them. What in this' kind I have done, and with how much truth and diligence, I leave to the impartial Test of After times, the rest at more leifure may be perfected. Yet these following Observations, as a Co-ronic to the whole Work, I thought would not be unacceptable, if by way of anticipation I communicated them to the World: And those are how the Originals and Standards of Weights and Vol. II.

Measures, notwithstanding the Revolutions and Viciffitudes of Empires, may be perpetuated to Posterity. Amongst feveral ways, which I have thought of, I know none more certain and unqueflionable, than to compare them with fome remarkable and lafting Monuments, in remote Countries, that have flood unimpaired for many hundred Years, and are like to continue as many more. In which kind I made choice of the First and most Easterly of the Three great Pyramids in Ægypt; of the Basis of that admirable Corinthian Pillar, erected (as I suppose) by one of the Ptolemys, a quarter of a Mule distant to the South from Alexandria, being one vast and entire Marble-stone : Of the Rock at Tarracina, or Anxur, where it adjoyns to the Via Appia, and almost touches the Tyrrhene Sea: Of the Gate or Entrance into the Pantheon, or Temple of Agrippa, dedicated by him to all the Gods, and by the Christians to all Saints: Of the Porta Sanda, in that new and exquisite Structure of St. Peter's Church in Rome. If the lihad been attempted by some of the ancient Mathematicians, our Times would have been freed from much uncertainty, in discovering the Weights 9 B

and Measures of the Greeks and La-Greaves. tines.

The First and most Easterly of the three great Pyramids in Egypt, hath on the North-side a square Descent, when you are entred a little past the Mouth of it, there is a Joint, or Line, made by the meeting of two smooth and polished Stones over your Head, which are parallel to those under your Feet, the breadth at that Joint, or Line, is three Feet and The Stones of the English Foot.

Within the Pyramid, and about the midst of it, there is a fair Room, or Chamber, the top of which is flat, and covered with nine massy Stones; in it there stands a hollow Tomb of one entire Marble-stone: The length of the South-side of this Room at the Joint, or Line, where the first and second Rows of Stone meet, is 34 Feet.

The breadth of the West-side of the same room at the Joint, or Line, where the first and second Row of Stones meet, is 17 Feet .::.

The hollow or inner part of the Marble Tomb, near the top, on the Welf fide of it, is in length fix Feet - !!!

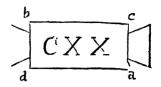

The hollow, or inner part of the Marble Tomb, near the top of it, on the North-fide, is in breadth two Feet r:::.

The Basis of the vast Corinthian Pillar, about a quarter of a Mile from Alexandria to the South, on the West-side of the Pillar at a b, is in breadth twelve Feet 12: At c d it is fourteen Feet 12:

The Rock at Terracina, or Anxur, near the Via Appia, close by the Tyrrbene Sea, hath these Figures, besides several others in the same perpendicular, very deeply engrayen.

The uppermost Line bc, over the Figures CXX, in the innermost, and deepest part of the engraving, is in length four English Feet, and  $\frac{2}{3}$ . The lowermost Line dc in the innermost

The lowermost Line d a in the innermost, and deepest part of the engraving, is in length four Feet  $\pi^*$ ::

The stately Gate or Entrance into the Pantheon, or Temple, built by Agrippa in Rome, the jambs, and top and bottom of it, being all of one entire Marble-stone, is in breadth between the jambes, or sides, some three Inches above the bottom, and the Briches within, nineteen Feer research.

The Porta Santia, on the Right hand of the Frontifpice of St. Peter's Church in Rome, is in breadth on the Pavement, or Threshold, between the jambes or sides of the entrance, eleven Feet

The great Gate, or Entrance, which is the middlemost of the five in the Frontispiece of St. Peter's Church in Rome, the Doors of which are covered with Leaves of Brass, with very fair and exquisite Figures, is in breadth on the Pavement, or Threshold, between the jambes or sides of it, eleven Feet

The Measures being fixed, we may likewise fix the Weights in this manner; by making a Vessel of a Cubical Figure, answerable to the proportion of any one of these Feet, or Palms, or Braces, which are described in the Table at the end of the first Treatise. This Cubical Vessel being filled with clear Fountain-water, we are to weigh it with an exact Balance, and to express the Weight of it by some one of those Weights, which we have placed in a Table at the end of the second Treatife. The fide of this Cube being known, and the weight of it in Water defined, the the rest of the Weights in the second Table, by way of consequence, by those Proportions which we have affigned, may be diffcovered. Thus for Example: The Roman Foot described by Villalpandas, is nine hundred eighty fix parts, fuch as the English Foot contains a thousand: This being cubed (saith he) weighs of Fountain-water eighty Roman Pounds.

### Of the DENARIUS.

If therefore there be given nine hundred eighty fix parts of a thoufand of the English Foot, the Cube of this will give us eighty Roman Pounds in Fountain-water; and confequently the other Weights will be discovered by those Proportions we have affigned to them, in respect of the Roman Pound. Again, eighty Roman Pounds of Water being given, if we reduce this into a

Cubical Body, the fide of it will give the Roman Foot described by Villalpan- Gr. dus: And confequently the other Meafures may be deduced by those Proportions we have given them in a peculiar Table. Whereby it appears, that as hy Meafures Weights may be preferred, fo on the contrary, by Weight's Measures may be restored.

### Some DIRECTIONS to be observed in comparing the Valuations of COINS.

IN comparing the Valuations, either of ancient Coins with modern, or of modern one with another, we are to confider: First, the intrinsick of them, and then the extrinsick: The intrinsick is either the fineness of the Coin, in refpect of Metal, or the gravity in respect of Weight. . The extrinsick I term first, the Charaller imprinted on the Coin. And, Secondly, the Valuation enjoyned by the Prince, or State: By which Character and Valuation, what originally and materially was but common Metal, or Plate, comes now icgally and formally to be current Money. With these Limitations, if we shall compare ancient Coins with modern. and modern one with another, it will be no difficult matter to proportion out their feveral respective Valuations; and withal to reconcile the feeming Repugnancies, either of ancient Coins now found, differing from the Traditions of ancient Authors, or the Traditions of ancient Authors differing amongst themselves.

I shall first give an instance of modern Coins compared with modern, in our English Money compared with that of Spain, as being most familiar to us; the application of which will by analogy lerve for all other distinct States and Times, using diffinct Coins.

In comparing therefore English Money with Spanish Money in England, or Spanish Money with English in Spain, we are thus to proceed: First, We are to examine whether they be of a like fine-ness for the intrinsick, if they be, then an Ounce of English Money, and an Ounce of Spanish (supposing the Weight of the Ounce to be alike) will be of like value in any other Country out of England and Spain; where neither are current, but only confidered as fo much Metal, or Plate. Secondly, We are to Vol. II.

confider the extrinsick, that is, the Form and Stamp of the Coin, with the Valuation of it by the Injunction of the Prince of either State; and here that which before was equal, comes now to be unequal: For an Ounce of English Money in England comes to be more worth than an Ounce of Spanish Money in England; because this wants the Character, Stamp, and Valuation of our Princes, whereby it is current: And for the same Reason will an Ounce of English Money be less in Valuation than an Ounce of Spanish Money in Spain, supposing (as I said) the Ounce in both Countries to be exactly one and the fame

The fame analogy will be, if we compare ancient Coins, as those of the Hebrews, Greeks, and Romans, with our modern Coins. We are first to consider the intrinsick of them, whether they be of a like weight and fineness for the Metal, with ours: And this is the Natural or Physical Consideration. From whence we may conclude, that if, for Example, fo many Attick Tetradrachmes do equal in pureness and weight, so many of our English Shillings, newly brought from the Mint, or so many of our Troy or Silver Ounces, taken from the Standard. then are they to be balanced with these in the acception of them as Plate; and a Silversmith, abstracting from the extrinsick, that were to melt them both, would give a like Value for them both. But if we, Secondly, look upon them with the Image and Character of the State, and in the Notion of Money, which is the politick Confideration, then that which before in the Trutina, and Scale, was equal, in the Foro, and in Commerce, comes to be unequal: And, an Ounce of English Money shall pass for more than an Ounce in Attick Tetradrachmes, with reference to the Ex-

9 B 2 pences

Greaves. Valuation, depending upon a Mandate, or Law, enacted by the Prince.

> In like manner will it be, if we compare ancient Coins with ancient, made in different States, as it is in comparing

ancient with modern.

Upon these Grounds of Reason it will follow, that whereas the Roman Authors make the Denarius Confularis to be equal to the Drachma Attica, and the Greeks equal the Druchma Attica to the Denarius Consularis, that both say true; and yet both of them, if we speak strictly and exactly, may be deceived. For the Denarius Consularis examined by the Balance, which is the best Judge of the Intrinsick, (I speak of the Intrinsick in respect of weight, and not of the Intrinfick in respect of fineness, that being best discovered by the Scale, and this by the Test: Which last, for the more clearness of my Discourse, I suppose in all these Coins to be alike). I say, the Denarius Consularis is found by me, contrary to the Opinion of all modern Writers, to be lighter than the Drachma Artica: And therefore to speak strictify, and precisely, cannot be equal to it in the intrinsick. But again, if we look upon the extrinsick of the Drachma Attica, and Denarius Consularis, that having the Stamp of Athens, and this of Rome, here Reason must be our Balance. and not the Trutina. For the Athenian Coin being a Foreigner, and not current in *Italy*, in the way of Exchange and Commerce, will lose of its primitive Valuation it had at Athens, and for want of the extrinsick of the Roman Stamp, necessarily rebate in the intrinfick. And therefore both Greeks and Romans writing in Italy, might truly fay, that the Denarius Confularis, and Prachma Attica, were equal, that is, speaking in Civil Commerce, and Popular Estimation: Altho' they were unequal in the Intrinsick and Natural Valuation.

But if we shall change the Scene, and carry the Denarius Confularis to Athens, the Case will quite be altered. For the Denarius being a Stranger, and the Druchma Attica a Denizon, that cannot

have the same Privileges with this: And therefore the extrinsick of the Denarius being there of no use, and the intrinsick in respect of weight falling short of the Drachma, it must necessarily be much less in Valuation at Athens than the *Drachma*: And I think no advised Athenian, writing in Attica, would make them equal, I am certain no Nummularius would.

The same may be said of the Hebrew Shekel, and Attick Tetradrachme, and of all other Coins of diffind States mentioned in Classical Authors. Thus Philo and Josephus, in Judea, both truly equal the Shekel to the Attick Tetradrachme, that is in way of Commerce; tho' the Shekel be unequal, and leis than the Tetradrachme, (as I have found by examining may of them) in a just Notion of Weight. of Weight. The Reason is evident by what hath been expressed before: For in Judga the extrinsick makes amends for what the Shekel wants in the intrinfick; and on the contrary, what the Tetradrachme exceeds in the intrinsick, is diminished for want of the extrinsick, till at length in a popular Estimation they come to be equal. But the quite contrary would happen, in the transportation of Shekels from Terusalem to Athens. Here the Shekel would necesfarily fall from its primitive Valuation, and the Tetradrachme, being confidered now no longer as a Foreigner, would recover what it lost in Judea, and consequently rife above the Hebrew Shekel; as having a double advantage in the extrinsick from the State, and in the intrinsick from its Weight

But what need we to go fo far for Examples, when as we instanced before, we have them nearer home? The Spanish Quarters of the Dolar, or Double Rials, pass ordinarily in our Sea-Towns but for Shillings, (whereas they are worth in the intrinsick Thirteen Pence Farthing) and our Shillings pass in Spain scarce for a Rial and an half. For theirs wanting in England our extrinsick, and ours in Spain wanting their extrinsick, must respectively rise and fall in their

Valuation.

# ACCOUNT

O F

### COCHIN-CHINA

### In Two Parts.

The FIRST Treats

Of the TEMPORAL STATE of that Kingdom.

The SECOND,

Of what concerns the SPIRITUAL.

Written in ITALIAN,

By the R. F. CHRISTOPHER BORRI, a Milaneze, of the SOCIETY of JESUS, who was one of the First Missioners in that Kingdom.

### To the READER.

HIS Account is fo short, it requires not much Preface, or to Jay the Truth, any at all; a little time sufficing the Curious to inform himself into the Value and Contents of it. Who the Author was appears by the Title, and what the Cause of bis going into that Kingdom, his Profession and only Business being to preach Christianity to the Insidels: He liv'd sive Years among them, and learn'd their Language to perfection; and therefore his Relation is not like those of Travellers, who just pass through a Country; or Merchanse, that touch at Ports upon the Bufiness of Trade, and consequently deliver very fabulous Accounts, either to make their Travels the more surprizing, or for want of knowing better, taking things upon hear-say, and not understanding the Language to get certain Information. This Father on the contrary frequently conversing with all forts of People, and having a setled Residence there for Years, had the opportunity of knowing what he writ. He gives the Descrip-

tion of the Kingdom, a considerable part whereof he travell'd over : He speaks of its Product, which be had the benefit of for Sustenance and Cloathing: He tells us the Temper and Scasons of the Air, which he several times felt: He relates the Inundations which he often saw: He gives an Account of their Sells, which he learn'd from their Priefts, or Omfays, whom he converted to Christianity: He fets down the Power and Government of the Kingdom, which he could be no Stranger to. being familiar with several Men in great Authority: And to conclude, he partiscularizes how far the Christian Faith has been there propagated; which he well knows, as having been himself a Labourer in the Vineyard for the first five Years; and ofter that, receiving it from those that succeeded him. In fine, the Relation is curious, the short, and seems to carry, all the Air of Truth imaginable, besides the general Approbation it has always receiv'd in all parts, which is the greatest Commendation that can be given it:

## ACCOUNT

OF

### COCHIN-CHINA.

### The First Part.

OF THE

Temporal State of the Kingdom of Cochin-China.

#### CHAP. I

Of the Name, Situation, and Extent of this Kingdom.

Name of \* Cochin-China.

Ochin-China, so call'd by the Portugueses, is by the Natives call'd Anam, fignifying a We-flern Country, because it lies West of China; for which same Reason the Tabanasa; the Japoneses in their Language give it the Name of Cochi, fignifying the same as Anum, in the Cochi-Chinese Language. But the Portugueses having by means of the Japoneses been admitted to trade in Anam, of the Japonese word Cochi, and this other word China, compounded the Name Cochin-China, applying it to this Kingdom, as if they call'd it Cochin of China, the better to distinguish it from Cochin the City in India, isthabited by the Portugueses; and the Reason why in the Maps of the World we generally find Cochin China fet down under the denomination of Cauchin China, or Cauchina, or the like. is no other but the corruption of the right Name, or that the Authors of those Maps would fignifie, that this Kingdom was the beginning of China.

This Kingdom on the South Borders the other by a Ridge of Mountains inapon that of Chiampa, in 11 Degrees of North Latitude, on the North fomewhat inclining East-ward with Tunchim, on the East is the Chinese Sea, and on the West North West the Kingdom of the Fastnesses of the uncouth Mountains in the Fastnesses of Mountains in the Allie of Mountains in the Salary and the Kemois, which fignishes a savage People, for the they are CochinChineses, yet they no way acknowledge or submit to the King, keeping in the Fastnesses of the uncouth Mountains inhabited by the Kemois, which fignishes a savage People, for the they are CochinChineses, yet they no way acknowledge or submit to the King, keeping in the Fastnesses of the uncouth Mountains in-

As to its Extent, I shall here speak Exceronly of Cochin China, which is part of the Great Kindom of Tunchim, usurp'd by a King who was Grandsather to him now reigning in Cochin China, who rebell'd against the Great King of Tunchim: For as yet the Portugueses have traded only in this Province; and here only the Fathers of the Society have been conversant, in order to introduce Christianity: Yet at the end of this Account, I shall discourse concerning some Particulars of Tunchim, where our Fathers got footing since my return into Europe.

Cochin China extends above a hundred Leagues along the Sea, reckoning from the Kingdom of Chiampa, in the afore-faid 11 Degrees of North Latitude, to the Gulf of Ainam, in the Latitude of 17 Degrees, or thereabouts, where the King of Tunchim's Dominions begin. The Breadth is not much, being about 20 Miles, all the Country plain, thut up on the one fide by the Sea, and on the other by a Ridge of Mountains inhabited by the Kemois, which fignifies a favage People, for the they are Cochin-Chineses, yet they no way acknowledge or fubmit to the King, keeping in the Fastnesses of the uncouth Moun-

### An ACCOUNT of Cochin-China.

tains, bordering on the Kingdom of Lais.

Cochin China is divided into five Prolyifion vinces, the first bordering on Tunchin, where this King refides, is call'd Sinuvá; the fecond Cachiam, here the Prince, the King's Son refides and governs; the third, Quamguya; the fourth Quignin, by the Portugueses call'd Pullucambi; and the fifth confining on Chiampa, is Renran.

#### CHAP. II.

### Of the Climate, and Nature of the Country of Cochin-China.

THO' this Kingdom, as has been faid, lies between 11 and 17 De-Great Heat grees of North Latitude; hence it follows of Course, that the Country is raof India. ther hot than cold, and yet it is not fo hot as India, tho' it be in the same Latitude, and within the Torrid Zone. The Cause of the difference is, because in India there is no diffinction of the four Seasons of the Year, so that the Summer lasts there nine Months without intermission, without seeing so much •as a Cloud either Day or Night, and therefore the Air is continually, as it were, inflamed with the great reflection of the Sun-beams. The other three Months are call'd Winter, not because there is any want of Heat, but because at that time it generally rains Day and Night; and tho' to appearance, such continual Rains should naturally cool the Air, yet they falling in the three Months of May, June, and July, when the Sun is in its greatest Elevation, and in the Zenub of India, and no Winds blowing but what are hot, the Air continues so inflam'd, that sometimes the Heat is more intense than in Summer,

> tries, they would be uninhabitable. But Cochin-China enjoying the Distinction of the four Seasons, tho' not in so perfect a manner as Europe, is much more temperate: For tho' its Summer, which comprehends the three Months of May, June, and July, be violent hot; because it lies within the Torrid Zone, and because the Sun is then in its Zenith, yet in September, October, and November, the Autumn Season, the Heat ocases, and the Air becomes very temperate by reason of the continual Rains, which at this time usually fall upon the Mountains of the Kemois, whence the

when for the most part there are pleafant Winds blowing from the Sea, which

cool the Ground, wherewith, if Al-

mighty God did not relieve those Coun-

Waters running down in abundance do fo flood the Kingdom, that meeting with the Sea, they feem to be all of a piece. These lnundations during these three Months, for the most part happen once a Fortnight, and last three Daysat a time. They ferve not only to cool the Air, but to fertilize the Larth, making it fruitful and abounding in all things, but particularly in Rice, which is the most common and universal Food of all the Kingdom. During the other three Winter Months, which are December, January, and February, there are cold Northerly Winds, bringing cool Rains, and fo fufficiently diffinguishing the Winter from other Seafons. To conclude, in March, April, and May, the Effects of Spring appear, all things being green and blofforning.

Now fince we have spoke of these In-Nomble

undations, I will not conclude this inunda-Chapter without first observing some non-Curiofities that occur on occasion of

The first is, That all Men in general wish for them, not only that they may cool the Air, but much more for the fertilizing of the Earth: For which reason as soon as they appear, all the People are fo pleas'd and joyful, that they express it by Visiting, Feasting, and Presenting one another, all of them crying, and often repeating, Daden Lut, Daden Lut; that is, the Inundation is come, it is here: And this is done by Persons of all Degrees, even to the King himfelf.

And in regard the Inundations often come to unexpectedly, that very often when they do not think of it at Night, they find themselves the next Morning furrounded with Water; fo that they cannot go out of their Houses, throughout the whole Kingdom, as has been faid: Hence it is that abundance of Cattel are drowned, for want of time

BORRI.

A pleafant Law.

to retire to the Mountains, or higher Grounds. For this Reason there is a pleasant for host Law throughout the Kingdom; which is, that if any Oxen, Goats, Swine, or other Beasts, are drowned, the Owner loss them, and they belong to him that first takes them: Which causes much Sport and Jollity; because when the Lut happens, they all go out in Boats, to seek the drowned Cattel; upon which they afterwards feast and treat one another.

Beneficial Sport.

Nor are the younger fort without their Pastime; for there being in those Fields of Rice, an infinite number of Rats, their Nests filling with Water, they are forced to fwim out, and get upon the Trees to fave themselves: And it is pleafant to fee the Boughs loaded with Rats, like Fruit hanging on them. Then do the Boys run out in their Boats, striving to out-do one another, in shaking the Trees, that the Rats may fall and be drowned: Which Childish Pastime is wonderful beneficial to the Country, delivering it from those mischievous Creatures, hat otherwise,

by degrees, would devour all the Harvest

In fhort, the Lut causes another con-markers fiderable Advantage: Which is, that it and Fan affords every Body the opportunity of on the furnishing his House with all Necossa ries, because the Country being all mavigable, during these three Days, Com-modities are very easily convey'd from one City to another, and therefore then are held the greatest Fairs and Mark ts, and with greater Concourse of People than at any other time in the Year. Then also it is, that they lay in Provifion of Wood to burn and build, bringing it from the Mountains in Boats; which to this purpose come into the Streets, and into the very Houses, built for this purpose upon high Pillars, that Water may have free passage, the People living during that time in the upper Floors; to which it were a wonder if the Lut should ever rife, they being built according to the Situation of the place, to fuch a height, as they know by long Experience, is sufficiently above the Waters.

### CHAP. III.

### Of the Fruitfulness of the Country.

Rice.

.....

Oranges.

abundance, that there is no Body will work for Gain, all Persons having enough to live on plentifully.

There are great Quantities of Fruit of several sorts, all the Year about; and they are the same with those in India, Cochin-China being within the same Climate. But to come to Particulars, the Oranges there are bigger than ours in Europe, and very full; the Rind of the state of the same of the sam

IT is an easie matter to conceive the Fertility of Cochin China, by the Ad-

vantages accruing from the Lut; yet

we will mention fome other Particulars

relating to it. The Lut leaves the Land fo fruitful, that Rice is gather'd three

times a Year, in fuch great plenty and

them is thin, tender, and so well tasted, that it is eaten with the Juice, which has a pleasant relish like Limons in Italy.

Banana?. There is a fort of Fruit which the

Portugueses call Banana's, and others Indian Figs, tho', in my Judgment, the Name of a Fig is neither proper to those in India, nor in Cochin-China, be-

cause neither the Tree nor Fruit has any resemblance with our Figs, the Tree being like that we call Indian Wheat, but higher, and the Leaves so long and broad, that two of them would ferve to wrap a Man in quite round, and from Head to Feet. Hence fome have taken occasion to say, that this was the Tree in Paradife, with the Leaves whereof Adam cover'd himself. This Tree at the top produces a Cluster of twenty, thirty, or forty of these Banana's together; and each of them is in shape, length, and thickness, of an indifferent Citron in Italy. Before the Fruit is ripe, the Rind is green; but afterwards yellow, as the Citrons are. There is no need of a Knife to pare this Fruit, for the Rind comes off as we shell Beans. This Fruit has a most fragrant smell; the Pith or Flesh of it is yellow, and firm, like that of a Bergamot Pear, when full ripe, that melts in the Mouth. By this it appears to be no way like our Fig. except in the tafte and fweetnefs. There is another fort of them, which is only eaten roafted, and with Wine: The Stem dies every Year, when it has produced the Fruit, and leaves a young Sproat at the Foot, which grows up against the next Year. That which in Italy they call an Indian Fig, is nothing like the Plant, or Fruit of this Banana, we now speak of; nor is this which we have in Italy call'd an Indian Fig, in those parts. This Fruit is common throughout all India. There is another fort in Cochin-China, that is not found in China, nor India: It is as big as the largelt Citrons we have in Italy; fo that one of them is enough to satisfie a Man. These are nourishing, very white within, and full of black round Seeds, which chew'd together with the white Substance, are of a delicious Tafte, and a good Medicine against the Flux.

There is another Fruit in Cochin-China, which I have not feen in any other Country of India; and this they call Can: The outward form and nature of the Rind is like our Pomegranate; but within it contains a Substance almost liquid, which is taken out, and eaten with a Spoon; the Taste is Aromatick, and the Colour like that of a ripe Medlar.

They have another peculiar to the Country, that grows, and is like our Cherries, but taftes like Raifins, and is call'd Gnoo.

There are also Melons, but not so good as ours in Europe; nor are they eaten without Sugar or Honey. The Water-Melons are large and delicate.

There is a Fruit they call Giacca, which is common to the other parts of India, but much larger in Cochin-China: It grows on a Tree as high as the Walnut, or Chefnut, and has much longer Prickles than the Fubeb. It is as big as a very large Pompion in Italy, fo that one of them is a Man's Load. The outrind is like that of a Pine-Apple, but foft and tender within. This Fruit is full of certain yellow round Kernels, like a small plece of Coin, that is round and flat; and in the middle of every one of them, is a Stone that is thrown There are two forts of this Fruit; one in Portugueze is call'd Giacca Barca: The Bone of this is thrown away, and the Pulp is stiff; they do not take out the Stone of the other; nor is the Pulp hard, but foft as Glue: Both these in taste somewhat resemble that delicious Fruit called the Durion. whereof we shall speak next.

This Durion is one of the most deli-Vol. IL

cious Fruits in the World, and only found in Malaca, Borneo, and the ad-BOR jacent Islands. The Tree differs little from the Giacca last mention'd, and the Fruit it felf is like it without, and that refembles the Pine Apple, even in the hardness of the Rind. The Meat within is very white about the Bone, to which it sticks like Glue, and tastes very like our Mangiare Bianco (a Dainty among the Italians.) This Meat and Liquor is divided into ten or twelve little Apartments, in each of which the Flesh and Moisture is about its Stone, which is as big as a large Chefnut. And it is to be observ'd, that when they break and open the Shell of this Fruit, there comes from it an ill fcent, like that of a rotten Onion, all the Substance within remaining of a most sweet and unexpressible flavour, whereupon I will relate what hapned in my presence: A Prelate arrived at Malacca, and one there open'd a Durion before him to give him a tafte; the Prelate was fo offended at that naufeous Smell that came from it when broke, that he would not talte it by any means. Being afterwards fet down to Dinner, they gave the rest of the Company Mangiare Bianco; but on ... this Prelates Plate they laid the white Substance of this Fruit, which is so like the Mangiare Bianco, that he could not distinguish the difference by the fight. The Prelate tafted it, and thought it fo much more delicious than usual, that he ask'd, What Cook drefs'd it fo rarely? Then he that had invited him to Dinner, finiling, told him, It was no other Cook but God himfelf, who had produc'd that Fruit, which was the very Durion he would not tafte. The Prelate was fo aftonish'd, that he thought he could never eat enough; and they fo dear, that even at Malacca, where they grow, they fometimes cost a Crown apiece.

Cochin China abounds in another fort of Fruit, by the Portugueses call'd A- Anamas nanas; which tho' it be common to all India, and Brazile, yet because I have not found it well describ'd by those that have writ of it, I would not pass it by. This Fruit does not grow on a Tree, nor from a Seed, but on a Stalk, like our Artichokes, and the Stem and Leaves are much like those of the Thistle or Artichoke. The Fruit is like a Cilinder, a span long, and so thick that it requires both Hands to grasp it. The pulp within is close, and like a Radish, the Rind somewhat hard, scaly like a

Fift,

Areca.

Fish. When ripe, it is yellow both within and without, is par'd with a Knife, and eaten raw, the taste of it an cager Sweet, and as foft as a full-

ripe Bergamet-Pear.

There is besides, in Cochin-China, a Fruit peculiar to that Country, which the Portugueses call Areca. The Trunk of it is as strait as a Palm-Tree, hollow within, and produces Leaves like those of the Palm, only at the top among these Leaves, there grow some small Boughs, which bear the Fruit in shape and higness like a Walnut, green without, just as the Nut is; within it is white and hard like a Chesnut, and has no talte at all. This Fruit is not eaten alone, but is wrapp'd up in Leaves of Betle, well known in India, which are like our Ivy-leaves in Europe, and the Plant it felf clings to Trees like the These Leaves are cut in pieces, and in them they wrap a bit of Areca, each of them making four or five Morfels; and with the Areca they put some Lime, which is not there made of Stone, as in Europe, but of Oister-shells; and as among us there are Cooks and Caterers, & c. so in Cochin China there is one in every Family, whose Business is to wrap up these Morsels of Areca in Betle, and these Persons being commonly Women, are call'd Betleres. They fill their Boxes with these Morsels, and chew them all Day, not only when they are at home, but when they are walking, or talking, at all times, and in all places, never swallowing, but spitting them out when they are well chew'd, retaining nothing but the relish and virtue of it, which wonderfully comforts the Stomach. These Morfels are so much in use, that when one of them goes to make a Vifit, he carries a Box full of them, and presently presents some to the Party visited, who claps it into his Mouth; and before the Visitor departs, he that is visited sends to his Betler-Woman for a Box of the same, and presents it to the Visitor, to return his Kindness; and these Morsels must be still making. And there is so much of this Arecaus'd, that the greatest Revenues of that Country come from the Fields of it, as among us of Olive Gardens, and the like.

Tobacco is also us'd there, but not so Growth. much as Betle. The Country also abounds in all forts of Pumpions and Sugar-Canes. The European Fruits are not yet come thither, but I believe Grapes and Figs would take very well.

Our Herbs, as Lattice, Endive, Col. worts, and the like, come up well in Cochin-China, as they do throughout all India: But they all grow into Leaf, without producing any Seed, fo that it must be still supplied out of Eu-

There is also great plenty of Flesh, Carrel by reason of the great multitude not bowl only of tame Cattel, as Cows, Goats, Swine, Buffaloes, and the like; but of wild, fuch as Deer, much bigger than those of Europe, wild Boars, &c. and of Hens both tame and wild, of which fort the Fields are full, Turtles, Pigeons, Ducks, Geefe, and Cranes, which are favory enough; and in short, other forts, which we have not in Europe.

Their Fishery is very great, and Fish Fish fo delicious, that tho' I have travell'd fo many Countries, I do not think I have met with any to compare to that of Cochin-China. And the Country, 2s was faid before, lying all along upon the Sea, there are fo many Boats go out a fishing, and they bring in fo much Fish to all Ports of the Kingdom, that it is really very remarkable to fee the long Rows of People continually carrying Fish from the Shore to the Mountains: which is duly done every Day, for four Hours before Sun-rifing. And tho' generally among the Cochin-Chineses, Fish is more valu'd than Flesh, yet the main Reason why they apply themselves so much to Fishing, is to furnish them-felves with a kind of Sauce, which they call Balachiam, which is made of Salt Bala Fish macerated and steeped in Water. This is a sharp Liquor, not unlike Mustard, whereof every Body lays in such store, that they fill Barrels and Tubs of it, as many in Europe lay in their Stocks of Wine. This of it felf is no Food, but ferves to sharpen the Appetite to the Rice, which they cannot eat without it. For this Reason, tho' Rice be the general and most common Sustenance in Cochin China, there must be vast Quantities of Balachiam, without which it is not eaten, and confequently there is tontinual Fishing. There is no less plenty of Shell-fish, Oisters, and other Product of the Sea, especially of one fort, which they call Cameron. (I suppose this to be the Portuguese word Camerano, fignifying Shrimps, of Prawns.)

Befides all this, Providence has furnish'd them with a fort of Food so rare and delicate, that in my Opinion it may be compar'd to the Manna, wherewith

Other

the chosen People of God were fed in the Defart. This is so peculiar to Cochin-China, that it is no where else to be found: And I will give an Account of what I know of it by Experience, and not by Hear-fay, having feen and eaten of it feveral times.

Wonderful Nefts.

In this Country there is found a small Bird like a Swallow, which fastens its Nest to the Rocks, the Sea-waves break against: This little Creature with its Beak, takes up some of the Foam of the Sea, and mixing it with a certain moisture it draws from its own Stomach, makes a fort of Slime, or Bituminous Substance, which ferves to build its Neft, which when dry and hardned, remains transparent, and of a Colour between green and yellow. The Country People gather these Nests, and being soften'd in Water, they serve to season Meat, whether Fish, Flesh, Herbs, or any fort whatsoever; and give every thing so different a relish. and so proper to it, as if they had been feafon'd with Pepper, Cinamon, Cloves, and the richest Spice; this Nest alone being enough to feafon all forts of Provisions, without Salt, Oil, Bacon, or any other addition; and therefore I said I thought it like Manna, which had in it the taste of all the most delicious Meats; faving that this is the Work of a finall Bird, and that was made by God's Angels. And fuch great flore of them is found, that I my felf faw ten fmall Boats loaden with Nefts, taken among the Rocks, in not above a Mile's distance. But they being so precious a Commodity, only the King deals in them, they being all kept for him; and his greatest Vent is to the King of China, who values them at a great rate. They eat no fort of White Meats,

looking upon it as a Sin to milk the Cows, or other Creatures: And the Reason they give for this Nicety, is, that Milk was by Nature appointed for the Sustenance of the Young Ones: As if the Owner of the Young Ones could not dispose of their Sustenance. They eat fome things which we loath, and Camelions count venemous, as Camelions, which are here fomewhat higger than those that are fometimes brought dry'd up into Italy, out of other Countries. faw a Friend buy fome ty'd together in a Cluster, and lay them upon the live Coals, which having burn'd the String, they walk'd about gently, as they use to do, till they felt the Heat of the Fire, which being of, a violent cold Vol. IL.

Nature, they refifted a-while, but were at last broil'd: My Friend took them up, and scraping off the burn'd Skin with a Knife, the Flesh remain'd extraordinary white; then he bruts'd and boil'd them in a certain fort of Sauce like Butter, and then eat them as a great Dainty, inviting me to bear him Company: But I had enough with the

fight of it.

Cochin-China abounds in all other things necessary for the Support of Human Life; and in the first place for Cloathing. There is fuch plenty of Silk, that the Peafants and Mechanicks All w generally wear it; so that I was often Silk. pleas'd to fee Men and Women at their Labour, carrying Stone, Earth, Lime, or the like, without the least fear of tearing or spoiling the rich Cloaths they had on. Nor will they wonder it, who shall know, that the Mulberry-Trees, whose Leaves feed the Silk-worms. grow in vast Plains, as Hemp does among us, and run up as fast; so that in a few Months the faid Worms appear upon them, and feed in the open Air, spinning their Thread at the proper time, and winding their Bottoms in fuch plenty, that the Cochin-Chineses have not only enough for their own uses, but they furnish Japan, and send it into the Kingdom of Lais, whence it afterwards spreads as far as Tibet; this Silk being not so fine and fost, but stronger and more sub-Stantial than that of China.

The Structures the Cochin-Chinefes Eurld use of Wood, are nothing interiour to those of any other part of the World; for without falfifying, this Country has the best Timber in the Universe, in the Opinion of all that have been there to this time. Among the variety and multitude of their Trees, there are two that most usually serve for Building, and are so incorruptible, that they do not decay in the least, either under lncor Ground, or under Water; and they are call d fo folid and heavy, that they do not fwim upon the Water, and a Log of them ferves instead of an Anchor to a Ship, One of them is black, but not fo as Ebony; the other is red, and both of them, when the Bark is taken off are fo fmooth and flick, that they scarce need any plaining. These Trees are call'd Tin; and they would not deviate much from the Truth, who should say, they were that incorruptible Wood, which Solomon made use of for building the Temple: For we know the Scripture 9 C 2 · gives

gives them a Name much like this, BORRI. calling them Ligna Thyina. The Mountiins of Cochin China are all full of these Trees, all strait, of such a prodigious height, that they feem to touch the Clouds, and fo thick that two Men cannot fathom them. Of this Timber the Cachin-Chineles build their Houses, every Man being free to cut down as many as he pleafes.

The Houses.

The whole Fabrick of their Houses rests upon high, folid, and well fetled Pillars, between which they they place Boards to remove at pleasure; either to exchange them for Cane-Lattices, which they weave neatly, to let in the Air in hot Weather; or to leave a free passage for the Water and Boats, at the time of the Inundation, as we observ'd above. They have also a thousand curious Inventions, and ingenious Contrivances to fet off their Houses, with Carving, and other Works on Wood, which are a very great Ornament.

Aquila, and

)a

Since we have begun to talk of the odoriferous Trees, before we proceed upon any other matt.r, I will here mention fomething of a fort of Wood, accounted the rich-, eft Commodity that can be carried out of Committee to other Parts; which is the most famous Wood call'd Aquila, or Fagles-Wood, and Calamba; which are the same thing as to the Tree, but differ in their Value and Virtue. Of these Trees, which are thick and high enough, the Kemois Mountains are very full; if the Wood be cut of a young Tree, it proves Aquila, or Eagle-Wood, and this there is most plenty of, every one cutting as much as he can: But when the Wood is of an old Tree, that proves Calamba; which were very hard to be found, had not Nature it felf provided for it, caufing thefe fame Trees to grow on the tops of inaccessible Mountains, where growing old without being expos'd to destruction, some Boughs of them now and then drop down, breaking off either for want of Moisture, or through Age, and are therefore found rotten and worm-eaten, infinitely exceeding the common Aquila, or Eagle-Wood, in Virtue and sweet Scent; and this is the fo highly valu'd and famous Calamba. The Aquila is fold by any Body, but the Calamba belongs only to the King, because of the high Value of its Perfume and Virtue. And to fay the

truth, it is so sweet where they gather. it, that fome Pieces being prefented me, for a Trial, I buried them above a Yard and half under Ground, and yet they discovered themselves by their Fragrancy. The Calamba, where taken, is worth five Ducats a Pound; but in the Port of Cochin China, where the Trade is, it hears a much greater Price, and is not fold under fixteen Ducats a Pound. In Japan it is worth two hundred Ducats a Pound; but if there be a Piece big enough for a Man to lay his Head on like a Pillow, the Faponeses will give after the rate of three or four hundred Ducats a Pound: The Reason of it is, because they instead of a soft Down-Pillow, when they fleep, lay their Head on some hard thing, and generally it is a piece of Wood, which every one according to his Ability endeavours to have of as great Value as he can; and a piece of Calamba is look \ upon as a Pillow fit for none but a King, or fome Great Lord. Yet the Aguila, tho' of less Price and Esteem than the Calamba, is so considerable, that one Ship's Load of it, enriches any Merchant for ever: And the best Advantage the King can allow the Governour of Malacca, is to grant him one Voyage of Aquila; because the Brachmans, and Banians, of India, using to burn their Dead with this fweet Wood, the Confumption of it is continually very great.

To conclude, Cochin China abounds Great in rich Mines of the most precious Me-Wealth tals, especially of Gold; and to reduce China. to a few words, what might be faid more at large of the Plenty of this Country, I will conclude with that which the European Merchants trading thither commonly say of it; which is, That in some measure the Wealth of Cochin China, is greater than that of China it felf; and we all know how rich that Country is in all respects.

I ought in this place to fay fomething of the Beafts, whereof we before obferv'd there was great Variety and Numbers in Cochin China: But that I may not dilate too much, I will only treat of the Elephants, and Abadas, or Rhinoceroes, chiefly found here; of which many curious Things may be faid, which perhaps very many have not heard of.

#### CHAP. IV.

### Of the Elephants, and Abadas, or Rhinoceroes.

There are abundance of Elephants in the Woods of Cala Cala the Woods of Cochin China, which they make no use of, because they know not how to take, or tame them: Therefore they bring them tame and well taught from Cambogia, a neighbouring Kingdom. These are twice as big as those of India, the round Print of their Feet they leave behind them, is not less than half a Yard Diameter; the two Teeth striking out of the Mouth. whereof Ivory is made, are very often four Yards and a half long; that is, those of the Males, for those of the Females are much shorter; by which it is unfie to compute, how much those Elephants of Cichin-China are bigger than those shewn about in Europe, whose Eichhante, Teeth are not above three Quarters of their Age. a Yard long. The Elephants live many · Years; and I asking, how old one might be? The Driver of it told me, It was fixty Years old before it came from Cambogia, and had liv'd forty in Cochin-China: And having my felf feveral times travell'd upon Flephants in that Kingdom, I can relate many things that will ficem strange, but yet are very true.

Ticy carry Land nd Water

An Flephant generally carries thirteen or fourteen Perions, who are thus di-ipos'd of: As we lay a Saddle on a Horse, so they clap a certain Machine upon the Elephant, which is like a Coach, wherein there are four Seats; it is faltned with Chains under the Elephant's Belly, as a Horfe's Saddle is girt. The Coach has two Doors on the fides, where fix Persons fit, three on a fide; and another behind, where there are two more; and laftly, the Nayre, who supplies the place of a Coachman, fits over the Elephant's Head, and guides him. Nor have I travell'd in this manner by Land only, but very often by Sea too, croffing Arms of it above a Mile over: And it was wonderful to any Body that knew it not before, to fee fuch a valt great Lump of Flesh fwimming under fuch a Weight, so that it look'd like a Boat rowing. True it is, the Beatt groan'd under the Toil, occasion'd by the unreasonable Bulk of its own Body, and the difficulty of Breathing; and therefore to ease it self in that Pain, it suck'd in Water with the Trunk, and fpouted it out fo high, that it look'd like fome great Whale gliding along the Ocean.

For the fame Reason of its mighty Corpulency it finds much difficulty in stooping down; and this being absolutely necessary for the Conveniency of They Passengers to get up to, or down from up Pa the Coach, he does it not but when gers, commanded by the Nayre; and if when he is kneeling, any one stops but never fo little, upon Ceremony, or any other Account, he rifes up, not having Patience to continue in that Posture, it is so

painful. Nor is it less wonderful to behold. how at the Nayre's Command, he makes, as it were, a Ladder of his Limbs, for the greater Conveniency of those that are to get up into the Coach: The first Step is his Foot, which is high enough; for the fecond, he turns out the first Joint above the same Foot, distant enough from the other; for the third, he bends his Knee; for the fourth, his Hip bone, sticking out to that purpose: and from whence, he that gets up, lays hold of a Chain fastned to the Coach it

felf, where he feats himfelf. By this it plainly appears, how much they are miltaken, who fay and write, that the Elephant can neither kneel nor bow down; and that the only way to How th take him, is to cut the Tree he leans Sleep. against to sleep: For that falling together with the false Support, and not being able to rife, he becomes a certain Prey to him that lies in wait: Which is all a Fable, tho' it be true that he lies not down to fleep, that being an uneasie posture to him, as has been said, but fleeps always flanding, with a continual agitation of his Head.

Upon occasion of War or Battel, they Their v take off the Roof of the Coach, whence, strengt as it were from a Tower, the Soldiers fight with Muskets, Arrows, and fometimes a fmall Piece of Cannon, the Elephant being itrong enough to carry it, his, Strength being answerable to all the rest: And I have seen one my felf, that would carry vast Weights upon his Trunk; and another that lifted up a great Piece of Cannon with it; and another, who by himself launch'd ten

BORR1.

Galliots one after another, taking "Ald of them very dexteroully with his Teeth, and shoving them into the Sea. I have feen others pull up large Trees with as much ease as we do a Cabbage, or a Lettice: With the same ease they throw down Houses, levelling whole Streets when they are commanded, either to do harm to an Enemy in War, or to stop the Fury of the Flames upon occasion of anv Fire.

TheTrunk.

The Trunk's length is proportionable to the height of the rest of his Body, so that he can take up any thing off the Ground with it without stooping. It is made of abundance of small Sinews knit together, which makes it fo pliable, that he can take up the least thing, and vet fo strong and firm as we have fhewn.

All the Body is cover'd with a rough Ash-colour Skin. An Elephant's usual Day's Journey is twelve Leagues, and his Motion has the same effect upon those that are not us'd to it, as that of

a Ship has at Sea.

Senfe of the Elephanu

I shall say nothing more wonderful concerning the Elephant's Docility, or aptness to learn, than what is generally reported; by which it will appear, there was Reason to say, No Beast was more sensible than the Elephant: For it does such things as seem to be the A&s of Prudence and Understanding. In the first place, tho' the Nayre makes use of a certain Instrument of Iron a Yard long, which has a Hook at one end, wherewith he strikes and punches him, that he may be watchful and mind what he bids him do, yet for the most part, he governs him only by Words: By which it appears he understands the Language very well; and some of them understand three or four that are very different, according to the feveral Countries they have liv'd in. Thus he that I travell'd on, seem'd to understand the Language of Cambogia, whence he came, and that of Cochin-China, where he was. And who would not admire to hear the Navre discourse with his Elephant? Tell him the Way and Road he is to take, what Place he is to pass by, what Inn they are to lie at, what they shall there find to eat; and in short, give him an exact Account of all that is to be done during the Journey? And to fee the Elephant perform what he expects from him, as regularly as any Man of good Sence could do: Infomuch, that when the Elephant feems to have understood what Place he was

to go to, he takes the shortest Cut to it. without minding the beaten Road, Rivers, Woods, or Mountains, but goes on, not doubting to overcome all Difficulties, as in effect he does: For if any Rivers be in the way, he either fords or fwims them; if Woods, he breaks the Boughs of the Trees, pulls them up whole, or cuts them with a sharp Iron like a Scithe, which to this purpose is fastned to the fore-part of the top of the Coach, wherewith upon occasion having first laid hold of the Boughs, he cuts them with his Trunk, and makes himself way, cutting through the thickest Forest, where it is easily known to have been an Elephant that made the way: And all this he does with great ease and expedition, in Obedience to the -

Nayre.

One only thing diffurbs this Creature, The Ele and puts it to great pain; which is that unwhen a Thorn, or fuch like thing, runs what is into the bottom of his Foot, which is faid. extraordinary foft and tender, and therefore he treads very cautioufly, when he goes through Places where there may be danger of fuch an Accident. I went a Journey once with feven or eight Elephants in a Company, and heard the Nayres, every one warn his own Beaft, to look out carefully where he fet his Feet: For they were to pass over a fandy place about a Mile in length, where Thorns grew up among the Sand; upon this intimation all the Elephants held down their Heads, and looking out, as it were, for fome small thing that is loft, they walk'd that Mile very cautioufly, step by step, till being told there was no more to fear, they lifted up their Heads, going on as they had done at first. Being come at Night to the Inn, the Nayres fent the Elephants to the Wood to feed, without taking the Coach off their Backs; and I asking, Why they did not take it down? They anfwer'd, That the Elephants fed on the Boughs of Trees, and therefore they left the Coach on their Backs, that they might cut them with that Iron we faid was before it. The next Day being come where there was no Wood, every Nayre carry'd a large Bundle of Green Boughs for his Elephant. I took particular Satisfaction to observe one, who more nimbly than the rest, laying hold of those Boughs with his Trunk, bark'd them with his Teeth, and then eat them up as quick, and with as good a Gust, as we would a Fig, or any other fort of Fruit. Discouring the next Day with

my Fellow-Travellers, who were about wenty, I told them, how much I was pleas'd to fee that Elephant eat the Boughs fo cleverly. Then the Nayre, by Order of the Elephant's Master, call'd him by his Name, which was Gnin, he being at some distance, but presently lifted up his Head to give Ear to what was faid to him. Remember, faid the Nayre, that Father, the Passenger that looked upon you yesterday, when you was eating; take such a Bough as one of them was, and come before him, as you did yesterday. No fooner had the Nayre spoke the words, but the Elephant came before me with a Bough in his Trunk, fingling me out among all the Company, shew'd it me, bark'd, and eat it; then inclining himfelf very low, he went away, as it were, laughing, making Signs of Joy and Satisfaction; leaving me full of aftonishment, to see that a Beast should be so apt to understand, and do what it was commanded. Yet the Elephant is obedient to none but the Nayre, or his Master; and he will only endure to fee them get upon him: For if he should see any other Person mount, there were danger that he would throw down the Coach with his Trunk, and kill him: And therefore when any Body is to get up, the Nayre generally covers his Eyes with his Ears, which are very large and ill shap'd.

If at any time the Elephant does not obey so readily as he should, the Nayre beats him cruelly on the middle of his Forehead, standing himself all the while upright on his Head. One time when I was upon him, with feveral others, the Nayre beat him, as has been fuid, and every Stroke he gave him, it look'd as if we should have been all thrown down headlong. Generally they give him fix or seven Strokes on the middle of the Forehead; but with fuch force, that the Elephant quakes, and yet bears all patiently. There is only one time when he obeys neither the Nayre, nor any other Body; which is, when on a fudden he is inflam'd with Lust: For then, being quite befides himfelf, he bears with no Body, but lays hold of the Coach with all that are in it, killing, destroying, and beating every thing to pieces. But the Nayre by certain Signs discovers it a little before it comes, and getting down speedily with all the Passengers, unloads him, taking down the Coach, and leaves him alone in fome By-place, till that Fury be over: After which, being fentible of his Error, and

as ir rere asham'd of himself, he goes wi: 3 Head low to receive the Blows BORRI. that are to be given him, thinking he has

deferv'd them.

Formerly the Elephants were of great Now useuse in War, and those Armies were for less inwar. midable that carried great T100ps of them into the Field; but fince the Portugueses found out the way of using artificial Fireworks to them, they are rather hurtful than otherwise: For not being able to endure those Sparks of Fire which get into their Eyes, they betake themselves to flight, breaking their own Armies, killing and confound-

ing all that stands in their way. The tame Elephant fights with only The Rhitwo Creatures, which are the wild Ele-noceros, phant, and the Abada, or Rhinoceros; the latter it overcomes, by the first is generally conquer'd. The Rhinoceros is a Beaft of shape between a Horse and an Ox, but as big as one of the smallest Elephants, cover'd all over with Scales, as it were so many Plates of Armour. He has but one Horn in the middle of the Forehead, which is strait and pyramidal, and his Feet and Hoofs are like those of an Ox. When I was at Nucc. mon, a City in the Province of Pulucambi, the Governour went out to hunt a Rhinoceres, that was in a Wood near our Dwelling place He had with him above a hundred Men, some a Foot, and fome a Horseback, and eight or ten Elephants. The Rhinoceros came out of the Wood, and feeing fo many Enemies, was fo far from giving any Tokens of Fear, that it turiously encountred them all; who open'd and making a Lane. let the Rhinoceros run through: It came to the Rear, where the Governour was a top of his Elephant, waiting to kill it: The Elephant endeavours to lay hold with his Trunk, but could not by reason of the Rhinoceros's swiftness and leaping, that striving to wound the Elephant with its Horn. The Governour knowing it could receive no hurt, by reason of the Scales, unless they struck it on the fide, waited till leaping it laid open the naked place, and calting a Dart, dexteroufly struck it through from fide to fide, with great Applause and Satisfaction of all the multitude of Spectators; who without any more to do, laid it upon a great Pile of Wood, and fetting Fire to it, leap'd and danced about, whilst the Scales were burning, and Flesh roasting, cutting pieces as it roafted, and eating them. Of the Entrails, that is the Heart,

How they are cormacd.

Liver, and Brain, they made a more BORRI. dainty Dish, and gave it to the Covernour, who was upon a rifing Ground, diverting himself with their Merriment. I being present, obtain'd the Hoofs of the Governour; which are look'd upon

to have the same Quality and the Claws of the Great Beaft (or the Hoof of the Elk) and so the Horn is good against Poison, as is the Uni-

### CHAP. V.

Of the Qualities, Customs, and Manners, of the Cochin-Chineses: Of their Way of Living, their Habit and Cures.

Colour and Deposition The Cochin-Chineses are in Colour Deposition This the Chineses; that is, inclinate Cochin-ning to an Olive colour: I mean those

that are nearest the Sea; for those up the Inland, as far as Tonchin, are as white as the Europeans. The Shape of their Faces is exactly like the Chinefes, with flat Nofes, little Eyes, but of an indifferent Stature, not so small as the Japoneses, nor so tall as the Chineses. Yet they are stronger and more active than either of them, and braver than the Chineses, but are out done by the Faponeses in one thing, which is the Contempt of Life in Dangers and Battels; the Japoneses seeming to make no Account of Life, nor to apprehend the least Fear of Death.

Their Civility.

The Cochin Chineses are naturally the most courteous and affable of all the Eastern Nations; and tho' on the one fide they value themselves much upon their Valour, yet on the other they look upon it as a great shame, to suffer themselves to be transported with Pasfion. And whereas all the other Eaftern Nations, looking upon the Europeans as a profane People, do naturally abhor them, and therefore fly from us when first we come among them: In Cochin-China it falls out just contrary; for they strive who, shall be nearest us, ask a thousand Questions, invite us to eat with them, and in short use all manner of Courtesie with much Familiarity and Respect. So it hapned to me and my Companions when we first came there, being, as it were, among Friends of an old standing. This is a very good Disposition to facilitate the Preaching of the Gospel.

This loving and easie Disposition is Liberality the Cause of much Concord among tem, they all treating one another as familiarly as if they were Brothers, or of the same Family, the they have

never known or feen one another before; and it would be look'd upon as a most vile Action, if one Man eating any thing, tho' never so little, should not share with all about him, giving every one a bit. They are also naturally kind and free hearted to the Poor, to whom it is customary among them never to deny an Alms, when ask'd; and it would be reputed a great Fault to deny it, as if it were due to them. Thus it hapned, that some Strangers escaping from a Shipwreck in a Port in Cochin-China, and not knowing the Language to make known their want, but learning only this word Doii, which fignifies, I am hungry: When the Natives faw Strangers at their Doors, crying out Doii, as if the greatest Misfortune in the World had befallen them, every one strove to be before another in giving them to eat; fo that in a short time they gather'd so much Provision, that a Ship being afterwards given them by the King to return to their Country, they took fuch an Affection to that Country, where they found all things for their Sustenance at such an easie rate, that not a Man of them would go away; so that the Captain of the Ship was forc'd to drive them aboard with many Blows and Cuts, which he effectually did, loading the Ship with the Rice they had gather'd only by going about, crying, I ans hungry.

But as ready as the Cochin-Chineses are to give, so are they as apt, if not more, to ask any thing they fee, fo that as foon as ever they cast their Eye on any thing that is new to them, and curious, they fay, Schin Mocaii; that is, Give me one of these Things: And it is fuch a Rudeness to refuse them, tho the thing be rare and precious, that whofoever should do it, would be ever after look'd upon as a vile Person; so that a

BORI

Man must either hide, or be ready to give what he shews. A Portugueze Merchant disliking this uncommon Cufrom, as not used to it, resolv'd, since every one ask'd of him whatfoever he faw, to do the fame with them: Accordingly he came to a poor Fisherman's Boat, and laying hold of a Pan-nier full of Fish, in the Country Language, faid to him, Schin Mocan, the honelt Man made no Answer, but gave him all the Pannier as it was, for him to carry home, as he did, admiring the Liberality of the Cochin-Chineses; but taking Compassion on the poor Fisherman, he afterwards paid him the full Value of it.

Their

The manner of Breeding and Civility Breeding, the Cochin-Chineses use, is more or less the same with that of the Chineses, always punctually observing all Niceties; we know these latter observe between Superiours and Inferiours, Equals, and the Respect due to ancient Persons, ever preferring the Eldest, of what Degree foever, and giving them preference before the Younger. Wherefore fome of those Gentlemen coming often a Visiting to our House, tho' the Interpreter told them, that a Father we had there somewhat elder than the relt, was not our Superiour: Yet they could never he brought to pay their Respect to the Young Superiour, before the Old Man. In every House, the' never so poor, the Cochin Chine fes have three forts of Seats: The first and meanest, is a Mat upon the bare Floor, on which Persons of equal Quality fit, as those that are of the same Family. The next is, a low Stool, cover'd with a very fine Mat; which is for Perfons of better Account. The third, is a Couch about three quarters of a Yard high, on which only the Lords and Governours of Places fit. or Persons dedicated to the Divine Service, and on this they always make our Father's fit.

This Good Nature and Civility of the Cochin Chineses, makes them so courteous to Strangers, whom they allow to live according to their own Laws, and to wear what Cloaths they please; and so they praise their Customs, and admire their Doctrine, frankly preferring them before their own; quite contrary to the Chineses, who despise all but their own Cultoms and Doctrine.

Fashion of

As for their Habit, we have before observ'd, that it is the general Custom in Cochin China to wear Silk; it only remains to speak of the Fashion of Vol. II.

the Cloaths. To begin with the Women; I think the modestest Garb of all India; for even in the hottest Weather. they fuffer no part of the Body to be uncover'd: They wear five or fix Petticoats one over another, all of feveral Colours; the first reaches to the Ground, which they train along the Ground with fuch Gravity and State, that the tips of their Toes are not feen: The fecond is half a Span shorter than the first: The third shorter than that; and so one over another; fo that all the feveral Colours appear: And this is the Womens Habit from the Waste downwards. for on their Bodies they wear Doublets checkered, of feveral Colours; over all they have a Veil; but so thin, that tho' it covers them, yet it is transparent, and shews all their Gaiety with Modeity, and makes a beauteous majestick Appearance. Their Hair is loofe, spreading over their Shoulders, so long that it reaches to the Ground, and the longer the greater Beauty they are reckoned. On their Head they wear fuch a broad Cap, that it covers all their Faces, fo that they cannot fee above four or five paces before them; and these Caps are interwoven with Silk and Gold, according to the Quality of the Person. The Women when met, are not oblig'd to any other Return of Civility, but to lift up the Brims of their Caps, fo much, as their Face may be feen. The Men, instead of Breeches, swarh themselves with a whole Piece of Stuff, putting on over them five or fix long and large Gowns, all of fine Silk, and of feveral Colours, with wide Sleeves, like those of the Monks of the Order of St. Benedill; and these Gowns, from the Waste downwards, are all flash'd curiously, so that as a Man moves, he makes a shew of all those several Colours together, and if any Wind blows to lift them up, they look like Peacocks with their fine Feathers foread abroad.

They let their Hair grow as the Wo- Hair and men do, down to their Heels, and wear Nails ne the same fort of Hats, or broad Caps. cur. Those who have any Beard, and they are but few, never cut it; being in this like the Chineses, as they are in suffering the Nails of their Hands to grow, which the People of Note never pare; this being a Mark of Distinction between them and the Commonalty, who always keep them short, for the conveniency of their Trades; whereas the Gentry have them fo long, that they cannot grasp any small thing in their

9 D

BURRI.

hands. Nor can they approve of our Falhion of cutting our Hair and Nails, being of Opinion, that they were given by Nature, as an Ornament to Man: So that some Discourse arising once concerning Hair, they started an Objection, which was not lo eafie to aniwer at fight, faying : If the Saviour of the World, whom in your Actions you profels your selves to imitate, wore his Hair long, after the manner of the Nazarites, myon your selves do afterm, and shew by your Pittures, why do not you do fo too? Adding, That our Saviour's wearing long Huir, demonstrated it to be the better Fushion. But at last they were fatisfi'd with the Answer we made, that this Imitation did not confift in the outward Drefs.

The Scho-

The Scholars and Doctors are formewhat more gravely clad, without fo many Colours and Slashes, and therefore cover all their Gowns with one of black Damask. They also wear a thing like a Scole about their Necks, and a blew Silk Maniple on their Arms, covering their Heads with Caps made after the manner of Miters.

Both Men and Women carry Fans in their Hands, rather for Ornament than Use, and they are not unlike to those the Women in Europe use. For Mourning, as we Europeans use black, they wear white. They never uncover their Heads in Saluting, that being look'd upon as an uncivil Action: Wherein they agree with the Chineses, among whom that Custom is reputed so unmannerly, that to comply with them in this particular, the Fathers of the Society were forced to obtain leave of Pope Paul the Fifth, to celebrate the Holy Sacrifice of the Mass cover'd. In thort, the Cochin-Chineses, wear neither Shoes nor Stockins, only faving their Feet with Leather Soles faitned acrol's the Toos with Silk, like Sandals; nor do they think it indecent to go quite bare-foot, and the going field, or un-shed, they are apt to dirty their Feet, they value it not, there being in every House at the Door of the ohief Room, a large Pan of clean Water, in which they wash their Feet leaving those Soles or Sandals they are there, to take them again when they go away, because they cannot then dirt their Feet, all the Floors being cover'd with Mats.

The Cochin-Ghinefes not being fo fond of their own Cultoms, as to despite those of Sarangers, as the Chinefes do, our Fathers in those parts have no accasion to change their Habit, wherein by differ but little from the generality

of all India. They wear a thin Cotton Caffock, which they call Ehingon, and is generally blew, without any Cloak, or other Upper-Garment. They have no Shoes, neither after the European, nor Country Fashion, the first they cannor get, because there is no Body knows how to make them; and the latter they cannot endure, because of the pain it is to any Body that is not us'd to it, to have his Toes spread at a distance from one another, by reason of the Buttons that fasten them on, and therefore they choose as the less Evil, to go quite bare foot, tho' it exposes them to continual Pains in the Bowels, especially at first, by reason of the dampness of the Country, and their not being us'd to it. True it is, that in time Nature complies, and the Skin grows so hard, that it is no pain to walk upon Stones or Briars. When I return'd to Macao, I could not endure Shoes, thinking them a weight

and encumbrance to my Feet.

The chief Suttenance of the Cochin-Their Di Chineses is Rice, and it is wonderful, that tho' the Country abounds in Flesh, Fowl, Fish, and Fruit, of so many several forts, yet when they eat, they first fill their Belly with Rice, and then tafte of other things, as it were for Fashion-lake. They make more account of Rice than we do of Bread, and that it may not clog them, they eat it alone without any feafoning of Salt, Sugar, Oil, or Butter, but boil'd in fo much Water as will keep it from burning to, fo that the Grain remains whole, only formed and moistned. For this very reason that the Rice is not season'd, it is the eafier of Digestion, and therefore they that live upon Rice, as they do in the East, commonly eat it at least four times a Day, and a great quantity of it to support Nature. The Cochin-Chinefes eat fitting crosslegg'd on the Ground, with a round Table before them Breaft-high, with Mouldings, or adorn'd with Silver or Gold, according to the People's Quality or Wealth. It is not very large, because the Custom is for every Man to have one to himself; fo that at a Feaft, as many Guefts as there are, so many Tables are provided, and the fame is done when they dine privately, only, fometimes, Man and Wife, or Father and Son, will make a that with the same Table. They neither use Knives nor Forks; of the first they have no need, because every thing is brought up from the Kitchin cut into finall bits; the place of the last is supplied by two little Sticks, wherewith

hey neatly and very readily take up any hing; nor have they any need of Nankins, for they never foul their Hands, nor touch any thing with them.

There are frequent Invitations among Neighbours, and ar these Entertainments they provide other forts of Dishes than what we have hitherto spoke of; for they make no account of Rice, suppofing every Man has enough of that at home; and tho' he that treats he never so poor, he does not come off with Credit, unless every Guest's Table be ferv'd with at least an hundred Dishes; and it being the Custom to invite all their Friends, Kindred, and Neighbours, there is no Feast where there is less than thirty, forty, fifty, fometimes a hundred, and even two hundred Guefts: I was once my felt at a folemn Entertainment, at which no less than two thoufand were feasted, and therefore these Banquets must be made in the Country, that there may be room for so many Ta-Nor must any Body admire that the Tables being small, they be furnish'd with a hundred Dishes at least: for upon these Occasions they very curioully make Frames of Sugar-Canes on the Table, on which they dispose of the Lid Dishes; and there must be in them all the Varieties of Meat the Country produces, as well Flesh as Fish, and Butchers Meat as Fowl, wild and tame Creatures, with all forts of Fruit the Season affords; for if but one were wanting, it would be a great Fault in the Entertainer, and they would not count it a Feast. The Men of Quality that are invited eat first, being waited on by their chief Servants. When the Musters have tasted of all they like best, these same principal Servants take their places, and eat, being waited on by the inferiour fort: Then these succeed in their places; and because all of them are not able to confume fuch Plenty, and according to Custom all the Dishes must be emptied; when these are fatisfied, then the very meanest Servants of every Great Man come in, and do not only eat their Belly-full, but put up all the Fragments in Bags they carry for that purpole, and carry them home, where they merrily divide it among the Boys, and other mean Fry, and so the Feast ends.

Cochin-China produces no Grapes, and therefore instead of Wine they drink a Liquor distill'd from Rice, which tastes like Brandy, and resembles it in colour and harshness, spirit and briskness, and

Vol. II.

ave fuch plenty of it, that all People in general drink as much as they will BOK of it, and are as drunk as People are 🐸 among us with Wine. Graver Persons mix that Liquor with some other Water distill'd from Calamba; which gives it a delicious Smell, and is a delicate Composition.

Between Meals they drink hot Water, wherein they boil the Root of an Herb they call Chia, from which the Liquor takes name. It is cordial, and helps to dispel Humours from the Stomach, and advance Digeltion. The Faponeses and Chineses, use such a fort of Drink, only that in China, instead of the Root, they boil the Leaves of the Herb; and in Japan, a Powder made of the same Leaves; but the effect is the same, and they all call it Chia.

Amidst this great plenty of Meat, and abundance of Provisions it is incredible how much Hunger and Thirst we Europeans endure; not fo much for want of Food, as because we are not us'd to that Diet, Nature finding a very great miss of Bread and Wine: And I believe the Cochin-Chineses would be in the fame Condition, should they come into Europe, where they would be depriv'd of their usual Sustenance of Rice, tho' they had plenty of other delicate To this purpose I will not Provisions. omit to relate what hapned to us with a Governour of Cochin-China, he being a Friend of ours, was invited by us to eat at our House; and the more to shew our Affection, we endeavour'd to have several Dishes dress'd for him after the European manner. He sate down to Table, and when we expected he should acknowledge our Kindness, commend the Cookery, and thank us for the Rarity, because we had been at much trouble about it: When he had tafted them all, he could not eat of any one, tho? out of Civility he strove against his Stomach; and we were forc'd to dress more Meat after the Country-fashion, the best we could, whereof he afterwards eat very favourily, to his own and our satisfaction. Yet Providence does not neglect a thousand ways to support those that undergo these Hardships for the Preaching of the Gospel, finding means, even in this World, to requite what they fuffer for the fake of God, as happens in this particular of Food, as was before faid of going bare foot; for by degrees Nature grows familiar with it, and comes to be so habituated to the Custom of the Country, that it looks 9 D 2 **Itrange**  BORRI.

when to return to its first ways. Lis happed to me, who when I return'd from thence, coveted nothing but the Rice of Cocbin-China, which I thought satisfied me more than any other thing.

Physicians.

As for Physicians, and their Way of Practice, there are abundance of Doctors, not only Portugueles, but Natives; and it often is experimentally known, that the Country Physicians eafily cure several Diseases, which the European Physicians know not what to dowith: So it sometimes happens, that after our Physicians have given over a Patient, they call one of the Country, and he cures him.

Way of Practice.

The Physicians of the Country use this fort of Practice: Being come to the Patient's Bed-fide, they stay a little to fettle themselves after the motion of coming; then they feel the Pulie for a long while together, very attentively, and with much confideration; after which they usually say, You have such a Distemper; and if incurable, they honestly say, I have no Cure for this Disease: Which is a sign the Patient will die. If they find the Difease curable, they fay, I have a Medicine that will cure him; and I will do it in fo many Days. Then they agree what they are to have if they cure the Sick Man, bargaining the best they can, and fometimes they draw up Writings to bind the Contract. After this the Phyfician himself prepares the Medicine, without the help of an Apothecary; for which reason there are none in the Country: And this they do, that they may not discover the Secret of the Art they work; and because they will not trust another to put together the Ingredients they prescribe. If the Patient recovers within the time appointed, as generally happens, he pays the Price agreed on; if he miscarries, the Physician loses his Labour and Medicines.

Medicines.

The Medicines they give are not like ours, which cause a loathing, and are laxative; but theirs are palatable as their Broaths, and nourishing without any other Sustenance, which makes them give the Patient several Doses in a Day, as we give Broath at so many Hours interval, and these do not alter the Course of Nature, but only help the usual Operations of Nature, dispersing the peccant Humours, without wracking the Patient.

A nomble Story. I remember a passage worth the relating in this place: A Portugueze salling sick, sent for the Ruropean Physi-

cians; who having us'd their Endeavours, gave him over. When they were gone, a Physician of the Country was call'd; who undertook to cure him in so many Days, strictly enjoining him, whilft he was under his Hands, to have a care of having to do with Women, upon pain of certain Death, from which, the Virtue of his Medicine could not deliver him. They agreed upon the Price, and the Phyfician undertook to cure him in thirty Days. The Patient took the Medicines prescribed him, and in a few Days found himself so well recovered, that he was not afraid to transgreis the Physician's Injunction; who coming to visit him, by the alteration of his Pulse discover'd the fick Man's Incontinency, and bid him prepare to die, because there was no Cure for him; but that he should pay him his Money, fince it was none of his fault that he must die. The Case was try'd; the fick Man was adjudg'd to pay: And so he dv'd.

Bleeding is also used, but not so much Bleeding. as in Europe, nor is it done with a Sieel Lancet; but they have abundance of Goofe-Quills, in which they fix some bits of fine Porcelane, made sharp, and shap'd like the Teeth of a Saw, fome bigger, some less, of several fizes. When they are to let Blood, they apply one of these Quills to the Vein, proportionable to the bigness of it, and giving it a fillin with the Finger open the Vein. a fillip with the Finger, open the Vein, only so much of the Porcelane entring as is requifite: And what is most wonderful, when they have drawn the Blood, they use no Fillet or Binding to stop it; but wetting their Thumb with Spittle they press the Orifice, so that the Flesh returning to the place whence it was parted, the Blood is stopt, and runs out no more: Which I suppose to proceed from the manner of opening the Vein, as it were fawing it with that Porcelance full of Teeth, and therefore it closes again the eatier.

There are also Surgeons, who have Surgeonsforms wonderful Secrets, whereof I will give but two Instances, one practis'd upon my self, the other upon one of our Brothers, my Companion: I hapned to fall from a very high place, with my Breast against the corner of a Stone, whereupon I presently began to spit Blood, and had a Wound in my Breast outwardly. We applied some Medicines after our European manner, but to no purpose. A Surgeon of the Country came and cook a quantity of a

certain

Grees.

certain Herb like that we call Mercury, and making it into a Plaifter, laid it on my Breaft, then he caus'd fome of that Herb to be boil'd for me to drink, and made me eat the fame Herb raw: And thus in a few Days perfectly cur'd me. I to make another Experiment, caus'd the Leg of a Hen to be broke in several places, and making a Plaifter as he had done of the same Herb, bound it upon the broken Leg, and in a few Days it was whole and sound.

A Scorpion bit a Brother of ours, my Companion, in the Neck; and in that Kingdom the Bite of a Scorpion is mortal. All his Throat fwell'd immediately, and we were about giving him Extreme Unction. A Surgeon was fent for, who immediately fet a Pot of Rice a boiling in nothing but fair Water, then clapping the Pot to the Brother's

It is cover'd him and it close with Closes, that the Steam might not go out, and as soon as the said Steam and hot Smoke of the Rice came up to the place where the Bite was, the Brother felt the Pain asswage, the Swelling in his Throat fell, and he remain'd as sound as if nothing had ail'd him.

Many other Instances might be added, but I shall only say, that the Medicines in those Parts have a greater Virtue than when they come to us; and particularly I can affirm, that I brought with me a small Cask of Rhubarh, which was extraordinary good there, and when I came into Europe, having spent two Years by the way, I found it so chang'd, that I scarce knew it my self, so that those Medicines lose much of their Virtue in bringing from those Countries to our Parts.

### CHAP. VI.

### Of the Civil and Political Government of the Cochin-Chineses.

Will give a brief Account of as much as may suffice for the Reader's Information, for it would be too tedious, and from the purpose of this my short Relation, to discourse of every thing in particular. The Government of Cochin-China, in general, is a Medium hetwixt those of China and Japan: For whereas the Japoneses make less account of Learning than Military Knowledge: And on the contrary, the Chineses attribute all to Learning, taking little Notice of Warlike Affairs. The Cochin-Chineses following the Example of neither, equally encourage Learning, and Skill in War, according as occasion offers, fometimes preferring the Soldier, and sometimes the Scholar, and so repulling them as appears most conve-

• In Cochin China there are feveral Universities, in which there are Professors, Scholars, and Degrees content'd by way of Examination, in the same manner as is practised in China, the same Books and Authors read; that is, Zinfu, or Confucius, as the Portugueses call them, which are Authors of such profound Learning, and in such Esteem and Reputation among them, as Aristotle is among us, being much anciencer than

he. These Books of theirs are full of Erudition, of Stories, of grave Sentences, of Proverbs, and fuch like things, for the directing a Civil Life, as are Seneca, Cato, and Cicero, among us; and they fpend many Years in learning the true sense of the Phrases, Words, Characters, and Hieroglyphicks, they are writ in; but that they most value is Moral Philosophy, or Ethicks, Oeconomy, and Policy. It is comical to fee and hear them, when they are Studying, read and repeat their Lessons in such a Tone as if they were finging, which they do to use themselves to it, and give every Word its proper Accents, which are many, every one expressing a several thing: And therefore one would think, that to converse with them, a Man must understand the Grounds of Musick.

The Language they generally speak, is different from that they read and teach in at the Schools, and which their Books are writ in: As among as the Vulgar Language differs from the Latin generally used in the Schools. Wherein they differ from the Chineses, who, if they are Learned, or Noble, always use the same Language, which they call of Mandarines; that is, of Doctors, Judges, and Governours, and the Characters they use in writing and printing their Books,

OKRI.

are above 8000, all differing frof one another. And for this Reason the Fathers of the Society spend eight, and even ten Years, in Itudying the Chinese Books, before they can be Musters, and go abroad to converse with them. But the Cochin Chinefes have reduced the Chara-Eters to 2000, which they generally make use of: And these are enough to express themselves in their Harangues, Letters, Petitions, Memorials, and fuch things which do not belong to printed Books; for those of necessity must be in Chinese Characters. The Japoneses have been more ingenious, who tho' in all that belongs to Books, whether written or printed, they agree with the Chineses, yet for all common uses have found out 48 Letters, wherewith they expreis whatfoever they pleafe, as well as we do with our Alphabet: And yet the Chinese Characters are in such esteem even among the Japoneses, that these 48 Letters, notwithstanding the use they are of above the others, are contemn'd in comparison of them; insomuch, that in fcorn they call them Womens Letters.

The ingenious Invention of Printing was found out in China, and Cochin-China, long before it was in Europe: but not in fuch perfection: For they do not Compose joining Letters and Characters, but with a Graver, Penknife, or fuch Instrument, cut and carve the Characters upon a Stone as they will have them in their Books: On this Board so carv'd they lay their Paper, and print it off, as we in Europe do Copper-plates, or the like.

Besides these Books of Morals, they have others, which contain things they account facred; as for instance: The Creation and Beginning of the World: Of the rational Souls of Demons: Of Idols, and of their feveral Sects. Thefe Books are call'd Saye Kim, to distinguish them from the profane, which they call Saye Chin, Of the Doctrine of their Sacred Books, we shall treat in the Second Part of this Account, where the Subject will be more fuitable.

Tho; the Language of the Cochin-Chineses be in one sespect like that of the Chineses, both of them using all Montifyllables, deliver'd in feveral Tones and Accents, yet they utterly differ in the word it felf, the Cochin-Chinese being more full of Vowels, and confequently fofter and fweeter, more copious in Tones and Accents, and therefore more karmonious. The Language

of Cochin China is, in my Opinion, the ealiest of any, for those that have a Musical Ear, to take the Tones and Accents; for it has no variety by way of Conjugation of Verbs, or Declination of Nouns, but one and the same word, with the addition of an Adverb, or Pronoun, fignifies the Present, the Present. and Future Tenfes, the Singular Number, and the Plural; and in fine, serves for all Moods, Tenses, and Persons, and the diversity of Numbers and Cases. For instance : This word, To bave, which in the Chinese Language is Co. by only adding a Pronoun, ferves all occasions, saying, I have, Thou have, He have; the Name of the Person making that diversity, which we express by altering the termination, thus, I have, Thou hast, He has. In the same manner they make the feveral Tenfes; faying, for the Present, I now have; for the Preterit, I heretofore have; and for the Future, I hereafter have; And fo without ever altering the word Co; by which it appears how eafily this Language may be learn'd: As it hapned to me, who in fix Months understood so much, that I could discourse, and even hear their Confessions, tho' not so perfectly, for it requires at least four Years to be a Master. [This variety of Moods and Tenses, appears better by the Latin, or other Languages, than in English, where we use much the same Method, as he represents in Cochin-China; our Variations the same, being but few, as to instance in the same word, I have, You have, We have, They have, I shall have, May we have: And so in this, and many others.

But to return to our Relation: I was Rewards faying, that the Cochin-Chineses reward for Military not only the Learned with Dignities, Em. Men. ployments, and Revenues; but that they make great account of good Soldiers, in which particular they act differently from us; for instead of assigning brave Commmanders, some Land, Earldom, or Marquisate, as a Reward of their Valour, they allot him fuch a number of People, and Vassals, belonging to the King himself, who whatsoever part of the Kingdom they live in, are oblig'd to own him as their Lord, to whom they have been assign'd by the King, being bound upon all Occasions to serve him with their Weapons, and to pay him all those Duties they before paid to the King himself, and therefore, as we say, such a one is Lord, Earl, or Maraness of such a siace; they say,

he Lanuage.

such a one is a Man of fifty, fuch a one of a thousand Men, to such a one the - King has added three thousand, to such a one two thousand; their Dignity, Wealth, and Grandeur increasing by the addition of many Vastals. We shall speak of the Wars of this Kingdom in

the next Chapter. Trials at

It remains that we fay fomewhat worth being known of the Civil Government. In the first they govern rather after a Military manner, than by Judges, Counfellors, and Lawyers, and their Formalities, the Vice-Roys and Governours of Provinces performing that Function; for every Day they give Publick Audience for four Hours daily, in a large Court within their own Palace, two Hours in the Morning, and two after Dinner. Hither all Suits and Complaints are brought, and the Vice-Roy, or Governour, fitting on a Triburial rais'd like a Balcony, hears every Man in his turn; and these Governours being generally Men of sound Judgment, Capacity, and Experience, they eafily discover the truth of the matter by the 'Questions they put, and much more by the common Consent of the Stander by, which is gather'd by the Applause they give the Plaintiff, or Defendant, and accordingly they immediately, without delay, give Judgment with a loud Voice, which is immediately executed without any Demur, or Appeal, whether the Sentence be Death, Banishment, Whipping, or Fine, every Crime being punish'd as the Law appoints.

Falle Witpunifi'd.

The Crimes generally try'd and feneffes how verely punish'd are many, but they are particularly rigid against false Witnesses, Thieves, and Adulterers. The first of these being convicted of having given talse Evidence, are themselves indispenfably condemn'd, as if they themselves had committed the Crime they accuse others of. And if the Crime they alledg'd deserv'd Death, they are sentenc'd to die: And Experience teaches, that this way of Trial is very proper to find out the truth.

Thieves.

Thieves, if the Theft be confiderable, are beheaded; if small, as for Example, a Hen, for the first Offence they have a Finger cut off, for the fecond another Finger, for the third an Ear, and for the fourth the Head.

Adulserers.

Adulterers, both Men and Women, indifferently, are cast to the Elephants to be kill'd, which is done thus: They lead the Criminal out into the Field,

Wı in the presence of an infinite number or People flocking together, he is fet in the middle with his Hands and Feet bound, near an Elephant, to whom the condemn'd Persons Sentence is read, that he may execute every part of it orderly, first that he lay hold of, grasp, and hold him fast with his Trunk, and fo hold him in the Air, shewing him to all the Company; then that he tols him up, and catch him upon the Points of his Teeth, that his own weight may strike them through him; that then he dash him against the Ground; and lastly, that he bruise and cruth him to pieces with his Feet : All which is exactly perform'd by the Elephant, to the great Terror and Amazement of the Spectators, who are taught by this Punishment, at another Man's cost, what Fidelity is due between married Persons.

Since we are upon this Point of Ma-Matrin trimony, it will not be from the purpose to deliver some farther Particulars concerning it, before we conclude this The Cochin-Chineses, tho' Chapter. Heathens, never use to contract Matrimony within those Degrees forbid by the Laws of God and Nature, within the first Degree of the Collareral Line of Brothers and Sifters. In other Degrees Matrimony is lawful to every Man with only one Woman; tho' rich Men use to have many Concubines. under pretence of Grandeur and Generofity, looking upon it as Coverousness. not to have as many as every Man's Income will conveniently maintain; and these are call'd second, third, tourth, and fifth Wives, and to on, according to every one's Rank, all which wait upon the first, which is accounted, and really is the true Wife, whose Business it is to chuse the others for her Husband. But these Marriages of theirs are not indisfoluble, the Laws of Cochin-China allowing of Divorces, but not at china allowing of Divorces, but not at the Will of either Pary, it being first requisite, that the Person suring for it requisite, that the Person suring to it, convict the other of many Ottences; which being made out, it is lawful to dissolve the first Marriage, and marry again. The Husands bring the Portion, and leave their own House to go to the Wife's; upon whose Forumes they live, the Wolmen managing all the Houshold Affairs, and governing and Family, whilst the Husband lives idle arhome, hardly knowing what there is in home, hardly knowing what there is in the House, satisfy'd that they have Meat and Cloth.

#### CHAP. VII.

Of the Power of the King of Cochin-China, and of the Wars he has in his Kingdom.

in Cannon and fmall Arms.

Their Skill Took Notice at the beginning of this Account, that Cochin-China was a Province of the great Kingdom of Tonchin, usurp'd by the Grandfather of the King now Reigning; who being made Governour of it, rebell'd against the faid King of Tonchin; to which he was not a little encourag'd, by having in a fhort time got together a great many Pieces of Cannon of the Wrecks of feveral Portuguese and Dutch Ships, cast away upon those Rocks, which being taken up by the Country People, there are above fixty of the biggest, at this time, to be seen in the King's Palace. The Cochin-Chineses are now become so expert in managing Artillery, that they perform it better than the Europeans, practifing continually to shoot at a Mark, with such success, that being proud of their Skill, as foon as any European Ship arrives in their Ports, the King's Gunners challenge ours, who being fenfible that they cannot stand in competition with them, as near as they Gallies, Sci-can, avoid this Trial of Skill, being con-

Horfes.

mitars, and vinced by Experience, that they will hit any thing as exactly with a Cannon, as another shall do with a Firelock; which they are also very expert at, often drawing out into the Field to exer-Another great Encouragement to Rebellion, was, his having above a hundred Gallies, which rendring him for-midable by Sea, and the Artillery by Land, he eafily compass'd his Designs against the King of Tonchin. Besides, by reason of the constant Trade in Japan, there were in Cochin-China abundance of Catana's, which are Scimitars made in Japan, and excellently temper'd: And all the Country abounding in Horses, which tho small, are handsome and mettlesome, on which they could be calling Descended daily excellent. fight, calting Darts and daily exercise them elves.

King's

The Power of this King is fo great, that whenfoever he pleafes, he can bring 80000 fighting Men into the Field, and yet is always in fear of the King of Tonchin, whose Power is four times as great; to whom, for quietness sake, he, by Agreement, pays a Tribute, of all

fuch things as his Kingdom affords, and are useful for that of Tonchin, particularly of Gold, Silver, and Rice, furnishing, befides all this, Plank and Timber for building of Gallies. And for the same Reason he was about entring into a League with the fugitive Son of the late King, who Lorded it in the utmost Province of Tonchin, which boders upon China, that in case he succeeded, and became Master of Tonchin, Cochin-China might remain free from all Tribute and Acknowledgment.

For the better understanding hereof St

is to be observ'd, that when I was in Cochin China, that Kingdom was in the possession not of the precedent King, but the Tutor or Governour of that Son, who made his escape from the said Governour to fave his Life. The faid Prince liv'd like a Fugitive, in the farthest Province adjoining to China; where being known to be what he was, that is, the late King's Son, he was receiv'd by that People as their Sovereign Lord, and by his good Government he had fo strengthned himself, that his Tutor already declar'd King of Tonchin, was much afraid, feeing him grow fo great, left he should agree with the King of Cochin China, who is on the opposite fide, to catch him between them, and expel him his unjust Possession. therefore every Year form'd a confiderable Army to destroy the aforesaid Prince; but always to no purpose, because the Army being of necessity to march five or fix Days, tho' a Country where there is no other Water to drink, but that of fome Rivers coming from the Enemies Country; the Army always found it poison'd by the Prince's Party, with a fort of Herb, the effect whereof was fuch, that it destroy'd both Men and

The Military Discipline, and Art of War . in Cochin China, is almost the same as in a Europe, the same Form being observ'd in ' drawing up, fighting, and retiring. This King has generally War in three parts of his Kingdom: Figh, he is always

Horses; which oblig'd him always to

retire after much Trouble and Expence

cast away.

### An ACCOUNT of Cochin-China.

upon his Defence against the King of Tonchin, who as has been said continually threatens and assaults his Frontiers, and therefore the King of Cochin-China has his Residence in Sinuua, the extream part of his Dominions, the better to oppose him, and march his Forces towards the Consines of Tonchin, which is a powerful Province, and generally under experienced and martial Governours.

The next is a fort of Civil War. rais'd by two of his own Brothers, who aiming to be equal in Command and Power, not fatisfy'd with what has been allotted them, have rebell'd against him, and craving Succours from Tonchin, gave him perpetual trouble. Whilft I liv'd in those parts, they having got fome Pieces of Cannon, which they carry'd upon Elephants, fortify'd themselves so well upon the Frontiers, that the King's Army marching against them, was in the first Engagement routed with the loss of 2000 Men; but coming to a fecond Battel, the King's Brothers loft all they had gain'd before, being both made Prisoners; and they had both immediately lost their Lives, had not his Majesty's Natural Clemency and Brotherly Affection prevail'd, and taken place of his Anger, so far as to spare their Lives, yet so as to keep them Prisoners.

The third place where he has continual War, is on the West-side, and utmost Bound of his Kingdom call'd Renran, against the King of Chiampá; whose Esforts being weaker, are sufficiently repuls'd by the Troops of that same Province, and the Governour.

He is also in continual Motion, and making Warlike Preparations to assist the King of Cambogu, who has marry'd his Bastard Daughter, sending him Succours of Gallies, and Men, against the King of Stam; and therefore the Arms of Cochn-China, and their Valour, is famous and renowned, as well by Sea as by Land.

At Sea they fight in Gallies, as has been faid, each of which carries Cannon, and is mann'd with Musketiers. Nor will it seem strange, that the King of Cochin China has an hundred, or more, Gallies in a readiness, when the Method of furnishing them is known. It is therefore to be observed, that the Cochin-Chineses do not use the have a Crew of Criminals, or other blaves, to row in his Gallies; but when they are to go Vol II.

stight, or for any other purpose, the way to man them immediately is this: A great number of Officers, and Commiffaries, go out privately, and fcouring on a fudden all together throughout the whole Kingdom, with the King's Authority, press all they find fit for the Our, conducting them all together to the Gallies, unless they be exempted by Birth, or any other Privilege. Nor is this Method fo troublesome as it appears at first fight: For in the first place they are well us'd and paid aboard the Gallies; and befides, their Wives and Children are fed and provided with all things necessary, according to their Condition, all the while they are from their Houses. Nor do they only ferve at the Oar, but upon occasion lay hold of their Weapons, and behave themselves bravely. tor which purpose every one has his Musket, Darts, and Scimitar allotted him; and the Cochin-Chineses being of an undaunted Spirit, and brave, they give good Tokens of their Valour, either rowing to join their Enemies, or with their Arms when join'd. Their Galleys are somewhat less, but particularly narrower than ours, but so neat, and fo well adorn'd with Gold and Silver, that they afford a glorious fight. Chiefly the Stem, which they account the most honourable Post, is all over Gold, there the Captain and Perfons of chief Note have their Station; and the Reason they give for it is, that it being the Captain's Duty to be the first upon any danger, it is fit he should be in the properest part of the Gally for that purpose.

Among other forts of Defensive Arms they use in War, they have certain oval, hollow Targets, so long that they cover a Man quite, and so light, that they can manage them without any trouble. The Cities of this Kingdom have a great advantage in the manner of their Houses, which being all of Word upon Pillars of Timber, as has been said before, when the Enemy cones so strong, that they perceive they annot oppose him, every Man slies to be Mountain with what he has, firing the Houses, so hat the Enemy sinds northing but the Rubes left by the Flames, all having no place to fortisse himself, noting the hock to his own Country, and the thabattants returning to the same place in a short time, with great ease rebuild their

Houses.

BORRI.

#### CHAP. VIII.

#### Of the Trade and Ports of Cochin-China.

Trade of Cochin-China.

THE great plenty Cochin-China aftords of all things necessary for the support of Human Life, as has been faid before, is the cause that the People have no Curiofity, or Inclination to go into other Kingdoms to trade; and therefore they never go fo far to Sea, as to lose fight of their beloved Shore; yet they are very ready to admit of Strangers, and are very well pleas'd they should come not only from the neighbouring Countries, but from the remotest Parts to trade with them. Nor do they need to use any Art for this purpose, Strangers being sufficiently allur'd by the Fruitfulness of the Country, and the great Wealth which abounds there, and therefore they refort thither not only from Tonchin, Cambogia, Chincheos, and other neighbouring places, but from the remotest, as China, Macao, Japan, Manilla, and Malacca, all of them carrying Silver to Cochin-China, to carry away the Commodities of the Country, which are not bought, but exchang'd for Plate, which is here put off as a Commodity, being fornetimes worth more, and fometimes less, according as there is more or less plenty of it, as is usual with Silk and other Goods.

All the Coin they use is of Brass, and of the same value, like a Quatrine, 500 of which make a Crown. These Pieces are quite round, with the King's Arms and Enfign itamp'd on them, and every one of them has a hole through the middle, which ferves to string them by thousands, and every thousand is worth

two Crowns. The Chine Test and Japone fes, drive the

Rich Trade

of the Chi- chief Trade of Orchin China, which is manag'd at a Fair held yearly at one of the Ports of this Kongdom, and lasting about four Months The Chineses, in The Chineses, in their Vessels they fall Junks, bring the valle of four or eve Millions in Plate; and the Japone feet in their Ships call'd Solvers an ministe quantity of very fine and, and other commodities of their Country. The King has a valt Revenue from this Fair by Cultoms, and Impolts, and all the whole Country receives great profit. The Cochin-Chineses applying

themselve, very little to Arts, because

plenty makes them lazy; and being foon taken with the Curiofities of other Countries it comes to pass, that they put a great Value upon, and buy at great Rates, many things, which to others are of very small worth; as for instance, Combs, Needles, Bracelets, and Pendants of Glass, and such-like Womens Tackling. I remember a Portugueze, who bringing into Cochin China from Macao, a Box full of Needles, which could not be worth above thirty Ducats, made above a thousand of it, felling that for Six-pence in Cochin-China, which had not cost him above a Farthing at Macao. In short, they out-bid one another, in buying any thing that is very new and strange, without sparing for Price. They are very fond of our Hats, of Caps, of Girdles, Shirts, and all other forts of Garments we wear, because they are quite different from theirs; but above all, they put a great Value upon Coral.

As for their Ports, it is wonderful sea-1 that in a Coast little more than an hundred Leagues in length, there should be above fixty most convenient Landingplaces, which is fo, because there are many large Arms of the Sea. But the principal Port, to which all Strangers refort, and where the afore mention'd Fair is kept, is that of the Province of Cacchian; which has two Mouths, or Inlets from the Sea, the one call'd Pulluchiampello, and the other of Turon, being at first three or four Leagues distant from one another, but running in seven or eight Leagues like two great Rivers, at last join in one, where the Vessels that come in both ways meet. Here the King of Cochin-China assign'd the Chineses, and Japoneses, a convenient Spot of Ground, to build a City for the benefit of the Fair. This City is call'd Faifo, and is so large, that we may say they are two, one of Chineses, the other of Japoneses; for they are divided from one another, each arrivate divided from one another, each arrivate diffinct Governour, and the Court Living according to the Law of Court, as the Japone of december of the Law of Court Living according to the Law of Court Living according to the Law of Court Living of Cocking to the Law of Court Living of Cocking to the Law of Court Living of Cocking to the Law of Cocking

Dutch reforted thither with all forts of Hereupon the Portu-Commodities. gueses of Macao, resolved to send an Embassador to the King, to demand in their Name, that the Dutch, as mortal Enemies to their Nation, should be excluded all Cochin-China. One Ciptain Ferdinand da Costa, a Man well known for his Valour, was appointed to go up-on this Embaffy; which he deliver'd, and was favourably heard, with Affurances of obtaining his Demands. Nevercheless, whilft he was yet at that Court, there arriv'd a Duich Ship, and coming to an Anchor in the Port, some of them landed with much Mirth and Jollity, and presently went with rich Presents to the King: He accepted of them very graciously, and granted them the usual Liberty of Trading freely in his Kingdom. Acoffa hearing of it, went presently to the King, and complaining, That His Majesty did not keep his Word with him, in a Portuguese Bravadogue a Stamp on the Ground to shaw his R. Lament. The King, and all the Cartiers were pleas'd at his P flog and bill again tave Parience, the meet and revent, and le flould find the first and the flould find the first and the flow of the first and the latest to go affore, and the latest the first and the Figure 1 and 1 arch to go affore, and land all their Goods against the Fair at Turon, as the Portugueses did; which they perform'd: But as they were going upon the River in Boats, they were on a sudden assaulted by the Gallies, which destroy'd most of them. The King remain'd Master of their Goods; and to justifie this Action, alledg'd, That he very well knew the Dutch, as notorious Pyrates, who infested all the Seas, were worthy of feverer Punishment; and therefore, by Proclamation. forbid any of them ever reforting to his Country: And it was actually found, that those very Men had robb'd some Vellels of Cochin-China, and therefore took this just Revenge; admitting the Portugueses as good and fincere Friends: Who not long after fent another Emballador from Macao, to obtain of the King a Confirmation of the aforesaid Vol. II.

at the instance of A. ofta, alleaging as a Motive, the Danger that the Dutch, in time, in the conningly pollels themselves of fom part of cochin China, as they had done in other parts of India. But the new randa dor was advis'd by knowing Men of that Country, not to mention any fech thing to the King, because that very thing would be a Motive to him to grant the Dutch a free Trude, and invite all Holland to come over, he pretending to be afraid of no Nation in the World; quite contrary to the King of China, who being afraid of every Body, forbids all Strangers trading in his King-dom; and therefore the Embassador must urge other Motives to obtain his Defire.

The King of Cochin-China has always Portul shewn himself a great Friend to the Por- favour tugueses that trade in that Kingdom, China. and has several times offer'd them three or four Leagues of the fruitfullest Country about the Port of Turen, that they may build a City there with all forts of Conveniences, as the Chinefes, and Ja-ponefes, have done. And were it al-low'd me to give his Catholick Majesty my Opinion in this point, I should say, he ought, by all means, to command the Pertugueses to accept of the kind Offer made them, and to build a good City there as foon as possible; which would be a Refuge, and brave Desence, for all the Ships that pass by towards China: For here a Fleet might be kept in readiness against the Dutch, that fail to China and Fapan, who of necessity must pass through the middle of the Bay, that lies between the Coast of this Kingdom, in the Provinces of Ranran, and Pulucambi, and the Rocks of Pulusisi.

This is what small Matter I thought I could, with Truth, give an Account of, concerning the Tranpotal State of Cochin-China, according to the Knowledge I could gain in some Years I restided there; as pill farther appear in the Second Part of this Relation.

The End of the First PAR

The

## The Second PART.

#### TREATING

## Of the SPIRITUAL STATE of Cochin-China.

#### CHAP. I.

Of the first Entring of the Fathers of the Society of JESUS into that Kingdom: And of the two Churches built at Turon, and Cacchian.

The Jesuits the first that raught Christianity in Coebin-China.

Efore the Fathers of the Society of Jesus went into Cochin China, it was the Custom of the Portugueses trading thither, to carry thither with them from Malacca, and Macao, and the Spaniards from Manila, some Chaplains, to say Mass and administer the Sacraments to them. during their stay there, which generally was three or four Months in a Year. These Chaplains having no other Obligation but only to serve the Portugueses, never thought of promoting the Spiritual Welfare of the Natives of that Country, not applying themselves to learn their Language, nor using any other means to communicate the Light of the Gospel to them. And yet there was one of these who had the Face to publish in Spain, in a Book call'd, The Voyage of the World; that he had Catechiz'd and Baptiz'd the Infanta or Princes of Calletin cess of Cochin China, and a great many of her Ladies: Whereas never Infanta, nor any other Person, of all that Royal Family, till this time, has shewn any Inclination to become Christian, notwithstanding we Fathers go every Year to vift the King, and discourse with all the Great Men of the Court; and yet the Informa has not given any Token of hig a Christian, or so much as knowing what a hristian is. And it may well be dicern'd, how fally he talks in this foint, by the other Fables he adds in the same Book, concerning that Infanting as that the would have

marry'd the faid Chaplain, and the like. We know of none but fome Fathers of the Order of St. Francis, that went from Manila, and one of St. Augustine from Macao to Cochin China, merely for the Conversion of those Souls. But they meeting with no Success, by reason of the many several Difficulties that occur, they return'd to their Countries! Providence so ordering it, which had design'd that Land to be cultivated by the Sons of the holy Patriarch Ignative, which was done as follows:

Certain Portuguese Merchants and quainted the Superiours of the Sociof Jesus at Macao, with the great; vantages that might be gain'd, to wance the Glory of God in Cochin-Chin if there were undaunted and zealous bourers sent thither; and particula one Captain earnestly press'd the Fatl Provincial, not to abandon a Kingd so capable of being instructed in Holy Faith. The Proposal seem'd the Father very agreeable to the Sp of our Vocation, and therefore with demurting upon the execution of it, smade choice for this Enterprize of Francis Buzome, who had been Professor of Divinity at Macao, by Birth a Genose, but educated in the Kingdom of Naples, the Society, India: Together, was cochis. China was

the fake of his Redeemer, freezing leifurely to Death. F. Caravalho being gone, F. Buzome was left alone in Cochin-China, with only a Lay-Brother to attend him: Being zealoufly inflam'd with the defire of faving Souls, he us'd all possible means for their Conversion, and to this purpose began his Missionat Turon. But as yet he knew not the Language, nor could he find any Interpreter that knew any more Portugueze than what was requifite for buying and felling, and fome Words or Phrases, which the Interpreters of the Chaplains of Ships, who were there before the Fathers of the Society, made use of to ask the Cochin-Chineses, Whether they would be Christians? After this manmer they had made fome, but fuch as might rather be accounted to by Name than by Profession; for they did not so much as understand what the Name of a Christian meant: And this by reason of the Phrase the Interpreters us'd to ask them, Whether they would be Christians: For the Words they made use of, fignify'd nothing more, than that they would become Portugueses; which F. Francis Buzome found out by this following Accident: A Play was afted in the publick Market-place, at which the Father saw one in the Habit of a Portugueze, brought in by way of ridicule, with a great Belly to artificially made, that a Boy was hid in it; the Player, , ore the Audience, turn'd him out of Belly, and ask'd him, Whether he would go into the Belly of the Portugueze? Using these words, Con gnoo muon bau tlom laom Hoalaom chiam? That is, Little Boy, will you go into the Belly of the Portugueles, or not? The Boy answer'd, He would: And then he put him in again, often repeating the time thing to divert the Spectators. The Father observing, that the Phrase the Player fo often repeated, Muon bau tlom laom Hoalaom chiam, was the fame the Interpreters us'd, when they ask'd any one, Whether he would be a Christian? Presently conceiv'd the mistake the Cochin-Chineses were under; who thought, that to become a Christian

was only to cease being a Cochin-Chinese, and become a Popuguese, which to make Sport was expressed in the Play, by making the Bay go into the Belly of The Fa-

The Fa-

Mistaken Conver-

fions.

Japan, as he did. This was he, who

heing put into a Pool of cold Water in

the dead of Winter, and expos'd to the Wind and Snow, gave up his Life for

ook care, that so pernicious an Error should spread no farther, teaching those already baptiz'd their Duty, and instructing those that were newly converted, what it was to be baptiz'd and become a Christian, taking particular care that the Interpreters should be well inform'd in this particular, that they might afterwards ferve faithfully in teaching of others; changing the abovemention'd Phrase into this, Muon bau dau Christiam chiam? That is, Will you enter into the Christian Law, or no? His great Diligence and Charity was fo fuccefsful, that within a few Days he began to reap the Fruit of his Labours. as well by the Reformation of those who before were Christians only in Name, as the Conversion of many more. Nor was the Fame of his Charity and Zeal for the gaining of Souls confined to Turon, his usual Place of Refidence, but foread abroad into other places; he labouring in all places to inffruct, convert, and dispose the People to receive Baptism with such Fervour, and so great a Concourse about him, that in a short Churc time those new Christians built a very erecte large Church at Turon, in which the most Holy Sacrifice of the Mass was publickly celebrated, and the Christian Doctrine preach'd and taught, by means of the Interpreters, then well instructed: all Persons being very much taken with F. Francis Buzome: Who besides his being a Person of great Knowledge and Vertue, entirely gain'd the Affections of those Heathens, by his great Meekness and Affability, informuch that they all flock'd after him. This particularly hapned at Cacchiam, the City where the King refides, fix or feven Leagues from Turon, up the River.

Here F. Buzome made so great an Impression, that a place was presently allotted him for a Church, which was built in a very short time, every Body contributing to the Expence, and to the Work, according to their Power. Befides, he had a good House assign'd him, fit for to make a Residence of Fathers, who were to go thither in time to instruct that keeple in Matters of Faith: All which was done with the assistance of a most Noble Lady, who was converted, and in Baptifin to

Name of Joanna. She not only took the Foundation of the House and Church, but erected feveral Altars and Places of Prayer in her own House, never ceafing to bless and praise God for the Mercy shewn her, is mlightning

and drawing her to the Faith. All t 's his Divine Majesty brought to pass in the space of a Year, through the means of his Servant, F. Francis Buzone; whose Fame being spread as far as Macao, the following Year our Father Provincial thought fit to fend him another Father, that was younger, with a Japenefe Brother, that learning the Language, he might afterwards preach without standing in need of an Interpreter. This was F. Francis de Pina, a

Portuguese, who had learn'd Divinity under F. Francis Buzome. And tho' this fecond Year the Increase was not anfwerable to that of the first, as to the Conversion of Souls, yet the Advantage was much greater in the Sufferings of a cruel Persecution, rais'd by the Enemy that fow'd the Tares, who could not endure to fee the Divine Seed grow. up so prosperously in those Parts, and endeavour'd to choke it; as shall be thewn in the next Chapter.

#### CHAP. II.

Of the Persecution the New Church of Cochin-China endur'd, at its first Institution: And how I was sent thither to be as fifting to it, by my Superiours.

Caufe of the Perfecurion.

THE Perfecution against the Fathers took its beginning from an Accident at first fight ridiculous, and of no moment, which afterwards gave them much cause to lament. That Year there hapned an universal Barrenness throughout the whole Kingdom, for want of the ufual Inundation in Autumn; which, as was faid in the first part, is so necessary for bring ng up the Rice, the chief Support of Life in that Country. Hereupon their Priefts, whom they call Omfaits, held a Great Council, to find out the Cause why their Idols were so angry with all their Kingdom, that feeing the People starve to Death about the Fields, yet they were not the leaft mov'd to Compassion for so great a Calamity. It was there unanimously agreed, that there was nothing new in the Kingdom, so opposite to the Worthip of the Idols, as the admitting of Strangers freely to preach up a Law there, that utterly contradicted the Honour given to those Idols; and that they being justly brovok'd at it, reveng'd themselves by denying them their defined Raise. defired Rain.

The Fathers banish'd.

This being agreed on as a most undoubted Truth, according to their ignorance, they presently went in a tumultuous manner to the King, and press that the Preachers of the New Law may be banished all the Kingdom, that being the orth Merchant production of the Warth ing the only Means to appeale the Wrath of their Gods. The wife King laugh'd at their Project, knowing it to be a foolish Notion of those Priests, and

made little Account of it, having a great Elteem for the Fathers, and a Kindness for the Portugueses. Yet this Favour of the King avail'd them but little to oppose the Fury of the Ministers of Saran; for they so stirr'd up the People to press that the Preachers of the Gospel might be expell'd the Kingdom, that the King, not able to refift without danger of a Muuny, fent for the Fathers, and with much Concern told them, He was fenfinle of the Folly of the People, and Ignorance of the Priests; but that it was not Prudence to withstand a Multitude; so eagerly bent upon such an Affair as that was, which was defigned for the removing fo General a Calamity, and therefore they must depart his Kingdom as soon as possible. The Fathers having heard these Words with Tears in their Eyes. feeing themselves oblig'd to forsake those new and tender Plants of Chriflianity, yet ever submitting to the Will of God, went away to emberk; but being got aboard, in Obedience to the King's Command, they could never get out of the Harbour, because at that time a fort of contrary Winds, which ufually hold three or four Months, had begun to blow, which by the Portugueses are call'd Monceo, or General Winds. The Communication of General Winds. The Communication in the City, but the bloom to small upon the Short and the communication of the Comfort, and the company of the Comfort, and the company of the Comfort of the C

# An ACCOUNT of Cochin-China.

is very violent. It was a great Satisfa-· Etion to them in the midst of their Sufferings, to fee the Constancy of some of those new Christians, who never forfook their Masters, following, accompanying, and relieving them the best they could, becoming voluntary Companions in their Sufferings. F. Busome had here a new Trial of his Vertue; for the uneafiness of this uncomfortable Life, in a few Days, caus'd an Imposthume to break out in his Breast. from which abundance of Corruption ran, and was a mighty weakning to him.

An H po-core Prieft brought the Preachers of the Gospel to o' tak idols this miserable Condition, made yet farther efforts to discredit their Doctrine, and Catholick Religion, making use to this purpose of one of those Omfairs, who living a folitary Life, was therefore in great Reputation of Sanctity. This Man coming one Day, from his Hermitage, publickly boalted, That by his Prayers he would cause the Idols immediately to fend Rain: And without more to do, went away follow'd by an innumerable multitude to the top of a Mountain, where he began to call upon his Devils, and striking the Earth three times with his Foot, the Sky was prefently clouded, and there fell a Shower of Rain; which tho' not fufficient to fupply the want, yet was enough to give a Reputation to that Minister of Hell, and to discredit our Holy Faith, every one faying, They had not yet feen the Foreign Priests obtain so much by their Prayers of the Great GOD, whose Servants they profes'd themselves. This Accident troubled the Fathers more than the Misery they liv'd in; but Providence comforted them by the means of the Lady Joanna above-mention'd. She, as it were, with a Prophetick Spirit, bid them not be concern'd at any thing that had hapned; for in a little time God would make the Hypocrific of that Omfaii, and the Vanity of his Idols, known to all Men, by destroying the Reputation he had gain'd till then; all which was verified to a tirrle soon after. For the Fame of his Sanctity being spread abroad upon account of the Rain, and coming to the King's Ear, he presently sent for him, and gave him an Apartment in the Palace. There he fell in Love with one of the King's Conculines, and found no difficulty to compals his Defign; but the matter being kipwn, the in Collin-

this be accounted a most heinous Crin., and it be Death to have to do with a Woman the King has once touch'd, yet they could not proceed to Execution against him, as being a Perfon Sacred among them, but according to the Form appointed by their Laws. The King therefore gave the Sentence, That the Omfai should vanish; but that he should neither go East, West, North, nor South, nor through any part whatfoever of his Kingdom. This Decree being publish'd, was immediately executed in fuch manner, that the Omfair vanish'd with great shame, and was never more feen in the Kingdom, nor out of it.

But the Devil being enrag'd, vented The his Fury against God's Servants, stirring Church up the People to fire the Church in Tu-burnts ron, to the great Grief of the Fathers, who beheld all from the Shore without

hopes of redrefs.

In the mean while the News of the Fathers Misfortune was spread all about the neighbouring Countries, and even as far as Macao, which was a great trouble to the Fathers of that College, who pitying their Brethren, refolv'd to fend The Au them some Relief by a Portuguese Vest thorin fel that was ready to fail to Cochin-China; Cochinand the Fathers judg'd the Business China. might succeed the better, if two Fathers going in it, one had the Name of Chaplain of the Ship, to return in it; and that the Cochin-Chineses might have no cause to complain, or be incens'd, he that remain'd was to go disguis'd: F. Peter Marques, a Portuguese, was appointed Chaplain; and I had the good Fortune to be his Companion, Obedience so ordering it: For tho' I had been destin'd for China by our Father General, I freely and affectionately embraced the opportunity of dedicating my felf to God in the Mission of Cochin China, and for the Comfort of those afflicted Fafor the Comfort of those amicrea rathers, feeing my felf quiet thut out of China, by Reason of the Persecution rais'd there. I set out from Macao in the Habit of a Slaves and soon arriv'd in Cochin China upon my Birth-Day, which was very near opening the way for me to a blessed Life; but it pleas'd Providence to order Matter otherwise, either because my Sins made me unworthy of because my Sins made me unworthy of such a Mercy, or for ther Causes only known to God: As the Vessel was entring the Harbour, upon which there were abundance of the County People, there hapned, I know not how, a Quarrel between two Portugueses and one

of them falling down for dead the other leap'd into the Sea to escape the wounded Man's Friends and Companions, who would have kill'd him. He iwam a-while, but being tir'd, drew towards the Ship again, to fave himfelf from finking, and endeavouring to catch hold could not, because they were ready above with Half-pikes, Javelins, and Swords, to wound him. I feeing him in that diffress, endeavour'd to relieve him; and tho' I was in a fervile Habit, ran among them, and calling out to one, and pulling another, took fuch Pains that I appeas'd them. The Cochin Chrne es who were aboard the Ship, feeing the Portugueses pacified at the fight of a Slave, began presently to suspect the matter; and knowing by Experience, that the Portugueses, when in a Passion, are not to easily quell'd, unless Religious Men interpose, said to one another, This Man is certainly no Slave, as his Habit feems to fuggelt; and being no Merchant, as the reft are, he is cetainly one of their Religious Men, that endeavours, contrary to the King's Command, to be conceal'd in our Country, but we will discover him to the King himself, that he may be punish'd as he deserves. Immediately they flock'd about me, and tho' I did not understand their Language, yet I plainly perceiv'd they had all a Jealousic of me; and notwithstanding all my Endeavours not to difcover my felf, I could not prevent their fending Advice to Court. When I had fatisty'd my felt as to this point, believing I was certainly a dead Man, I refolv'd to die as what I was: Accordingly I put on my Habit of the Society, à Surplice over it, and a Stole about my Neck; and in that Habit I began publickly to preach the Faith of Christ by means of the Interpreter; then erecting an Altar on the Shore, I faid Mass, and gave the Communion to the Portugue Jes that were fent, standing ready for whatsoever it fould please God to appoint: But it peas'd him not that I should then shed my Blood for him. Whilst my Cause was in hand, it rain'de that this should be attributed to a poor fo abund intly Dayland Night, without ever ceafing, that every Man apply'd himfelt to tilling of the Ground, and fowing of Rice, and perhaps reflecting that they had obtain'd that at my Arrival, which they had so long wish'd for, looking upon a as a good Omen; and concluding it was not the Fault of the Fathers that they had wanted Rain, they repenced, them of all they had done

against us, and never gave us any farther trouble, but suffer'd us to live freely throughout the Kingdom.

Matters being thus pacified, I refolv'd Charity to go look out F. Buzome, and his Com- Japonele panion, fince I was gone thither to that Christian end; and whilft I was endeavouring to hear fome News of him, the Report of my Arrival being spread about the City, that Lady Joanna above-mention'd tound me out. By her I understood, that F. Francis de Pina, with the Japonese Brother, had been privately convey'd by Japonese Christians to the City Fasso, all People certainly concluding that the Fathers were then got out of the Kingdom. Upon this Information, F. Peter Marques, who knew the Language of Japan very well, would have us go to Faifo, where we found F. Francu de Pina, who was there hid, but very well used by those good Japonese Christians, to whom he privately administred the Sacraments. We receiv'd incredible Joy in meeting: For befides the general Charity of Religion, we had been Companions, and great Friends, in the College of Macao; and the Kindness of the *Japoneses* was extraordinary, for they treated us during a Fortnight very splendidly, with great Demonstrations of Affection and Joy.

Here I also understood how, through God's special Providence, F. Buzome was also fate in the Kingdom, as if God had particularly defended him for the good of that Million, where whilst he was upon the Strand amidst so many Afflictions, and with that Imposthume in his Breaft, the Governour of Pulucambi came to Turon; who seeing that Man so ill us'd, that he look'd like a walking Ghost, being mov'd to Compassion ask'd who he was, and what Misfortune had brought him to that miferable Condition. He was told all. that had hapned; and that the want of Rain being laid to his and his Companion's Charge, he had been banish'd by the King's Order. The Governour was not a little amaz'd, and laugh'd to think Religious Man, which could no way depend of him; therefore he order'd him to be taken from that open Shore, and carry'd into one of his Gallies, in which he carry'd him his Province, entertain'd him in his own Heafe, had him look'd after by the most kilful Physicians in that Care, and made his own Children attend him aluting a whole Year; for so long, its fine he lasted

all Men admiring that a Heathen should behave himself so charitably towards a Stranger atterly unknown to him only out of mere natural Compassion.

Thus we were four Priests of the Society in Cochin China: F. Buzome, at Pulucambi, 150 Miles from the Port of Turon; F. Peter Marques remain'd at Faifo, as Superiour, and to serve the Japoneses, keeping F. Francis de Pina for his Companion: And I return'd to Turon, there to ferve the Portugueses, to say Mass, preach to them, and hear their Confessions, and learning at the same time the Language of Cochin-China, enderwour'd, with the affishance of the Interpreters, to persuade some of those Heathens to be baptiz'd; and above all, to encourage and confirm those that were already baptiz'd. Soon after my were already baptiz'd. Soon after my tirst coming, there hapned to mean Accident worthy to be known: I was call'd to make a dying Infant a Christian; I did so, and soon after it gave up the Ghost. I was concern'd, not knowing where to bury it, which made me think of fixing a Burying place for all the Christians that should die for the future. To this purpole I order'd a Mast of a Ship that was cast by, to be taken, and a starely Cross to be made of it: Which done, I invited all the Portugueses, and Sailors, to help to carry it to the appointed place, I attending with my Surplice and Stole. lated. Whilst the Hole was digging to creek the

Holy 10s, a Company of Armed Men came out from the Neighbourhood, who with their Muskets threatned to kill me, which I perceiving, caus'd the Interpreter to endeavour to know of them, what it was they would be at? And was told, they would not have that Crois erected there, because they fear'd the Devils would infest their Houses. I answer'd, It would be quite contrary; because the Cross had such a Virtue, that it put the Devil to flight: With this they were fo well pleas'd, that laying down their Arms, they all ran to help: And thus the Crofs was fer up to the general Satisfaction of all Parties, and the Burial-place fix'd. Soon after the Governour of Pulucambi came thither, and brought F. Buzome with him; and we met all four Fathers of the Society, to our unspeakable Joy at Faifo, together with two Lay-Brothers, one a Portuguese, and the other a Japonese. After a charitable Reception, we confulted together about the most proper means of promoting that Million. It was unanimously agreed, that F. Peter Marques should stay at Faifo with the Japonese Brother, because he was a good Preacher; and the other three. with the Portuguese Brother, should follow the Governour of Pulucambi, who earnestly desir'd it; which was accordingly done, as shall be here re-

#### CHAP. III.

The Governour of Pulucambi introduces the Fathers of the Society into his Province, building them a House and Church.

F. Francis Buzome, F. Francis de Pina, . and I, fet out from Faifo, for Pulucambi, with the Governour of that ness, always lodging us near himself, and behaving himself in such manner, that there being no human Motives to incline him fo to do, it plainly appear'd to be the Work of Providence.

to be the Work of Provincince.

He appointed a Gally only to carry odness us and our Interpretors, not fuffering so the Gorphuch as our Magnate to be put aboard to but order'd another hoar for it. In this easie manner we tavell'd twelve

large Days Journey, purcing into a Port Morning and Evening and all the Ports being near great Towns or Cities of Province, who all the way treated us the Province of Plangbia, in which with unexprehible Courtess and Kind-Province the Governour had as much Power as in his own of Pulucambi; all People ran to pay their Respects and Acknowledgments, tringing him rich Presents, the first of which always fell to our share, he himself so ordering it, every one admiring to fee us fo honour'd; which gain'd us much Efteem and Reputation among those People, that being the defign of the Governour: And this was much forwarded by the great

BORRI.

account he made of our Intellettion. when any Criminal was to be punish'd: For we no fooner open'd our Mouths, but we obtain'd all wedefir'd; by which means we not only gain'd the Reputation of being great with the Governour, but of having Compassion and Kindness for those People, who therefore lov'd and respected us. Besides, during the whole Voyage, he treated us as if we had been some great Lords, contriving Sports and Pastimes in all parts, causing the Gallies sometimes to represent a Sea-fight, fometimes to row for Rewards. Nor did there a Day pass but he came aboard our Gally to vifit us, feeming much pleas'd with our Converfation, especially when we discours'd of Religion and our Holy Faith. In this manner we came to the Province of Pulucambi, through which we had still fome Days Journey to make, before we arriv'd at the Governour's Palace, who for our greater Diversion would have us travel by Land. To this purpose he order'd feven Elephants to be provided; and the more to honour us, would have one for each, causing an hundred Men, some on Horseback, and some a Foot, to attend us: And the Journey being for Recreation, we spent eight Days in it, being Royally entertain'd wherefoever we came; but particularly in the House of a Sifter of his, we had a most fplendid Entertainment, not only for the Variety and Number of Dishes, but much more for the Rarity of the Dreffing, all things being dress'd after the European manner, tho' neither the Governour, nor any of the Family were to talte of them.

His Granthers.

Being at length come to the Gover-Affection and Dainties of the Journey concluded to the Far in flich a Reception as he used to make for Kings and Great Princes, treating us for eight Days together in most splendid manner, making us fit in his Royal for so many Favours bellow'd on us du-Throne, and eating with us himself in ring our Journey, and those we still republick, with his Wife and Children; coiv'd. Having taken our Leaves for the to the great association of all that Ci-c Present, we mounted the Elephants again, ty, where it was ulanimously affirm'd, and with a great Attendance went away such a Reception had never been seen to the City Nuocoman, which extends unless it were for some Royal Person: it self five Miles in length, and half a start which were we were by the And this was the Caufe of the Report generally forced inroughout the King-dom, that we were a lving's sons, and were come this about Matter of great Concern; which being known by the Governour, he was higherty pleas'd, and belose the chiefelt Men of the Cour hedbiblickly Aid, le is very true,

that the Father's were the Sons of a King. for they were Angels, come thither, no for any Want or Necessity of their own. being provided with all Things in their? own Countries, but only out of pure Zeal to fave their Souls : And therefore he advis'd them, to give car to the Fathers, and observe the Law they would preach to them, learn the Dollrine they taught, and receive the Faith they deliver'd: Bor (faid be) I have often discours'd and convers'd with these Men, and plainly perceive by the Dollrine they teach, that there is no true Law but theirs, nor no Way but that they shew, which leads to Eternal Salvation. But take heed what you do; for unless you learn that true Dostrine, which I, your Chief, bring to you by means of these Fathers, your Neglect and Insidelity will be punish'd eternally in Hell. Thus spoke that Lord, becoming a Preacher of the Gospel, tho' himself a Heathen; all Men being the more amaz'd and affonish'd at it, because of the great Concest they had of his Wisdom.

After the first eight Days, we gave The Fa him to understand, that we would ra-time & ther go live in the City, the better to promote the preaching of the Gospel. which we could not so well attend in the Palace, because it was three Miles from the City, in an open Field, according to the Custom of the Country. The Governour would not have parted with us, because of the great Assection he had for us, but preferring the Publick Good before his own Satisfaction, he immediately order'd there should be a very convenient House provided in the City Nuoscman: And moreover told us, we might fee above a hundred Houses that were about his Palace, and take our choice of the convenientest of them, to make a Church of it; and acquainting him with it, he would provide all that was necellary. We return'd him Thanks Mile in breadth, where we were by the Governour's Order receiv'd with extraordinary Honour. He not being able to endure to be so for from us, came the next Day to visit us, to know whether the House we had given asserts convernient; and told us he knew that we being Strangers, could not have Money

## An ACCOUNT of Cochin-China.

d other Necessaries, but that he took apon him to provide every thing; and ...immediately order'd a good Sum to be paid us Monthly, and every Day Flesh, Fish, and Rice, to be sent in for us, our Interpreters, and all the Servants of the House: And not so satisfied, he frequently fent us fo many Prefents, that they alone were jufficient to furnish us plentifully with all things The more to honour and credit us among all Men, he one Day gave Publick Audience in the Court of our House, in the manner as we said above was practis'd in Cochan China. Here te-'seral Criminals were try'd, every one receiving Sentence according to his Crime; among the rest, two were condemn'd to be shot to Death with Arrows, and whilst they were bound we undertook to beg their Pardon; which was immediately granted, and he order'd them to be discharg'd, publickly protesting, he would not have done it at the Request of any other, but to these Holy Men, who teach the True Way for the Salvation of Souls, (faid he) I can deny nothing; and I am my felf impatient to be rid of those Impediments that obstruct my being Baptiz'd, and receiving their Holy Faith; which is what you all ought to do, if you defire to oblige me.

way of building a

Then turning to us, he again defired we would appoint the Place for the Church, that he might give Orders for its speedy fitting up. We show'd him a place that feem'd convenient enough, and he approving of it, went away to his Palace. Before three Days were over, News was brought us, that the Church was coming: We went out with great Joy, and no less Curiofity, to see how a Church could come, which tho' we knew was to be made of Timber, as had been agreed, yet it could not choose but be a great Pile, could not choose but be a great File, according to the space it must fill, fill, flunding upon great Pillars. On a sudden, in the Field, we spied above a thousand Men, all loaded with Materials for this Fabrick. Every Pillar was carry'd by thirty lusty Men; others the Planks, as it would do in Tinder; and carry'd the Beams, others the Planks, therefore during those where the Rases. others the Capitals, others the Bales, fome one thing, fome another, and fo all of them went in order to our House, filling all the Court, which was very large, to our the ble Joy and Satisfaction. Thing displeas'd us, that we had not Provisions enough in the House to give to great a Multi-Vol. II. Vol. II.

tude finall Entertainment; for the' they were paid by the Governour, yet BORR it look'd like ill Breeding to fend them away without some Refreshment: But we were foon eas'd of this Trouble; feeing every one fit down upon the Piece he brought, being oblig'd to keep and deliver it, and take out of his Wallet, his Pot with Flesh, Fish, and Rice. and lighting a Fire, fall to Cooking very quietly, without asking any thing. When they had eaten, the Architect came, and taking out a Line, view'd the Ground, mark'd out the Distances. and calling those that carry'd the Pillars, fix'd them in their places; this done, he call'd for the other Parts, one after another, that every Man might give an Account of what he brought, and go his way: And thus all things proceeding very regularly, and every Man labouring his best, all that great Pile was fet up in one Day; yet either through over-much hafte, or the negligence of the Architect, it prov'd fomewhat awry, and leaning to one fide; which being made known to the Governour, he presently commanded the Architect, upon pain of cutting off his Legs, to call all the Workmen he had need of, and mend it. The Architect obey'd, and taking the Church to pieces with a like number of Workmen, rebuilt it in a very short time very compleatly. And we blefs'd God, for that at a time when Christians were so lukewarm, it had pleas'd him to flir up a Heathen fo zealoufly to build a Church, in Honour of his Divine Ma-

And to shew how affectionately the Governour look'd to our Affairs, I will give one particular Instance, and so end this Chapter. In the Months of June, July, and August, the South-West Winds generally reign in Cochin-China, which causes such an extraorare generally great fires throughout the Kingdom, for when it has taken hold of one House, the Flame soon catches hold of those that lie the way the Wind blows, and miserably confumes them. To deliver us from this Danger, our House being in the middle of the City, and to make it farther appear 9 F 2

what Esteem the Governour macing, That the tops of all the Houses that lay South-West of us, should be taken off; and there were so many of them, that they extended at least two

Miles, which he did to the end, that if any of them took fire, it might be the easier to prevent its passing forward to ours: And this was readily perform'd by them all, by reason of the great Respect they bore us.

#### CHAP. IV.

#### Of the Governour of Pulucambi's Death.

UR Affairs advanced very prosperoufly in this City, and it was now the time, when the Divine Providence was, according to its usual Method, to give us a Tafte of Sufferings, wherewith God frequently tries his Servants; and so we ever see he gives such a mixture of Prosperity and Adversity, that they neither be depress'd by the one, nor puff'd up by the other: And as the Primitive Church was founded by the holy Apostles upon these two Pillars of Prosperity and Tribulation, even so it pleas'd the Almighty, that the new Church of Cochin China should be establish'd by his Apostolical Ministers. The first Beginnings of this Mission were very fuccessful, as has been seen in the First Chapter of this Second Part; but very foon after enfu'd that terrible Persecution for want of Rain, which had like to have ruin'd all. Afterwards, with the Favour of the Governour of Pulucambi, the Storms feem'd to be blown off, and the budding Vine seemed to promise abundance of Fruit: But it pleas'd him that disposes of all things, that the Governour of Pulucamhi's Death, like a violent North-wind, almost destroy'd all in the Bud. This Mistortune hapned as follows: The Governour went out one Day a Hunting on his Elephant, very well pleas'd, and the Sport drawing him on, he made no reflection that he rode all Day over a fcorching Plain, whose the Heat piere'd his Head in fuch manier, that at Night he fell into a burning rever; upon Notice whereof we hafted to the Palace to Vifit, or rather to Baptize him, if we found him in imminent Danger. He kept us with him two Days, we still pressing him to be Baptiz'd, as he had often faid he would; to which he always answer'd, he was ordering his Affairs for that purpose, but came to no conclusion. The third Day he lost

his Senses, God so permitting, for Cause only known to himfelf; and perhap that vain Honour he ever passionatel coveted, was the Reward of the Goo Turns he did us: In fine, he began t rave, and fo continu'd three Days, til overcome by the Violence of the D stemper, he died without Bautism.

Any Man may guess how much w were concern'd at this Accident, feein our felves forfaken in a strange Cour try, and destitute of all human help; but it chiefly griev'd us, that a Person to well dispos'd, and through whose means we had conceiv'd hopes, that the Faith might spread throughout the Heathen whole Kingdom, should die so in our Ceremo-Hands without Baptism. Abundance of mesatthe their Rites and superstitious Ceremonies nour's were perform'd at this Governour's Death. Death, at which we were present till the last. It would be endless to relate them all, and therefore I will fet down two or three, by which the others us'd by those Gentiles upon fuch Occafions may be guess'd at. First, Whilst he lay in his Agony, there was a multitude of arm'd Men, who did not cease to cut and make thrufts in the Air with their Scimitars, cast Darts and fire Muskets in the Rooms of the Palace; but particularly two, that stood on each fide of the dying Man, were continually striking the Air about his Mouth with their Scimitars, and both these and the others being ask'd, why they did fo, told us, They frighted the Devils, that they might not hurt the Governour's Soul, as it was departing his Body. These superstitious Ceremonies made us pity their Ignorance, but not fear any Harm to our felves, as follow'd when the Governour was dead: For we had much cause to fear being expell'd that Province of Pulucambi, and perhaps all the Kingdom, with the loss of all we had acquir'd towards feeling Christia-

The G > vernour's Deatl.

pity, and perhaps worfe. It is the Custom when any Great Person dies, tor all the Omfaus, or Priests of the Country, to meet together, in order to find out not the natural, but the superstitious Cause of his Death; and being agreed upon what it may be, immediately that thing to which it is attributed, is order'd to be burnt, whether it be a House, Garment, Man, or Beast. Accordingly all the Omfaus being affembled in a great Hall, they began to argue this Point: We who were prefent, remembring the Perfecution for want of Rain, there being at that time "nothing extraordinary in the Province, but the Governour's kind Reception to us, and his affiguing a House, and building a Church in the Chy, with fuch extraordinary Tokens of Affection for our Holy Law; did not at all quelcion. but that these things being represented to them, key would lay the Death of that Lord to our charge, and confequently would order us all to be burnt alive, together with our House and Church, and all our Goods. Therefore we stood in a Corner of the Hall, recommending our felves to God, and preparing our felves for whatfoever his Divine Majesty should suffer to be decreed against us; when one of the Omfairs, who was the eldest of them, and as it were their Dean, standing up, said with a loud Voice, That, in his Opinion, the only Cause of the Governour's Death, was the falling of a Beam some Days fince in the new Palace; and he was the more apt to believe it, because all the Distemper was in his Head, as appear'd by his Raving; an evident Sign, as he said, of the Stroke he had received in his Head by the aforesaid Beam: All which he meant metaphorically, and in a fuperstitious Sence, and therefore it pleas'd the other Omfain, who all unanimoully agreed in the same Sentiment: And to rifing without more to do, they went and fet fire to that Palace, which was all reduc'd to Ashes, whilst we gave Thanks to God for having escap'd so manifest a Danger. This done, some other Omfain, who

the State of profess Necromancy, came to the Governour's Palace, to perform another superstitious Ceremony, according to the (uftom of the Country. The Kindred of the Party deceafed looking upon it as a great Blessing, that any Body in spirit does not spirit, should speak concerning the State of the Soul departed; and to this purpose those WizZa . mfans were cail'd, of whom they all earnestly beg that Devilish Favour, he that obtains it being much envo'd by the rest. These Conjurers made their Cucles, and us'd feveral Charms both in Words and Actions, that the Devil might enter into some one of the Governour's Eindred, who were there in a suppliant posture, but all in vain. At last a Sister of the Governour's, for whom he had an extraordinary Kindness, came in, and begging the same havour, immediately gave manifelt Signs that the was polfelt: For being decrepid, by reason of her great Age, and not able to go alone, the began, to the aftonishment of the Spectators, to skip as nimbly as if the had been a young Gil, and the Stick she threw from her hung in the Air, all the while the Devil was in her Body, during which time talking in a raving manner, and doing many diforderly Actions, she utter'd feveral Extravagancies about the State and Place her Brother's Soul was in; and concluding her mad D'fourfe, the Devil leaving her, the fell down as if the had been dead, remaining to tpent for the space of eight Days, that she could not fur for meer weakness, all the Kindred and Friends flocking to vifit her, and congratulate her Happiness, in that she had been chosen among all the Relations for an Action (as they thought it) fo glorious and honourable for the dead Man.

At length they began to order the Fu- Heathe neral of this Lord; and as in the Ca-Canoni tholick Church it is the Custom to ho-tion. nour the Memory of Men renown'd for Sanctity of Life, by a folemn Canonization; fo in Cochin China, the Devil always mimicking Holy Things, the more to delude the People, it is customary to honour the Death of those who have been univerfally reputed just Men. and upright in their Actions, and adorn'd with Moral Vertues, with great Solemnity and Magnificence, Canonizing them, if we may so call it, after their man-ner, by eternizing their Memory, and giving them immortal Veneration. For this Reason, the Governour of Pulucambi, who by all Men, not only in his own Province, but throughout all the Kingdom was, for his extraordinary Natural Parts, reputed a Man of great Wifdom, and incomparable Prudence, his Government being adorn'd with fingular Justice and Integrity, together with an unufual Inclination and Affe-Etion for all needy Petfons, was judg'd

Sorecry to difcover the Soul departed.

not to require a doleful fad Fune.al ORRI. Pomp, as was due to others; but on the contrary, all Demonstrations of Joy and Grandeur, which might declare him worthy of Religious Honours, and to be added to the number of their Gods. This being decreed, they all endeavour'd to lay afide their Mourning and Sorrow, and to express all Pleasure and Satisfa-Etion; and to this purpose all the Governour's Kindred, for the space of eight Days, fumptuously treated all the People, during which time, they did nothing from Morning till Night, but eat and drink, fing, dance, and play upon Mulical and Warlike Instruments.

The Goernour's onceal.

After the eight Days, the Body was carry'd in a Silver Coffin gilt, under a Canopy, to the City where he was born, call'd Chifu, three Days Journey diltant, attended by a multitude of all forts of People, dancing and rejoycing, leaving the Palace where he dy'd utterly difinhabited, that it might run to ruin, and no fign of it remaining; to the Memory of the Governour's Death might be loft in perpetual Oblivion, he still remaining alive with perpetual Praise and Veneration in the Hearts and Mouths of all Men. Being come to a spacious Plain without Chifu, they all fell to work upon a Palace, twice as magnificent and fumptuous as that the Governour dy'd in; and to make a greater fnew of the dead Man's Wealth, they built as many Gallies as he us'd to keep, upon Wheels, for them to run upon dry Land. In the same manner they made wooden Elephants and Horfes, and all the other Movables us'd when the Governour went abroad when alive, without sparing any Cost. In the midst of the Pulace they erected a stately Temple, with a fine Altar, on which they placed the Coffin cover'd, and hid with fuch curious Workmanship, that the Hieroglyphicks, Carving, and Painting, greatly mov'd those Gentiles to respect. For three Days continually they perform'd feveral Sacrifices and Geremonies, by the Ministry of five or fix hundred Omfairs, all clad in white, who spent the time in Singing and Sacrificing, offering Wine, Oxen, and Buffaloes, in great numbers, the Publick Entertainments continuing these three Days, for above two thoufand Men of Note, every one having his Table to himfelf, according to Cufrom; and each of them cover'd with above two hundred Dishes. At the end of these three Days they set fire to all that Pile, burning the Palace and Tem-

ple, with all the Perfumes and Furniture, only faving the Cossin with the Body, which was afterwards bury'd, and privately remov'd to twelve feveral Graves, that the People being always in doubt where it had been left, that uncertainty might increase the Honour of the new Idol, they adoring it, in all those places where they thought the Bones might be. Thus the Solemnity ended for that time, till fome Months after, that is, in the Seventh Moon, according to their Computation of Time, it was repeated in the fame manner as it had been perform'd at first; a few Months after it was done a third time, and fo from time to time for three Years, all the Revenues affign'd the Governour of that Province by the King, being spent upon this Solemnity for those three Years, and therefore no other Governour was appointed during that time, they being perficued that the dead Man's Soul, which was placed among the Gods, would continue in the Government for those three Years. However, his own Son was appointed his Deputy-Governour, or Lieutenant. We three Fathers of the Society then The Fa-

in that Province, were present at most there queof this Solemnity; and tho' we did not flion'd attend at their superstitious Ceremonies, concerning the Government to avoid being thought upgraped. yet to avoid being thought ungrareful, nour's Soul. and unmannerly, we were forced to ac-cept of fome Invitations, in one of which we were forewarn'd we should be ask'd where the Governour's Soul was; affuring us, that if we faid it was in Hell, we should presently be cut to pieces. We were a little after publickly ask'd the Queltion, and answer'd, That no Man could be fav'd without Baptism; but that, through the Mercy of God, an earnest Desire to be Baptiz'd fufficing, where better cannot be; if the Governour, at last, had such a Defire, as it was likely he had, because of the Affection he bore our Faith, as was faid above, and that he would have ask'd it, but that the Violence of his Diftemper hindred, therefore it might be believ'd he was fav'd, and not damn'd.

This Answer, tho' new and unexpected, in some measure satisfy'd them, in Token whereof they offer'd us some whole Buffaloes, some boil'd, some roalled, which had been facrificed to their new Idol, the dead Governour; but we refusing them, saying, Our Law forbid us to eat of that Flesh so defiled by their Sacrifice: Instead of the dead

Nomen on the other fide, feeing themleives excluded the way of Salvarion, cry'd our aloud, They would forbear being the Embaffador's Concubines, fince it obstructed their Baptism, and was the way to Damnation. The Lady seconded their good purposes, taking upon her to deliver them from that Sin, and get every one of them a Husband. All I ets and Impediments being remov'd by thele Promifes of the Lady, and firm Purpoles of the Women, one Day, which was the joyfullest I ever saw in my Life, the Embaffador's Lady richly apparel'd, and drefs'd with Jewels, and nobly attended to our Church by Gentlemen, was baptiz'd, with twenty five of her Women, and as chief of them call'd 13fula, to the Glory of Jesus Christ, who by means of these few Women, open'd a way to the Conversions made by our Mission in Cochin China.

Zeal of the After the were baptized, we went Converts. in Procession to the Palace of the Embaffador's Lady Urfula, where there was an Oratory, in which she us'd be-fore to perform her superstitious Devotions to an Idol. When we came in, we first sprinkled the House with Holy Water, and then the Lady, and her Women, couragiously laid hold of the Idol, and throwing it violently against the Ground, beat it to pieces, trampling on it; in whose place we set up a fine Picture of our Saviour, which those new devout Christians falling down, devoutly worshipp'd, owning themselves his most humble and devout Slaves. Then we put about their Necks fome Agnus Deis, Croffes, Medals, and Relickaries, which they valued above the Gold Chains, and Strings of Pearls they were adorn'd with. Having obtain'd this Vi-Ctory over the Devil, after faying the Litany, and other Prayers in the Oratory, now blefs'd, F. Buzome, and I, return'd home with that Satisfaction and Thanksgiving that every Man may imagine. The Embassador's Lady, and her Women, came after this, every Day duly to Mass, Catechize, and other Spiritual Exercises, with great Tokens of Fervour, and Christian Pietv.

The Lady's

At this time the Embaffador, Huf-Carriage to band to the Lady Urfula, came from her Huf-Court, to depart in a short time upon his Embassy to the King of Cambogia. It is the Custom of that Country, when the Head of the Family comes from afar off, for the Wife, Children, and rest of the Family, to go out at least a Mile Vol. II.

. Way to meet him. I ne Lady Urfuta fail'd to perform this Ceremony, being then retired in her Oraroiv. The Husband wondring at it, and fulpecting the might be hindred by Sicknets, ask'd what was become of her, but underflanding flie was well, admir'd it the more, till coming to the Gate of his Palace, and milling the usual Reception, he begin to mistrust she was angiv with At length he went up, and into the Oratory, where he found his Lady and her Maids, with Agnus Dei's, and Relicks about their Necks, Beads in their Hands, and other Christian Signs, praying before the Image of our Savi-The Embaffador was aftonish'd at this fight, and his Lady directing her Discourse to him, bid him not admire that the had forbore the usual Complements to him, because she was rais'd to a higher pitch of Honour than he was, both the and her Women being Children of the true God, and Saviour of the World, Jesus Christ, whose Pi-Eture she shew'd him, saying, he ought to adore him, if he would be equal to them in Dignity. The Embassador mov'd by his Lady's Words, and the Beauty of the Picture, with Tears in his Eyes fell down and ador'd, then standing up, he turn'd to his Wife and Women, faying, How is it possible you should be Christians? Have you a mind to leave me? Do not you know that the Law the Eubers preach forbids Polygamy? Therefore you must either find another Dwelling-place, or I leave this to you, and feek out another House. His Lady an-fwered, Neither need you depart, nor we leave you, for there will be a Remedy for all things: Wifely concealing for the present, the Prohibition of Plurality of Wives, to avoid that difficulty which would have bred a disturbance. The Embassador took Heart at these Words, and conceiving, as yet, that he need not be oblig'd to leave his Women; thus piously impos'd on, he said, he would be a Christian too, and follow the good Example fet him by his Wife, and her Women.

The next Morning betimes the Embassador came to our House, to tell us, that fince we had made his Wife a Christian, he had a mind to embrace the fame Religion, if we thought it pra-Eticable. Very practicable, faid we, The Err full of Joy and Satisfaction at fo grate-baffador ful a Question: For in case he were structed refolv'd, we would in a short time instruct him sufficiently to be baptiz'd.

9 G

He was pleas'd, and because the ffairs BORRI. of his Embassy took up the Day, so that he had not leisure to be instructed: Upon his Request we agreed to go to his House at Night, where we began to Catechize him, continuing it for twenty Nights, four or five Hours at a time, informing him in the Mysteries of our Holy Faith, from the Creation of the World, till the Redemption of Man, the Glory of Heaven, and Pains of Hell. It was no finall matter for fo great a Person, and so full of Business, to lose his Sleep to hear the Word of God; and he gave himself to them with great application, asking many very ingenious Questions, which shew'd his great Wit. In all our Discourses, our whole aim was to imprint the Truth of our Holy Law in the Heart of this Noble-man, and make it agreeable to Reason, that being made sensible of the great Importance of Salvation, and the Terror of the Pains of Hell, and being well inclin'd to, and convinc'd of the Certainty of our Religion, he might afterwards make less difficulty in the main Point concerning Polygamy, which was the only thing he fluck at, and which we till then had defignedly forbore to speak of. Having gone so far towards the Embassador's Conversion, we began to expound upon the Commandments, where we informed him, that among Christians it was unlawful to have many Wives.

Convinced gamy.

This Propolition was fo unexpected, about Poly-that like Fire that has Water thrown on it, the Embassador presently cool'd, and taking leave of us, faid, This was a matter of great confequence, and therefore requir'd time to come to a Refolution. This Answer was so displeasing and grievous to us, that returning home we Ipent that Night in Prayer and Mortification, praying to God with all the Fervour we could, that he would be pleas'd to put a happy Conclusion to the Work he had so well begun. Next Morning one of the most learned Omfans in the City came to us from the Embassador, to examine the Reasons for the Prohibition of Polygamy. Among other Objections, this Man made one, in his Opinion, of the greatest torce; which was, Why Plurality of of Wives should be forbid, fince Generation and Children were a Work of Perfection, and so agreeable to Nature, chiefly when a Man had a barren Wife, as was the Embassador's Case, and might not have another to get Heirs

upon. We wanted not Answers cording to our Divinity, but perceiving they were not fatisfactory to them, because they were not us'd to our Theolo. gical Notions, we at last added a Reaton out of Scripture, whereof the Embassador had before some knowledge from us, and it pleas'd God, this made an Impression on his Heart, and absolutely convinced him. This was putting of him in mind, that God being fo just, and the Law he had prescrib'd so agreeable to Natural Reason, as he himself had own'd, he ought without doubt to obey in this point, fince God himself commanded it; and this so much the more, in regard that God creating Man, intimated the fame to him, when there was most occasion for propagating Human Race, and vet he gave Adam but one Wife, whereas he could as eafily have given him many more, that Man might maitiply the fafter. This Reason, i say, fully satisfy'd the Embassador, yet finding it difficult to observe the Precept, as being a thing he was much addicted to. Is there no Remedy, faid he, or L'ifpenfation from the Pope, or any other means, tho' never so difficult, to have this Point remitted? We told him, it was in vain to feek any Redrefs whatfoever in this Case; and therefore, if he defir'd to be fav'd, he must dismiss the other Women, and stick to his Wife. Then the Embassador lifting up his Eyes and Hands to Heaven, as it were struggling with himself, and press'd on by Truth, with a generous Resolution said, If then multiplicity of Wives be inconsistent with my Salvation, let them all go in the Name of God; for it is pity to lose an Eternity of Glory, for a transitory Delight. Then turning to his Concubines, who were present with his Wife, he discharg'd them all: But perceiving they laugh'd at his Discharge, as a thing that would never stand good; to shew he was in earnest, he order'd his Wife to pay them all off immediately, and let not one of them stay in his Palace that Night. After which turning again to the Fathers, Behold, faid he, I have readily perform'd all you commanded me. Having obtain'd our Defires, we went home to give Thanks to Almighty God.

But the Devil found out a way still His Conve to make opposition, making use of the fion. Lady Urfula's Womanish Temper, for the had not the Heart to turn away those Women she had bred up from

dred afterwards fending us Elephants, that we might return on them to Pulucambi, with as much Honour as when the Governour was living

The Fa-

thers in diftrefs.

These were the last Favours we receiv'd in Virtue of the Governour of Pulucambi's Favour; and therefore returning home, we were left like Fatherless Children, forsaken by all the World. Now no Body minded us, the Allowance of Rice for our Maintenance fail'd, and we having but twenty Crowns must in a few Days have been reduced to great Misery and Want; and if any one fell fick, we durft not call any Body to breathe a Vein, because we had not wherewithal to pay for it; and tho' there were among them People very ready to fupply the Needy, especially with Suffenance, as was faid above, yet it was not convenient for us to ask any thing, leaft we should lose all the advantage we made, as to the Conversion of Souls, because they would have faid, we went not thicker to preach the Law of Jesus Christ, but to supply our own Wants under the Protection of the Governour. No Body now came to our House, that first shew of Authority ceafing, and tho' we had learn'd the Language of the Country, yet they made no account of the Words of three

facrific'd Buffaloes, they order'd others a-

live to be given us , the Governour's Kin-

Men, left in the midst of infinite Idolaters, and despis'd our Doctrines, as an Invention of our own, carry'd thither to oppose their ancient Sects and Tenets.

Three Years pass'd after this manner. and yet we were not fo much troubled at our own Wants, which God knows were very great, as to fee every Day less hopes of promoting the Service of God among those Pagans, having during those three Years converted but very few, and that with unspeakable labour and toil. Things being in this polture, in fome measure desperare, we being inclinable to believe the time was not yet come, when it would pleafe God to enlighten the Darkness of those People, either because our Sins obstructed it, or for some other hidden Judgments of God. But when our Human Frailty shew'd it self most diffident of Divine Assistance, even then, the more to confound us, the God of Mercy shew'd the wonderful Fffects of his Divine Omnipotency, that the noble Undertaking of converting Souls might be wholly attributed to him, we then owning we had no power to proceed in it, and that we might know experimentally, that neither he who waters, nor he who plants, does any thing; but it is God that gives the increase; as will appear in the following Chapter.

#### CHAP. V.

How God made way for the Conversion of the Province of Pulucambi, by means of the Noblest Persons in it.

The Fathers disperfe.

W/E having nothing to maintain us at Pulucambi, and converting no Body, differs'd our felves into feveral parts: F. Francis de Pina went to live at Faifo, a Japonese City, as has Christians, whose Pastor he had been before, and to live upon their Alms. He being well skill'd in the Language of Cochin-China, and talking of it naturally, never ceas'd there to preach out Holy Faith. F. Francis Busiome went away for Turon, carrying along with him the best Interpreter we had, to endeavour to obtain fome Alms of the Porsuguefes there, that might at least maintain us two in Palucambi, in our House

at Nuoecman, till forme Supply came from Macao.

Thus was I left in Pulucambi, foli-Conve tary and disconsolate, without any hopes of a gr of the Conversion of those Gentiles. Lady. When one Day being at home, far from any fuch thought, I faw a number of Elephants before our Door, with many Ladies, and a large Retinue of Gentle-trien, after whom follow'd a great Lady, and principal Matron, most richly clad, and adorn'd with abundance of rich Jewels, according to the Country Fathion. I was much furprized at the unified Speciale, and Majetty of the Lady, and in Internet, not imagining what might be the defign of the new

DORRL

Going out at last to receive her, Vifit. I understood she was Wife to the Embaffador the King of Cochin-China was sending to the King of Cambogia, which Embassador was a Native of Nuoceman, where we dwelt, and next the Governour the chief Man in that City, who was then at the Court of Sinud, treating with that King upon the Subject of his Embassy. After the usual Ceremonies and Complements, according to the Cufrom of the Country, the Lady being unwilling to lose time upon matters that were not to her purpose, Let us come (faid she) to the Business I aim at; I have been fully informed, Father, of your coming into this our Country and Province, and of the occasion of your coming; I see the boly and unblemssh'd Life you lead, I know you preach and teach the true God; and being satisfied that this is most agreeable to Reason, am persuaded that there is no true Law but yours, nor other God but yours, nor any Way to Life everlasting, but that you teach; and therefore my coming to your House, is for no other intent, but earnestly to beg of you, that bathing me in your Holy Water, you will add me to the number of Christians, this is the utmost of my Wilbes and Defires. In the first place I commended her good and holy Refolution, exhorting her to return Thanks to God for 10 fignal a Mercy bestow'd on her, in calling her to the Knowledge of his Holy Law, there being nothing in this World to be valu'd equal to the Soul's Salvation. Next I made my Excuse for not complying out of hand with her pious and reasonable Request; because, altho' I had some knowledge of the Cochin-Chinese Language, yet it it was not enough to instruct her in the lofty Mysteries of our Christian Religion; and therefore I advis'd her Excellency to wait for F. Buzome, who in a few Days was to return from Turon, having with him an excellent Interpreter, by whose means she would be instructed as she ought to be to her own Satisfaction, and obtain the End of her Holy Defires. The great Fire (reply'd the) that inflames my Heart, will not allow of such a long delay: and the more, for that my Husband is hourly expelled from Court, with whom I am foon to embark for the Kingdom of Cambogia, where the Dangers of the Sea being frequent, a Storm may bappen to rife, where dying, I may perfelf, as when the thew'd fuch Signs o rifb for ever. She added, That it was Joy, for that which ought to be the enough if I discours'd of Matters Dionly Cause of all our Sarisfaction. He

vine, as I did of other things; for sh should understand all I said. These views fible Tokens of her Resolution obliging me to it. I began the best I could to inform her in several Matters and Principles of our Holy Faith. Soon after it pleas'd God, F. Buzome return'd, and feeing this good Success, gave infinite Thanks to God. The Lady was much pleas'd with the arrival of the Interpreter, whom she had so earnestly expected; with whose affiltance, and her continual application, study, and attention at Catechizing, which was done for two Hours before, and two Hours after Dinner, in a Fortnight's time the became perfect in the Christian Doctrine. Above all, what made the greatest Impression on her Heart, was the knowledge of Jelus Cheift, true God, made Man, and humbled for the fake of Man; and therefore in some measure to imitate our Saviour's great Humility, file for the future came to our House, which was a good Mile from hers, not only without the State and Elephants she us'd before, but bare footed, in Dirt, and upon Stones, obliging her Gentlemen and Ladies, by her Example, to imitate her Devotion.

In our Spiritual Discourses, and Ex- Twenty fit position upon the Catechize, when we baptize. came to make mention of Hell, describe its Torments, represent the greatness, eternity, and variety of Torments there futter'd, the horrible Company of the Devils, the Darkness of those infernal Dungeons, and inhabitable Dens; and laftly, the Torture of Fire: Both she and her Ladies were so terrify'd, that having by themselves, all Night, confider'd upon what they had heard, they came again the next Day to tell us, they would all be Christians, to avoid that everlasting Misery: But we telling them it was impossible, they being Servants, and confequently Concubines to the Embassador, according to the Custon of the Country, as has been mention's in the first Treatise, the Embassador's Lady answerd, That Impediment doe. not concern me. It is so, said we, for your Excellency is your Husband's onl Wife, and bas not to do with other Men and therefore may freely be baptiz'd At these words, lifting up her Hands to Heaven, she gave such Tokens of Joy as if the had been beffdes her felf, the the had never been truly to much he

# An ACCOUNT of Cochin-China.

"their Infancy in her House, and lov'd them as it they were her own Chil-Therefore some Strife arising between the Man and his Wife, he preffing to have them gone, and she opposing, the Embassador distatisfy'd, came to us to jultifie himfelf, and defire to be baptiz'd, fince the Impediment was remov'd, he being willing the Women should depart his House. were about going to work, perceiving he spoke rationally, and particularly because he resolv'd they should not continue in the House as his Concubines, but as his Lady's Servants. But the Good Man making a stand as if he were thinking, at last faid he had a Scruple to propose: Since, according to what you Fathers have taught me, faid he, God fees into the Heart of Man, and cannot be deceiv'd, the I defire to for sake and send away the Women, yet whilf they continue in the House, I plainly see, either my ancient Habit, or frailty of Nature will easily cause me to fall again into Sin; therefore methinks I do not proceed with due Sincerity in this Affair. We perceiving, by the Embassador's Discreet and Christian Discourse, he foresaw the danger of being in the immediate occasion of Sin, study'd some proper Means to remove so confiderable an Impediment, but nothing occurring for the present, he himself being very earnest upon the Business, propos'd a Method, which we stuck to as the best of all others: Fathers, said he, the safest way I can think of is that you as their Directors powerfully persuade the Christian Women that were my Concubines, (for the Heathens I will infallibly make my Wife turn away) that in case through frailty I should be under any Temptation, they resist me resolutely; and forasmuch as I bear a great respect to, and stand in awe of our Saviour's Pillure placed in the Oratory, if the Women lie in that place, I will rather be torn to pieces than have any thing to do with them in the Presence of that Great Lord; and they being thus secur'd against me, till there be an opportunity of marrying them, it will be known broad, that they are not kept in the House as my Concubines, but only as Servants to my only Wife Ursula, and the People will be sensible I do not all contrary to the Law of God. This Method was so well approved of, that the Day after it was put in evecu-

tion .he Embassador was baptiz'd in great State, attended by Drums, Fifes and other Instruments, and he himself clad in rich Apparel. With him were baptiz'd twenty other Gentlemen, his best Friends, and he had the Name of our holy Patriarch Ignatus given him. After which, taking his Wite Urfula by the Hand, she renew'd the old Contract of Matrimony as a Sacrament of the Church. The Joy they all conceiv'd at their Baptism, and new Marriage, was unspeakable.

It now remain'd that the Embaffador should depart on his Embassy for Cambogia; and he order'd, that the Ship which was to carry him, should have a Cross in its Colours, and the Picture of the glorious Father S. Ignatius his Protector, causing all the Jacks and Pennants to express the Religion he profes'd. Embarking with all his Gentlemen and Christian Women, he had a prosperous Voyage from Nuoecman to Cambogia. When the Squadron appear'd, being well known to the People of Cambogia to be the Embassador's, they were all aftonish'd, seeing Christian Colours fet up; and therefore they imagin'd that the King of Cochin-China, instead of the ordinary Embassador, had fent some extraordinary Portuguese Christian; but their doubt was soon clear'd, feeing the usual Embassador land with a Cross and Medals on his Breast, among the Gold Chains and Jewels. This fight on the one hand, mov'd the Portuguese and Japonese Christians, who reside there on account of Trade, to give Shouts of Joy, and bless God for this new Off-spring Cochin China had produced; and on the other, the Heathens could not believe that the Embassador, who before was observ'd to be excesfively lascivious, should embrace the Christian Religion, which forbids all immodesty. But the Grace of the Holy Ghost soon appear'd to strengthen Human Frailty; for the' the Embassador at his Palace in Cambogia, had double the number of Concubines, as generally us'd to attend his Wife, he order'd them to be all difmiss'd; nor did he ever lift up his Eyes to look at them, which made his Fame spread abroad, as of a Man of fingular Sanctity and Vertue; and being reputed a Man of great Knowledge, his Example mov'd many of the most learned Persons of Pulucambi to: be baptiz'd. oft

#### CHAP. VI.

How God open'd another Way to Christianity, through the Means of the Learned People among the Heathens.

inefes.

OD's infinite Mercy, and his ardent Defires for the Salvation of n of the Mankind, finds out divers Means fuitable to the feveral Conditions of Persons, which are as it were fo many Ways to direct and lead them to that End for which they were created. Thus we fee he himself in Person call'd upon his People, and complying with the Inclination of the Persons, invited the Wife Men by means of the Star; Denis the Areopagite the Aftronomer, by the Prodigy of the wonderful Eclipse; S. Augustine by the Knowledge of the true Light and Law, and the Confusion and Obscurity of former Errors; and in fine, he calls the ignorant Multitude, by the means of Prodigies, Wonders and So it fell out in the new Miracles. Church of Cochin China; for when his Divine Majesty had by himself convinced some of the principal Persons, as has been shewn, next he call'd not only the learned and wife Philosophers and Mathematicians, by means of fome Eclipses, as shall be shewn in this Chapter, but also the Omsais or Priests, who were hardned in the Errors of their Heathen Sects, to the knowledge of the true Religion, as the following Chapter will make appear. And lastly, in the next to that we shall fet down, how he open'd the way of Salvation to the People, by means of feveral Prodigies and Miracles.

Aftrology in great cfteem.

Now to come to the manner of converting the wife and learned Cochin-Chinefes, reputed excellent Mathematicians, by means of the Eclipse. For the better understanding of what we are to fay, it is requisite in the first place to be acquainted with a Custom they have in this Kingdom, relating to the Science of Altrology, but particularly of Eclipses; for they make such great account of it, that they have large Halls where it is taught in their University; and there are special Allowances assign'd the Aftrologers; as for instance, Lands which pay them a Tribute or Stipend. The King has his peculiar Aftrologers, Letion of has the Prince his Son, who use an their Art to fet down Eclipses exof the Calendar, and other matters, relating to the Motion of the Sun and Moon which we have, they commit fome Mistakes in the Calculation of the Moons and Eclipses, wherein they generally err two or three Hours, and fometimes, the not so often, a whole Day, tho' generally they are right as to the material part of the Eclipse. Every time they hit right, the King rewards them with a certain quantity of Land; and so when they mistake that same quantity is taken from them.

The Reason why they perform the Superflitte count of foretelling the Eclipse, is be one concause of the many Superstitions at that cerning time us'd towards the Sun and Moon, Echipses.

for which they prepare themselves in very folemn manner: For the King being told the Day and Hour a Month before the Eclipse happens, sends Orders throughout all the Provinces of the Kingdom, for the learned and common fort to be in a readine's the Day. When the time is come, all the Lords in every Province meet with their Governours, Commanders and Gentry, and the People with their proper Officers in every City and Liberty. The greatest Affembly is at Court, where the principal Men of the Kingdom are, who all go out with Colours and Arms. First goes the King cloath'd in Mourning, and after him all the Court, who lifting up their Eyes to the Sun or Moon. as the Eclipse comes on them, make several Obeifances and Adorations, speaking fome Words of Compassion for the pain those Planets endure; for they look upon the Eclipse to be no other, but that the Dragon swallows up the Sun or Moon, and therefore, as we fay, the Moon is all or half eclips'd; fo they fay, Da an nua, Da an het; that is, the Dragon has eaten half, now he

Which way of expression, tho' it be Their A nothing to the purpose, yet it shews arologic that they affign the fame Ground for the Terms Eclipse originally that we do, which is and ours the cutting of the Eclipticks, that is alike. the Sun's Circle and the Line of the Course of the Moon, in those two Points which we call the Dragon's

eats all.

# An ACCOUNT of Cochin-China.

" Head and Tail, as Aftronomers well know: Whence it follows, that the very fame Doctrine, and the fame Terms and Names of the Dragon, are common both to us and them, and fo they give Names like ours to the Signs of the Zodiack, fuch as Aries, Taurus, Gemini, &c. And thus in process of time the People have invented fabulous Causes of the Eclipse, instead of the true, faying that the Sun and Moon, when eclips'd are drown'd by the Dragon; whereas, at that time they are really in the Head or Tail of the Aftronomical Dragon.

Now to return to the Compassion they have for those suffering Planets, when the Adoration is over, they begin first at the King's Palace, and then throughout all the City to fire Muskets and Cannon, ring Bells, found Trumpers, bes Drums, and play upon other Instruments, even to clattering of the Kettels, and other Utenfils of the Kitchin in all Houses: And this is done. to the end the Dragon may be frighted with the great Noise, and not proceed to cat any more, but vomit up what he has already eaten of the Sun or Moon.

Conversions by means of

When we were inform'd of this Cuftom, the first Eclipse that hapned was an Ecliple, one of the Moon, in the Year 1620, on the Ninth of December, at eleven at Night. I was then in the City Nuoecman, in the Province of Pulucambi, where there was the Commander of the Ward we liv'd in, whose Son was become a Christian; tho' the Father, as proud of his own Learning, despis'd not only our Religion but our Knowledge; and we earneftly defir'd his Conversion, hoping that if he receiv'd the Catholick Faith, his Example would induce those of his Ward or Quarter to do the fame. This Man came once to visit us before the Eclipse of the Moon hapned, and in Discourse we hapned to talk of it, he positively affirming there would be no such Eclipse: And tho' we demonstrated it to him, according to our Calculation, and shew'd him the Figure of it in our Books, yet he would never believe it; alledging among other Arguments for his Obstinacy, that if any fuch Eclipse were like to be, the King would doubtless have sent him Notice a Month before, according to the Custom of the Kingdom, whereas there wanted but eight Days of the time by us appointed;

was a certain fign that there would be r fuch Eclipse. He perfisting obstinatel in his Opinion, would needs lay a Wa ger of a Cabata, which is a Silk Gown We agreed to it upon Condition, that if we loft we were to give him fuch a Garment; but if we won, instead of paying the Gown, he was to come to us for eight Days together, to hear the Catechize and Mytteries of our Faith expounded. He reply'd, He would not only do fo, but the very moment he faw the Eclipse would become a Christian: For he said, if our Doctrine was so certain and infallible in such hidden and heavenly things as Eclipses are, and theirs fo erroneous, there was no doubt but our Religion and Knowledge of the true God was no less asfured and fafe, and theirs falle. The Day of the Eclipse being come, the aforefaid Gentlemen with a great many Scholars came to our House at Night, bringing them as Witneffes of the Event. But because the Eclipse was to be at Elevenat Night, I went to fay my Office, turning up the Hour-glass in the mean while. An Hour before the time these Men came several times, calling upon me by way of derifion to fee the Eclipse, thinking I had not withdrawn to fay my Office, but had hid my felf for shame that there would be no Eclipse. Yet they could not but admire at my affurance in answering them, that the Hour was not yet come. till the Glass was run out, which they gaz'd at, as if it had been fome wonderful thing. Then going out, I shew'd them that the Circle of the Moon on that fide the Eclipse began, was not so perfect as it should be, and soon after all the Moon being darkned, they perceiv'd the Truth of my Prediction. The Commander and all of them being aftonish'd, presently sent to give Notice of it to all the Ward, and spread the News of the Eclipse throughout the City, that every Man might go out to make the usual Noise in favour of the Moon; giving out every-where, that there were no fuch Men as the Fathers, whose Do-Strine and Books could not choose but be true, fince they had fo exactly foretold the Fclipse, which their Learned Men had taken no Notice of; and therefore in performance of his Promise, the Commander with all his Family became Christians, as did many more of his Ward, with some of the most Learned Men in the City and arber

RI.

Such another Accident hapned be the fame time, tho' among People of greater Quality, and in a more eminent Place. Tho' the King's Aftrologers had not e E. forescen this Eclipse, yet those belongtruer ing to the Prince at Cacciam, being more studious and intelligent, foretold it; but with a gross Miltake as to Time: For it was not of an Hour or two, as is usual, but of a whole Day, giving out that the Full Moon, and confequently the Eclipse would be a Day sooner than F. Francis de Pina, who was then at Court, had given Notice of it to a Courtier who was very great with the Prince, being his Umgne; that is, in the nature of Malter of the Ceremonies. The Father told him, That fince the Eclipse was not to fall out as their Astrologers said, but as F. Christopher Borri affirm'd, the following Night, he should give the Prince his Master No-tice of it. But the Omgne not giving entire Credit to the Father, would not do that Duty of his Office at that time. The Hour appointed by the Astrologers being come, and the Prince having Notice of it, he went out with his whole Court, according to Custom, to see and help the Moon, that as they faid was to be eclips'd; but finding he was deceiv'd, and growing angry with his Mathematicians for their Mistake, he order'd they should forfeit the Revenue of a Town, according to the Custom before mention'd. Hence the Omene took occasion to acquaint the Prince that the European Father, had, before this hapned, told him the Eclipse would be the Night following. The Prince was mightily pleas'd that the Fathers should hit right, where his Mathematicians had miscarry'd.

The Omgne repair'd immediately to the Father, to know the precise Time of the Eclipse; who having shew'd him that it was to be exactly at Eleven the following Night, he still continu'd doubtful of the truth of the matter, and therefore would not wake the Prince till he saw the beginning of the Eclipse. Then he ran to rouze him, and he coming out with fome of his Courtiers, perform'd the usual Ceremonies and Adorations to the Moon. Yet he would not make the matter publickly known, for fear of utterly discrediting their Books and Mathematicians, tho' all Cen conceiv'd a great Opinion of our octrine, and particularly the Ongne, who from that time forwards for a

chifing, diligently learning all that be longs to our Holy Faith. However he was not haptiz'd, wanting Refolution to overcome the difficulty of the multiplicity of Women, as the Embassador lenatives had done before. He forbore not nevertheless publickly with much fervour to declare our Doctrine and Law were true, and all others false, and faid he would certainly die a Chri-Itian, which mov'd many others to defire to be baptiz'd.

Having talk'd of the Eclipse of the An Eclipse Moon, we will conclude with another of the Sun of the Sun, which hapned on the 22d mistaken.

of May, 1621, which the King's Aftrologers foretold was to last two Hours: but having conceiv'd a great Opinion of us as to this particular, for their own greater Security, they came to ask our Opinions concerning it. I told them it was true there would be "Eclipse of the Sun, the Figure whereof I shew'd in our Ephemerides; but I purposely forbore to let them know, that it would not be seen in Cochin China, by reason of the Moon's Parallax to the Sun. Now they know not what the Parallax is, which is the cause they are often deceiv'd, not finding the just time by their Books and Calculations. This I did, that their Error being observ'd, our Knowledge might appear the more: I therefore demanded time to find out the precise time, saying in general terms, it was requifite to measure Heaven by the Earth, to discover whether that Eclipse would be visible in their Country; and I delay'd the Answer so long, till the time of making known the Eclipse being come, the Aftrologers fatisfy'd that our Book agreed with their Opinion, without farther reflection, concluded the Eclipse was most certain. and advis'd the King to publish it after the usual manner. When the Astrologers had spread their false Prediction throughout the Kingdom, I gave it out that the Eclipse would not be seen at all in Cochin China. This Affertion of ours was carry'd to the Prince, who being doubtful in the matter, fent his Mathematicians to me to ask my Opinion, and argue the Point. This Difpute had no other effect on them, but only to increase their doubt, and hold the Prince in suspence, whether he ought to fend his Orders throughout the Kingdom, as the King his Father had done, or publish the contrary; for on the one hand it wrought upon him to fee that

Sslipse, wherefore he thought it would be a Dishonour to him, in case it hapned not to have fent the usual Advice; and on the other fide, he had a great Opinion of us on account of the antecedent Eclipse of the Moon. Hereupon fending to confult me again, I answer'd, that having calculated the Eclipse very exactly, I found it could not possibly be visible in his Kingdom; and therefore he need not take any care to fend Advice about the Country, for I would be answerable for his and his Astrologers Reputation, against the King and his Mathematicians. He at last rely'd upon my Words, and took no care to give Notice in his Liberty of the Eclipse, the whole Court and King's Aftrologers admiring at it; and they enquiring into the Cause of the Prince's neglect, were answer'd, that he had better Mathematicians in his Court than the King his Father: By which they understood that fome of our Fathers being there, he forfook the Opinion of the Natives for theirs. However the Publication they .had made being irrevokable, the usual Preparations were made against the Day of the Eclipse, till the Hour being come they experimentally perceiv'd their Er-The Day was clear and not a Cloud to be feen, and tho' it was the Month of May, when the Sun is there in the Zenith, and the Time of the Day about There in the Africa. Day about Three in the Afternoon when the Heat is violent, yet the King did not omit to go out with his Courtiers, enduring all the burning Sun for a long time; but finding himself impos'd upon, and being much incens'd, as well

by rea" of the great Heat he endur'd, as at the Ignorance of his Mathematicians, who had put him to that trouble without any reason, he reprimanded them feverely. They alledg'd for their excuse, that there would be an Eclipse infallibly, but that they had made a Day's Mistake as to the Conjunction of the Moon, and therefore it would be feen the next Day at that fame Hour. The King submitted to his Astrologers. and coming out the next Day at the fame Hour, fuffer'd the fame Inconveniency of Heat, to the great shame of his Aftrologers, who efcap'd not unpunish'd: for he not only took away their Revenues, but order'd they should kneel a whole Day in the Court of the Palace, bare-headed expos'd to the Heat of the Sun, and to the Scorn of all the To return to the Prince Courtiers. who had got the better in this point,' he writ to his Father in a jesting , unner, That tho' he was his Son, he had out-done him as to the Eclipse, and had more Learned Men at his Court.

It is not to be imagin'd how much Reputation this Accident gain'd us among the Learned, infomuch that even the King's and Prince's Mathematicians came to us, earneftly begging we would receive them for our Scholars; and upon this account the Fame of the Fathers was every-where fo great, that not only our Knowledge in Aftronomy, but our Religion was extoll'd above their own, they arguing from the heavenly Bodies to things above the Heavens, as I faid before.

#### CHAP. VII.

How God open'd another Way to Christianity, by means of the Omsaiis, or Heathen Priests.

Conversion

OD in his infinite Wisdom forefor a Heaquence it would be for the Conversion
of those Heathens, that some of their
Priests or Omfaiis should be converted,
because of the great Authority they
have among all the People, it pleas'd
his Divine Majesty to open even this
way to his Holy Faith. An Omfaii
whose Name was Ly, liv'd near to our
House, and had the Charge of an Idol

Temple, and being a Neighbour had frequent Opportunities of conversing with us, and of coming to some knowledge of our Rules, Actions, and Course of Life. This pleas'd him so well, that proceeding still farther, he would needs be inform'd as to the Law of God, whereof we gave him a full Account, and coming to discourse of the Resurrection of our Lord, shewing him how he rose again, that he and all Men might

rife again the laft Day, he was fo pleas'd OFRI. at it, that being inspir'd by God, he ask'd to be baptiz'd, which was accordingly granted to him and all his Family upon Christmass Night, which he tpent on his Knees in Prayer with Floods of Tears, uttering these words, Tun exam Biet; that is, I knew not, as if he would have faid, Forgive me my God, tor till now I knew you not. Then continuing fome time very still, as it were contemplating, he repeated the fame words, making a fweet Harmony to the new-born Infant. After Baptism he took tuch an Affection for us, that he refolv'd to come to us with all his Family, that he might live under our Rule; but being inform'd that could not be, because he was marry d, he concluded to live nearer to our House, that he might regulate his Actions by the Sound of our Bell, even to faying the long Litany in his Oratory, at the time we use to fay it every Day, according to the Cultom of the Society. And it is remarkable, that observing me at a certain Hour us'd to fay our Beads walking, he would walk at the same time, to the amazement of his Country-men, who look upon walking as a strange and ridiculous Action, because they never going a step but what is about Business, or to fome Diversion, look'd upon our Action of walking as idle, because we went to a place to no other end but to return; to that the People flock'd to fee us walk, and admiring the strangeness of it said, Omfan de Lay; that is, the Fa-totable ther goes and comes, goes and comes. Let then Gazing did not make Omfan Ly leave his Cuftom, which tended to nothing but to be like us in all Points. He had but one Wife, and had liv'd about thirty Years, which was his Age, to strictly up to the Law of Nature, that he had never, as he faid, to that time, knowingly deviated in any matter of consequence from what was just and upright; and his adoring of Idols was because he thought it contrary to Reason not to adore them. This shews how true that Doctrine of Divines is, to wit. that God never fails to have Baptilin administred, either by the Hands of Men, as this was, or the Ministry of Angels, to a Heathen who lives a good Moral Life, according to the Dictates of Reason, and Law of Nature. This Omfaii Ly wholly devoted himself to the Service of God, and after previding for the Maintenance of his Fimily all he and they could earn was bestow'd

upon our Church, taking special Cais of its Neatness and Decency, and of adorning the Altars.

Nor was this all God requir'd of this other Conhis belov'd Servant; for he so inflam'd verus. his Heart, that he apply'd himself to preach the Faith of Christ publickly, making the Mystery of the Resurre-Etion the usual Subject of his Discourse. whereby he attracted and converted abundance, not only of the common fort, but several Omfaiis; for the' he was none of the most learned, yet his fervour so well supply'd that defect. that among those who came to defire Baptism, there was one of the most learned and famous Men in the Kingdom, whose Authority, he himself proving the falfity of the Heathen Seels. immediately increas'd the Harvest of the Church. This Man therefore took upon him to oppose the other Gentile ; casily consuting them, as being well acquainted with the Grounds they went upon; herein very much eafing our Fathers, who not being fo well acquainted with their Sects, could not so well oppose them.

And in truth there was need of fuch Several a help; for there is fuch variety of forts of Omfais in that Country, that it looks Omfais. as if the Devil had endeavour'd among those Gentiles, to represent the Beauty and Variety of Religious Orders instituted by Holy Men in the Catholick Church, their feveral Habits answering their feveral Professions, for some are clad in white, others in black, others in blue, and other Colours; some living in Community, some like Curates, Chaplains, Canons, and Prebends; others profess Poverty, living upon Alms; others exercise the Works of Mercy. ministring to the Sick, either Natural Physick, or Magick Charms, without receiving any Reward; others undertaking some pious Work, as building of Bridges, or other fuch things for the Publick Good, or erecting of Temples, and going about the Kingdom, begging Alms to this purpose, even as far as the Kingdom of Tonchin; others teach the Doctrine of their Keligion, who being very rich, have Publick Schools, as Univerfal Masters. There are also some Omfails who profess the Farriers Trade, and compassionately cure Elephants, Oxen, and Horses, without asking any Reward, being fatisfy'd with any thing that is freely given them. Lastly, Others look to Monasteries of Women, who live in Community, and

when.

admit of no Man among them but the Omfaii who looks to them, and they are all his Wives

There are valt Temples with beautiful Towers and Steeples, nor is there any Town, tho' never to little without a Temple to worthip its Idols, which are generally very large Statues, with abundance of Gold and Silver shut up in their Breafts or Bellies, where no Body dares to touch it, till extream necessity obliges some Thief to gut the Idol, without regard to so great a Sacrilege as that is accounted among them; and what is very remarkable, they have Chaplets and Strings of Beads about their Necks, and make so many

Processions that they out-do the Chri stians in praying to their talse Gods. There are also among them some Perfons refembling Abbots, Bishops, and Arch-Bishops, and they use gilt Staves, not unlike our Crofiers, informuch that if any Man come newly into that Country, he might eafily be perfuaded there had been Christians there in former times; fo near has the Devil endeavour'd to imitate us. This will give us an Opportunity of adding here a Chapter of the Sects in Cochin China, to give fome Light how we may draw that People out of fuch Darkness, and bring them into the Light of the Gospel.

BORRI.

#### CHAP. VIII.

#### A short Account of the Sects in Cochin-China.

HE End of all Sects is either the God they adore, or the Glory and Happiness they expect, some believing the Immortality of the Soul, others concluding that all ends when the Body dies. Upon these two Principles the Eastern Nations build all their Sects; all which took their Origin from a great Metaphysician of the Kingdom of Siam, he Pailo- whose Name was Xaca, much ancienter xer Xaca. than Aristotle, and nothing inferiour to him in Capacity, and the Knowlege of Natural Things. The sharpness of this Man's Wit raising him to consider the Nature and Fabrick of the World, reflecting on the beginning and end of all things, and particularly of human Nature, the chief Lady of this worldly Palace; he once went up to the top of a Mountain, and there attentively observing the Moon, which rifing in the Darkness of the Night, gently rais'd it felf above the Horizon to be hid again the next Day in the fame Darkness, and the Sun getting up in the Morning to set again at Night, he concluded that as well Moral as Physical and Natural Things were nothing, came of nothing, and ended in nothing. Therefore returning home, he writ feveral Books and large Volumes upon this Subject, calling them, Of nothing, wherein he taught that the Things of this World, by reafon of the duration and measure of Time are nothing: For the' they had a being,

faid he, yet they would be nothing, no thing at prefent, and nothing in the time to come, for the prefent being but a moment, was the fame as nothing.

His fecond Argument he grounded on His Opinithe Composition of things: Let us in on, that al stance, said he, in a Rope, the which is nothing. not being naturally diffinguish'd from its Parts, inafmuch as they give its Being and Composition, so it appears that the Rope as a Rope is nothing; for as a Rope it is no diffinct thing from the Threads it is compos'd of, and the Threads themselves are no distinct thing from the Hemp they are made of, and the Hemp has no other Being but the Elements, whereof its Substance confifts: So that refolving all things after this manner into the Elements, and those to a fort of Materia Prima, and meer Potentia, which is therefore actually nothing, he at last prov'd, that as well the heavenly things, as those under Heaven, were truly nothing.

In the same manner did he argue as So of all to Moral Things: That the Natural Hap Moral piness of Man did not consist in a posi-Thing. tive Concurrence of all that is good, which he look'd upon as impossible, but rather in being free from all that is evil, and therefore faid, it was no other thing but to have no Disease, Pain, Trouble, or the like; and for a Man to have such power over his Passions, as not to be sensible of Affection or Aversion, to Ho-

BORRI. nour or Difgrace, Want or Plenty, Riches or Poverty, Life or Death, and that herein confifted true Beatitude. Whence he inferr'd, that all these things being nothing, they took their origine as it were from a Cause not efficient but material, from a Principle which in truth was nothing, but an eternal, infinite, immense, immutable, almighty, and to conclude, a God that was nothing, and the origin of this nothing.

The World

As a Prelude or Introduction to his how made. Sect, this Philosopher gave some Account of the making of the World under two Metaphors. The one was, that the World came out of an Egg, which ftretch'd out so vastly, that the Heavens were made of the Shell; the Air, Fire, and Water, of the White, and of the Yolk, the Earth and all earthly Things. The other Metaphor he took from the Body of a vast great Man, whom they call Banco, whom we would call Microcosm, saying that the Mass of the World came from him, his Scull extending to form the Heavens, his two Eyes making the Sun and Moon, his Flesh the Earth, his Bones the Mountains, his Hair Plants and Trees, and his Belly the Sea, and thus applying all the Limbs and Parts of Man's Body, to the Fabrick and Ornament of the World; he added, that the other Men fpread about all the World, were made of this great Man's Lice.

Another Philofopher.

Having establish'd this Doctrine of Doftrine of Nothing, he gather'd fome Scholars, by whose means he spread it throughout all the East. But the Chineses who knew that a Sect which reduced all things to nothing, was hurtful to the Government, would not hearken to it, nor allow there was no Punishment for wicked Men, or that the Happiness of the good should be reduced only to the being free from Sufferings in this World, and the Authority of the Chineses being so great, others following their Example, rejected his Doctrine. Xuca diffatisfy'd that he was disappointed of Followers, chang'd his Mind, and retiring writ several other great Books, teaching that there was a real Origine of all Things, a Lord of Heaven, Heaven, Hell, Immortality, and Transmigration of Souls from one Body to another, better or worle, according to the Merits or Demerits of the Person, tho' they do not forget to assign a fort of Heaven and Hell for the Souls departed, expressing the whole metaphorically under the Names of Things Corporeal,

and of the Joys and Sufferings of this World.

This 2d Doctrine being made publick, The Se the Chinefes receiv'd it, and above others that be the Bonzis, who are generally the lieves all meanest and most inconsiderable People be noth. in Japan, who being zealous for their Spiritual Advantage admitted this Do-Etrine, and preserv'd it in twelve several forts of Sects, all differing from one another, tho' that which is most follow'd and esteem'd, is the Opinion and Sect that believes all to be nothing, which they call Gensiu. These sometimes go abroad into a Field to hear a Sermon, that is a Discourse of Bliss made by a Bonzo, who treats of no other Subject, but to persuade his Congregation, that human Blifs is nothing, and that he is happy who values not whether he has Children or no Children, whether he is rich peop fick or well, and the like; and the Bonzo preaches this Doctrine with fuch frength of Argument, and vehemency, that the Audience being fully hent upon the Contempt of all things, which in themselves they look upon as nothing, fuffering themselves to be in a manner transported, they express their Satisfaction and Happiness in this manner, that is often crying out with a loud Voice, Xin, Xin, Xin; that is, Nothing, Nothing, Nothing, accompanying their Voices with certain Bits of Boards they clap between the Fingers of one hand striking them together with the other (as Boys play on their Snappers) and with this Noise they are quite besides themselves as if they were drunk, and then they fay they have done an Act of Bliss. The Faponefes and others making fo great account of this Opinion of Nothing, was the cause that when Xaca the Author of it was come to his last, calling together his Disciples, he protested to them upon the Word of a dying Man, that in the many Years he had lived and ftudy'd, he had found nothing so true, nor any Opinion fo well grounded, as was the Sect of Nothing, and the his fe-cond Doctrine feem'd to differ from it, yet they must look upon it as no Contradiction or Recantation, but rather a Proof and Confirmation of the first, tho' not in plain Terms, yet by way of Metaphors and Parables, which might all be apply'd to the Opinion of Nothing, as would plainly appear by his Books.

But it is time to return to our Cochin-Chineses, who not receiving this most foolish and vain Doctrine, which deors of

nying the fubftantial Form, reduces all things to nothing, they generally throughout all the Kingdom hold the Immortality of the Soul, and confequently the eternal Rewards for the Just, and Punishments for the Wicked, yet mixing a thousand Errors with these The first of which is, thar they do not distinguish between the immortal Soul and the Demons, calling both by one and the same Name Maa, and attributing to them both, the same Practice of doing Mischief to the li-The fecond is, that they affign one of the Rewards of the Soul to be Transmigration from one Body to another, more worthy, nobler, and in greater Dignity; as from one of the common fort to a King, or Great Lord. The third, that the Souls of the Dead stand in need of Sustenance and Corporal Good, and therefore at certain times in the rear according to their Custom, the Children make plentiful Entertainments for their dead Parents. Men for their Wives, and Friends for their Acquaintance departed, expecting a long time for the dead Guest to come and fit down at Table to eat. We one Day confuted these Errors with Arguments which the Philosophers call à priori, and therefore told them that the Soul was a Spirit, and had no Mouth or other material part to eat, and therefore they were deceiv'd to think they could feed And then a posteriori, for in case they did eat, then the Dishes would not be as full after they had done as they were before. They laugh'd at these Arguments, saying, These Fathers know nothing; and to solve both Difficulties, answer'd, That Meat confifted of two Parts, one the Substance, the other the Accidents of Quantity, Quality, Smell, Taste, and the like. The immaterial Souls of the Dead, said they, taking only the Substance of the Meat, which being immaterial, was proper Sustenance for the incorporeal Spirit, left only the Accidents in the Dishes, as they appear to our Corporal Eyes, to which purpose the Dead had no need of Corporeal Parts as we faid.

Any: fe Man may by this false Anfwer discover the Acuteness of the Cochin Chinese Philosophers, tho' they abfolutely err as to the reality of the Ar-

gument.

They also err in respect to the Souls themselves, adoring those of Men who were look'd upon as holy in this World, adding them to the number of their Idols, whereof their Temples are full, placing them orderly according to their feveral Degrees, in Rows along the fides of the Temples, the least first, and fo bigger and bigger, till the last are extraordinary large. But the high Altar being the most honourable Place in the Temple, is purposely kept empty, behind which is a vacant dark space, to express that he whom they adore as God, and on whom the Pagods, who like us were visible and corporeal Men. is invisible, wherein they think the greateft Honour confilts. Such a multitude of Idols, by them accounted Gods, giving us occasion to endeavour to demonstrate to them, that there can be but one only God: They answer'd, they agreed to it, supposing those that were placed along the fides of the Temples, were not they that had created Heaven and Earth, but holy Men whom they honour'd, as we do the holy Apostles, Martyrs, and Confessors, with the same distinction of greater and lesser Sanctity, as we assign among our Saints. And therefore to corroborate their Affertion they added, That the vacant dark place about the high Altar, was the proper place of the Creator of Heaven and Earth, who being invifible, and quite remote from our Senses, could not be represented by visible Images of Idols, but that under that Vacuity and Darkness the due Adoration was to be given him as to a thing incomprehenfible, uling the Intercession of the Idols, that they may obtain Favours and Bleffings of him. And altho' according to what has been hitherto faid, they feem to have an efficient and intellectual Cause for God, yet upon mature Examination of the Matter and their Books, we find that they cerrainly adore a predominant Element.

#### CHAP. IX.

How God open'd another Way to the Conversion of the meaner fort by miraculous Means.

Frequent Apparituons of Devils.

Succuhi

IT remains that we shew how God acting conformably to the mean vulgar People of Cochin-China, who were us'd to fee Phantoms, Vifions, and Apparitions, the Devil often appearing to them, was pleas'd to shew some Miracles, to the end that declining in their Opinion of Diabolical Prodigies, they might own the only Lord and fingular Worker of true Wonders. The Devils appear fo frequently among those Heathens, that not to speak of the Oracles they deliver by the Mouth of Idols, which are in great effeem among the wretched Gentiles, they walk about the Cities so familiarly in human Shapes, that they are not at all fear'd but admitted into Company, and this is carry'd so far, that there are Incubi and abundance of Incubi and Succubi. And among great People those Husbands account themselves happy, who know their Wives have such Familiars; for generally they have to do with none but marry'd Women, publickly boafting that they are worthy to mix with a Nature so much above their own as is the Devils. It hapned in my time, that a Woman of great Quality, Mother to two Sons who were Christians, envy'd by her Neighbours not to much for her Beauty, as for her dishonest Familiarity with the Devil, positively refusing to become a Christian, came to die in Labour, and by the affistance of the Devil brought forth two Eggs: Now it being held as most certain among them, that the Devil her Incubus was God of the Rivers, they did not bury the Body in a Cave, building a Chapel over it as is the usual Custom, but carrying it in tolemn Procession to a River cast it into the Deep, together with the two Eggs, faying, Let her go to the Lord of the River, fince she was worthy to have to do with him when living. Among the common fort this Filthiness is not esteem'd an Honour, but they rather account it a grievous Distemper when their Women are thus molested by the Devil, as we should their being posest. These Women therefore understanding that the Religion of the Fathers

was altogether opposite to the Devil, they imagin'd they might have some Medicine against this Diffemper, cal-ling Holy Things as the Water of Baptism, Agnus Deis, and the like, Medicines, and therefore came to our House to beg fuch Medicines; and by the Grace of God all those that carried away with them any bit of Agnus Dei, were never more molested by the Devil, yet with this difference, that those who were not Christians saw the Incubus come to the Bed's-fide, but had not power to lay hold on or touch their Persons, whereas the Christians perceiv'd he could not come near the Chamberdoor, which occasion'd several to be baptiz'd.

Tho' these Incubis Devils appearing Other

in human Shapes, do no harm to the montrous Body, yet sometimes there are others visions. that appear in horrid and frightful Shapes, and the Cochin-Chineses, who have often seen, describe them after the fame manner as we paint them, for example, with a Cock's Face, a long Tail, a Bar's Wings, a hideous Look, bloody flaming Eyes; and when they appear in fuch Shapes, they are much fear'd, being then generally hurtful to Men, fometimes carrying them up to the tops of Houses to cast them down headlong. We once heard a wonderful Noise of People in our Street, crying out very loud, Maqui Maco, that is, the Devil in a monstrous Shape, whereupon fome Gentiles came running to defire us, that fince we had Weapons against those evil Spirits, we would go relieve those distress d People who were infested by them. Having recommended our felves to God, and arm'd our felves with Crosses, Agnus Deis and Relicks, we went two of us to the place where the Devil was, and came fo near, that we only wanted turning of a Corner to be upon him, when he fuddenly vanish'd, leaving three Prints of Feet upon the Pavement, which I saw, and were above two Spans long, with the Marks of a Cock's Talons and Spurs. Some attributed the Devil's flying to the Virtue of the holy Crofs and Relicks we carry'd with us.

# An ACCOUNT of Cochin-China.

Vifions.

These frightful Apparitions God has made use of to attract many to his holy Faith, yet not denying them good Visions, as will appear by the following Accidents, which hapned before me in that Kingdom. The first was, that as we were one Day in our own House, we saw a Procession of a vast multitude of People in a Field making towards us, whither when they came, being ask'd what they would have, they aniwer'd, That a most beautiful Lady came from their Land through the Air, on a Throne of bright Clouds, who bid them go to that City, where they should find the Fathers, who would shew them the sure Way to Blifs, and the Knowlege of the true God of Heaven. This made us give Thanks to the bleffed Virgin, whose this great Benefit was own'd to be, and having catechis'd and baptiz'd the People fent their home well pleas'd.

The fecond was at another time, F.

Francis Buzome and I returning homeward together, fuch a multitude of People came to another place, who having paid us very much respect, told F. Francis Buzome, they were come to him to teach them what he had promis'd them the Night before when he was in their Town. The Father was aftonish'd at their Demand, having never been in the place they spoke of; but examining into the matter, I found that God of his infinite Mercy had caus'd fome Angel in the Father's shape, or in a Dream had given those People some knowledge of our holy Faith. The Fame of these Miracles being spread abroad, such numbers of People were converted, that the Church given us by the Governour was too little, and we were forced to build one larger, his Wife, Children, and Kindred, with many other Christians contributing towards it.

#### CHAP. X.

## Of the Churches and Christians of Faifo, Turon, and Cacchiam.

at Faifo.

What the Francis de Pina being gone to Faifo, Fathers did F. a City of the Fanonelas as before, he there joyn'd F. Peter Marques, and they did great Service in that City. The last of them, who was Master of the Japonese Tongue, in a short time reform'd some of those Christians who were become Libertines, and kept Women, and converted many Pagans. The other who understood the Language of Cochin-China made many Christians, and having convinced fome Bonzos and Omfairs, by that means drew over many more to the Holy Faith; so that between Faponeses and Cochin-Chineses, that Church for Number and Religious Obfervance might compare with many in Europe, such was their Piety, Zeal, frequenting of the Sacraments, and other godly Works. The Church of Turon, which we faid in the fecond Chapter of this Book, the Heathens burnt down during the first Persecution, was by God's permission rebuilt by means of the Fathers of the Society, who gain'd many Christians in that City.

At Turan.

Abundance of People were likewise converted to our Faith at Cacchiam; which good Work was much forwarded by the Omgne, who on account of the Father's foretelling the Eclipse so certainly, as was before observ'd, publickly affirm'd, there was no other true Religion but that the Father's taught. This was the State of Affairs there, when I came away out of that Country for Europe, which was in the Year 1622.

Afterwards by the annual Letters fent me by those Fathers, my Companions left there cultivating that Vineyard, I understood that there were still about a thousand converted and baptiz'd in a Year, and that Christianity flourish'd more than ever it had done at Cacchiam particularly. But now of late they write, that the King had forbid any more becoming Christians, and threatned to expel the Fathers out of the Kingdom, and this because the Portuguese Trade fail'd. Yet it pleas'd God this Persecution went no farther, the King being satisfy'd, provided one of the Fathers went away to Macao, to endeavour to parsuade the Portugueses to continue the Trade, as it seems was afterwards done; fo that things are now quiet, and the Fathers continue gaining new Christians as they did at first.

At Cac. chiam.

#### CHAP. XI.

#### Of the Kingdom of Tunchim.

HEN the Superiours of Macao fent me into Cochin-China, they told me, they did not absolutely design I should continue in that Mission, but only to learn the Language, that I might afterwards discover the Kingdom of Tunchim. For this reason during those five Years I dwelt there, I almost made it my Bufiness to enquire into, and get certain Information of the Affairs of that Kingdom, the Language being the fame, as formerly it was but one Kingdom. I will therefore fay as much of it as any way concerns Cochin-China, which has some dependance upon Tunchim, and this according to the Accounts given me by Natives of Tunchim, who came to the Province of Pulucambi, where I refided most part of my time; the rest I will leave to the News we shall receive from our Fathers, who are there still making further Discoveries.

him.

This Kingdom, befides Cochin-China ion of Tun- which belongs to it, contains four other Provinces, all extending equally in length and breadth. In the very Center of them is the Royal City of Tunchim, from which all the Kingdom takes Name, there the Court is kept, and the King refides, being encompais'd on all fides by those four Provinces, compofing a Square four times as big as co-chin-China. On the East-fide of this Kingdom is the Gulf of Ainam, into which falls a great and navigable River that runs down eighteen Leagues from the City Tunchin, and Japonese Ships call'd Jonks go up it. This River generally overflows twice a Year, in June and November, drowning almost half the City, but it lasts not long. On the South are the Frontiers of Sinuva, the Court of Cochin China, as has been obferv'd already. On the North of it is China, without the Defence of a Wall, the Trade and Commerce between the Chineses and Iuncoineses using to inatual and constant, that it will not allow of Walls and Gates shut, as they against other Foreigners. This is Chineses and Tunchineses being so muthe Reason that induces the Fathers of our Society to attempt the entrance into China that way, knowing they shall not on this fide meet with all these Imthroughout all the rest of the Kingdom, and more especially about Canton. Lastly, On the West it borders on the Kingdom of Lai, into which F. Alexander Rhodes of Avignon made his way thro' Cochin China; and this Kingdom, I am of Opinion, cannot but horder upon that of Tiber, newly discover'd; which I am apt to believe, as well by reason of the extent and length of the Land of Tibet and Borders of Lai, because by the greatness and compass of these two kingdoms, it seems impossible that any other Land should lie betwixt them; as also much more on account of what the same Fathers who were there relate of Tiber, who report that the farthest Province of Tiber Eastward borders upon, and trades with a People, who fell them Raw Silk and fine Dishes, like those of China, and such like Commodities, which we know Tunchim abounds in, and fell them to the Laiss.

As to the Government of this King. The Godom it is hereditary, and rul'd as fol vernment, lows: The Supreme Regal Dignity refides in one they call Buna; but he of himself does nothing at all, all things being left to his Favourite, whom they call Chiuna, whose Power is so absolute both in Peace and War, that he is come by degrees to own no Superiour; the Buna remaining in his Royal Palace, quite cut off from all Management of the Publick Affairs, fatisfy'd with an exteriour Respect due to him as a sort of Sacred Person, and with the Authority of making Laws, and confirming all Edicts. When the Chiuua dies, he always endeavours to have his Son fucceed him in the Government, but for the most part it falls out that the Tutors of those Sons aspiring themselves to that Dignity, endeavour to murder them, and by that means possess themselves of the Dignity of Chiuna.

The Chiuna's Power is so great, that Power fuitable to the bigness of the Kingdom, he is able to bring into the Field three or four times the number of Men as the King of Cochin-China, whose Army as was faid above amounts to 80000 Men. Nor is it any difficult matter for the Chiuna, as often as he pleases, to

cause the prime Lords of his Kingdom, such as among us, Dukes, Marquess, and Earls, are oblig'd in time of War to surish them at their own Expence. The Buna's Strength is not above 40000 Men for his Guard. Yet he is always own'd as Superiour to the Chinua of Tunchim, by the King of Cochin-China, and by that other Chinua, we observed in the first Book to be sled into the Province bordering upon China, tho' these are continually at War against one another; and the King of Lain bordering upon Tunchim, pays him a certain Tribute.

Therefore when we say this Crown is hereditary, it is to be understood only in reserence to the Buna, whose Children always succeed the Royal Race being continu'd in his Family. This is as rauches I thought sit briefly to say of the Kingdom Tunchim, from what I could learn of it till my return into Europe.

Since then I have been inform'd, that Julian Baldinotte, an Italian born at Pistoria in Tuscamy, was sent into that Kingdom to make some way for the Gospel, and arriv'd from Macao at the City Tunchim, after a Month's Sail. As for what the faid Father found in that Country, what pass'd between the King and him, the Solemnity of his Reception, and the first Foundation he laid to Christianity, I refer the Reader to the Account given lately by that Father himself; and we are still expecting fresh Advices from the other Fathers, as F. Peter Marques a Portuguese, and F. Alexander Rhodes of Avignon, who we faid before had been in Cichin-China, and are there still gaining Christians. We therefore hope both these Kingdoms of Tunchim and Cochin China, will foon be united to the Flock of the Church, acknowledging and giving the due Obedience to the universal Pastor and Vicar of Christ our Lord on Earth.

#### The CONCLUSION.

IT is not possible but that such as have least Inclination to the Discovery of the World, and are most affected to their own Countries and Homes, must be excited by this short Account to defire to fee not only the Variety but the Truth of fuch strange things, which tho they be not supernatural, may yet be term'd Miracles of Nature. Such are those I have faid I saw in Cochin-China, a Land as to its Climate and Seasons of the Year habitable, by reason of the fruitfulness of its Soil abounding in Provisions, Fruit, Birds, and Bealts, and the Sea, in choice and delicious Fish; and most healthy, because of the ex-cellent Temper of the Air, infomuch that those People do not yet know what the Plague is. It is rich in Gold, Silver, Silk, Calamba, and other things of great value, fit for Trade by reason of the Ports and resort of all Nations: Peaceable, because of their loving, generated the property of the Ports and Pilos distributions and Pilos nerous, and sweet Disposition: lastly secure, not only by the Valour and Bravery of the Cochin-Chineses accounted such by other Countries, and their Store of Arms, and Skill in managing them; but even by Nature, which has thut it in on the one fide by

Alps, and uncouth Mountains of the Kemois. This is that part of the Earth call'd Cochin-China, which wants nothing to make it a part of Heaven, but that God should fend thither a great many of his Angels, so S. John Chrysoftom calls Apoltolical Men, and Preachers of the Gospel. How easily would the Faith be spread abroad in this Kingdom of Cochin-China, where there are not those Difficulties which we Fathers of the Society dispers'd about the East, do meet with in other Countries; for there is no need here of being difguis'd or conceal'd, these People admitting of all Strangers in their Kingdom, and being well pleas'd that every one should live in his own Religion. Nor is it neceffary before Preaching to spend many Years in studying their Letters and Hieroglyphicks, as the Fathers in China do, for here it is enough to learn the Language, which as has been faid is fo eafie, that a Man may preach in a Year. The People are not thy, nor do they firm Strangers, as is practised in other Eastern Nations, but make much of these affect their Persons, prize their Commodities, and commend their Do-Strine. They do not lie under that

ucceffion.

BORRI.

the Grace of the Gospel, that is, the Sin of Sodomy, and others contrary to Nature, which is frequent in all the other Eastern Countries, the very Name whereof the Cochin-Chineses naturally abhor. In short, these People may very eafily be taught the principal Mysteries of our holy Faith, they, as we have shewn, in a manner adoring but one only God, accounting the Idols as inferiour Saints, allowing the Immortality of the Soul, Eternal Punishments for the Wicked, and Bliss for the Just, using Temples, Sacrifices, Processions; so that changing the Objects, it would that changing the Objects, it would be easie to introduce the true Worship. That there will be no difficulty in making out the Mystery of the holy Eucharift may appear by the Distinction they make, between the Accidents and Substance of the Meat they provide for the Dead, as has been faid above in this Second Book. All these things inflame the Minds of the Children of the Society, who tho' recluse and shut up in the Colleges and Provinces of Europe, have an ardent Defire to convert the

World. And tho' many of them put it in practice with the Affiltance of the Holy See Apoltolick, which with a Fatherly Care relieves the Mission of Fapan; as also by his Catholick Majesty King Philip, and his Council of the Indies, who so frequently with incredible Bounty supply the East and West-Indies with Ministers of the Gospel, yet it is impossible that these two great Pillars which support other mighty Weights, and bear almost all the World on their Shoulders, can sufficiently supply all that daily occurs and is discover'd. I therefore trust in God, that his Divine Providence will rouze up fome generous Soul, inflam'd with the Zeal of God's Honour, to fend and maintain fome Evangelical Ministers, who fatisfy'd with a religious and poor Sustenance, may convey the Food of the Gospel not only throughout Coonn-China, but unto the great Kingdom of Tunchim, founding a Church and Christian Flock that may compare with the most renowned in the World.
